The quinces raised on the Reid place are so large, smooth and shapely that at a short distance the visitor takes them for pears. Apparently there is no reason for the gnarly appearance of the average market quince except ignorance and carelessness—with many farmers, the quince has the reputation of being able to withstand pretty much any treatment—or lack of treatment—accorded it; and the result is that it is neglected. Mr. Reid started his trees out right and kept them growing healthily. They are pruned and cultivated—an intercrop of strawberries pays for this tillage in the young orchard—and once each year they are sprayed. This sounds like neglect, but then, as the proprietor explains, one dormant spraying which the trees unfailingly get is better than a half dozen theoretical sprays which they do not get. This dormant spray is the usual one-to-eight lime sulphur spray.

In conclusion, let me pass on an idea of considerable importance to all country dwellers.

"Recent investigations have shown that there are 22 varieties of Comice pears," Mr. Reid says. Many of those varieties are woody, flavorless, and lacking in eating and market qualities; nevertheless, they are sold under the name of Comice pear. Now, the handicap of getting such a variety to start with is enough to insure the failure of a man new in the fruit business. He has 'gotten off on the wrong foot,' and may fail to get into step in time to save himself from disaster. And what is true of Comice pears is true of many other varieties of fruits and vegetables—under the one variety are many variations in quality. Why do not the nurserymen begin to breed from the best, and to eliminate these worthless variations? And until this comes about, why are not beginners in horticulture warned that the strain is of equal or perhaps greater importance than the variety. Success in farming results from observation, hypothesis, and the testing or demonstration of these hypotheses. And under this formula, blind acceptance of a trade name or label is ruled out."

Boys' and Girls' Poultry Club

Free Hatching Eggs from Prize Winning Pens

Any thrifty boy or girl can get a start in purebred poultry by devoting a little time to pleasant work outside of school hours. We offer nothing but eggs from prize winners. Each setting contains 15 eggs and you can make your selection from the following breeds:

S. C. Reds, R. C. Reds, Barred Plymouth Rocks, White Rocks, White Wyandottes, Buff Orpington, Blue Orpington, Black Orpington, White Orpington, Light Brahmas, Anconas, S. C. Andalusians, R. C. Andalusians, R. C. Brown Leghorns, S. C. Leghorn, R. C. White Leghorn, S. C. White Leghorn, S. C. Buff Leghorn, Black Minorca, Bantam, Buttercup, Campine, Houdan.

Write today if you want to join the Poultry Club. You will want to have your eggs hatching before long, so don't delay.

Was the $21,500 Bull Calf Sale Bona Fide?

Charges and Denials Are Supported by Affidavits and Statements.

Statement by E. A. Stuart, president of Carnation Stock Farms, giving letters and other incidents "indicating that there was some irregularity regarding the listing and sale of the Holstein bull calf, Finderne Mutual Fayne Valdessa, at the Portland stock show, for $21,500."

Affidavits of Gue, Holmes, Bishop and A. E. Smith, stating their belief that the sale was bona fide.

Wire from Bernhard Meyer in reply to a wire from The Farmer: "Bull was sent by me to the sale under the recommendation of Von Herberg, guaranteeing me $5000 at least."

Copy of letter to George Gue from B. Meyer: "I consign this bull to your sale without any restrictions whatsoever."

Signed statement by J. Von Herberg containing sensational charges.

"Friday at the Pacific International marked a great milestone of black and white in the northwest when the Finderne Mutual Fayne Valdessa consigned by Bernhard Meyer of Finderne, N. J., sold for the northwest record price for any single animal—$21,500. He was bought by John Von Herberg, interested in the theatrical business at Portland and Seattle, and owner of 90 head of pure bred Holsteins at Kent, Wash."

The above was the first paragraph of the announcement in The Farmer of December 14, 1916, of the most sensational incident in the live stock auction history of the northwest.

Now, after nearly two months, there comes to The Farmer the remarkable statement made by no less a personage than Mr. Stuart, who is at the head of the largest concern manufacturing condensed milk in the United States, together with other remarkable documents from men most prominent in live stock circles.

Belied Name of Grange to Sell Stock

N. W. General Trading Co. Got Indorsement of Kegley and Lawrence

The trial of the five officers of the Northwestern General Trading company for conspiracy to defraud the public through the use of the United States mail, which has been in progress in the federal court in Spokane, has disclosed facts of intense interest and far-reaching importance to every reader of the Farmer. A summary giving the defendants in the case, together with the leading issues involved, follows:

Defendants in the Case.

The defendants in the case: Gale Smith, original promoter and president of the Northwestern General Trading company; Olin C. Fowler, treasurer of the company; C. L. Davies, treasurer and later manager of the company's branch at Portland; S. T. Knudson, sales manager of the Northwestern and later in charge of stock sales of the Olympic Trading & Supply company, and John C. Lawrence, one time candidate for governor, former public service commissioner, and head of the organization department of the Northwestern General Trading company when it went into bankruptcy.

Counsel for defendants: F. C. Robertson for the defendants; P. W. Campbell for Lawrence alone.

Prosecution: United States District Attorney F. A. Garrecht, assisted by H. S. House, a special examiner for department of foods, and J. S. Swenson, postoffice inspector.

Grange and Farmers' Union.

Letters from Clyde L. Davies, manager of the Portland branch of the Northwestern General Trading company, told of having secured an indorsement from "Kegley and his bunch."

The Farmers' union bunch are standing pat with us with the exception of Mr. Dilivuk.—C. L. Davies, February 27, 1915.

J. C. Lawrence was on the pay roll of the Northwestern General Trading company when acting as a member of a farmers' union committee making an investigation as to its indorsement.

J. H. Taylor, farmers' union organizer, received $35 a week from Northwestern at time he opposed a

The Tractor That Answers the Call

The UNIVERSAL Tractor Attachment

$275

F. O. B. Tacoma

For the Farm, the Orchard, the Road and the Lumber Yard.

Notice the large rear tractor driving wheels of this equipment. Note the heavy tubular steel weight and strain axle. It is a powerful tractor, a thorough tractor, and it will win you when you drive it yourself.

THE CALL OF THE TRACTOR

Your *1917 Problem* Is the *Tractor Problem.*

The Tractor CALL Is *Heard on Every Farm.*

You Will Have to Choose.

You Must Make Up Your Mind.

And why hesitate when for $275.00 you have offered you a complete, clean-cut Tractor proposition? You clamp the UNIVERSAL to the chassis of your auto; in three hours your auto is plowing for you, hauling your four or six horse spreader, doing chores at a cost and with an ease that surprises you and delights you, and it can be reconverted in the same time to a pleasure car again. You have nothing to learn—you run a UNIVERSAL tractor as you run an auto—the same engine, the same steering gear. No complicated mechanism to baffle and puzzle you—the ESSENCE OF THE UNIVERSAL is its complete simplicity combined with complete effectiveness.

Photo of parts in the Universal factory ready for shipment.

You Will Answer "The CALL of the TRACTOR"—*But Remember,* It Is Your Tractor Must Answer *Your* Call Later—Therefore INVESTIGATE.

"TRACTOR FACTS" and Other Literature--FREE

"Tractor Facts" tells all about the UNIVERSAL. It should be read by every man interested in Tractor Equipment. We will be pleased to send you this folder and other important literature FREE. Write to address as follows:

Gerlinger Motor Car Co., Dept. P, Tacoma, Wash.

P&O

LIGHT DRAFT PLOWS

Built for the Field Test.

Three-Quarters of a Century of "Knowing How" Hammered Into Every One of Them.

The product of the Parlin & Orendorff Co. has always been noted for simplicity of construction, great strength and ease of operation. It was upon such a basis that the founders of this business made their implements, established their reputation, and built their factory. It is upon the same foundation that the business has been carried on to this day, and in 1917 we celebrate our Diamond Jubilee; 75 years of practical experience gained through constantly striving to provide for the exacting requirements of three generations of American farmers.

For an even three-quarters of a century we have met the demand, and today we operate the largest and oldest permanently established plow factory in the whole world. "It's the way we build them."

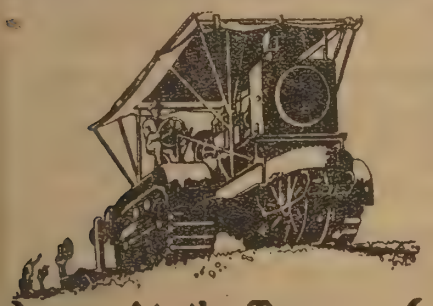
P&O

Light Draft Plows, Harrows, Planters and Cultivators are made in all types and sizes, to meet the conditions in all sections, and are Backed by an Unqualified Guarantee.

We also make the most complete line of Traction Engine Plows produced, and we have a special catalog devoted to these famous plows.

The P&O Little Genius Engine Gang Plow

was the most popular plow shown at all points on the 1916 National Tractor Demonstration.



We will send P & O Catalogs to any address. While P & O Implements are sold only through established implement dealers, we welcome correspondence from farmers in all sections.

Resolved

That there is a place in the dairy for the average cow as well as for the high-grader.

Would you take the affirmative or the negative of the question?

D. W. Ainey of Payette, Idaho, is a friend of the "average" cow. A. A. Stauffacher of Buhl, Idaho, is the friend of the high-grade cow. They debate the above question in next week's issue of The Farmer.

In This Issue

Extensive Review of Northwest General Trading Company Trial.

Documentary Evidence on Sale of $21,000 Calf.

Marketing Products of the Farm, an Article by John J. Dillon, New York.

The Federal Loan Act, the Third Article by Mr. N. W. Durham.

WASHINGTON PORTRAITS—NO. 2.

P. A. McNamara.

P. A. McNamara says that dairying is a paying business in Clallam county, and does not believe in trying to raise grain on a dairy farm. He has been in this business for 10 years near Sequim, raising as many cows as he has hay and pasture for. He keeps only the Jerseys, having the grade Jersey cows and purebred sire. All the heifers from his best cows he raises, and keeps his herd well culled of poor stock. Mr. McNamara does almost all of his own work, keeping hired help only in the seeding and harvesting time, and believes that it is the only way to succeed in the dairy business.

The next in the series of Washington portraits will be that of George E. Sellick of Kennewick, and will be given in next week's issue of The Washington Farmer.

Clara G. Wein, Seattle, Wash.: "Just a word of praise and recommendation for The Washington Farmer. It has been helpful to me as a city resident, in taking proper care of my chickens through your many helpful items in your magazine pertaining to chickens. I have followed each suggestion carefully and as a consequence my chickens lay better and are never sick."

The Abbreviation of What State Means 'To Launder'

$300 SOMEBODY WILL WIN | SIXTY QUESTIONS | SOMEBODY WILL WIN $300

Read the Plan and Rules of This Big, New, Free-for-All

FARM INFORMATION CONTEST

There are 60 questions which everybody should try to answer. They are interesting, they are entertaining, and the prizes make it worth your time to try to answer them. Look into the contest plan and fix your aim on the big cash awards.

READ THE RULES
Answer These Questions

11. When will the moon be full in March, 1917?

12. What part of a wagon and what piece of furniture have the same name?

13. In what state of the United States did the child live who was the original of the Mary in the poem beginning "Mary had a little lamb, its fleece was white as snow?" (If you haven't the information handy, consult our CONTESTANT'S HELPFUL OUTFIT, free to any public library or included with every subscription payment of $1 or $1.50 to the Farmer.)

14. Will bar of iron measuring when ice cold 1 inch thick and 1 inch wide and 12 feet long contain more than one cubic foot if its temperature is raised 100 degrees?

15. How many stars are there in the great dipper?

(Five more questions will appear next week.)

The announcement of this contest, February 1, brought quick responses from all the four northwest states from persons who sent in the order coupon on this page with subscription remittances, expressing their intention to register for the $300 prize provided in "Enlarged prize list plan."

$800—IN CASH to Be Paid—$800

We will positively give EIGHT HUNDRED DOLLARS in cash awards (and more in event of ties) to the winners. As explained in the rules which follow, there will be five questions run in every issue of the Farmer for 12 weeks. The last five questions will appear in the issue of April 19.

You Can Enter Without Cost

You do not even have to be a subscriber of the Farmer to enter. As has already been stated, any resident of Washington, Oregon, Idaho or Montana is eligible to compete in this contest.

Five Questions Each Issue

The contest will be composed of 60 questions. Five will be run in each issue of the Farmer for 12 issues.

Answers to each question except No. 45 can be given correctly in from one to 10 words and will be given a score of 100 if correct. Answers to question No. 45 will be limited to 100 words each, and will be graded as to the common sense and general knowledge of farm conditions shown by the contestant without regard to spelling, grammar or penmanship. As with the other 59 questions, a perfect answer to No. 45 will be scored 100.

Perfect Score Is 6,000

The contestant who comes nearest to a score of 6000 and complies with all the conditions of the contest will receive the first prize; the next nearest, second prize, and so on. In case of a tie each tying contestant will receive the full amount of the prize.

There are 35 prizes as follows:

$150 is amount of First Prize. **$50 is amount of Third Prize.** **$10 is amount of Fifth Prize.**

$100 is amount of Second Prize. **$20 is amount of Fourth Prize.** **$5 each, Sixth to Tenth Prizes.**

$4 each Eleventh to Fifteenth Prizes. **$1 each, Sixteenth to Thirty-fifth Prizes.**

OTHER RULES

The answers will be passed upon and graded by a fair-minded, thoroughly competent judge.

Two weeks will be allowed for sending in answers after April 19, 1917, date of the issue containing the last five questions.

Remember, your failure to answer all the questions will not necessarily exclude you from the contest. There are 60 questions to be answered and it is not reasonable to suppose that all our prize winners will attain a perfect score. Your answers must all be sent in at the same time. Do not send any answers until you have completed the full list or as many as you can answer.

Those who use our CONTESTANT'S HELPFUL OUTFIT will be able to send in their complete set of answers without delay, there being no need of their waiting for the questions as they appear in The Farmer from week to week down to the final issue of April 19. In order to get as prompt returns as possible from those contestants who use our CONTESTANT'S HELPFUL OUTFIT, extra inducement is made in the prize awards. SEE ENLARGED PRIZE LIST.

Announcement of prize winners will be made and prize checks mailed as soon after close of contest as possible.

If any point is not clear, do not hesitate to write the Farm Information Editor.

All answers must be mailed on or before midnight, May 3, 1917, as shown by postoffice dating stamp on your envelope.

ORDER COUPON—If your subscription is paid ahead, the time paid for herewith will begin at the date to which you are now paid.

FARM INFORMATION EDITOR,
Review Building, Spokane, Wash.

Enclosed find $1 for one year, or $1.50 for three years' subscription to

THE WASHINGTON FARMER.

and enter me as a contestant in the Farm Information Contest. I am also to receive at once the complete CONTESTANT'S HELPFUL OUTFIT, consisting of guide against wrong answers, reply blanks, rules and all information to aid me to win a reward.

Name .....

R. F. D. .....Town .....

State .....

Notice—Amount of remittance to be either $1 for one year's subscription to the Farmer or $1.50 for three years' subscription.

Answer this question: Are you now a subscriber?.....
If you wish paper sent elsewhere, fill in name and address.

A Valuable Aid to Contestants

One complete CONTESTANT'S HELPFUL OUTFIT, including all of the 60 questions and instructions and helpful warnings as to answers which would be wrong, and the correct answers to some of the most difficult questions, will be sent to any public library free of charge, upon request.

To each contestant who sends in a new, renewal or an extension of his subscription at the time of registering for the contest, this complete CONTESTANT'S HELPFUL OUTFIT will be sent in combination.

We feel that those beginning on the contest will find these suggestions as to what to avoid distinctly useful. This equipment supplies in convenient form everything needed to enable you to apply your ability to the best advantage, and will contain information enabling you to answer the most difficult questions correctly.

Puts Questions in Reach of Children

This CONTESTANT'S HELPFUL OUTFIT puts the solution of the questions in the reach even of the children, it being the purpose to make it possible for everybody in Washington, Oregon, Idaho and Montana to compete. This outfit includes, besides general information about the plan of the contest, the following:

Guide against wrong answers, which includes either correct answers of more difficult questions or easy references as to where to find the correct answers; and blank forms on which to write your answers in such a way that there can be no confusion when your answers are taken up by the judge for scoring.

It will be worth considerable to you to be assured that your answers are reaching the Farm Information Editor in such form that he will know in every instance exactly what question you intended to answer. This CONTESTANT'S HELPFUL OUTFIT will make it possible for you to

Begin Work at Once

On account of the large number certain to send for our CONTESTANT'S HELPFUL OUTFIT, thus making it possible for them to answer the entire 60 questions without delay, it is deemed advisable to offer some special inducements to secure prompt returns from this particular class of contestants. By securing the early replies of those who are thus supplied with the entire 60 questions, we will be able to have their papers carefully scored before the final rush of answers toward the end of the contest.

Understand, it is not absolutely required that those who use our CONTESTANT'S HELPFUL OUTFIT send in their replies at once, but, in order to induce them to get in early, the following plan for enlarging the awards to those prize winners whose answers come in early is offered:

ENLARGED PRIZE LIST—$800 CAN BE WON—ENLARGED PRIZE LIST

For those who use our CONTESTANT'S HELPFUL OUTFIT.

Thirty-Five Prizes	Amt. of prize if winner sends in answers during 1st period, Feb. 1- Feb. 21	Amt. of prize if answers sends in winner during 2d period, Feb. 21 Mch. 14	Amt. of prize if winner sends in answers during 3d period, Mch. 14 April 5	Amt. of prize if winner sends in answers during 4th period, April 5 April 19	Amt. of Prize for winner who does not send in answers before April 19
First Prize	$300.00	$225.00	$200.00	$175.00	$150.00
Second Prize	200.00	175.00	125.00	110.00	100.00
Third Prize	100.00	87.50	62.50	55.00	50.00

FOR GOOD FARMING, ATTRACTIVE COUNTRY HOMES AND HAPPY COUNTRY PEOPLE

THE WASHINGTON FARMER

SUCCESSOR TO

Vol. 40. No. 7 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF February 15, 1917

Want Common School of Agriculture

West Side Would Have State College Extend Its Educational Work

The need of a "common school of agriculture" in western Washington was urged at the meeting last week in Tacoma of the western Washington Horticultural association, which adopted a resolution favoring the establishment of such school by the state college in connection with the experiment station at Puyallup.

It was the consensus of opinion that such school should be open to children or their parents, with no other entrance requirements that ability to read and write the English language.

It was pointed out that owing to the fact that the state college, which is situated at Pullman, in eastern Washington, is not only distant from western Washington, but is immediately surrounded by farming conditions so different from those found in the western part of the state that farmers west of the Cascades are not adequately served It was declared at the meeting that frequently students go from western Washington points to Corvallis, Ore., to take up at the Oregon Agricultural college the subjects they wish to have given in western Washington.

The resolution asks the legislature to include in its educational tax levies a sufficient mileage to allow the establishment of such a school.

Approve Port Commission.

The association sent a telegram to the legislature in session at Olympia urging that whatever legislation be enacted concerning the Seattle port commission be drawn with a view to building up that institution rather than weakening it.

The association considered a wide variety of subjects, from farm life in general to specific matters, such as grape culture, apple culture and gardens. It was one of the most enthusiastic and helpful sessions of the organization ever held. The next session will be held at Bellevue, Wash.

Speakers included W. H. Paulhamus, T. O. Morrison of the state department of horticulture, Fred Burglehaus and Charles Orton of Sumner, Adam Eckert of Detroit, Wash.; Mrs. R. A. Small of Snohomish county, President Robert B. Miller of the association, Arthur Frank of the Puyallup experiment station, H. M. Brayton of Alderton and others.

Officers for the present year were elected as follows: J. L. Stahl, Puyallup, president; A. S. Caton, Olympia, first vice president; C. W. Orton, Sumner, second vice president; Mrs. R. A. Small, Everett, treasurer, and G. P. Stuart, also of Everett, secretary.

Next week's issue and subsequent issues of the Farmer will contain summaries of the points brought out by those addressing the convention and taking part in the discussions.

Thirteen New Laws

Governor Lister Has Signed Them

With a little more than half of the 60-day session of the state legislature over, 13 measures have become laws through passage by both houses and signature by the governor.

Two of the measures are those settling the controversy that arose when the University of Washington at Seattle undertook to rearrange the courses given by itself and the state college at Pullman by the transfer of several courses from the latter to the former.

Rabies Quarantine.

Another bill that has become a law is one authorizing the state department of agriculture to establish districts of quarantine against rabies.

Others of the 13 provide as follows:

The appropriation of $115,000 to cover the expenses of the session of the legislature.

The validation of a $2,000,000 bond issue voted by Pierce county to purchase an army post site at American lake.

Changing the name of North Yakima to Yakima only.

Potatoes

Some Varieties for Lewis County

By A. S. COREY.

To many producers a potato is a potato, while trade recognizes about three grades; the large potatoes weighing a pound and a half or over are used mainly by the dining car departments of the railroads; the fancy grade, composed of potatoes weighing from eight to 10 ounces, oval or long in shape, white or russet skinned, of shallow eyes and free from disease; the common grade composed of mercantile potatoes not in the other two classes. Some one will sort potatoes before they get on the market, and the farmers can better afford to pay themselves for this service than the city commission merchant.

Authorities seem to believe that the main reason why Yakima potatoes get from $3 to $5 a ton more than Lewis county potatoes is mainly in the grading and reputation that Yakima has built up for her product, and not because the potatoes themselves are superior. In fact, many dealers pass off Lewis county fancy potatoes as Yakimas and no one is the wiser, although the dealer profits financially thereby, and our producers lose accordingly.

As to varieties to grow that naturally he expected many different opinions from individual growers, but leading growers seem to perfer the Early Rose or Beauty of Hebron. As to the late potatoes, all united in naming the Burbank as leader, although some include as Burbank such kindred varieties as Pride of Multnomah and American Wonder. The Netted Gem was the second choice. The Up-to-Date is also a good yielder.

I would urge you farmers to combine on not more than three standard varieties so that carlots could be secured by dealers as desired; to carefully select your seed, to properly and critically grade your product. If you do this Lewis county spuds will soon command the same respect in the market as do the Yakimas.

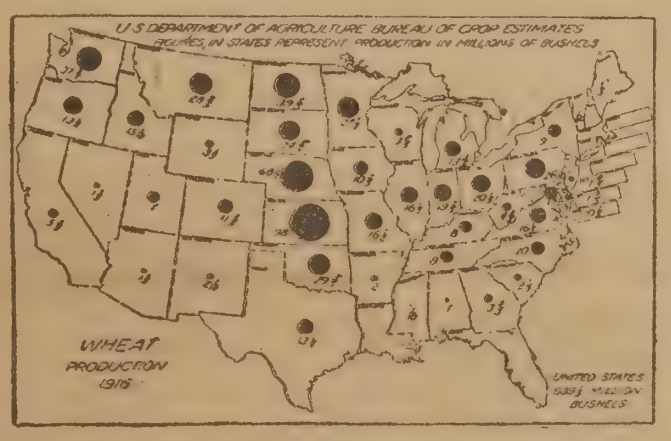
Kittitas Jail Empty.

For the first time in a good many years the jail of Kittitas county is empty.

EGGS AT $1 EACH

When Potatoes Were $14 a Bushel.

John Burbee, a pioneer of the northwest, who was visiting in Chehalis, Wash., a short time ago, related an interesting story as to the high cost of living in this section in 1848-49, at which time Mr. Burbee says his father sold a large quantity of potatoes at $14 a bushel and onions at $7 a bushel to the Hudson Bay company at Vancouver. L. C. Wallace of Kelso, Wash., says that at that time $7 a bushel for wheat was nothing unusual for a market price. He also says that at one time his father gave $1 a piece for eggs to set.



YAKIMA WOOL CROP

Of Uniform Growth and Texture.

"The wool crop of Yakima valley will be heavier and of better quality than it was last year," says George Prior. "The sheep are wintering in fine shape and the wool is of uniform growth and texture. It will be a much better quality all around than we had in the valley last year.

Wheat Production of United States

WASHINGTON RANKS FOURTH IN PRODUCTION OF WHEAT FOR 1916 AND LEADS ALL THE STATES WEST OF NEBRASKA. MONTANA IS RAPIDLY COMING TO THE FRONT. KANSAS LEADS ALL STATES.

The above diagram clearly brings out the leading wheat-producing states of the country. The diagram is made by the department of agriculture and taken from its December crop summary. By this report, it is seen that Washington, with its production of 37,635,000 bushels of wheat, is at the head of all the states west of Nebraska. Montana is rapidly coming to the front as a wheat-producing section with its record of 28,655,000 bushels. Oregon has 19,550,000 bushels to its credit and Idaho 15,071,000 bushels. Kansas leads all the states of the Union with over 98,000,000 bushels, followed by Nebraska with 68,550,000 bushels and North Dakota with 39,325,000 bushels. Of the eastern states, it will be noticed that Pennsylvania leads with 26,125,000 bushels, which is just a little less than the 27,555,000 bushels of Wisconsin and 29,585,000 bushels of Oklahoma.

Popcorn Imports

Of Washington Should Be Stopped

The state of Washington annually uses the equivalent of a great, big train load of popcorn, according to estimates made by Charles Uhden, produce dealer of Spokane. At two and a half cents per pound, which he states is considerably below the present price, this train load would be worth $24,000 to the grower. And he says that shipments which he has received from certain districts of the state convince him that it can be grown successfully here. In a statement to the Farmer, he sums up the situation this way:

Two-two Carloads.

"As far as I can find out, the jobbers of Spokane handle about five carloads a year. Using this as a basis for ascertaining the amount handled in the state, the result would be about as follows:

Spokane	5 carloads
Tacoma	5 carloads
Seattle	15 carloads
Walla Walla	1 carload
Everett	1 carload
Other jobbing centers	5 carloads
Total	32 carloads

"The lowest price at which we have bought the popcorn, which was a good many years ago, was 2 1-2 cents per pound at shipping point and since it is not best to paint things in the rosiest light, we will take this figure. (At present we pay considerably more.)

"Thirty-two carloads of 30,000 pounds make a total of 960,000 pounds at 2 1-2 cents a pound, $24,000. But if we can raise the popcorn successfully (as small shipments which I have received seem to indicate), and the grower can make money, we could no doubt ship into Montana and Idaho, perhaps British Columbia and Alberta, and thereby be enabled to dispose of double the quantity, which would represent a value of $48,000.

"The item is surely large enough to deserve consideration sufficiently to induce some one to investigate whether it is possible to raise the corn profitably."

BUILT AN ELEVATOR

Bulk Handling of Grain Crop.

Klickitat county employed B. W. Cooney as county agricultural agent the 18th of last September, since which time Mr. Cooney has given much attention to the promotion of a cooperative grain elevator which it is hoped will be the first step in solving the bulk grain problem of Klickitat county. Here is a citation from one of Agent Cooney's reports upon this subject:

"These questions naturally suggested bulk handling of the crop through a farmers' cooperative elevator. An elevator of this kind was duly incorporated March 27, 1916, at Centerville, Wash. Thirty-four shares of stock were then issued with a par value of $50 a share, giving a paid in capital of $17,000. This amount put the elevator up ready to receive the grain.

"The elevator handled 130.000 bushels of grain from August 1 to November 15, 1916, saving the farmers about six cents per bushel on the sack bill alone, or about $6500. In addition, there has been a large saving on the handling of the crop on the farm. I have been informed by several stockholders that they were able to save enough on their sack bill to pay for the shares they owned in the company."

Horticultural Inspector.

P. S. Darlington, who served the Okanogan district for four years as horticultural inspector, has been reappointed to succeed C. C. Clawson, who accepted a position with the government of Brazil.

Belied Name of Grange to Sell Stock

N. W. General Trading Co. Got Endorsement of Kegley and Lawrence

(Continued from page one.)

complete investigation by the farmers' union requested by Louis Delivuk.

Stock Sales and Commissions.

Examiner House presented figures showing sales of 10,245 shares of stock in the Northwestern General Trading company for a total of $441,296, on which there were collections of $315,-636. The total payments of commission by the Northwestern footed $101,-011, or 31.6 per cent of the entire receipts from the sale of stock.

Of $98,745 of stock sold by the Iowa Mercantile company, it was testified, $35,547 was paid out in commissions. Commissions in the Iowa company were divided equally in the beginning, the testimony showed, among T. R. Wilder, A. H. McGregor and Gale Smith. The Iowa company now is in a receiver's hands, and Wilder, its president, under indictment, according to testimony.

Nearly 32 per cent of money collected on stock sales by the Northwestern branch at Portland was paid out in commissions.

Clyde L. Davis, Portland manager, drew $1000 in commissions from the company after it had gone into bankruptcy; no authority for payment found by expert.

According to testimony, Gale Smith, president of the Northwestern General Trading company, admitted having received $10,000 in commissions, besides his salary, in two and one-half years.

Examiner H. S. House showed that in some cases all of initial payments had gone out in commissions and that the company received nothing.

Olympic Trading and Supply company paid out in commissions more than 51 per cent of its receipts from stock sales. Commissions paid on conclusion of stock sales regardless of whether collections were made or not. Thousands of dollars paid in commissions on stock for which the company received nothing. In total collections from stock sales of $142,963 the amount paid in commissions was $74,-267.

Net assets December 31, 1915, but 7 per cent of the money collected from the sale of stock.

Promises a Cash Business.

United States Attorney Garrecht for the prosecution, read excerpts from a prospectus issued by the Northwestern General Trading company:

"Our business is founded upon the soundest principles of trading known to the world—buying for cash and selling for cash. * * * This company will buy principally everything in car lots, direct from the manufacturers and producers. We will go into the markets of the world with spot cash, and therefore can command the lowest prices. * * * The board of trustees of this company are hereby prohibited by these articles from incurring any indebtedness on behalf of the company over and above such indebtedness as the said corporation may have cash on hand sufficient to pay."

The Northwestern General Trading company never on a cash basis at any time between 1912 and 1915, as shown by monthly balances taken from books.

Merchandise customers placated with the means of "rebate checks," called dividends, made up from payments on stock.

Cooperative store in Spokane charged more, witnesses testified, than the average retail store.

Is the Promise Fulfilled?

J. H. O'Gara, Laclede, Idaho, testified: "Their agent came to my house for two days, telling me all kinds of lies about that company.

"He said that a fellow could save from 30 to 50 per cent on all goods bought at their store and with the three or four shares of stock would not have to work after two years; that his dividends from the company would keep him, and all such dope as that, until he got me to sign for two shares and got my $20.

"As soon as we investigated the business I demanded my money back, told them they had swindled me, as I could not buy any cheaper than at the other stores in Spokane. Besides, they did not have hardly anything in stock. At that time I could have got my money back if I went after it right.

Operation for department for enforcing collections on unpaid stock notes outlined.

Poor people plead their case on payments for delinquent stock notes and are threatened with lawsuits.

Aged women among the victims; women solicitors used to sign up some of them.

Two subscribers for stock in the Portland concern received a letter of congratulation on uniting with "the greatest cooperative concern in the northwest" after it had gone into voluntary bankruptcy.

Among the interesting documents which came to light in the investigation preceding the present trial of the five officials of the Northwestern General Trading company was the recommendation of C. B. Kegley, master of the Washington State grange, in behalf of this company. The signed indorsement is printed in the 1915 catalogue of the Northwestern General Trading company, and is quoted here:

> Patrons of Washington:
> Your executive committee have made a personal investigation of the resources and liabilities, methods of business and quality of merchandise of the Northwestern General Trading company. We are satisfied that it is on a sound financial and cooperative basis, and through the proposed plan of a distributing center with each subordinate grange, and the active cooperation of the patrons, can be made to fill the need of the wholesale supply house for the grange members.
> Executive committee, Washington state grange.
> C. B. KEGLEY.
> J. O. WING.
> J. T. COMPTON.

Lining Up the Gronge.

The following letter from C. L. Davies, manager of the Portland branch of the Northwestern, to Gale Smith, president of the company in Spokane, was read:

"Portland, Nov. 7, 1914.—Dear Gale: Mr. Kegley and his bunch have finally indorsed the company. It took a long time to bring them over. I was up at Washougal yesterday and had a talk with Mr. Wing, one of the executive committee, and signed him up for a share of stock. He is the one that was bucking our proposition last spring at Washougal. We have him in line now; are getting him out and putting him to work undoing what he did last spring. That is the way to fix these fellows that knock. When they kick the brick wall down make them get in and build it up again.

"I am joining the grange down here and am going to be initiated tonight. I will be some granger, believe me. Heretofore when I wanted to arrange a meeting I would get in for a few minutes and then they would kick me out. But I am going to be in a position where I can go to their grange meetings and stay until the last dog is hung.

"I am glad to hear that you are getting things lined up there with a bunch that are capable of getting the business. I trust that you will be able to run onto some new proposition that will be of benefit to us. CLYDE."

Says Union and Grange Indorsed

"Spokane, Nov. 10, 1914.—Mr. Crabb, Saywer, Idaho—You understand this is a cooperative company issuing catalogs to members only. The membership numbers at this time nearly 8000 of the most progressive and enterprising people of this Inland Empire. By far the greater portion of these people are trading with the company, buying their merchandise, clothing, hardware, groceries, shoes, farm implements, vehicles, wagons, etc., through the company and report a saving of from 25 to 35 per cent on practically all kinds of merchandise. The company has prospered very rapidly, and in five years the membership has grown to nearly 8000 and the total assets to a third of a million of dollars, and the stock is selling for $75, nearly four times its original value.

"You will notice by the enclosed circular the executive heads of the Washington Farmers' union have investigated the company, its management and system of business very thoroughly and have unanimously indorsed the proposition. This of itself is going to enhance the value of the stock and should double the membership. The state grange of Washinton also took the same action and unanimously indorsed the company. Five shares is the most we can sell to one person and represents an outlay of only $375 and makes you a part owner in the Wholesale Mercantile company that is today in the foremost rank of any institution of its kind in the west and getting larger every day.
Northwestern General Trading Co.,
By Sears."

With Farmers' Union.

July 16, 1914, President Smith was authorized to work out a proposed combination with the Farmers' Educational and Cooperative union.

L. C. Crow, P. C. Cox of Colfax, J. P. Hill and J. C. Lawrence addressed the sixth annual meeting October 13, 1914, in behalf of the proposed merger with the Farmers' union. A resolution was adopted favoring a merger of the Northwestern General Trading company and the warehouse operated by the Farmers' Union and Supply company in Spokane.

It was agreed that from every share of stock in the Northwestern sold to members of the Farmers' union at $75 a share that $40 be applied on the debt of the Farmers' Union Warehouse and Supply company, amounting to $13,500.

In this connection the following communications written by C. L. Davies, treasurer and later manager of the company's office at Portland, will be read with interest:

"Portland, Oct. 19, 1914. F. B. Sears, Spokane: Please send me my receipt from the Farmers' union to show that I am their member, the initials and postoffice addresses and the official titles of the following: Crow, Cox, McCurtain and Hill.

C. L. DAVIES."

"Portland, Feb. 27, 1915.—S. T. Knudson, Seattle: I just returned from Spokane this morning. I was up for a few days to get a few little things straightened out. Mr. Gallahan (Gollehon) and Ben Gill have lost their jobs and, believe me, they are pretty sore about it. Trying to raise some trouble, but think they will give it up as a bad job. The Farmers' union bunch are standing pat with us with the exception of Mr. Delivuk.

C. L. DAVIES."

J. C. LAWRENCE

On Payroll While Investigating.

The testimony at the trial brought out the important fact that J. C. Lawrence received $50 a week from the Northwestern General Trading company when investigating it on behalf of the Farmers' union, of which he was a member. This was brought out in a cross-examination of W. L. Neihoster by Attorney Robertson.

"He told you that J. C. Lawrence was drawing $200 a month from the Northwestern when the state of Washington had paid him $500 a month as a member of the state public service commission?" "No, but he did tell us that Lawrence was put on a committee to investigate the Northwestern General Trading company when Lawrence at the time was on the company's payroll," said the witness.

"He told you that the farmers' union knew this?" "No, it was shown that the union did not know it."

Attorney Garrecht informed the court that neither Louis Delivuk nor W. G. Wynhoff appeared before the grand jury.

Lawrence Fees So Marked.

"You have testified that J. C. Lawrence received from the Northwestern General Trading company $1498. To what fund was that charged?" inquired Robertson of Examiner House of the department of justice. "To salaries and commission fund."

"No payments were made to Lawrence as purely commission?" "It was marked commission."

"Would you say from the books that Lawrence received a commission?" "I would say that he was paid a salary, first of $50 a week, which was later cut down to $35." Lawrence first drew pay on June 30, 1914, and received his last payment February 27, 1915.

"What about J. H. Taylor?" "He was on salary at $35 a week, which was later reduced to $25."

TAYLOR ON SALARY

Organizer for the Farmers' Union.

A letter, written by F. B. Sears, head of the membership department of the Northwestern, and addressed to Gale Smith at Cedar Rapids, Iowa, where the latter was assisting in the organization of the Iowa Mercantile company, was read, as follows:

"Spokane, Nov. 8, 1914. — Gale Smith, Cedar Rapids, Iowa: Mr. Jeffries, Mr. Lawrence and myself have been in conference today. Mr. Lawrence said he thought it was by far the best to put the bunch of agents all back on a commission basis. He said the other business in connection with the unions and with the bank proposition that would take up practically his entire time, therefore he wished to turn the handling of the agents back to me, which has been done, and we think it for the best.

"We are putting Mr. Taylor out on a salary, as his position should enable him to get big returns for the company. He is the official organizer for the (farmers') union, and is also in charge of the editorial department of some farmers' union papers, and pleased to get the company the advertising, which it is necessary to have, and get in and sell the stock. I feel confident that he will make good.

"This entire program has been made with the utmost approval of Mr. Lawrence, together with Mr. Jeffries and myself. Mr. Lawrence is going to address the meetings and do all he can to boost the proposition.

F. B. SEARS."

Union Bunch Stands Pat.

"Portland, Feb. 27, 1915.—S. T. Knudson, Seattle: I just returned from Spokane this morning. I was up for a few days to get a few little things straightened out. Mr. Gallahan (Gollehon) and Ben Gill have lost their jobs and, believe me, they are pretty sore about it. Trying to raise some trouble, but think they will give it up as a bad job. The farmers' union bunch are standing pat with us with the exception of Mr. Delivuk.

"C. L. DAVIES."

Leading Geek Leads to Fizzle.

"Monroe, Wash., Friday noon,—S. T. Knudson, Seattle: A man named Bennett here seems to be a leading geek, but he has just led his flock into a fizzle along cooperative lines at Everett. Edwards tried to talk to him, but couldn't even get a hearing. I'm going to make an attempt to land him. Am getting dope on him and will locate his weak spot. There sure is some way to land him and if we do it will at least break the ice.

"O. C. FOWLER."

Sends Smith Salary Check.

Seattle, Jan. 9, 1914.—Gale Smith Spokane: Enclosed you will find check for $100 salary due you for December as per your agreement with me. You will notice I am sending you my personal check, as Mr. Fowler has not felt like taking the matter up with Mr. Dabney and Pickett just at this particular time, but I am satisfied that a satisfactory arrangement will be made along this line within a short time. S. T. KNUDSON."

Are Establishing Chain of Stores.

"Spokane, April 2, 1914.—Mrs. Frank Terrill, Metaline Falls, Wash.: Furthermore the people connected with this business are at the present time establishing a chain of stores on the Coast similar to this one. Our president and general manager is vice president and assistant superintendent of the Seattle concern. Our sales department manager is now in Seattle financing the proposition there. The two companies will buy their goods together, which will have a tremendous buying power. F. B. SEARS."

Everything to Win, Nothing to Lose.

"Seattle, April 8, 1915.—S. L. Davies, Portland: I presume you have pur-

(Continued on page fifteen.)

Was $21,500 Calf Sale Bona Fide?

Charges and Denials Are Supported by Affidavits and Statements

(Continued from page one.)

The following introductory letter from H. G. Stibbs, advertising manager of the Carnation Stock farms, gives a setting to the letters that follow:

SEATTLE, Jan. 30, 1917.—To the Editor of The Washington Farmer: Herewith please find enclosed a letter written over the name of Mr. E. A. Stuart, president of the Carnation Stock Farms.

The name and reputation of the Carnation Stock Farms has been brought up in such a way in connection with the auction sale at the Pacific International Live Stock show held at Portland, Ore., last December which is quite misleading. It is Mr. Stuart's desire to clear the name of the Carnation Stock Farms of any official connection with the bidding on this animal, and we will appreciate very much your publishing this article over Mr. Stuart's name.

Thanking you very much for inserting this in your next issue, we beg to remain, Yours very truly,

CARNATION STOCK FARMS.
H. G. Stibbs.

Statement by E. A. Stuart.

Carnation Stock Farms, Seattle, U. S. A., Jan. 31, 1917.—To the Readers of The Washington Farmer: In the December 14th issue of this paper, page 4, there appeared an article headed, "Holstein Calf Sells for $21,500," etc., about the auction sale held by the Pacific International Live Stock show at Portland, Ore., December 5, 1916.

In this article, it was stated that C. W. Holmes of the Carnation Stock Farms bid on the bull calf Finderne Mutual Fayne Valdessa, which animal finally sold to J. G. Von Herberg for $21,500 on December 5, 1916.

We wish to state that Mr. Holmes, who was at that time superintendent of our western farm, was not authorized by the Carnation Stock Farms to bid on this animal. Furthermore, and contrary to reports, the Carnation Stock Farms have not listed any of their cows to be bred to this bull calf.

It is the writer's desire to clear the Carnation Stock Farms of any official connection with the bidding on this animal in view of the facts (given below) indicating that there was some irregularity regarding the listing and sale of same at auction on December 5, 1916.

In reply to inquiry regarding young bulls, my secretary received a letter from Mr. Bernhard Meyer of Finderne Stock Farms as follows:

Finderne Stock Farms, Bernhard Meyer, Owner, Finderne, N. J., Oct. 2, 1916.

Mr. F. Y. Van Patten, 3608 Thirty-seventh avenue, South, Seattle, Wash. Dear Sir: In reply to your favor of September 14 I enclose pedigree and pictures of three young bulls. They are as good as I have got them. The pictures were taken when they were very young, but they have developed to be very fine individuals at the present time and I price them as follows:

Finderne Mutual Fayne Valdessa No. 174999, $5000.

Finderne Johanna Fayne Korndyke No. 164270, ——.

King Valdessa Pride Johanna No. 187262, ——.

If you are interested in any of them and want any further information I will be pleased to give it to you, or if you want later pictures of them we will have them taken.

All three are good individuals, as good as they can make them and they are all rugged and in good health.

Awaiting a favorable reply, I remain. Very truly yours. B. MEYER.

Before leaving Seattle on November 7, 1916, for the east I heard indirectly that J. G. von Herberg had purchased the bull Finderne Mutual Fayne Valdessa. That this bull had been sold by Finderne Stock Farms previous to the auction sale on December 5, 1916, is proven in their letter of November 17 in reply to an inquiry from our Eastern farm at Oconomowoc, Wis., as follow'

Finderne Stock Farms, Bernhard Meyer, Owner, Finderne, N. J., Nov. 17, 1916.

Carnation Stock Farms, Oconomowoc, Wis. Gentlemen: In reply to yours of November 14th I must say that the bull Finderne Mutual Fayne is sold, but we still have a son out of Valdesa Scott II., whose pedigree and picture please find enclosed. This bull, King Valdessa Pride Johanna, No. 187262, is a very good individual, growthy and in perfect condition, and if you are interested you can buy him for five thousand ($5000) dollars. This is the best bull proposition that I nave on hand, etc.

Any further information will be gladly given. Should like to hear from you. I remain very truly yours,

B. MEYER.

Furthermore, upon the writer's visit to the Finderne Stock Farms on December 2, 1916, upon casual inquiry, he was informed by Mr. Meyer's herdsman that a Mr. von Herberg had purchased Finderne Mutual Fayne Valdessa for $2500 and had given instructions to have the calf expressed to George A. Gue, Portland, Ore.

In view of these facts we desire to clear the Carnation Stock Farms of any alleged connection with the bidding on this animal.

Your very truly,
CARNATION STOCK FARMS,
E. A. Stuart, President.

Telegrams and Replies.

Upon receipt of the above communication from E. A. Stuart, president of the Carnation Stock Farms, the following telegram was sent by the Farmer to Bernhard Meyer of Finderne Stock Farms, under date of Spokane, February 2: "E. A. Stuart, president Carnation Stock Farms, sends us communication for publication embodying copy of your letter October 2, offering Finderne Mutual Fayne Valdessa for five thousand dollars and copy of your letter November 17 to Carnation Farms, Oconomowoc, stating bull sold. Also says your herdsman told him December 2 this bull purchased by Von Herberg, Seattle, for twenty-five hundred. At live stock show, Portland, bull officially reported auctioned from you to Von Herberg for over twenty-one thousand. Prices and dates of sale in statements and at Portland conflict. Will publish Stuart's communication in next issue and will appreciate prompt wire from you as to when bull sold, at what price and to whom."

"Was Not True.

In reply, Mr. Meyer wired:

Finderne, N. J., via Somerville, N. J., Feb. 4, 1917.—Bull was sent by me to the sale under the recommendation of Von Herberg, guaranteeing me five thousand dollars at least, and all he would bring above it. What my herdsman said was not true.

BERNHARD MEYER.

Believing that the correspondence needed further elucidation a second wire was sent to Mr. Meyer as follows: "Your answer does not state to whom bull was sold or the price you actually received for him. Please give this information promptly by wire at our expense. Is report in our issue of December 14 that you sold bull to Von Herberg for twenty-one thousand correct?"

A second telegram from Mr. Meyer given below add further interesting information as to the sale of the $21,500 bull calf:

Finderne, N. J., via Somerville, N. J., Feb. 5, 1917.—The statement in your issue of December 14 is correct. The bull was sold at auction for twenty-one thousand five hundred dollars to Mr. von Herberg. After deducting commission, freight and expense I received the balance of my money in full. Exact amount what I got is my business.

B. MEYER.

The following telegram was sent by the Farmer to J. von Herberg, Seattle, under date of Spokane, February 2: "We have communication from E. A. Stuart, president Carnation Stock farms, for publication in which are embodied copies of letters from Bernhard Meyer of Finderne, N. J., offering Finderne Mutual Fayne Valdessa for five thousand dollars to him and statement from his herdsman that you bought this bull prior to December 2 for twenty-five hundred. At portland Live Stock show this bull officially reported sold on December 5 to you for over twenty-one thousand. Prices and dates of sale conflict as well as facts. Will publish Stuart's letter next issue and will appreciate prompt advices from you covering as full details as possible regarding your purchase of this animal."

No response was received to this telegram until February 8, when the following signed statement come from Mr. von Herberg, together with affidavits and other documents.

The reader will notice that some of these affidavits were executed early in January, showing that there was a growing sentiment questioning the sale of the bull calf Finderne Mutual Fayne Valdessa.

J. von Herberg's Statement.

Seattle, Feb. 7, 1917.—to the Editor: You have invited an answer from me relative to a certain communication made to you by E. A. Stuart for publication. I have not been favored with o copy of Mr. Stuart's communication, but am informed in a general way that he charges that the auction sale conducted by Mr. George A. Gue of North Yakima at North Portland, Ore., at which the young bull—Finderne Mutual Fayne Valdessa—was offered for sale and sold for $21,500, was fraudulent and that I purchased said bull at private sale from Bernhard Meyer for $2500. Mr. Stuart has evidently allowed his ill feeling for me to get the better of his judgment. I can see no other motive for his accusations. Sometime since I purchased from Mr. Stuart some cows, one of which was tubercular and two of which were aborted. I had reason to believe that Mr. Stuart knowingly sold me the diseased animals, and compelled him to return me my money. Subsequently, he attempted to sell me a bull, but forewarned was forearmed and I declined to deal with him. Since which time he has apparently held a great animosity toward me. Ordinarily, I would let his statements go unanswered for, as is well known, the Portland sale was openly conducted by Mr. Gue and some of the most representative Holstein breeders of the northwest attended and participated therein. It is idle, indeed, for Mr. Stuart to attempt to make the public believe that such men as William Bishop of Chimacum, A. E. Smith of Sumas, Mr. Boomer of Idaho, Mr. John L. Smith of Spokane and Mr. C. W. Holmes, then of the Carnation Stock Farm, would lend themselves to any fraudulent scheme; yet all of these men, and others of equal prominence, were at the sale and took part in the bidding on the bull. However, as I feel that the charges reflect not upon me only, but upon the distinguished gentlemen who conducted and took part in the sale I have concluded to take advantage of your invitation and lay the facts before the public:

Bidding on the Calf.

The bull was bred by Mr. Bernhard Meyer of the Finderne Stock farm, Finderne, N. J., who has probably made more world's records than any other Holstein breeder, and whose integrity has never been questioned and who, on the 4th of November, 1916, consigned without reserve, the bull to the Portland sale. I append a copy of Mr. Meyer's letter so consigning it. A large number of Holstein breeders of the Pacific northwest attended the sale, among those present being Charles W. Holmes, then superintendent of Mr. Stuart's Carnation Stock Farm, near Tolt, William Bishop of Chimacum, Henry Boomer of Idaho, A. E. Smith of Sumas, John L. Smith of Spokane and myself. Mr. Gue exposed the bull for sale and the bidding was general and lively until the price had reached up into the thousands. A. E. Smith continued to bid until his final offer was $9000; Mr. Bishop until his bid was $16,000; and Mr. Holmes until his final bid was $21,000. Sometime later I was informed by Mr. Gue that Mr. Stuart was circulating reports to the effect that the sale was fraudulent and because thereof he had obtained affidavits from some of those present. Since you informed me of Mr. Stuart's communication to you and invited my answer I have obtained from Mr. Gue certain of the affidavits and Mr. Meyer's letter consigning the bull to the sale, and I append hereto copies of the affidavits of William Bishop, Albert E. Smith, George A. Gue and C. W. Holmes.

Holmes Bought Cow.

I also understand that Mr. Stuart is now claiming that Mr. Holmes had no authority to appear at the sale and Make any bid on behalf of the Carnation Stock Farm. Personally knowing that Mr. Holmes on previous occasions, particularly at the Snohomish sale, had purchased stock for the Carnation Stock Farm and that he at different times priced and sold stock from the Carnation Stock Farm, and, indeed, that at the Portland sale he purchased a cow for upward of $1000, I saw Mr. Holmes and informed him of the claim made by Mr. Stuart. His answer is contained in his subsequent affidavit, a copy of which I attach. The omitted portion shown by the asterisks is withheld because of the fact that it involves personal matters matters between Mr. Stuart and Mr. Holmes, which, to a certain extent, cast reflections upon Mr. Stuart and which are of no consequence, except as showing a reason for Mr. Stuart now claiming that Mr. Holmes had no such authority.

Mr. Stuart's statement that the bull was bought by me at private sale for $2500 is absurd and I am informed that Mr. Stuart even was frank enough to admit that this statement was based upon some remark of an employe at the Finderne Farm. However, I attach a copy of an advertisement inserted by Mr. Meyer in and clipped by me from the January 25, 1917, issue of Black and White Record. It will be noticed that Mr. Meyer states that the bull was sold at the Portland sale and purchased thereat by me for the highest price a young bull ever brought. The fact that Mr. Meyer may have previously advertised or offered the bull for sale at $5000 is of no moment, for it is well known that persons frequently fail to realize the true worth or market value of an animal and offer to sell the same for a price much lower than the animal subsequently brings when judged by experienced stock men. I can cite many such instances, but feel confident that every breeder knows such to be the case.

Alleges Jealousy.

Mr. Stuart should not allow his personal enmity toward me, nor his jealousy, which has been aroused because of his knowledge that in the possession of Finderne Mutual Fayne Valdessa I have one of the best if not the greatest bred bull in America today, to lead him in making further attacks upon me or other Holstein breeders in this

(Continued on page seventeen.)

Since charges of irregularity have appeared with regard to the sensational sale of the bull calf Finderne Mutual Fayne Valdessa for $21,500 at the Pacific international live stock show at Portland December 5, 1916, and since evidence has been produced, we deem it right to print it in full.

We have two excellent reasons for this: First, because a number of well-known and responsible men are involved and it is only right they should be heard. Second, and even more important, is the fact that all farmers interested in Holsteins (in dairy cattle, in live stock of any kind) have a right to know all about a matter of this sort. They are entitled to this information.

Don't worry about the breed. It will not suffer. There is nothing charged against the Holstein cow or bull.

We make no charges—we print exactly what these men say, word for word.

This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Northwest Farmers Alert

Under normal conditions nearly one-half of the exports from the United States to foreign countries consist of agricultural products. It follows that the American farmer should be the most interested citizen in foreign trade questions. But B. F. Harris, a prominent corn belt farmer and banker of Champaign, Ill., told the national foreign trade convention at Pittsburg last week that the American farmer knows less and cares less about the underlying forces in foreign trade than any other citizen.

While that assertion may be true in general, it is not applicable to our farmers in the Pacific northwest. From early days in Washington, Oregon and Idaho the farmers here looked to foreign markets for buyers of their surplus products. Ships from Europe came into Puget sound and the Columbia river seeking cargoes from the farms of the Willamette valley and the Inland Empire, and our farmers have always been alert to the importance of foreign trade and all public movements to foster it.

They have stood insistently for the opening of the Columbia and Snake rivers to navigation. They took a keen interest in the building of the Panama canal. They are awake to the importance of the upbuilding of an American merchant marine.

From his nearness to the sea the farmer of the Pacific northwest has enjoyed a broader outlook on world trade, and he will be found a keen student of the new and difficult problems that are the outgrowth of the European war.

Cooperative Lyceum Course

Actual, practical cooperation between the people of a town or city and the farming community surrounding it is admirable, and one of the things most to be sought after in the development of the country.

Idaho Falls, Idaho, and the people in and about it have ventured a little farther than most communities have along social and educational cooperation. They have gone in together to conduct a free rural lyceum course of entertainment and educational features. The commercial club, the schools, the good roads associations, the government and the farmers and residents of the city contribute. The programs consist of one-half purely entertainment, but of a high tone, and the other of education. Music, readings, humor and the like comprise the one-half. Lectures on practical subjects comprise the other. At one of these entertainments recently there were 150 persons present.

Such a thing is not only possible, but thoroughly practical for any community, and it not only gives two hours of pleasure with a bit of practical education, but it binds all elements of the community together into a cooperative alliance that promises much for the future good of all its people.

Community Property

A large daily paper recently published a photograph of a man and woman grown gray together in the rearing of a family and the wresting of a livelihood for themselves and their children from the soil. A heading over the picture read: "Pioneer Who Accumulated Fortune of $500,000 From the Soil, and His Wife."

The point of order may probably be taken that the heading should have read: "Pioneer and His Wife Who Accumulated Fortune." For, is it not true that the wife on the farm—of anywhere else that she is "a helpmeet"—is a real copartner in the accumulation of whatever fortune is accumulated?

Nemesis

There is an ancient doctrine that goes back to the heathen mythology, according to which a divinity presides over the destinies of man to keep him from becoming too successful, or to cast him down if his head rises too high. Sometimes it is represented as a jealousy on the part of the gods, who, knowing the ambitions of the human heart, watch lest men rival the gods, and, perchance, overthrow them.

At other times the doctrine appears to be the more prosaic law of compensation by which the good and evil in human life balance each other. Lazarus in heaven enjoys happiness to compensate for his miseries in this earthly life. The rich Dives, who had no unsatisfied wish on earth, burns for it in the nether world.

We all are under the influence of this doctrine more or less, even in common things. If there has been a long, dry spell, we think there must be coming a period of extraordinary rainfall to make up for it; if the summer has been very hot, the winter will be very cold to even up.

We carry this feeling into our social judgments and wishes. No sooner do our neighbors begin to prosper than we begin to invoke Nemesis against him. We act as though we feared Nemesis would not get hold of him and pull him back quick enough, so we lend a hand. We become envious and jealous of his prosperity. If the beauty of his house and grounds is commended, we say: "Yes, but he gives mighty little to the church." If his barns are filled with plenty and his live stock receives favorable notice, we admit it, but remark that he makes a slave of his wife and children for the sake of getting rich. If a youth stands high in his classes, we hint that he is getting the bighead. If the young lady is pretty and dresses well, we suggest that her mother had better keep a pretty sharp eye on that daughter.

In fact we are determined that we are going to be earnest helpers of Nemesis, and at least see to it that nobody gets too high without our dragging onto his coattails to bring him down low.

If only we could reverse the matter and try to balance things by helping somebody up from below we would be happier for it.

E. A. BRYAN.

The Interstate Bridge

The completion and opening to traffic of the bridge across the Columbia river, Columbia slough and Oregon slough, adding a vital link to the great Pacific highway down the Coast and connecting the states of Oregon and Washington in a very practical way marks the accomplishment of a purpose that tested engineering skill and the faith of the people of two counties. The bridge was made possible at this time by the voting of bonds by the counties of Multnomah, Ore., and Clarke, Wash. These bonds undoubtedly will, at no remote day, be redeemed by the two states, but the public spiritedness and industrial confidence of the people of these counties stand as an inspiration to the northwest.

The great bridge, which is nearly four miles long and is claimed to be the longest in the world, cost one and three-quarters millions dollars, and is built of thousands of tons of concrete and more than 8000 tons of steel.

Washington Gleanings

Unusual interest in silos is reported from the Dayton (Columbia county) district.

O. M. Fleming has sold his 567-acre ranch at La Crosse to A. M. Winn for $45 an acre.

Wenatchee will have a fruit byproducts plant the coming season, and it will make cider, vinegar, jellies and evaporated fruit.

It is reported that two Seattle men will establish a condensed-milk plant at Mount Vernon in the spring, at a cost of $125,000.

A moving picture machine has been installed at the farm home of T. J. Harrah in the Yakima valley. He plans two picture shows a week.

More than 65 prunegrowers assembled at Vancouver and appointed a committee of three to formulate plans for a prunegrowers' union or organization.

Garfield county will be made the new home of some 20 families who plan to migrate from Missouri and locate in one community this spring in the state of Washington.

Rosalia, in Whitman county, held a potato day recently, with a display of potatoes and a "feed," at which the potato constituted the leading article on the bill of fare.

The Farmers' Union Warehouse company of Palouse has paid $15,000 for potatoes since the crop came in, and with other shipments it is estimated that $25,000 worth of potatoes have been shipped out of Palouse during the season.

The Libby-McNeill Canning company of Oregon has a representative in Yakima soliciting pear tonnage for the coming season at a price said to be $22 per ton. It is thought the company will try to contract for about 1500 tons.

L. E. Ensor has made the largest single sale of wheat ever closed in Reardan, 40,989 bushels, 25 pounds. The lot was in bulk, and consisted of mixed varieties, mostly marquis. He received $61,264.25, or about $1.50 a bushel.

Approximately 1000 acres of land, mostly timber land in the vicinity of Davis Peak, on the north fork of the Lewis river, about 10 miles northeast of Woodland, Wash., will be opened to homestead entry at the Vancouver land office on February 21.

Professor W. T. Shaw of the zoology department of the Washington State college and Professor I. D. Charlton of the department of agricultural engineering have secured a patent on a machine for the extermination of ground squirrels and other underground pests.

A "wool car" from Washington, D. C., has been secured by W. S. Thornber, director of the extension department of W. S. C., to tour Washington the latter part of March. The demonstration car will be in charge of U. S. experts and a state college man will probably travel with the delegation.

The state experiment station at Pullman is going to issue a bulletin on "A Soil Survey of the Proposed Palouse Irrigation Project," including a detailed survey of the 103,000 acres of land in southern Franklin county, which may at some time be put under irrigation with water from the Palouse river.

A farm loan association has been organized at White Salmon. Thirty-six applicants signed the articles of the association. The directors are C. B. Hilton of Lyle, Wash.; D. W. Plank of Dorr, Wash.; C. A. Wagner of Laurel, Wash.; William Olson of Husum, Wash., and W. W. Hawn, Theodore Adams and D. Hunsaker of White Salmon.

What Others Say

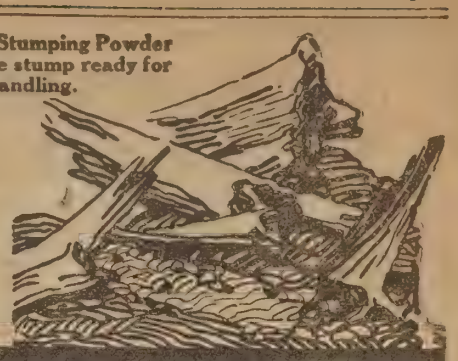
Farm Journal: Plan a job before you tackle it.

Southern Agriculturist: Even a cracked resolution is better than none.

Farmers' Mail and Breeze: Now the booze seller seems to have no friends anywhere.

Hoard's Dairyman: The growing animal is doing work just as much as is the producer and should be fed accordingly.

Green's Fruit Grower: It is not safe to assume that since a certain method of pruning is desirable for one tree or shrub, it is equally desirable for another.



The first step in stump blasting; making hole under the stump.

Loading sticks of Giant Stumping Powder in hole under center.

Giant Stumping Powder left the stump ready for easy handling.

Save money on your stump blasting

The explosives that get stumps out cleanest and cheapest are those that have a heaving and lifting effect, shattering the stumps just enough to break them up. Then you can handle them easily.

"The farmer," says an Experiment Station, "should use an explosive prepared especially for his work; one that stands all ordinary shocks of handling and transportation and does not easily freeze. He does not need and should not use the expensive nitroglycerine explosives." Thousands of farmers have taken this advice and have found that

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

always save them money because they go further than any other stumping powders. Also, because they are made especially to suit *western* farm conditions and because they are always uniform in composition and action.

Giant Farm Powders—the product of the oldest manufacturer of high explosives in the United States—are the only genuine "giant powders" for agricultural use. They are made in two brands—Giant Stumping Powder and Eureka Stumping Powder.

Giant Stumping Powder is the ideal explosive for blasting stumps in wet ground. It keeps perfectly for months, resists water and chilling, and gets the stumps out economically.

Eureka Stumping Powder is the money-saving, low-freezing explosive for blasting stumps in dry soil. It costs less than Giant Stumping Powder and careful blasters save many dollars by using it for wet work also.

EVIDENCE

I bought five boxes of your Stumping Powder and now I want to sell a lot of other powder that I have.
RUDOLPH STADELI, Silverton, Ore.

Your Stumping Powder has a wide breaking power and less fumes to contend with after being exploded than any other on the market.
G. L. METZGER, Hillsdale, Ore.

In using a thousand pounds of your Stumping Powder neither I nor any of my men had the least bit of trouble in getting the very best results. I have used practically every powder on the market and find there is more strength in yours. J. L. EIDSON, Silverton, Ore.

Your Stumping Powder shoots the roots and spreads wide in the ground instead of going down. It is the best powder we have used.
G. S. McCARTNEY, Russellville, Ore.

I find your Stumping Powder all you claim for it. ELI CLINKER, Camas, Wash.

I am a large user of powder in stump blasting as well as in grading roads, breaking boulders and making ditches. I get good results from the Giant brands all the time.
MICHAEL HARVEY, Charleston, Wash.

Giant Stumping Powder gives good results when all other means of removing stumps have failed.
ROBERT CHABOT, Moclips, Wash.

Make This Test

You want to clear your land as cheaply as you can. If you are not using Giant Farm Powders, try them *now*. Mark and mail the coupon at the right. We will have our nearest distributor supply you—at the lowest market price—with a 25-pound or 50-pound case of Giant Stumping Powder or Eureka Stumping Powder. Compare this with any other and *prove* for yourself that Giant Farm Powders will save you money, time and work.

We Issue Five Valuable Books for the Farmer

They tell and show how to remove stumps and boulders, how to increase the fertility of the farm by blasting the subsoil, how to have earlier-bearing, thriftier orchards by blasting holes for trees, and how to drain your land by using Giant Farm Powders. These books are written especially to cover Pacific Coast conditions, and will be helpful to every farmer. Choose the books that you prefer and *mark and mail the coupon.*

Hood Farm Jersey Produces 1000 Pounds

The cow pictured here is Sophie's Adora 299594, one of the pride Jerseys of the Hood Farm, Lowell, Mass. She went on test at one day over four years of age, and in the following 365 days produced 15,852.2 pounds of milk containing 888 pounds of butter-fat, which amounts to 1044.7 pounds of butter, figured on the 85 per cent basis.

This record is claimed to make her world's champion 4-year-old Jersey, and champion of all Channel Island breeds of that age, as she surpassed the records of Successful Queen (Jersey) and of Azucena's Pride (Guernsey).

She is a daughter of Pogis 99th of Hood Farm, the sensational son of Sophie 19th of Hood Farm; her dam is Lass 59th of Hood Farm, who is a daughter of Hood Farm Torono. She is three-quarter sister to Sophie's Bertha, who was sold in a recent auction for $5000.

The Hood Farm, of which C. I. Hood is proprietor, is one of the most widely known dairy breeding farms in America, supplying to other breeders many of their choicest animals.

Questions
Are Answered by A. B. Nystrom

Will you kindly tell me the best treatment for a cow that occasionally has some small lumps in the milk? I believe it is called garget, or something like that. The milk is this way perhaps every four or five weeks, for a couple of milkings, and then goes away.

V. G. S., Seattle.

There is a possibility that your cow has garget and if that is the case you may find it difficult to get rid of it. Usually massaging the udder after having made hot applications for about 15 or 20 minutes effects a relief. The thing to do is to bring blood to the udder. You do this by increasing the circulation and that tends to carry away the infection. At the time regulate the feed so that the cow is getting considerable laxative feed. Feed plenty of succulence, good hay, and a well balanced grain ration.

MILK FEVER, BLOAT
Symptoms and How to Relieve.

What are the symptoms of milk fever, and when do they usually appear? What is the best method to relieve bloat? How can a cow's cud be restored after it has been lost?

E. J. E., North Yakima.

The above questions are answered by A. B. Nystrom, professor of dairy husbandry of the State college at Pullman, as follows:

When a cow has milk fever the udder usually is rather empty. The cow lies down and throws her head back toward her side, sort of indicating a severe pain. The milk fever usually appears the first day after the calf is dropped, although it may appear any time within the first week. The best way of preventing milk fever is to feed lightly for the first two or three weeks previous to freshening and also for the week following freshening, but if a cow has milk fever I would suggest that you pump the udder full of sterile air and leave it there until the condition is removed.

Bloat in cows can be prevented by turning the cows onto alfalfa or clover pastures gradually, or by letting them eat a considerable amount of the dry hay before they go on to the pasture. Cows should never be turned onto an alfalfa pasture while it is wet. If a cow is bloated relief can usually be effected by tying a large wooden bit in the cow's mouth, so that she is forced to keep her mouth open. This sort of gage the cow and she belches the gas out. If the cow is down it may be necessary to puncture the paunch on the left side with a trocar. This always gives relief and is not a serious operation at all.

The chewing of the cud is what we call rumination and this is normal in all ruminants, such as cattle, sheep, goats, etc. When these animals are out of condition they do not ruminate and it is spoken of as losing the cud. The cud, in the strict sense of the word, refers to the ruminating process, which is bringing the food from the first stomach or paunch back to the mouth to be rechewed before it goes into the second stomach. When the cow does not ruminate it indicates that she is not well.

CARE OF THE COW
Change Feed Before She Freshens.

What is the proper care of the cow, to become fresh in two or three weeks? What feeds, etc?

E. J. E.

North Yakima.

The Answer.

Professor A. B. Nystrom of the Washington State college says:

In taking care of a cow that is about to become fresh I would advise you to change the feed and give her laxative feeds largely. If you are feeding any grain it should be a mixture of bran and oats, or perhaps bran alone will be just as well. Feed alfalfa and clover hay rather than any of the cereal hays and give plenty of succulent feed, such as roots or silage.

Within a few days of calving time give the cow warm water to drink, and you will have very little difficulty. This warm water should be continued for a couple of days after the calf is dropped, and a very light feed is given a cow at this time. As she graduatelly gets over her sickness of calving you may increase the ration slowly until at the end of a week or 10 days she will be getting a ration similar to the rest of the herd.

BEETS FOR STOCK
Used to Furnish Succulence.

What is the best variety of beets for stock, especially for milch cows? Which varieties grow the most thrifty and largest?

P. H. S., Colville.

Professor A. B. Nystrom of the dairy department at the State college at Pullman answers the above question as follows:

We usually figure that the variety of beets does not make any difference so far as the feeding is concerned. These root crops are watery concentrates and are used to furnish succulence which is necessary in every ration. Of course, we take advantage of the feeding value and of the nutrients that they contain, but still we feed them more for the succulence they furnish than for the nutriment that they furnish. Therefore, we usually advise the raising of that crop which will give the highest yield of good succulence at the least cost. The crop that would be best in your section would probably not be the best in another section and it remains for you to determine under your conditions which is the best crop to use.

CLALLAM COUNTY COWS
Ned Hart's Grade Jersey at Head.

In the report of the Clallam county Cow Testing association for the month ending December 18, 1916, a grade Jersey cow, belonging to Ned H. Hart, stands at the head, giving 990 pounds of 6.7 per cent milk, which produced 66.3 pounds of butterfat. Three other cows have exceeded the 50-pound limit—all grade Jerseys. That of Homer J. Hart gave 807 pounds of 7.6 per cent milk and produced 61.3 pounds of butterfat; that of George S. Willis, giving 924 pounds of 5.7 per cent milk, producing 52.6 pounds of butterfat, and that of Lou Doran giving 888 pounds, 6.9 per cent milk, producing 52.4 pounds of butterfat. Eleven other cows in the association gave over 40 pounds of milk during the month.

Profitable Dairy.

J. N. Griffith of Blaine county, Idaho, has been keeping tab on his dairy business. From January 1, 1916, to January 1, 1917, Mr. Griffith's dairy consisted, on an average, of 12 cows, which entered into the year's business and gave the following very comfortable results: The total yield of butter fat for the year was 2253 pounds, which brought a total of $760.70, and which, as Mr. Griffith figured all the conditions, was $65 per cow for the year.

As to Balanced Ration for a Cow

Will you please compute a balance ration which will be advisable for me to use, from the following feeds? I am selling whole milk and have grade cows, weighing from 600 to 1000 pounds. I have silage in good condition that is composed of about two parts oats to one part of Canadian field peas, and also alfalfa hay that cost me about $20 per ton. The following concentrates are available:

	Per lb.		Per lb.
Peanut bran	$21.50	Rolled barley	46.50
Wheat bran	29.00	Oil meal	43.50
Wheat shorts	32.00	Soy bean meal	43.50
Rolled oats	39.00	Alfalfa ground hay	27.50

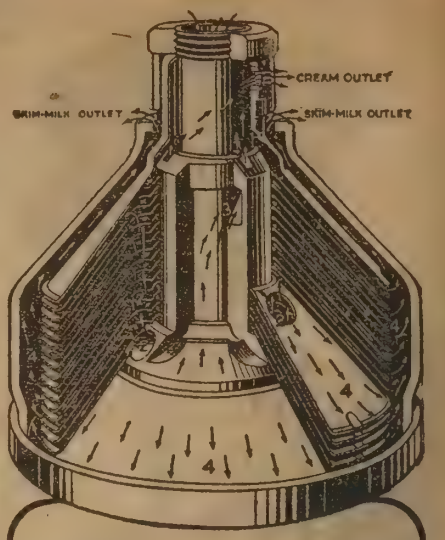
Of course some of these feeds are too high to use, but I believe this covers the list pretty well.

S. E. McC., Goshen.

Answered by A. B. Nystrom.

I note that you have peanut brand at $21.50 per ton, and you state that this has a nutritive ratio of 1:7.51. Professor Henry states that peanut hulls, which accumulate in great quantities at the factories, are sometimes ground and used for adulterating feeding stuff. This material, sometimes wrongly called peanut bran, is over half fiber and less valuable than common straw. I am wondering if you have the real peanut bran with a high nutritive value, or whether it is the peanut hulls you refer to. If an exact calculation of a balanced ration were to be made, we would have the following: A 1000-pound cow, giving 25 pounds of 4 per cent milk daily, would need for maintenance and for milk production:

Dry matter.	Purpose.	Protein.	Carbohydrates.	Fat.
25 lbs.	Maintenance	.7	7.0	.1
	Milk production	1.35	6.0	.52
25 lbs.	Total requirements	2.05 lbs.	13.0 lbs.	.62 lb.



All of the low priced feeds you have given are high in protein and relatively low in carbohydrates, and for this reason it is not possible to get a very cheap ration for you without having it what we would term "too narrow," carrying a little too high a percentage of protein.

I have figured out that by using the following you can get fairly good results and it will approximate the standard:

		D. M.	Prot.	C. H.	Fat.
Alfalfa hay	10 lbs. @ $20 a ton 10c	9.1	1.06	3.9	.39
Pea and oat silage	35 lbs. @ $4 a ton 7c	9.625	.84	4.7	.35
Wheat bran	3½ lbs. @ $29 a ton 5c	3.1	.4375	1.45	.105
Oats	3 lbs. @ $39 a ton 6½c	3.2	.34	1.82	.133
Total cost	28.5c	25.02	2.6775	11.87	.678

This gives a ration with a nutritive ratio of 1.5 and the cost is 28½ cents. The carbohydrate is a little low, but aside from this I think the ration will give good results.

You can get a cheaper ration by about ½c per day by having five pounds of wheat bran and two pounds of oats, rather than equal parts of wheat bran and oats, but this will give you a ration of a nutritive ratio of 1:4.8, which is very narrow. If the peanut bran is of good quality and not chaff I would suggest that some of it be used to widen the ration.

Here is the heart of
The NEW
DE LAVAL
CREAM SEPARATOR

This is the new self-centering De Laval bowl with detached spindle, that is creating such a sensation in the dairy world.

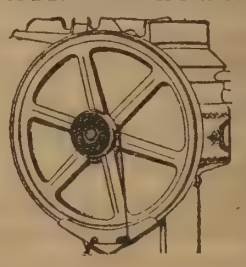
This new De Laval bowl, with patented tangential tubular milk passages and patented removable milk conveyor, makes possible in a bowl of given size and weight, operated at a given speed, greater skimming efficiency and capacity than has ever before been attained in any other cream separator bowl.

These are big advantages that you can secure only in the New De Laval.

But aside from the big advantages of greater capacity and closer skimming, there are many other important improvements in the New De Laval.

All discs are now interchangeable and are unnumbered. There are fewer discs. On account of greater simplicity of bowl construction, the New De Laval is easier to wash and, capacity considered, is still easier to run than before. High grade construction and design, together with perfect automatic lubrication, are a guarantee that the splendid De Laval record for durability will be maintained in the new style machine.

If you are trying to get along without a cream separator or with a half-worn-out or unreliable machine, why not get a NEW De Laval NOW and stop your cream waste? You don't need to count the cost, because the De Laval will soon pay for itself.



There is a De Laval agent near you who will be glad to explain all the improvements and advantages of the New De Laval, and will set and start a machine for you on your farm and let you try it for yourself.

Why not see the nearest De Laval agent at once? If you do not know him, write to the nearest office for any desired information.

New Catalog will be mailed upon request

De Laval Dairy Supply Co.

Raise Your Calves on
Blatchford's Calf Meal
and Sell the Milk

More calves have been raised on Blatchford's Calf Meal than on all other milk substitutes combined.

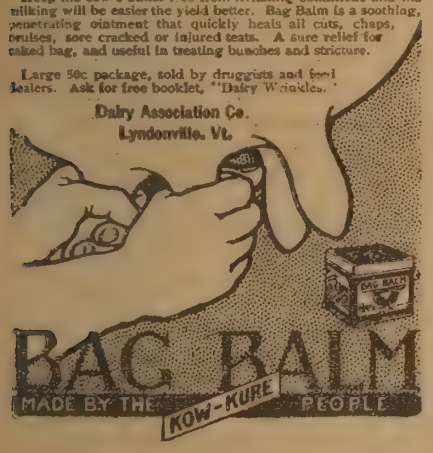
100 lbs. makes 100 gallons of milk substitute, costing only one-third as much as milk.
Prevents scouring and insures the early maturity of sleek, handsome calves.
It is steam-cooked and no trouble to prepare or use.

Write for Pamphlet "How to Raise Calves Cheaply and Successfully with Little or No Milk." At dealers, or Blatchford Calf Meal Factory, Dept. 58 Waukegan, Ill

Spokane Seed Co.
Distributors.
Spokane, Wash.

ANKER-HOLTH

When you buy a Cream Separator, get the latest in separator construction. The Anker-Holth has many very important improvements that place it far in the lead. These features are the reason for so many being sold. Hundreds have been sent out from Portland, and they are now going faster than ever. WHY? Because the users have to talk about them, and their neighbors see them, and then they want one. The best is none too good for you.



The J. C. Robinson Co.
48 First Street, Portland, Ore.

Comfort for Cows

Keep the cow's udder free from irritating conditions and the milking will be easier the yield better. Bag Balm is a soothing, penetrating ointment that quickly heals all cuts, chaps, bruises, sore cracked or injured teats. A sure relief for caked bag, and useful in treating bunches and stricture.

Large 50c package, sold by druggists and feed dealers. Ask for free booklet, "Dairy Wrinkles."

Wool Sale

Gets $64,000 for 160,000 Pounds

By A. B. KEITH.

Fred I. Long of Frazier, in northern Montana, last week sold 160,000 pounds of wool for $64,000, or 40c per pound. The wool had been stored in a wool warehouse, having been clipped in 1915, and was sold to a Boston firm. At the time the wool was sheared, a year and a half ago, the fleece was selling at from 24c to 25c per pound, but Mr. Long held out for 26c. The buyers would not consider it at that figure, so Mr. Long placed it in storage and for some time he has been predicting 40c wool. That expectation was realized in the sale last week. The news has roused interest in wool circles and Montana flockmasters feel very optimistic concerning this season's prices.

Mr. Long at one time was one of the largest flockmasters in northern Montana. Last year, however, he disposed of the most of his holdings in that line and retired. He is heavily interested in real estate in and about Great Falls.

FARMERS' CREAMERY
Sells 156,966 Pounds of Butter.

During the last year the Kennewick Cooperative creamery, Benton county, Wash., sold 156,966 pounds of butter, 2170 pounds of ice cream from the 129,203 pounds of butter fat bought from the farmers of Richland and Kennewick. The gross amount this business brought the company was $50,888.79.

Farmers were paid $12,035.08 for butter fat. The labor cost of the year was $2868.75; interest, $96; new equipment, $935; accounts payable, $275; general expenses, $3220.73; leaving a net profit to the ranchers who own the creamery of $1157.43.

The investment of the company, besides the plant, is represented in the report as cash on hand, $3048.98; accounts receivable, $1685.77; invoice, $375, giving a total of $5007.75.

The total gain of the company during the year is represented by the new equipment and net gain, and shows a total of $2092.43.

The company has been paying better than 1 cents a pound above the market for butter fat.

DAIRYING IMPROVING
Jefferson County Noted for Output.

CHIMACUM, Jefferson County, Wash., Dec. 28.—The main occupation in this part of the country is dairying, which is steadily improving, as a cow testing association has been running for over six months. Some of the herds have a few cows that are making very good records. During the month of October one Holstein cow made 92 pounds of butterfat and many of them make from 50 to 74 pounds of butterfat. One herd of ten cows averaged 41 pounds of butterfat. Most of them are purebred Holsteins. There are a considerable number of new buildings being erected and a few silos have been put up and filled the last season.

JOHN VAN TROJEN JR.

KILLS YOUNG LYNX
In Heart of Coeur d'Alene City.

A young lynx weighing 28 pounds and measuring 28 inches from the tip of his nose to the tip of his tail was killed the other morning at the corner of Second street and Lakeside avenue, in the heart of Coeur d'Alene city. The animal had apparently been driven from the mountains by the deep snow. He came up Second street from the lake. Several men joined in the pursuit and R. L. Urquhart killed him with a blow over the head with a club.

DIAMOND O RANCH
Changes Hands at $70,000.

Seventy thousand dollars for 2900 acres of land is the amount Ira Sanders, manager of the Diamond O ranch, received when he disposed of the Diamond O property near Blaine in Beaverhead county, Mont., to W. A. Staudemeyer of Minnesota. It is understood that the live stock and the farming implements went with the sale. The Diamond O ranch is one of the best known ranches in southern Montana.

Sun-Dried Beef.

In Latin America sun-dried beef is stretched for tether ropes.

How to Get More Cream

You can skim to a trace with the New National. You get practically 100% of your cream.

It is a big profit maker for you. The finest machine ever built. The handsomest machine. The most durable machine. Bearings of refined brass and finest steel. Lasts a lifetime. The easiest to run. The easiest machine to clean. The machine that quickly pays for itself in more cream profits and in the saving of your time and labor.

New National

The New National has won in every competition. It won because it was the best machine and the best made machine. It won because it skims more cream. If you have two cows or more the National is the machine that will make the most money for you. Remember, the New National is the only machine with the marvelous Vortespoon one-piece skimming device.

Marvelous Vortespoon

The marvelous Vortespoon gets more cream than any skimming device ever designed. One piece. One single solid piece of German nickle silver. Only one piece to clean. Smooth, bright, shiny and unbreakable. It never wears out.

Vortespoon

Unlimited Guarantee

The New National is guaranteed without limit. We guarantee it to skim more cream, to be easier to clean, and easier to handle in every way, and to last longer than any other machine on the market.

Pays to Raise High Class Draft Colts

L. K. Cogswell of Chehalis, Wash., says that farmers should raise the high class draft colts and the best type of Morgan team and army horses. Such horses will always be valuable but small scrubs and big cull horses are not worth a quarter of the cost of raising them. Mr. Cogswell's remarks are based upon the experience he has had with a Blackhawk Morgan mare, Dinah, whose ancestry he knows for 50 years. Dinah, shown in the accompanying cut with four of her colts, weighs about 1200 pounds and her colts mature to 1250 or 1300 pounds. She has worked nearly every day, including the day the colt is foaled and the day before. She has easily paid for her keep besides that of most of her colts. She is of a long lived, hardy family, always willing and able to pull anything and is a splendid fast traveler for short or long distances.

Work Horses

Preparing for the Spring Rush

By JOE S. HARVEY, Filer, Idaho.

Where good, bright alfalfa hay is fed during the winter, no grain need be given mature horses unless they are used for heavy work. They will do the odd jobs around the farm without grain and come through in good working shape.

Our spring rush here in southern Idaho usually starts not later than March 7, but the weather is the deciding factor, so it is up to the farmer to watch the days, and, about two weeks before he expects to start plowing or harrowing, or whatever the job may be, he should begin feeding a good condition powder to cleanse the horse's system thoroughly. At the same time, it is wise to begin feeding grain, and, personally, I prefer oats. We usually give two feeds a day for three or four days and then add the third feed.

About the same time we begin grain feeding we also add another rubdown to the daily routine, brushing the animals thoroughly every evening after supper, in addition to the morning currying. This makes the coat soft and glossy, and contributes to the horse's well-being more than any other one act of care. That may sound strange to farmers who have not tried it on their own stock, but I am convinced of the truth of the statement.

During the first few days of field work it is economy to take plenty of time and allow the animals to accustom themselves to the heavy loads, and they usually sweat profusely if the weather is at all moderate, and nervous horses will injure themselves more by worry than by work. If they find that they are not expected to clean up the job within two days, they calm down wonderfully and give their bodies a chance.

With the best care, the horses, and colts especially, are likely to scald their shoulders. The pads should be thoroughly cleaned every evening and the shoulders bathed in a strong brine. If the skin breaks once, great care must be taken to keep the shoulder from becoming raw. Different home remedies may prove very helpful, but the following is the best salve for treatment I have ever found:

Take one part of sulphur and one part of lard and mix thoroughly. It is a good plan to melt the lard before adding the sulphur, so that the two may be thoroughly mixed. Add a few drops of carbolic acid, just enough for a disinfectant, and the remedy is ready for use.

If a shoulder shows a bare spot in the evening, with the skin slightly lacerated, bathe with brine. Then in the morning, before putting on the harness, salve the sore with the sulphur and lard mixture. The scald can always be cured if one is watchful enough and begins treatment early. By using some common sense, a driver can keep his horses unmarked, and this, besides proving a source of pride to him, will very materially increase the team's efficiency.

ABSORBINE
TRADE MARK REG. U.S. PAT. OFF.

will reduce inflamed, swollen Joints, Sprains, Bruises, Soft Bunches; Heals Boils, Poll Evil, Quittor, Fistula and infected sores quickly as it is a positive antiseptic and germicide. Pleasant to use; does not blister or remove the hair, and you can work the horse. $2.00 per bottle, delivered.

Ed. S. Cushman Co., Dept. 26, Centerville, Iowa.

Six Apples

Do Well in Western Washington

C. R. Campbell of King county says that there are six varieties of apples which do well on his side of the Cascades, and that the family orchard, which contains these varieties, is certain to be well provided in the matter of fruit during most of the year.

"First in point of time comes the Yellow Transparent," says Mr. Campbell. "Gravenstein, or Duchess if you don't like Gravenstein, follows. Then, in the order indicated, come the following: Wealthy, Winter Banana, King and Grimes Golden. This is enough of a mixture for anybody, and all of these apples do well for us. You'll notice that in eastern Washington the fairs are no longer offering premiums of 50 or 60 varieties, as we do over here. They have cut the awards down to those kinds which are worth while. It's time we did the same thing here."

Preparing for 1917 Crop.

Now that the 1916 sugar beet cutting and growing campaign has passed into history farmers of the Billings district of Montana are preparing for their 1917 crop, and already over 2000 acres of beets have been contracted for 1917 delivery.

Stock Yards

Salt Lake City Is in the Game

By HORACE ADDIS.

Salt Lake City is adjacent to a region of large live stock interests, including southern Idaho, but it has seen most of the stock shipped to other cities and much of the manufactured meat products shipped back. A year ago last month an organization of progressive Salt Lake business men was effected, and one of the best equipped live stock yards in America has been completed; and these men have been able to induce one of the great packing firms of the country to establish a plant here. The Cudahy company has taken over a small local concern and is remodeling and enlarging the plant at a cost of $100,000, so that by the middle of March, when formal opening is made, it will have a daily killing capacity of 1000 hogs, 1500 sheep and 100 cattle. It is so arranged as to be easily enlarged when the development of the industry warrants.

To date, the company has expended more than $75,000 in the construction of the yards, and they will accommodate 20,000 sheep, 5000 hogs, 1500 cattle and 500 horses. The company controls 246 acres and new units will be completed as needed. The tract is ideally located, far enough away from the city to be free from its encroachments, yet within a 10-minute ride by two steam railroads, by electric car, or by automobile. Both the Oregon Short Line and the Denver & Rio Grande tracks adjoin the yards, giving the best of shipping facilities. A good hotel is now ready for business close by. A modern exchange building is being erected at a cost of $25,000, which will house the general offices of the stock yards and 12 of its 18 office rooms have already been reserved.

The various interested interests are now trying to encourage and aid the live stock industry and induce the marketing of live stock every month. The Utah-Idaho Loan company has been organized, and among its officers I notice F. J. Hagenbarth, president of the National Woolgrowers' association, and others who have the confidence of the live stock breeders.

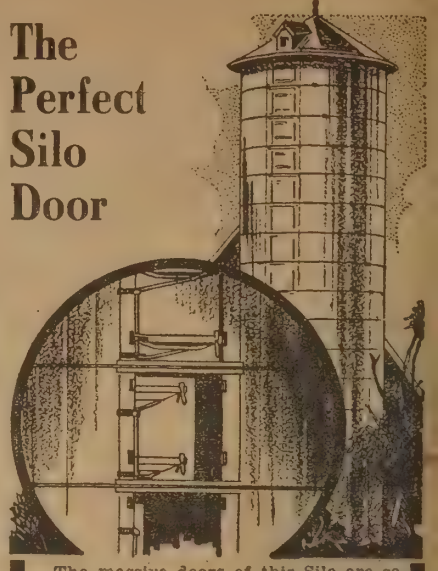
DRAINAGE RECLAMATION

Areas of Low Land in King County.

In terms of valuations concerned one of the most important county agent projects in the state is the one in charge of Agent F. W. Rader of King county, which involves the reclamation by drainage, of large areas of low land. The drainage propositions include the Issaquah one, which already has brought about an increase in land valuation estimated at $150,000; the Enumclaw project, involving $1000 acres of land and an already materialized increase in value of $100,000; the Enumclaw drainage project No. 2, involving 1800 acres of land with present results in increased land value estimated at $270,000; the Duvall project, including 3000 acres of land, and an estimated increase in valuation of $450,000.

Trap Two Foxes.

W. B. Gunnoe, one of the government crew employed for the destruction of predatory animals, went into Toppenish with a couple of beautiful fox skins, the former owners of which were trapped recently on the lower slopes of the range of hills south of town. The skins were secured in prime condition, the fur being at its best at this season of the year. Gunnoe expects to get a good price for the pelts, as furs of all kinds are scarce and command a ready market. As far as is known there have never been any foxes taken in this district heretofore. The government man thinks the animals wandered off from their home in the mountains and lost their bearings.



Before Planting Corn.

To the Editor of the Washington Farmer: Pouring a little coal oil over corn and stirring up well just before planting will make a good stand. I tried this last year. The untreated was a very poor stand, but in the treated there was not a hill missing.

Read the "Want Ads"

You will find it well worth while to read the "Want Ads" in each issue of this paper.

One difference between the wise man and the fool is that the wise man knows when he has made a fool of himself, the fool does not know because to be a fool is his normal condition.

Some people are so patriotic about their own town or country that they lie about the weather or the climate in which they live and disparage that in which some others live. This patriotic spirit is all right if it should take on different forms, but whatever we say about the weather or the climate, nature is deaf to praise or blame and moves on in majestic splendor, bringing the changes of seasons, produces life on the planets, building worlds and creating countless forms.

Fruit Products

Problem Is Still to Be Solved

By GRANVILLE LOWTHER.

It is generally conceded that in order to make the orchard business as profitable as many other lines of industry we must find a market for our waste products. Then, too, that market must not be a price which just a little more than pays the cost of a man and team for hauling to town in lug boxes, it must pay the cost of production as well.

Not long since I visited a brewery, the building of which cost perhaps one million dollars. They said that the prohibition movement had put them out of business as a brewery, but that they were manufacturing fruit juices. They used five thousand tons of apples last year, 1916, But the average price paid to the orchardist for his cull apples delivered on board the cars was $5 per ton. This is just a little better to the producer than waste.

The difficulty is in the process of solution and it will be worked out in an intelligent and economical way.

Did you hear some one say it could not be done
Because no one ever had done it?
Keep thinking and planning, persisting and trying
And the first think you know you'll have done it.

There is not a device in existence today
But some one has said: "You can't do it."
But some one went at it, kept patiently at it.
And the next thing was known he had done it.

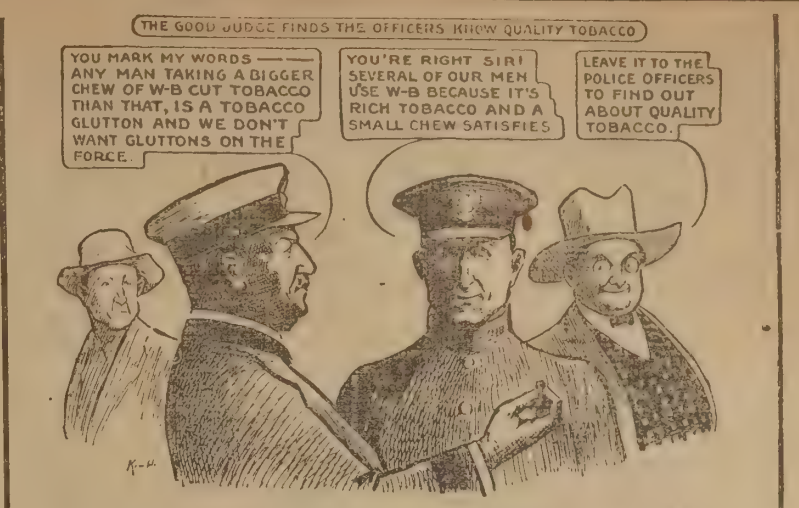
Perhaps when God thought He would make a few planets
Some one interposed: "You can't do it."
But Nature responded, the universe thundered,
The next thing they said: "He had done it."

G. L.

Vines and Berries

Sometimes Go Together It Seems

"If you manure your strawberry vines you will force them to go all to top."

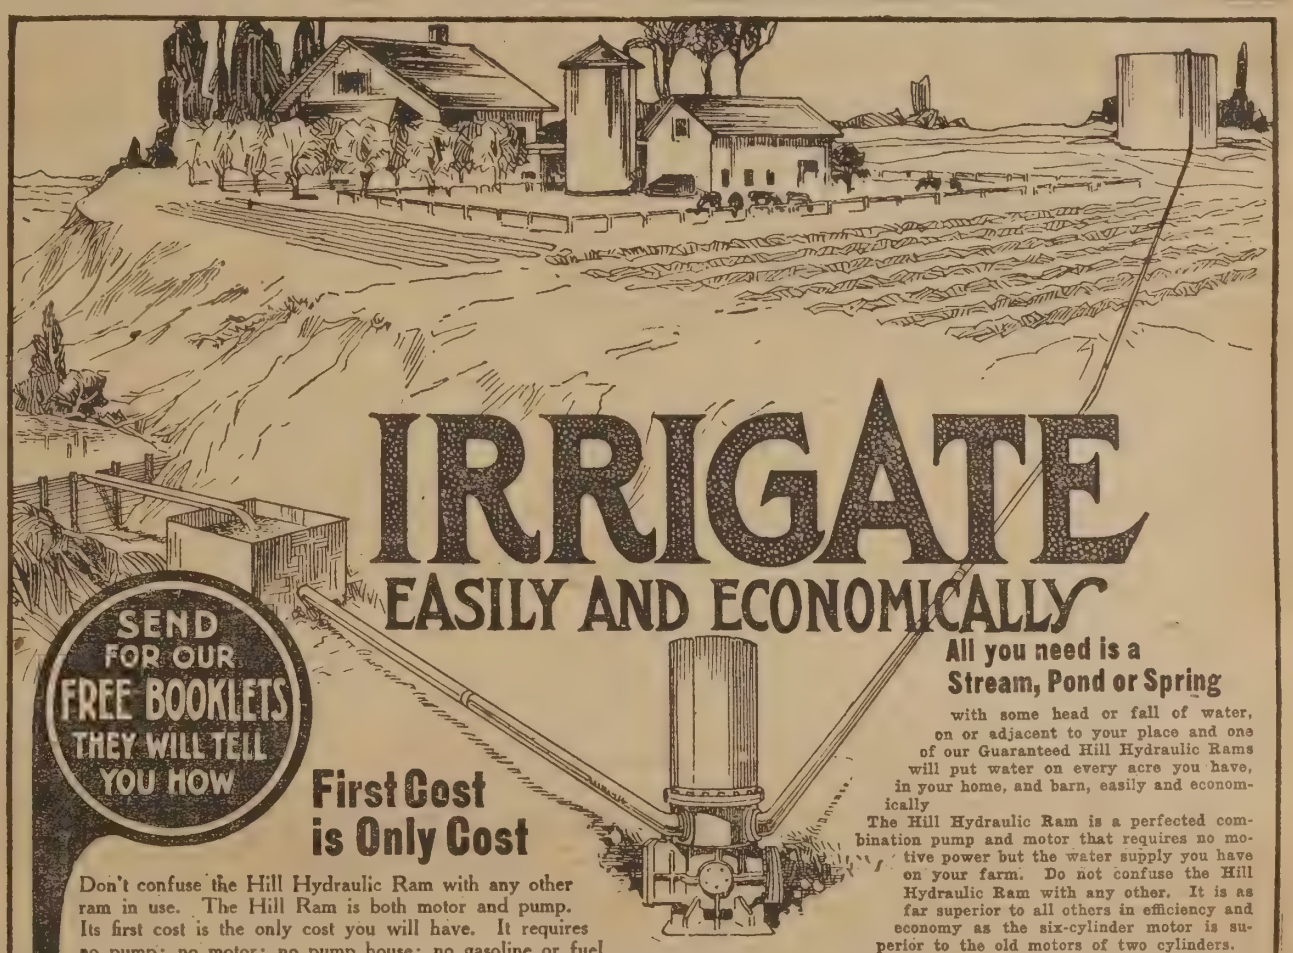


This is good orthodox teaching, from at least a certain proportion of our fruit growers. But—it isn't true, or at any rate, it isn't always true. C. R. Campbell, whose garden is located on the eastern shore of Lake Washington, near the city of Seattle, tried it out one year, against the earnest advice of his neighbors. And Mr. Campbell admits that he got some vines.

"They stood up knee high, so that they looked like young palm trees," Mr. Campbell comments. "And the people who came to see them told me I had made a big mistake; that I would get a crop of foliage plants, perhaps, but no strawberries. Well, I never saw finer strawberries in my life. We ate them fresh and we canned them, and at last I packed up a basket and took them into Seattle. Berries were selling in the store at that time at two boxes for a quarter, but I started in to sell mine at 25 cents straight. I sold several single boxes, then accidentally got into the home of one of the local grocers. As soon as I realized my mistake I began to try to back out, but the woman of the house, after examining my berries, took all that were left. She said that she got more good berries in the six boxes she bought from me than she would from a whole crate from the store."

Mr. Campbell adds that if he were raising berries regularly for market he would use some form of potash, in addition to stable manure. The potash is necessary in producing a firm berry for shipping.

Agricultural Training.



The French ministry of agriculture has organized a special service for the agricultural training of men injured in the war. Twenty-three training centers have been opened, and the instruction given covers almost every rural industry.

YOU notice a fine regard for appearance among the officers from Roundsmen to Captain—that's one reason they are so keen for W-B CUT Chewing. The pass-word among these gentlemanly fellows is "If you won't take a little chew don't take any." No need to disfigure the face, when a nibble of *rich* tobacco gives *more satisfaction* than a wad of ordinary stuff—also less grinding and spitting. Take a tip from the officer on W-B.

IRRIGATE
EASILY AND ECONOMICALLY

SEND FOR OUR FREE BOOKLETS THEY WILL TELL YOU HOW

First Cost is Only Cost

Don't confuse the Hill Hydraulic Ram with any other ram in use. The Hill Ram is both motor and pump. Its first cost is the only cost you will have. It requires no pump; no motor; no pump house; no gasoline or fuel oil engine. It requires no expert attention, you simply install the Hill Ram—start it and then forget it. It will pump water any reasonable lift, up to 300 feet, and will continue to pump without stoppage for replacement or repairs. Remember the only power that the Hill Ram needs is the water head you may have in a spring, pond or stream on or adjacent to your farm.

All you need is a Stream, Pond or Spring

with some head or fall of water, on or adjacent to your place and one of our Guaranteed Hill Hydraulic Rams will put water on every acre you have, in your home, and barn, easily and economically

The Hill Hydraulic Ram is a perfected combination pump and motor that requires no motive power but the water supply you have on your farm. Do not confuse the Hill Hydraulic Ram with any other. It is as far superior to all others in efficiency and economy as the six-cylinder motor is superior to the old motors of two cylinders.

IN FACT, WE DO NOT HESITATE TO GUARANTEE: THAT UNDER A GIVEN HEAD OF WATER PRESSURE ONE OF OUR HILL HYDRAULIC RAMS WILL DELIVER FROM 20% TO 40% MORE WATER THAN ANY OTHER RAM MANUFACTURED REGARDLESS OF PRICE, AND WILL CONTINUE TO DO SO INDEFINITELY.

WHAT A HILL RAM WILL DO—12 SIZES

A Hill Ram will relieve you from the worry and financial loss of drouth. It will reclaim your waste unwatered land; it will put water in your house and barn, making the labor cost less and the housework easier. It makes no difference how many acres you have, we have a Hill Ram that will fit your requirements. We make 12 different sizes from the No. 1 for household purposes to the massive No. 24 for large irrigation projects.

CONSULT OUR EXPERT STAFF FREE

We maintain a corps of Hydraulic Engineers

These men are leaders in their profession and to the man who wants expert advice their help is invaluable, but if you will fill out the coupon and send it to us these engineers will analyze your problem and give you honest expert advice. It will cost you nothing. No matter whether you have ten or ten thousand acres to irrigate, this service is free—just mail the coupon to us immediately.

The poultryman's harvest will be good if he sows good seed—sets eggs from hens that produced a good harvest last year.

Profits will be big or little in proportion as good seed is sown. J. D.

Poultry

Ask State for Financial Help

The Idaho State Poultry and Pet Stock association has submitted to the legislature a measure which will, if enacted, establish two state poultry shows in Idaho and carry an appropriation of $1500 for financing them. One such show would be in northern Idaho and the other would be in southern Idaho, probably for the present at Lewiston and Boise as has been the custom.

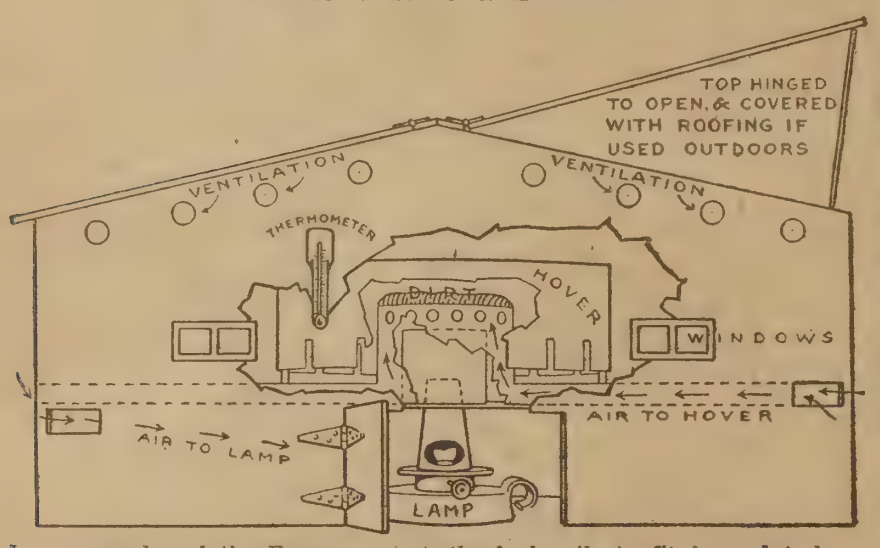
The movement is being made not because the state poultry association is in distress financially, but with a view to relieving local business men from the responsibility of guaranteeing the financial success of the displays. The Boise show was aided to the extent of $1000 the past season, it is stated, by the business men of that city.

At its meeting recently the state association audited its books and found itself possessed of assets totaling $600 and liabilities of $100. Indebtedness of $500 has geen paid off during the past year.

The following officers were elected: President, L. V. Patch, Payette, Idaho; vice president, John Demond, Boise; secretary, Mrs. B. Silversmith, Boise; treasurer, W. N. Sweet, Boise. The new directors elected were L. F. Abel, Meridian; H. K. Silversmith, Boise; Mrs. R. W. Barber, Boise; C. L. Haworth, Boise; A. Ketchen, Boise.

Elect at North Yakima.

The North Yakima Poultry association at the recent annual meeting elected the following officers for the ensuing year: President, R. D. Walker; vice president, J. Nonnenmacher; second vice president, E. S. Lueth; secretary, Mrs. F. L. Brown; treasurer, A. F. Luise; superintendent, M. F. Thornton; executive committee, M. F. Thornton, C. W. Spain, E. S. Lueth, J. Nonnenmacher and the president, secretary and treasurer; committee on marketing, A. Allen, R. D. Walker and Harold Paddock.



The treasurer's report showed a balance on hand of $80 after all premiums and expenses had been paid. It was decided to hold a show next year and use funds now on hand toward helping finance it. D. G. S.

Raising Turkeys and Geese.

In regard to raising turkeys, how many hens to one tommy? How old should turkey hens be? 2. Will geese eggs hatch that were layed in December? N. J.
Charleston, Wash.

Ten hens to a male is about right. Hens better be a year or two old, though fairly matured last year's stock may be used. The Tom, however, should be two or three years old. 2. Eggs may hatch at a month old or even older if they have been kept at a uniformly cool temperature of 40 to 50 degrees in a dry place and frequently turned. J. D.

How to Make a Brooder

I am a reader of the Farmer, and think it fine, will some one tell me how to make a good home-made brooder? What heat to use? What covering, if any, is necessary to use on the brooder floor, also what kind of litter is best to use for little chicks?

Please accommodate me with answers to these questions, and I will report my success. M. H. B.
Malaga, Wash.

Home-Made Brooder.

The following directions for making a brooder were submitted by H. F. Hoyt. Mrs. Hoyt says:

If chicks are hatched right, from the right kind of stock, almost any kind of a brooding device will raise them successfully; if not, it is a hard matter to raise them at all.

A good home-made, lamp heated brooder is made like the enclosed sketch. Two pails, one of the ordinary five-pound lard pails, and one of the 10-pound, will answer for the heater, a platform should be made three feet square, using 1x8 inches on the sides and one end, so that it will set eight inches off the ground and covering with matched lumber so that the floor will be tight, in the center of this cut out a hole with a key hole saw, just large enough for the smaller of the lard pails to fit in, and tack so that it lets in none of the lamp gas. This pail should be tight. Now take some one-inch battens and nail round all sides of the platform, leaving an opening of three inches in one corner for fresh air, and put on another layer of the matched stuff, thus making a one-inch air space between the two, this is the brooder floor, and should have a hole in the center that will let the larger pail set in and slip over the small pail in the lower platform. The large pail should be well punched with nail holes one inch from the top as it sets, which is the bottom, leaving the bottom whole, to be covered with sand or dirt to throw the heat; the hover can be made 18 or 20 inches square, like a little table with seven-inch legs, and should be covered with two layers of cloth that will not ravel that are six inches wide. The enclosed sketch, while not drawn to scale, will give a better idea of how to make this brooder than these direction.

We like straw cut into inch lengths best for chick litter, as hay sweepings from the barn generally contain fine weed seeds that get into the eyes of the chicks and cause trouble when they scratch.

Hatchet Cure

Recommended for Egg Eating Hen

The problem of the egg eating hen is still a problem. One writer declares that the remedy most effective is the use of the hatchet, followed by a chicken dinner, and there is a certain appeal in the suggestion that likely will cause it to be tried more frequently than some other suggestions.

Another person, however, says that if the contents of an egg are removed and the shell filled with bread crumbs soaked in ammonia, a complete cure will be effected. It is claimed that in some cases a single taste of the ammonia will destroy the hen's confidence in eggs as a food article.

It is often the case, also, that if nests are kept comparatively dark hens are not so likely to eat the eggs.

Early Hatching Best.

Now is the time to begin hatching eggs of the larger breeds. Plymouth Rocks, Wyandottes and Rhode Island Reds and larger breeds should be hatched before the end of March for best results. Seven months should be allowed for pullets of those breeds to mature and begin laying. Some of them may lay earlier and some later, but on the average if they lay in seven months they are doing well. However, the hatching may be continued into April if it could not be done in March, especially if it is good laying stock. The best layers lay early.

Leghorns and other breeds of that size may be hatched a month later than the large breeds. From the middle of March to the middle or even end of April will be all right.

It pays to hatch early. In fact it is absolutely necessary to hatch the chicks early enough to get them to laying by the first of November if one wishes to make money out of egg production.

There are millions of dollars lost to the poultry keepers of the United States just because the chicks are not hatched early enough. J. D.

Government Bureau Has Remedy

Entomologists of the United States department of agriculture have demonstrated that all species of lice which infest poultry may be quickly destroyed by the application of a very small quantity of sodium fluorid, according to the annual report of the chief of the bureau of entomology just issued. Entire flocks of poultry were cleared of the parasites in this way and were found to remain free when ordinary precautions were taken against reinfestation by contact with infested fowls.

In connection with this work the entomologists of the department made the first complete studies of the chicken mite and determined that it depends exclusively upon the fowl for its food and will not develop in any stage on filth or similar substances. In tests of a large series of insecticides it was found that a few thorough applications of crude petroleum to the interior of poultry houses will completely destroy the mites.

Stock Selling and Commission Making

(Continued from page six.)

chased and have made reservations for your South American trip. I just received a letter from Mr. Smith stating that everything is going along nicely over there and the optimistic feeling seems to predominate. Our case comes up here Thursday. We have everything to win and nothing to lose, as you will see from the Olympic Trader, which will be issued about the 10th of the month. We are going after Miller Freeman like a house afire, and if there is any chance at all, and I think there is, we will have very soon what little money he has got, so if you are up this way anywhere near soon we will do some celebrating.

"S. T. KNUDSON."

Let Lawrence Have Good Say.

"Cedar Rapids, Iowa, Nov. 3, 1914.—F. B. Sears, Spokane: I have written to Mr. Jeffries this morning suggesting that you, he and Mr. Lawrence get together and formulate a proper policy governing our work among the grange and union members, particularly with regard to the agents' commission. Do not be too hasty about it and please let Mr. Lawrence have a pretty good say in the matter. I really would not like to take the matter out of Mr. Lawrence's hands, for he has had charge of the organization, but I will write him today that you and Mr. Jeffries are to consult with him, after which he is to use his own judgment. GALE SMITH."

Would "Line Up" Labor Unions.

"Cedar Rapids, Iowa, Nov. 6, 1914.—F. B. Sears, Spokane: "By the way, I wired Mr. Lawrence last night that Cedar Rapids labor unions were writing to Spokane to ascertain the standing of the Northwestern. He is well acquainted with the labor leaders at Spokane, and should be able to see them and prepare an answer to those inquiries that will be satisfactory to Cedar Rapids people. The Northwestern has always favored union labor, runs its building department with union help, built its building with union carpenters, plasterers, bricklayers, plumbers, steamfitters, etc., and there is no reason why the Northwestern should not have a splendid standing with the labor unions of Spokane. We have a chance here to line up the labor unions if they can get proper reports of us from Spokane, and I wish you would interest yourself in seeing what can be done.

"GALE SMITH."
"C. L. DAVIES."

To Meet Lawrence, Crow, Kegley.

"Cedar Raids, Iowa, Nov. 12, 1914.—J. C. Lawrence, Spokane: I want to get into conference with you immediately upon my return, which should be about Wednesday of next week, and we should also arrange a conference with Mr. Crow and Mr. Kegley at the earliest opportunity.

"GALE SMITH."

Wanted Branch at Waverly.

"Portland, Oct. 19, 1914.—J. C. Lawrence, Spokane: We are getting lined up with the grangers of Clarke county, which, we think, will be a great benefit to us in securing new business. I did not get to have a final talk with you in regard to the situation at Waverly, but I suppose you and Mr. Smith framed that up before he left for the east. I think it would be advisable to take the situation up there at once, as they are holding off with the proposition they have already started, to see what the Northwestern General Trading company is going to do, and there is no question but what Waverly will be an ideal place to try out a local branch.

Lawrence Boosts Waverly Plan.

"Spokane, Oct. 21, 1914.—C. L. Davies, Portland: Your letter of the 19th at hand, and in reply will say that I have put it up to Mr. Darknell at Waverly and am expecting to hear from him. He talked the matter over with Mr. Smith before he left, and the plan is to see what conclusions can be reached with the Waverly people by the time of Mr. Smith's return. J. C. LAWRENCE."

Lawrence O. K.s Trading Company.

"Spokane, Oct. 21, 1914.—Mr. Edwards, Vancouver, Wash.: In regard to your inquiry concerning the Northwestern General Trading company, will say that I recently acted as a member of a committee of the farmers' union appointed to make a thorough investigation of the Northwestern General Trading company, with a view to be indorsed by the executive board of the farmers' union of the wholesale supply house. The result of this investigation was entirely satisfactory to the executive committee, which gave it their unqualified indorsement.

"The intention is to have all of the members of the farmers' union become members of the trading company and have all of the members of the trading company not now members of the farmers' organization who are eligible to such membership to put in their applications for membershps at their various locals.

"This is the beginning of one of the largest cooperative organizations in the United States. The Northwestern General Trading company at the present time is one of the largest cooperative stores in the United States. Consolidation of its interests with the farmers' organization is the beginning of a new era. J. C. LAWRENCE."

Refund Money, "I Don't Think."

"Portland, August 17, 1914.—F. B. Sears, Spokane: That is one of the first things we do, is to refund a man's money when he writes for it. That is one of our golden rules, I don't think. However, I am writing Mr. Stein a letter which I think will bring him to time all O. K. We will also have our representative in that locality have a little talk with him and stir up his enthusiasm again.

"I have been thinking of going to war myself, but, being as I am tied up with the cooperative business, it will be some time before I will be able to enlist, and I think that by that time the war will be over. Hope so, anyway.

"Northwestern General Trading Co.,
"C. L. Davies, Manager."

Ought to Put Over Deal.

"Portland, Sept. 15, 1914.—F. B. Sears, Spokane: Believe me, we ought to put over some deal this fall of some kind of stock selling proposition, but we have got to get busy on the proposition shortly, as it will soon be winter.

"Northwestern General Trading Co.,
"C. L. Davies, Manager."

Mossbacks Stick to Coin.

Replying to a letter from F. B. Sears, manager of the collection department of the Northwestern Trading company in Spokane, in which Sears expressed the hope that the Oregon people were "of a different nature than those in Washington, and when they bought anything they would stand by it," Davies wrote, under date of September 19, 1914:

"I don't think there is much difference between the Washington and Oregon people any more than some of these mossbacks are somewhat hard to jar loose from their coin."

Thought Cleanup in Sight.

"Portland, Oct. 9, 1914.—F. B. Sears, Spokane: Things are getting better here every day and we are getting lined up to do some real business. It sure has been an old grind, but the ice is breaking better now and we will sure make a cleanup if things go right. C. L. DAVIES."

"Portland, Oct. 19, 1914.—F. B. Sears, Spokane: Please send me my receipt from the farmers' union to show that I am their member, the initials and postoffice addresses, and the official titles of the following: Crow, Cox, McCurtain and Hill.

"C. L. DAVIES."

Passes Prospective Patron Along.

"Spokane, Nov. 7, 1914.—S. T. Knudson, Seattle, Wash.: We received a letter this morning which we are enclosing herewith from a party in Anacortes. We answered this letter and advised her to become a member of your organization as you could better serve their interest than we could from here.

"We are enclosing herewith proxy signed by myself and a good portion of the balance of your old associates. This proxy ought to be of great benefit to you in handling your meeting. We are all members of cooperative concerns and fully sympathize with the ideas which you report.

"F. B. SEARS."

Is Grateful for "Proxies."

"Seattle, Nov. 9, 1914.—F. B. Sears, Spokane: I am just in receipt of your various proxies and I wish to thank you one and all for the courtesy. We are promised a very warm reception at the meeting and no doubt it will be very interesting. I think you can well afford to attend, as it will more than likely mean a lot to you in the days to come. I don't know whether or not we will use the steam roller

(Continued from preceding page.)

method, but if necessary we can do it, as we have plenty of gasoline and hot air. S. T. KNUDSON."

Fire Up the Steam Roller.

Spokane, Nov. 12, 1914.—S. T. Knudson, Seattle: We are glad you appreciate proxy from the bunch of real cooperators over here. Nothing would please me better than to be at your stockholders' meeting Saturday. I am sure I would enjoy the fun, and would certainly learn something that would be of benefit to us. If necessary, get the steam roller in position, and have it well fired up, and if you find is necessary start it rolling and put them to sleep. There are times when the steam roller is quite necessary, as we found it on one occasion, which you will remember.

"There is a proposition in sight over here that is going to be of great benefit to the cooperative concerns throughout the state of Washington, and that is the big central farmers' union bank which is to be organized. Mr. Lawrence is taking a very active part in the organization of this bank, and it will be of vast importance to all farmers' organizations throughout these northwest states.

"F. B. SEARS."

Steam Roller Worked Fine.

"Portland, Nov. 17, 1914.—F. B. Sears, Spokane: I had the pleasure of attending the second annual meeting of the Olympic Trading and Supply company at Seattle last Saturday. The meeting was held at the store building of the said company. About 400 members were represented. The boys' steam roller was working in fine order. They made the grade with a full head of steam. The steam roller, with its gigantic power and speed, worked so fast that Mr. Edwards, who was handing out the ballots to the members for the election, had to be informed that the meeting was all over, and that he was entirely out of order. The election of officers was followed by some good speeches and the annual report was read, which was very satisfactory to the members.

"C. L. DAVIES."

Steam Roller Is Necessary.

"Spokane, Nov. 19, 1914.—C. L. Davies, Portland: I should like to have been with you at the Seattle meeting. I guess they had rather a hot time over there. Haven't had any reports from it as yet. The steam roller is rather a necessary adjunct to these meetings at certain times and when it gets started has to run quick and fast to have the desired effect.

"F. B. SEARS."

Invited to Grand Opening.

"Portland, Feb. 4, 1915.—S. T. Knudson, Seattle: The grand opening of the Portland branch of the Northwestern General Trading company will be on February 15 and we request that you and the bunch from the Olympic Trading and Supply company be present on that date if possible. I also have a proposition to put up to you and Gale at that time which I think will be of great benefit to both the Northwestern General Trading company and the Olympic Trading and Supply company, and also to our personal benefits. C. L. DAVIES."

Feared Lot of Stock on Market.

"Seattle, Feb. 5, 1915.—C. L. Davies, Portland: I presume you are mighty busy getting things in shape around the store and looking after the sales force. I feel that now is the time to sell stock in your house. After another year I think you will find a lot of stock on the market and that will have a tendency to interfere with the salesmen in the field. S. T. KNUDSON."

NEARLY SIX YEARS of N. W. General Trading Company.

United States District Attorney Garrecht, conducting the prosecution, in his opening statement, followed the progress of the Northwestern General Trading company from its organization by Gale Smith and others in 1909 to its bankruptcy proceedings in 1915. He said that although the concern lost money every year it sent out circulars and empolyed agents to sell stock, who gave glowing accounts of the company's business. As time went along and the activities of Smith and his coworkers expanded they organized a branch of the trading company at Portland, with C. L. Davies in charge, and began selling stock there.

Later the Inland Mercantile company was formed to collect the unpaid balance on notes, and in 1914 Smith organized the Iowa Mercantile company at Cedar Rapids, Iowa, along the same line as the concern in Spokane.

Told of Company Prosperity.

One of Smith's active lieutenants, the district attorney continued, was Frederick B. Sears, who died in 1911. Sears was in charge of collections on stock notes and sent out many letters telling of the prosperity of the company, which were issued, it was claimed, with the approval of Smith.

Early in the history of the Northwestern General Trading company a stock sales department was organized, which contributed to Smith and his associates a commission of 25 per cent on all stock sold. After the death of Sears, S. T. Knudson was placed in charge of stock sales and continued in this capacity until he went to Seattle to take charge of the stock selling for the Olympic Trading and Supply company. Gale Smith was a director in the Seattle company, which paid him $50 a month.

"Bought for Cash, Sold for Cash."

Continuing, District Attorney Garrecht said the Northwestern General Trading company advertised that it bought for cash, in carload lots, and sold for cash, whereas it had run large accounts and owed more than $60,000 at the end of 1914. The losses in the business had grown steadily from a total of $8000 in 1911 to an aggregate loss for the whole period of $70,000 in 1915.

During all of these years the company was represented as solvent and its stock steadily advanced from $25 a share in 1910 to $75 a share in 1912. Losses were recouped, the jury was informed, from the proceeds of the sales of stock. With this new money dividends in the form of rebates were given patrons to make a favorable impression.

Smith Employed J. C. Lawrence.

In 1914 Gale Smith, according to the federal attorney, conceived the idea of securing the indorsement of the farmers' union and the State Grange of Washington. He employed J. C. Lawrence, prominent in state politics and activities of the farmers, and had him work among the farmers' organizations at $50 a week. The government charges that Lawrence knew of the insolvent condition of the Northwestern General Trading company, but secured the indorsement of the farmers' union and the grange in spite of this. The grange indorsement was given by a committee of which C. B. Kegley, master of the state grange, was a member, at a time when the Northwestern General Trading company is alleged to have been running behind.

Lawrence Sold Stock to Farmers.

One of the moves engineered by J. C. Lawrence, according to Attorney Garrecht, is the merger of the Northwestern General Trading company with the farmers' union, which had become involved for $13,000. Lawrence is also alleged to have sold Northwestern stock, directly and through agents, among the members of the farmers' union and labor organizations.

Left $182,000 Unaccounted For.

Figures presented by District Attorney Garrecht from the examination of the books of the Northwestern General Trading company by federal examiners showed that up to April 30, 1915, $317,916 had been collected from the sale of stock, while the total assets in sight were only $135,000, leaving $182,000 to be accounted for. The losses in the mercantile end of the business on April 30, 1915, were $71,000. Gale Smith had accepted a salary of $60 a month in 1909, which grew to $500 a month just before the bankruptcy in 1915.

Robertson Outlines Defense.

Outlining the defense Attorney Robertson said he would show that the organization of the Northwestern General Trading company in 1909 was a legitimate business enterprise, started to fill a field then believed to be open, and was not a conspiracy fradulently to use the mails, as alleged.

A. G. Stall, was credited with making the first move in the matter. Stall met Gale Smith in the office of Conrad Wolfle in Spokane and found that Smith was considering the opening of a mail order house as well. Smith was then a former newspaper man and printer and later installed his own printing office in the Northwestern General Trading company's building after the concern grew.

Business Was in Good Faith.

Attorney Robertson said that he would show that the business was always conducted with good faith and that when bankruptcy was forced as a measure of self-protection the company has assets of more than $300,000 and debts of only $49,000.

Attorney Garrecht read the following excerpts from a prospectus issued by the Northwestern General Trading company:

From "Our Policy."

"Not one dollar's worth of goods shall be purchased for this house unless the money is on hand to pay spot cash on delivery. Bankruptcy has no terrors for a business conducted on these principles."

SALES OF STOCK And Other Facts From Records.

W. W. Jeffries identified the minutes of the Northwestern General Trading company, of which he was secretary from late in 1909 until 1915. He said that frequently he was busy with other work and Gale Smith wrote up the minutes, while Jeffries signed them.

Early Stock Sales Recounted.

At the first annual meeting, October 13, 1909, President Smith reported the sale of 1500 shares of stock for $30,000, of which $6046 had been paid in cash. From these collections $2479 had been paid in commissions, and the minutes note that a difference of opinion existed as to the manner of conducting the sale of stock.

W. H. Sprague, Joseph Kaufman, Charles W. Haynes, Gale Smith and W. W. Jeffries and C. L. Davies were elected directors. On reorganization the board of trustees elected Gale Smith president, Joseph Kaufman first vice president, W. H. Sprague second vice president, W. W. Jeffries secretary, and C. L. Davies treasurer.

The company leased two store rooms at W128 and W130 Second avenue and opened for business November 24, 1909. A contract was closed with Robert Lair and S. T. Kundson for the sale of stock at a commission of 25 per cent. Manager Smith's salary was increased to $125 a month.

June 25, 1910, the price of stock was advanced from $30 to $40 a share.

Manager's Salary Increased.

At the annual meeting in October, 1910, receipts of $26,261 from the sale of stock since the last report was announced. There was talk of a new building. W. H. Sprague was reelected trustee. The old officers were reelected and Manager Smith's salary was increased to $150 a month.

On July 24, 1911, the price of stock was boosted from $40 to $50 a share, and the president authorized to organize a stock sales department, providing for the sale of stock on a commission of 25 per cent.

At the third annual meeting receipts from the sale of stock of $14,782 were reported and $55,000 of merchandise. W. W. Jeffries was reelected trustee. Gale Smith's salary was boosted to $175 a month and a deal closed for the A. E. Burgan building, at Division and DeSmet avenue, for $35,000, of which $9000 was to be paid in cash and the balance in four annual payments.

February 7, 1912, the stock was boosted to $60 a share, and a contract closed for the lease of the Shaw-Wells warehouse on East DeSmet avenue.

Conrad Wolfle Enters Firm.

At the fourth annual meeting Lawrence Jack, attorney for the company, delivered an address. Conrad Wolfle, a brother-in-law of Gale Smith, was elected a trustee to succeed Joseph Kaufman. Wolfle was elected first vice president in the annual election by the directors, the other officers remaining unchanged. W. H. Sprague asked that all matters of importance first be referred to the trustees for consideration. No action taken on the suggestion.

On January 14, 1913, a loan of $15,000 from the Spokane and Eastern Trust company was authorized, and the firm's banking business changed from the Exchange National bank to the Spokane and Eastern.

On December 27, 1913, Smith reported that he had been advised by Attorney Lawrence Jack that a branch office could legally be opened in Portland and stock sold there. C. L. Davies was appointed manager of the proposed Portland branch, and authorized to sell 1000 shares of stock at not to exceed $70 a share.

July 16, 1914, President Smith was authorized to work out a proposed combination with the Farmers' Educational and Cooperative union.

L. C. Crow, P. C. Cox of Colfax, J. P. Hill and J. C. Lawrence addressed the sixth annual meeting October 13, 1914, in behalf of the proposed merger with the farmers' union. A resolution was adopted favoring a merger of the Northwestern General Trading company and the warehouse operated by the Farmers' Union and Supply company in Spokane.

It was agreed that from every share of stock in the Northwestern sold to members of the farmers' union at $75 a share that $40 be applied on the debt of the Farmers' Union Warehouse and Supply company, amounting to $12,500.

Smith's Salary Now $6000 a Year.

After affecting the deal with the farmers' union the board of directors of the Northwestern the following day raised Gale Smith's salary to $6000 per annum.

January 18, 1915, a resolution was passed authorizing a loan of not to exceed $15,000 from the Fidelity National bank.

February 12, 1915, the first note of the final trouble appears in the record with a demand from J. T. Golehon, H. G. Wynhoff and other stockholders for permission to make an expert examination of books. After taking legal advice the board votad that stockholders had a right to see the books. A personal account carried in the name of Gale Smith for retiring the stock of dissatisfied shareholders was ordered changed to a company account to cover suspended stock. At this meeting all salaries were ordered cut and President Smith's pay reduced from $6000 a year to $335 a month.

February 25, 1915, demand is made by J. T. Gollenhon, Louis Delivuk, H. G. Wynhoff and others that the present board of directors resign. No action taken.

Tell of Stock Purchases.

R. M. McCoy, Cheney, had purchased one share of Northwestern stock at $40, on which he paid $30. He was promised a reduction of 20 to 35 per cent in the price of groceries, but found he could buy no cheaper than at home.

Miss Ida L. Fisher, a teacher of Missoula, Mont., bought five shares of Northwestern stock in 1912 at $60 a share from Mrs. Eisenhour, an agent. The deal had been closed with her sister, who had been promised a place with the company. After the deal was closed no job could be had.

Henry Daubel, Elk, Wash., had bought a share in the Northwestern on the representation that it would buy his wood. When he got ready to sell the company would not pay within 25 cents a cord of the market price, and he refused to make further payments on his stock.

Promise of immediate payments of dividends induced J. P. Hambrecht, Leavenworth, Wash., to invest $100 in Northwestern stock. He found the representations made were untrue and he made no further payments on his $375 contract.

Found Statements Untrue, Says.

Charles L. Freiderichs of Helena, Mont., had purchased five shares of Northwestern for $375, on which he paid $100 down, on the representation that the company's prices on groceries were 20 per cent under retail; that it was a large concern, soon to be as big as Sears-Roebuck and Montgomery Ward, all of which he found to be untrue, he said.

A. R. Sweet, Grangeville, Idaho, bought a share of stock in 1911 for $49, in the belief that a strictly cash business was conducted and lower prices given. Later he found the company was in debt, after which he refused to complete payment for his stock.

Almer McCurtain, secretary of the Farmers' union of Washington and Idaho, read the minutes of the union from July, 1914, to March, 1915, covering the period of the union's relations with the Northwestern General Trading company.

Agree to Consolidate.

The question of a consolidation of the two organizations was first brought up by J. C. Lawrence in July, 1914. The matter was discussed and action deferred until September, when a conditional indorsement of the union was given. This was finally concluded in December, 1914, and ratified at a massmeeting of the union members in January, 1915, at which time J. C. Lawrence and L. Delivuk, appointed on an investigating committee, made their report.

Afterward Delivuk made charges against the Northwestern and tried to secure further investigation. At two of the meetings at which the question was up J. H. Taylor presided and ordered that the matter lay over until the return of L. C. Crow, president of the union. Committees from stockholders in the Northwestern then waited upon the union and urged an investigation, and in March, 1915, a new audit of the books was ordered.

Confidence in Lawrence.

"Did you know that J. C. Lawrence was on the payroll of the Northwestern when he was appointed on that committee?" inquired Garrecht. "I did

Was Calf Sale Bona Fide?

Charges and Denials Backed by Documents

(Continued from page seven.)

community. However, I will say I will pay no further attention to any accusations which he may make, be they public or private, unless I take them up personally.

In conclusion I will state that shortly after the sale I declined a bona fide offer of $15,000 for one-half interest in the bull. The Holstein breeders, recognizing the worth of the bull—Finderne Mutual Fayne Valdessa—are rapidly agreeing to breed their cows to him, and I do not fear but that my investment will be a remunerative one and tend to the betterment of the stock of the Pacific northwest.

J. G. VON HERBERG.

Affidavit by William Bishop.

STATE OF WASHINGTON,
COUNTY OF THURSTON.

William Bishop being first duly sworn upon oath deposes and says: That he is the owner of a stock farm at Chimacum, Washington, and is now at Olympia, Thurston county, Washington, attending the legislature, of which he is a member; that he attended an auction sale of Holstein cattle held at North Portland, Ore., on December 8, 1916, by George A. Gue of North Yakima, Wash.; that at said sale the Holstein bull, Finderne Mutual Fayne Valdessa, was offered for sale at public auction; that at said sale this affiant in good faith and without any collusion with anybody and without any agreement, secret, expressed or implied, with any one whomsoever did in good faith bid the sum of $16,000 for said bull; that said bull was finally sold to J. G. Von Herberg for $21,500; that so far as affiant knows, or has any knowledge, information or belief, the other bidders at said sale were acting in good faith and without collusion; that said sale was fairly and openly conducted and the bids were openly made. That there were present at said sale nearly all the representative Holstein breeders of Oregon and Washington.

WILLIAM BISHOP.

Subscribed and sworn to before me this 9th day of January, 1917.

FRED W. AGATZ.

Notary public in and for the state of Washington residing at Olympia, Wash.

(Seal: Fred W. Agatz, State of Washington. Notary public. Commission expires May 7, 1918).

Affidavit by A. E. Smith.

State of Washington, County of King, ss:

ALBERT E. SMITH being first duly sworn upon oath says: That he is the owner of a stock farm at Sumas, Wash.; that he was present at a Holstein auction sale held at North Portland, Ore., on December 8, 1916, which was conducted by George A. Gue of North Yakima; that at said sale a Holstein bull, Finderne Mutual Fayne Valdessa, was offered for sale to the highest bidder. That at said sale this affiant bid for said bull the sum of nine thousand dollars; that said bid was made by this affiant in good faith and without any collusion or understanding or agreement, expressed or implied with any person whomsoever, and that so far as this affiant has any knowledge, information or belief the other bidders were acting in good faith and without collusion.

ALBERT E. SMITH.

Subscribed and sworn to before me this 26th day of January, 1917.

A. B. MACKAY.

Notary public in and for the province of Alberta. My commission expires at the will of the lieutenant governor.

Seal: A. B. Mackay, Notary Public, Province of Alberta.

Affidavit of George A. Gue.

State of Washington, County of King, ss:

GEORGE A. GUE being first duly sworn upon his oath deposes and says: That he is an auctioneer and live stock broker residing at North Yakima, Wash., and as such managed and conducted a certain Holstein sale held at North Portland, Ore., on December 8, 1916, and that at the above mentioned sale sold a registered Holstein bull—Finderne Mutual Fayne Valdessa—to the highest bidder for the amount of twenty-one thousand five hundred dollars; each and every bid received was a bona fide bid to the best of my knowledge and belief. This bull was consigned to the above mentioned sale by Bernhard Meyer of Finderne, N. J., with instructions to sell to the highest bidder without reserve. I also further state that there was no understanding between myself as manager and auctioneer of this sale, and any of the bidders on the above mentioned bull. That when the sale started the first bid was five hundred dollars and thereafter the bids kept increasing, nearly all of the Holstein breeders taking part and making bids until there was finally left William Bishop of Chimacum, Wash.; A. E. Smith of Sumas; Charles Holmes of the Carnation Stock farm; Mr. Boomer of Idaho, and Mr. J. G. von Herberg of Lodge von Heim, Kent, Wash. Mr. Smith's highest bid was something over twelve thousand dollars and that of Mr. Bishop sixteen thousand dollars and that of Mr. Holmes twenty-one thousand dollars and the final and highest bid was by Mr. von Herberg of twenty-one thousand five hundred dollars, for which sum the bull was sold to him.

GEORGE A. GUE.

Subscribed and sworn to before me this 8th day of January, 1917.

JAY C. ALLEN.

Notary public in and for the state of Washington residing at Seattle.

Seal: Jay C. Allen. State of Washington. Notary Public. Commission expires October 26, 1919.

STATE OF WASHINGTON,
COUNTY OF KING.

C. W. Holmes, being first duly sworn upon oath deposes and says: That for 16 months immediately prior to and ending on the 9th day of January, 1917, he was the superintendent of the Carnation stock farm in the Snoqualmie river valley near Tolt, Wash.; that on the 8th day of December, 1916, affiant, as was his usual custom, attended a public sale of Holstein cattle held in North Portland, Ore., which sale was managed and conducted by George A. Gue of North Yakima, Wash.; that at previous sales which affiant had attended affiant had bid, and on certain occasions had purchased animals for the Carnation stock farm, and had instructions and permission from E. A. Stewart, president of the Carnation stock farm, to purchase any animal which he saw and which he thought was advisable to buy; that at said sale so held in North Portland, Ore., on the 8th day of December, 1916, there was offered for sale by George A. Gue, the bull calf—Finderne Mutual Fayne Valdessa; that the pedigree of said animal was read at said sale and a letter from Bernhard Meyer of Finderne, N. J., was read consigning said bull to George A. Gue to be sold without reserve; that at said sale there was present practically all of the representative Holstein breeders in the northwest. That the bidding on said animal was general until the bids reached ten thousand dollars ($10,000), and thereafter there was left among the bidders William Bishop of Chimacum, Wash.; A. E. Smith of Sumas, Washington, H. R. Boomer of Idaho; that thereafter the bids increased between the said parties when J. G. Von Herberg of Lodge von Heim, Kent, Wash., entered the bidding, and when the bids had reached seventeen thousand dollars ($17,000) this affiant, having studied the pedigree of said animal, and having seen the animal itself, entered the bidding, and the bidding increased and continued until finally this affiant offered and bid the sum of twenty-one thousand dollars ($21,000) for said animal, and Mr. Von Herberg, bidding twenty-one thousand five hundred dollars ($21,500) the animal was sold to him. That affiant's bidding was done in good faith, with full knowledge of the pedigree of the animal, and with the full and honest belief that the animal was worth the sum which he bid. That affiant in making his bid of twenty-one thousand dollars ($21,000) was actuated by no purpose whatsoever except the belief that the animal was worth the sum so bid by him, and that it would be advisable for the Carnation stock farm to obtain it if it could at that price; that at no time was there any agreement, expressed or implied, between this affiant and any other person whomsoever, as to any amount or sum which he should bid for the animal, but that affiant acted on his own knowledge and belief as to the real value of said bull. That said sale was openly held in the same manner that all sales are held under like circumstances. That in affiant's opinion, based upon the pedigree of the bull, it is the best bull in the country today.

Affidavits of C. W. Holmes.

State of Washington, County of King, ss:

C. W. HOLMES being first duly sworn upon oath deposes and says: That he is the C. W. Holmes who for some period of time, ending January 9th, 1917, was the superintendent of the Carnation Stock farm in the Snoqualmie River valley, near Tolt, Washington, and is the same C. W. Holmes who as representative of said farm attended the sale of Holstein stock conducted by George A. Gue in North Portland, Oregon, on the 8th day of December, 1916. That he has just been informed that Mr. E. A. Stuart, who is the manager and owner of the Carnation Stock farm, is claiming that this affiant had no authority to represent the stock farm at that sale, or for that matter any other sale. In making the statement Mr. Stuart must have forgotten that this affiant on several different occasions has attended stock sales and purchased stock for and on behalf of the Carnation Stock farm, and at the sale at North Portland, Oregon, purchased a cow for

(Continued on the following page.)

Wide Spreading Pays Best

WHEN you have looked them all over, you will probably decide to buy a wide spreading **Low Cloverleaf, Low Corn King** or **Low 20th Century manure spreader.** These machines break the manure up into very fine pieces and spread it evenly. They spread beyond the tracks of the rear wheels. The width of the spread is adjustable. Manure goes further and does the soil more good when spread with a **Low Cloverleaf, Low Corn King** or **Low 20th Century** machine.

These wide spreading machines with load leveler are by long odds the most popular spreaders ever brought out. We find that the better work our spreaders do the more we sell. Join the crowd and buy a **Low Cloverleaf, Low Corn King** or **Low 20th Century.**

If you will drop us a line, we will send you complete information and also tell you where you can see these machines.

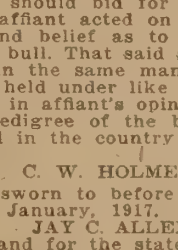
Saves 1/3

of gasoline and wear

The greatest single feature of the "Bean" Power Sprayer is the



"Bean" Pressure Regulator

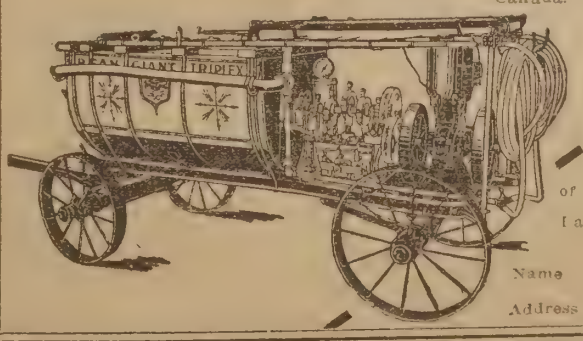
Patented, found only in the "Bean." Keeps pressure uniform at any desired point. Saves one-third of gasoline and wear and tear on engine because:

When spraying, the overflow simply runs directly back into the tank under *no pressure* (not through a safety valve under *full* pressure, as in all other types of control); and

When not spraying, the engine runs entirely free, liquid making a circuit from the tank and back under no pressure.

"Bean" Pressure Regulator also permits removal of any valve in pump, at full pressure, while engine is running. Absolutely safe and dependable. Only one of the 10 big vital, money and time saving features of the

"Bean" POWER SPRAYER



The 10-point sprayer

You owe it to your orchard and farm—to your pocketbook—to learn all about the "Bean" power Sprayer and our complete line of hand and power sprayers and accessories, before the spraying season begins. Write today for FREE catalog and name of dealer nearest you.

By E. A. BRYAN.

The editor has asked me to do a thing which seems to be exceedingly simple, but which, in reality, is most difficult. He has asked me to write a series of short, pointed articles on what the agricultural college can do for the farmer on the common things of farm life. It reminds one a little of the farmer who wrote the long ago classical college begging that they might send him a brick from the college building so that he could see what a college really was.

It is like asking the doctor what he can do to help the patient. That depends on the disease and the general condition of the patient and his surroundings. The doctor stands ready to prescribe remedies for the disease or expound general hygienic laws, or precautions against particular ailments.

It is like asking the lawyer what he can do for his clients. That depends on whether the client wants a will drawn, or wishes to have his person or property protected from unjust attack, or desires to recover judgment for wrongs done against himself.

It is like asking the editor what he can do for the benefit of the subscriber. He could answer you by a catalogue which would fill all his columns and then might miss the recital of the very thing which would met your specific need upon occasion.

The agricultural college is a vital force in the community, pressing upward into growth and fruition a multitude of different forms of community and individual life; it is like a string of finest steel, in tension, pressing forward the slow movement of agriculture toward the better—repressing adverse forces. It hovers over the community like a benign climate, with its warmth and moisture and sunlight making for growth and development. It resembles the operations of a just and free government, whose power to preserve the peace and promote justice between man and man is not measured by ostentatious forts and armaments, but rests upon constitutions and laws founded upon justice and freedom supported by the firm, but quiet administration of courts and police.

The one therefore who would perceive and feel the all pervading influence of the agricultural college upon the "common things of farm life" will scarcely be able to say "Lo here! or lo there," but he must be awake to the silent and all pervading influences about him, and perceive the results as he perceives the growth of the plant by the difference between then and now.

Nevertheless, I will try in future numbers to indicate some of the specific cases in which the college may help in the common things of farm life.

In his second article next week Dr. Bryan shows that an efficient "plant" is as essential to a modern farm as it is to a modern factory. He says:

"Whether on the little or on the big farm a fundamental necessity is the 'plant' which forms the center and the instrument of farm operations. The 'plant' includes the farm home, the farm barn and all constructions from a pig pen to a power plant."

Of course more than half the value of a reply depends upon the definiteness of the question asked. In other words, if Dr. Bryan can give you a pointer or two in asking a question, it will add just that much to a satisfactory reply.

Was Calf Sale Bona Fide?

Charges and Denials Backed by Documents

(Continued from preceding page.)

$1010 for the stock farm; that at no time did Mr. Stuart ever criticize or deny affiant's authority so to do, and the fact is as to the cow purchased at North Portland through error she was turned over to the Donny Brook farm; that Mr. Richards, the manager of the farm who had been the competitive bidder at the sale for the cow, bidding $1005 desiring to keep her, affiant took the matter up with Mr. Stuart's office and they wanted to get Mr. Richards to pay $50 bonus for the cow, but finally agreed to let Mr. Richards have it for $1010. Mr. Stuart in making the statement must also have forgotten that he has instructed me, when I saw any stock which I thought was advisable to buy to buy it, stating that he was able to pay as much as any one elses. Not only did he give me authority to buy, but likewise authority to price and sell. Affiant states that the reason for Mr. Stuart now claiming that he had no such authority must be because of certain incidents which occurred during affiant's associations with the farm. That I had authority to buy and also to sell is borne out not alone by the fact that Mr. Stuart gave me expressed authority so to do, but by the actual purchases and the actual cash sales which I have made and which have been ratified and approved by him.

Bull Sent Without Restrictions.

The following copy of a letter from B. Meyer to George Gue is enclosed among the documents sent by Mr. von Herberg:

Finderne, N. J., Nov. 4, 1916.

Colonel George Gue, North Yakima, Wash.: At your request I am consigning to your Portland sale Finderne Mutual Fayne Valdessa, No. 174999, a young bull of outstanding breeding and individuality. His dam, Finderne Mutual Fayne, holds the world's butter record, as a junior 2-year-old for one year, by over 200 pounds of butter. I consider this heifer the greatest female I ever owned, freshening shortly after finishing her yearly record. She made in seven days 36.72 pounds of butter as a 3-year-old and had it not been for an unfortunate accident she would undoubtedly have made 40 pounds. Too much can not be said in praise of the dam of this bull. I do not believe there was ever a better candidate for 50-pound honors than Finderne Mutual Fayne, had she lived. She was a large growthy heifer of ideal type and individuality and her persistent work at the pail making in one year 22,150 pounds of milk and 1200.63 pounds of butter, with an average test of 4.34 for the year.

I am enclosing herewith photos of the bull, his dam and his sire, King Valdessa, who now stands at the head of my herd. The records of King Valdessa's dam and sire's dam average higher for butter than any other bull in the world for seven and 30 days. Seven days' butter record, 43.03; 30 days' record, 167.90. King Valdessa is a young son of Spring Farm Pontiac Cornucopia and Valdessa Scott II., both of whom are so well known that very little comment is required. Valdessa Scott II. was the first 40-pound cow of the breed and is the only cow to make two records above 37 pounds She also has a fine list of daughters, one making almost a 33-pound record as a junior 4-year-old. Spring Farm Pontiac Cornucopia was the first bull of the breed to sell in public sale for $15,000. He is an excellent individual and is in hands where his offspring will be developed. He is from the first and one of the two 44-pound cows, K. P. Pontiac Lass, and by a good son of Aggie Cornucopia Lad. King Valdessa will be bred to a large number of the breed and his future as a sire is assured.

Animals like Finderne Mutual Fayne Valdessa are seldom consigned to a public sale. I want, however, to get a good representative of my herd on the Pacific coast and I think that this is a proper opportunity to do so and let the public say what he is worth.

I consign this bull to your sale without any restrictions whatsoever. I will ship him to you by express; will you kindly mail me shipping instructions. Very truly yours.

B. MEYER.

Will Back Every Statement.

A copy of the report of the Holstein sale at Portland as appearing in The Farmer was forwarded to H. G. Stibbs, advertising manager of the Carnation Stock farms. With reference to this Mr. Stibbs replies:

SEATTLE, Feb. 5, 1917.—To the Editor: Your letter of February 3rd with enclosure taken from December 14th issue of The Oregon Farmer has our attention.

There is no doubt in our mind that your Oregon representative reported this sale as given. It is true that Mr. Holmes was then superintendent of the Carnation Stock farms, but he had no instructions from the owners of the Carnation Stock farms to bid on this animal. It might have been that Mr. Holmes was bidding on this animal for somebody else. All we want to do is to correct the impression that he was bidding officially for the Carnation Stock farms.

Incidentally, we have here on file in our offices a letter from another man who bid on the animal in question. He states, however, that he was bidding for Mr. Von Herberg. We quote part of his letter as follows:

"When the price reached —— I quit bidding; but Mr. Von Herberg urged me to continue. I told him that it was reckless financiering; but I continued bidding for him until —— was reached. At that time I told him if he had any more money to tie up in the calf's skin he could do his own bidding, and I quit."

We merely quote the above to give you a few moro facts in the matter. When Mr. E. A. Stuart puts a statement of facts over his signature you can put it "down in your boots" that he is willing to stand back of every statement.

You might be interested to know that duplicate of this letter has been sent to all prominent publications in the west, as well as in the east. We hope that you will give these facts to your readers, because many of them no doubt know about the Carnation Stock farms and they are entitled to have the real facts of the case.

CARNATION STOCK FARMS.
H. B. Stibbs.

LIVE STOCK MEN

Will Meet in Spokane Next Week.

The Spokane chamber of commerce has issued a call to the live stock men of the northwest to meet at Spokane February 22 and 23. A large number of important matters will be taken up, including the legislation pending in the legislatures or that should be introduced, questions of feeding and breeding, diseases, community shipping and the like. It is expected that a large number of stock men will be present.

Blaine Creamery.

The creamery at Blaine, Wash., churned over 12,000 pounds of butter during December. The average during the year was over 14,000 pounds per month.

Pull Big Stumps by hand

Clear your stump land cheaply—no digging, no expense for teams and powder. One man with a K can rip out any stump that can be pulled with the best inch steel cable. Works by leverage—same principle as a jack. 100 pounds pull on the lever gives a 48-ton pull on the stump. Made of Krupp steel—guaranteed against breakage. Endorsed by U. S. Government experts.

Will U-Boats Win?

Operation Is Watched Anxiously

The situation between Germany and the United States has continued for nearly two weeks so tense that the people of the world have stood ready to receive at any moment without surprise the announcement that a state of virtual war between them had come to pass. So battle torn and paralyzed is most of Europe, however, that the German-United States possibilities are to those countries but one of a multitude of elements making up the unprecedented developments of the times. In this country every city and village and country community is alert to catch the word of the latest action, and the question that has been asked for weeks if not months contiues to be: Is it possible to avoid war and maintain the national honor of the United States?

The "Overt Act."

In his message to congress at the time of the breaking of diplomatic relations with Germany, President Wilson made reference to a possible "overt act" on the part of that country which would, if committed, compel this country to take drastic steps, possibly to the point of actually declaring war on Germany. The overt act in his mind was no doubt the destruction of a vessel, American or foreign, carrying with it American lives. Consequently, reports of the submarine activities have been watched with this in mind, and it seems apparent that only the preservation of American lives during the first two weeks of the submarine campaign has kept actual hostilities down.

Have U-Boats Failed?

At the time Germany announced her resumption of submarine warfare, she declared that the destruction of vessels totaling 1,000,000 tons carrying capacity a month would starve England in two months. To what degree she has been successful in her work of destruction these first two weeks in view of this necessity is somewhat problematical, but it is shown that at the rate of sinking vessels on several different days she would destroy probably three-quarters of a million tons in a month.

Compilation covering the first nine days of the submarine work showed unofficially that about 700 vessels had successfully entered British ports and 410 passed out of the war zone unhurt. During the same period 89 vessels had been destroyed, of which one out of every four was a small trawler or similar vessel. These figures tend to convince some observers that the submarine campaign will be a failure so far as starving England in a few months is conecrned.

U. S. Sea Traffic.

There is another view of this question, however. Has not the renewal of the submarine warfare resulted in the withdrawal of much commerce intended for England from the seas due to fear of losses? Very few American ships have sailed for ports in the war zone, and one of the large companies has declared that it will not send any of its ships out unless the navy department will convoy them through the submarine area and protect them from attack, if possible. With the extra hazard, insurance companies will greatly increase their rates on cargoes and vessels, the burden falling on the shipper or the ship company.

Would Negotiate.

One of the interesting developments of last week was the reported move on the part of Germany to reopen discussion of the case with the United States with a view to preventing actual war between the two countries. This proposal seemed to meet with little favor in this country, being generally considered a byplay on the part of German authorities to gain more time and carry on its ruthless destruction without interference from the United States.

Preparedness.

Various plans for military training have been broached in congress and in the state legislatures. The proposals face two points of debate:

The amount that can properly be expended and the question of universal, compulsory training of soldiers as against a voluntary system.

Approval and Disaproval.

A significant feature of the present situation is the passage of a resolution by the German-American alliance, which has some three million members, pledging loyalty to the United States if actual war comes between this country and their fatherland.

Another significant matter is the expressions of Minneapolis citizens, who, at the call of Mayor Van Lear, have joined in a demonstration protesting against President Wilson's action in breaking diplomatic relations with Germany and protesting also against any action on the part of this country that would put it into war. Mayor Van Lear was elected by the socialist labor vote, and the demonstration was made primarily by that element.

Avoid War Is Plan.

President Wilson has made it clear that he will not sanction war or ask congress for a formal declaration if he finds it possible at all to avoid it in the face of developments that may come. He has indicated that he will ask, however, for full authority to take whatever steps he finds necessary to protect American lives and property on the seas.

Potato Poisoning

Reported From Yakima District

In a recent letter to the Farmer from Toppenish, C. A. Wyckoff of that place reports considerable loss in live stock as a result of eating frozen potatoes. He says:

"A heavy loss in potatoes by freezing in November has resulted in a loss of live stock in many instances, from allowing the frozen potatoes to lay where the stock could get to them. Chickens, pigs, cows and horses have suffered from ptomaine poisoning from eating them and a considerable number have died from the effects. E. H. Burlington lost about $1400 worth of horses and mules."

Commenting on the above, Dr. S. B. Nelson, veterinarian at the Washington State college, says:

There are two kinds of troubles which may originate from animals eating frozen potatoes. The first is a straight indigestion caused by the frozen indigestible potatoes eaten in any considerable quantity. The general symptoms of indigestion being present, such as flatulency, that is, the intestines being distended with gas, colicky pains, a watery diarrhea, indicating the irritation of the bowels and the effort of the bowels to expell the offending material. The second phase of the trouble is a true potato poisoning, and this is due to potatoes which are allowed to be outdoors or not protected so that they freeze, and then during the warmer period of the day or days they thaw and start to grow, that is, they may sprout a little bit, and at this time there is a change in one of the constituents in the peeling, which is poisonous. The potatoes are closely related to the deadly nightshade, of which bella donna is a well-know example and the poisonous substance solanin is the active principle of bella donna and also of potatoes that are just sprouting or have just sprouted, and it is quite possible that this is the cause of the trouble. The administration of eight grams of potassium permanganante given in two or three quarts of water as a drench to the larger animals, such as the horse and cow, may be of value as a treatment. It is the only treatment that could overcome the poison. In the smaller animals from one to two grams given in a small quantity of water would be the treatment for such animals as pigs; and for chickens make a solution of strong wine color and given a tablespoonful of the solution; that is, take one teaspoonful of the stronger solution and dilute it down to about a tablespoonful and use.

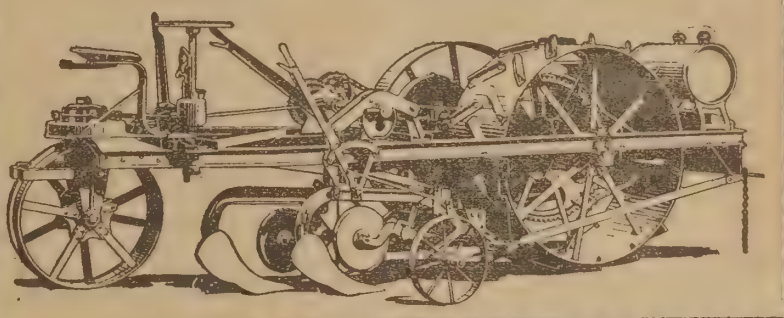
This is the Small Tractor You've Been Waiting For

HERE'S a tractor, the Advance-Rumely "8-16" that was especially designed to fit the needs of the small and medium size farm—a small, light weight, kerosene burning outfit to meet the demand where the famous Rumely OilPull is too large.

The "8-16" is easy to handle, economical and durable. It supplies reliable power for every farm job, and just as important, it is made by a company with an established reputation for dependability.

It is a real one-man outfit—tractor and plows are combined in one machine, and full control is from the driver's seat. With the Advance-Rumely you plow the same as with a horse gang, the plows are where you can always see what you're doing. Also you can back up with your plows, make short turns and cut square corners.

Kerosene for Fuel



Kerosene is its fuel, and it burns kerosene, not as a makeshift proposition, but continuously and at variable loads as well as full load.

An Advance-Rumely "8-16" not only will plow, but it will draw your discs, drills, harrows, mowers and binders, and on the belt it will run a small separator, hay baler, silo filler, sheller, feed grinder, etc. In fact, it will deliver the same reliable, steady power on all jobs—draw-bar or belt. When used for other jobs than plowing, the plows are quickly detached.

The powerful four-cylinder motor and the entire machine is Advance-Rumely built throughout. It comes from the same shops that build the well known OilPull tractor, the Ideal separator, and all the other dependable machines in the Advance-Rumely line.

Mary and Her Lamb Lived

Farm Information Contest Brings Revelation

Mary had a little lamb,
Its fleece was white as snow,
And everywhere that Mary went
The lamb was sure to go.

Did you ever suspect in those early kid days when, perhaps as your first public appearance before your school you recited "Mary had a little lamb"—and maybe wept through the last line from stage fright and sympathy for Mary—that Mary actually lived and that the pet mentioned was a "regular" lamb?

I doubt if you ever thought of the poem as having any historical foundation. Well, the truth is that Mary lived and so did the lamb, and as both of them led pastoral lives, and the lamb died a pastoral death, the question has seemed of sufficient interest to be given a place in the 60 queries in the Farm Information contest now running in the Farmer.

The question, which is No. 13 in the contest, reads:

"In what state of the United States did the child live who was the original in the poem beginning, "Mary had a little lamb, its fleece was white as snow?'"

The "Mary" that "had a little lamb" was a realty; and her lamb was one of twins, thrust out of the pen by its unnatural mother.

Mary took it home, and cared for it; and it became a great pet in the family. One morning when it was to be taken to pasture, it could nowhere be found; but as Mary went singing on her way to school, it heard her voice, and followed her.

At the schoolhouse door, for fear it would stray away, she picked it up, and managed to carry it secretly to her desk, where it lay quietly covered with her shawl until she was called to her spelling-class, when the lamb got up, and pattered after her. The children laughed, and the teacher reproved, until her explanation was given, when he very kindly allowed her to take her pet home.

It happened on that morning that a young man named Rowlston, the son of a riding-master, who was fitting himself for Harvard, was at school, and a few days after, he produced three verses of the poem. How it ever came to be published, Mary did not know; for the young man died soon after, ignorant of the immortality of his verses.

The lamb lived many years, and came to its death by the horns of an angry cow.

Many of the questions in this contest look simple, and they are simple, but the answers now coming in from contestants are developing some interesting and heretofore overlooked facts.

See contest announcement on page 4.

Farmers Organize Bureau

To Develop Direct Market With Customers

In an effort to develop a market direct to the city customers for their farm products, a few farmers of Longbranch, Wash., on the west side of Puget Sound, have organized a direct trading bureau.

The plan of the bureau is to enlist as members both farmers who desire to sell direct to the consumers and consumers in both city and country who desire to purchase farm or other products direct from producers. As a means of promoting the general idea of direct trading, and as a means of introducing individual producers to individual consumers the direct traders' bureau will issue a monthly bulletin called the Direct Trader.

In addition to carrying arguments in favor of direct trading in farm products, and information which will facilitate the establishment and handling of direct trading relations the Direct Trader will carry announcements for its members of what they have to sell or what they wish to purchase. For the present at least this bulletin will be issued from Longbranch.

Joe Smith, the president of the bureau, writes:

"Many farmers who have tried to develop a direct trade with city customers have found that the advertising expense of locating and forming satisfactory business connections with such customers to be such a burden that it adds materially to the cost of production and delivery of their products. In other words, the farmer who endeavors to develop a direct-to-consumer trade has either failed on account of this added expense, or else, having succeeded, has found that in addition to being a farmer he has become a merchant with a steady drain of selling expenses equal to if not greater than those of the middlemen.

"Our plan is to induce producers and consumers to cooperate in large numbers to lessen this expense. If we can do this we can enable farmers to sell to consumers approximately as cheaply as the commission men or jobbers sell to retailers. If we can do this it will retain for the farmers the profits of the commission men and for the city consumers the profits of the retailers.

"By forming an organization of direct traders, both producers and consumers, we can eliminate careless producers, producers whose products are not up to standard quality or who do not give prompt attention to orders. Also, we can eliminate purchasers who are overexacting, who make undeserved complaints or shortage claims, or who do not pay their bills promptly. By keeping a record of complaints from its members and supplying confidential information regarding these complaints to members desiring it, the bureau will possess a means of enforcing square dealing on both sides, eliminating those members who do not live up to its rules for such trading.

"While we favor parcel post shipments of food products wherever practicable, we shall not confine our efforts to that channel, but urge the use of express or freight carriers where weights are too high or rates are cheaper than those of the parcel post."

Organizations

Doing Most for the Communities

Scattered inquiries were sent out recently by The Washington Farmer asking: "In your opinion what organization has been of the most value to your community during the past year, and in what way, giving name and postoffice address of the president and secretary."

Thirty-seven replies have been received from 16 different counties. Eleven answered that the grange has been the most influential organization. Next comes associations carrying on certain lines of business, as fruit growers' association and so on—seven of these. Then follow six farmers' unions; five religious organizations; five commercial clubs; two government organizations and one unclassified community organization.

These preliminary hints give evidence that there is no one organization that can be classified as doing the most for community development. It is the old problem of finding a few faithful, energetic, public-spirited citizens who will push for better social, business, educational privileges for the community and it doesn't make very much difference in what particular kind of an organization the leader of a few chosen ones is to be found.

From time to time The Washington Farmer hopes to give an account of some of these organizations and how they have gained this fine distinction of being leaders in their communities.

The Washington Farmer further urges every one of its subscribers to look around and to send in the names of the associations, together with that of the president and secretary that is doing enviable work for your own town and neighborhood.

Here are the names of the organizations so far received, together with their presidents and secretaries as far as reported.

Organizations.

Ramapo—Grange—C. A. Kilmer, Ramapo, master; Mrs. W. S. Miller, Joyce, secretary.
Hunters—Grange—Mrs. David Konker, master; Louis Albey, secretary.
Marysville—Grange—Adolph Ziebell, master; Ethel Campel, secretary.
Grandview—Walnut Grove grange—R. H. Bauer, master; Alice W. Bone, secretary.
Cathlamet—Grange—W. W. Head, master; Mrs. Stott, secretary.
Vancouver—Grange—H. W. Sparks, master; Mrs. H. W. Sparks, secretary.
Richland—Vale grange—O. Y. Anderson, master; Miss Mabel Erickson, secretary.
Kennewick—Finley grange No. 414—A. S. Goss, master; J. R. Ayers, secretary.
Okanogan—Grange—Arthur Wells, master; W. T. Beals, secretary.
Pullman—Grange.
Krupp—Farmers' union—Amos Poggensee, Ruff, president; J. C. Keller, Ruff, secretary.
Lantz—Farmers' Educational and Cooperative union—Otis Robinson, president; P. B. Callaway, secretary.
Adrian—Farmers' union—George DeBolt, president; A. A. Winfrey, secretary.
Almira—Farmers' union—J. Weisman, secretary; John Lorup, president.
St. Andrews—Farmers' union—J. V. McCall, Hay, president.
Brewster—Brewster unit—Frank Phipps, president; C. E. Chase, secretary.
Prosser—Prosser Commercial club—W. C. Sommers, secretary.
South Bend—South Bend Commercial club—W. P. Cressy, president; J. H. Henderson, secretary.
Ilwaco—Ilwaco Commercial club—M. E. Sinclair, president; John W. Homerson, secretary.
Colville—Chamber of commerce.
Waterville—County agent—A. M. Richardson.
Cathlamet—County agriculturist—George A. Nelson.
Sequim—Cow Testing association—P. S. Govan, Sequim, president; F. P. Holland, Dungeness, secretary.
Grays River—Grays River Farmers' Produce and Warehouse association—Charles C. Schamond, secretary.
Kennewick—Kennewick—Richland Marketing union—Lee M. Lampson, president; M. N. Hudnall, secretary.
Latah—F. N. Grain and Supply company—H. Kreisler, secretary and manager.
Snohomish—Snohomish Valley Fruit Growers' association—Adolph Heck, president; Dave DeSell, secretary.
Bickleton—Dorcas society of the Presbyterian church—Mrs. George W. McCredy, president; Mrs. Fred Zumwalt, secretary.
Winthrop—Bear Creek Willing Workers—Mrs. William Fulton, president; Mrs. C. Renrod, secretary.
Quincy—Christian Endeavor—Otis Gibson, Mildred Johnson.
Skamokawa—Churches—The Rev. A. G. Brown, Mrs. Myrtle DeVick.
Grandview—Churches—The Rev. O. T. Mathers.
Spring Valley—Ladies' Aid society—Mrs. Hattie Bell, president; Mrs. W. R. Munger, secretary.

GRAIN IN BULK

Meeting in Spokane This Week.

On February 16 and 17 there will be held in Spokane two meetings of special interest to grain growers. On the former date the grain men, who are expected to come from all the grain growing districts of the northwest, will discuss the problems of bulk handling and work out methods for putting the scheme into effect in greater degree this season than heretofore. On the following day the federal department will conduct a hearing on the matter of the standardization of grains, as provided under the new grains standardizations act of congress.

State Should Own Land.

To the Editor of The Washington Farmer: The person who wrote "State Marketing and Packing" in The Washington Farmer of January 18, left out just one word, "buy," to make the business a great success. It should have read, "Said commission shall have power to buy, rent, lease or occupy." I believe if the state is going into a business of that kind it should own its land and buildings. Then they could put up the buildings suitable for the business. A. M. NEWSOM.

Spokane, Wash., R. F. D. 2.

Crushes the Clods

cuts, levels, and turns the soil twice—all in one operation. That's the way "the coulters do the work" when you use the

MONTANA FARMS
THE MONTANA STOCK RANCHES

of J. B. Long & Co. are now being subdivided and sold at retail. 20,000 acres in the **Famous Judith Basin.** In tracts of from 80 to 5000 acres. **Buy direct from the owners.** Save agents' commissions. Prices lowest. Terms easiest. For full particulars and price lists, write

J. B. LONG & CO.
Box 143-G, Great Falls, Montana.

WHEAT, ALFALFA

and other grains yield more where a perfect seed bed is prepared. The **Western** pulverizes, packs and mulches—makes a perfect seed bed at one operation. Saves seed, time and horse power. Is especially adapted for breaking crust on winter wheat or other grain or in orchards after irrigation or packing rains. It forms the hardest crust into a granular mulch without hurting the grain, and prevents evaporation.

Western Pulverizer, Packer and Mulcher 3 Machines in 1 made in 8 sizes, 1 and 3 sections, prices $20 and up. We want every farmer to have our free catalog before buying a roller or packer. It proves we can save you money and have far the best machine. Contains full description, price direct to you, letters from many farmers proving its advantages over other makes, and much other valuable information. Send for it today.

Belied Name of Grange

Stock Selling and Commission Making

(Continued from page sixteen.)

not at that time," said the witness.

"Did Lawrence at any time lead you to believe that he was acting for other than the best interests of the farmers' union?" inquired Robertson. "He did not," answered the witness.

"Did he try to deceive the committee to hide his connection with the Northwestern?" "He did not."

"Lawrence has always had the confidence of the farmers and still has it?" "Yes."

"Delivuk objected to Taylor selecting the expert?" inquired District Attorney Garrecht. "Yes."

"Did you know that Taylor was on the payroll of the Trading company?" "I did not."

Attorney Garrecht then had read the letter from Sears telling of the employment of Taylor as a field agent for the Northwestern.

Witness House, on direct examination by Attorney Garrecht, showed that Gale Smith, J. C. Lawrence and others of the defendants had drawn different salaries from the company.

Loss in 1912.

"Mr. House, what was the condition of the company as regards indebtedness June 30, 1912?" asked Garrecht. "It owed $15,000 on money borrowed and on merchandise bought and on July 1, 1912, the stock was raised to $75 a share; the company operated at a loss that year," was the answer.

Witness testified the company also did business at a loss in 1914, that during this time persons invested from $30 to $2000 each in the stock.

Among the witnesses called were aged women and poor people, who testified that they could ill afford to lose the money they had invested in Northwestern stock.

Mrs. Matilda C. Pleasant, Dayton, Wash., white haired and stooped by age, testified that a stock sales agent of the Northwestern called at her home in 1911, but that she was too sick to talk to him. Her granddaughter signed an applicantion for her for one share of stock at $50, on which $10 was paid and a note given. She afterward wrote to the company charging that the note had been secured through misrepresentation and fraud, and declined to pay it.

"Your granddaughter did nothing but what you directed?" inquired Attorney Robertson. "I did not direct her. I was sick in bed at the time," said the witness.

M. S. Crockett, a farmer, bought one share of stock in the Northwestern from S. T. Knudson on representations that goods could be bought for less through the company; that dividends would be paid and his produce purchased.

Hoped to Evade Middleman.

"Knudson said that as the stockholders were mostly farmers a produce department would do away with the middleman?" inquired Attorney Robertson. The witness assented.

Says Smith Word Painter.

George B. Cowden, Spokane Bridge, Wash., bought five shares in the Northwestern in 1910 for $300, on which he made a part payment. He was promised dividends after the company got under way and cheaper merchandise, he said, and talked once or twice with Gale Smith, president of the company, who painted its future in glowing terms. He afterward wrote to S. T. Knudson, stock sales manager, to see if he would take four shares off his hands. Knudson declined and eulogized the company, witness testified.

Told Company Would Redeem Stock.

Hilma B. Carlson, a former resident of Potlatch, Idaho, now living at Dassel, Minn., testified that she bought five shares of Northwestern stock in the spring of 1911 at $40 a share from an agent named Fisher. She was told that the company would redeem the stock at any time and that it would pay dividends in two years.

It was also represented that wholesals prices were given and all goods were bought and sold for cash. She afterward made several efforts to get the company to take the stock off her hands. To some of her letters no reply was made, while other letters told of the prosperous condition of the company and urged her to stay with it. Later she wrote to Gale Smith to inquire as to the value of the stock and was informed that it was worth $75 a share, but that no dividends had been paid.

The payment of dividends in a short time was guaranteed to M. L. Waite, Mabton, Wash., in 1914, when he subscribed for a share of stock. He was told that the company would handle his produce and had 1500 customers in Spokane which it supplied weekly. He made two shipments of tomatoes, for which he received but 35 cents a box or away below what he thought he shoudd have had. He then declined to pay his stock note and said 50 others in the valley had joined in a similar protest and talked of employing an attorney to protest their notes. He claimed that the note had not been obtained honestly and was not a valid debt.

Women Solicitors Got Woman.

Mrs. E. A. Bartlett, Troy, Mont., was visited by two women solicitors for the Northwestern in October, 1911, who assured her that the stock would be a good investment and would pay dividends in a short time. On this representation she bought five shares at $50 a share. Within two hours after she made the purchase she concluded to cut the order down to one share, but was informed that she was late, that the order had gone in by mail to Spokane.

She then wrote to the company with reference to the matter and received a letter from Gale Smith saying that the record showed the purchase by her of five shares of stock for $250, on which she had paid $30 and $220 still remained due.

After lauding the company and its future prospects Gale Smith declined to do anything for her Mrs. Bartlett testified that she had inquired at the postoffice in her home town and found that no letter had gone out from the women solicitors when they claimed to have mailed her order.

F. L. Stansbury or Oroville, Wash., testified that he was at work in the field in March, 1914, when F. B. Sears, an offical of the Northwestern Trading company, came along and solicited a purchase of stock.

"He told me of the big mail order house in Spokane, where you could get farming implements for much less than ordinary retail prices. I asked him what a type of disk riding harrow that I was using would cost, and he said about $25. I knew that was much less than I was able to get it for locally, so I subscribed for two shares of stock at $75 a share. He told me they were then paying dividends and tried to induce me to take five shares as an investment.

As soon as I got their catalogue I looked for the disk harrow, but it was not there. There were other harrows of an inferior grade at prices ranging from $17 to $27. I then had to pay $45 for the disk harrow in the local market.

Complained to Company.

"After this experience I wrote to the Northwestern General Trading company, making complaint. They replied that the gentleman who sold the stock did not intentionally misrepresent things, but that they did not have the disk harrow in stock."

In the purchase of five shares by Mrs. E. A. Bartlett October 4, 1911, at $50 a share, a total of $190 was paid. Of this $62.50 was paid out as commissions, $40 going to Mrs. M. M. Eisenhour and $22.50 to the stock sales account. The company received the balance.

$93.75 Paid in Commissions.

In the A. O. Jomsland deal five shares were sold for $375, all of which was paid, together with $3.65 interest. The commission payment was $93.75, of which $60 went to E. W. Rogers as agent and $33.75 to the sales department. The company received the balance.

In the E. Wells deal May 25, 1912, five shares were sold for $300, paid in cash. The commission was $75, paid to S. T. Knudson, the company receiving $225.

In the F. L. Stansbury deal March 27, 1914, two shares were sold for $150, of which $50 was paid in cash. The commission paid was $37.50, which went to the membership department, of which F. B. Sears was then in charge.

Asks Money; Suit Threatened.

J. H. O'Gara, a white-haired sawmill worker from Laclede, Idaho, was the last witness for the day and the chief one in point of interest, for the prosecution. He bought two shares of stock in 1911 from an agent, M. J. Welch of Spokane, to whom he paid $20. After an investigation of the company's store at Spokane O'Gara became dissatisfied and demanded the return of his money. He was threatened with suit in a series of letters written by F. B. Sears, head of the collection bureau of the company, operated under the title of the Inland Mercantile company, to conceal its identity.

Holstein Farm in Southwest Washington

The Holstein dairy farm of Abraham Sotki of Eden, in the lower end of Wahkiakum county. He is one of the progressive farmers of the county.

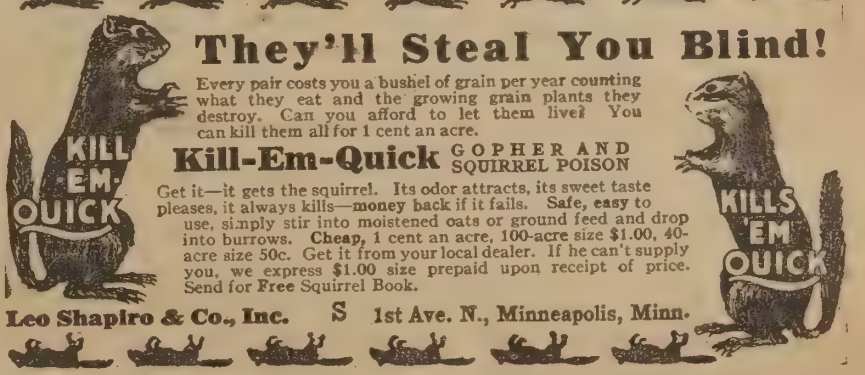
KING COUNTY ROADS
$3,000,000 During Last Four Years.

A total of $3,316,899.30 has been expended on the construction of roads and bridges in King county during the term of Arthur P. Denton, county engineer, according to figures compiled in the office on the last day of the term of the retiring engineer, who was succeeded Monday morning by Sam S. Humes. The majority of this work was done under the bond issue of $3,000,000 voted by the people on November 5, 1912, and includes the following: Gravel and dirt roads, 233.4 miles; bridges, trestles and bankers, 38 miles; hard surface roads, 38 miles; concrete and brick roads, 47.91 miles.

Cooperative Cost Basis.

The Okanogan Growers' union has arranged with the forest service to purchase about 100 cords of wood, which will be cut and sold to the members on a cooperative cost basis.

HIGH POTATO PRICES
Received by Oakesdale Growers.



To the Editor of the Farmer: Potato growers who held potatoes are now disposing of them at record breaking prices. During the past 10 days a Kansas City buyer has bought and shipped five carloads from here. The price was $2 per hundred pounds for field run and $2.25 per hundred for sorted stock. There is not over two carloads left in this vicinity, all told. Fully half of the farmers of this neighborhood did not raise enough of potatoes for their own use and are now buying them from the grocery store.

MASON BROWN.

Oakesdale, Wash.

More Alfalfa Acreage.

The Horn Rapids Irrigation company in Benton county will put in 385 acres to alfalfa this spring, the land having been sold to dairymen from the Sound.

They'll Steal You Blind!

Every pair costs you a bushel of grain per year counting what they eat and the growing grain plants they destroy. Can you afford to let them live? You can kill them all for 1 cent an acre.

Kill-Em-Quick GOPHER AND SQUIRREL POISON

Get it—it gets the squirrel. Its odor attracts, its sweet taste pleases, it always kills—**money back if it fails. Safe, easy** to use, simply stir into moistened oats or ground feed and drop into burrows. **Cheap,** 1 cent an acre, 100-acre size $1.00, 40-acre size 50c. Get it from your local dealer. If he can't supply you, we express $1.00 size prepaid upon receipt of price. Send for **Free** Squirrel Book.

These tools enable you to cultivate triple the acreage

They are so scientifically constructed that they do 3 to 6 times the work of old-fashioned tools in the same time; or they do the same work with one-third the labor, and they get bigger better crops because they cultivate more thoroughly. 45 years of practical farming and manufacturing experience is back of every Planet Jr. Fully guaranteed.

No. 4 Planet Jr Combined Hill and Drill Seeder, Wheel-Hoe, Cultivator and Plow does the work so quickly, easily and thoroughly that it pays for itself in a single season. Sows all garden seeds (in drills or hills) plows, opens furrows, and covers them, hoes and cultivates all through the season.

No. 12 Planet Jr Double and Single Wheel-Hoe Combined is the greatest hand-cultivating tool in the world. It straddles crops till 20 inches high, then works between rows with one or two wheels. The plows open furrows and cover them. The cultivator teeth work deep or shallow. The hoes are wonderful weed killers.

72-page Catalog, free!

Illustrates Planet Jrs doing actual farm and garden work, and describes over 70 different tools including Seeders, Wheel-Hoes, Horse-Hoes, Harrows, Orchard-, Beet-, and Pivot-Wheel Riding Cultivators. *Write postal for it today!*

We carry stock in Los Angeles. Agencies in all principal Pacific Coast cities.

Potatoes Are Already Planted

Plowing and Potato Planting Begun in Earlier Parts of the Coast Region; Early Spring About To Follow Mild Winter

The Leading Products.

SOUTH BEND, Pacific County, Wash., Jan. 27.—The ten leading products of this county are cheese, beef and dairy cows, cranberries, hay, milk, cream, butter, pigs, potatoes, garden truck, blackberries, apples and prunes. Lots of chickens are raised, strawberries and other small crops, but not enough to supply the local demand. This year there will be an increase in cheese, potatoes and cranberries. One farmer tried growing Sudan grass last summer, and another has been experimenting with different varieties of corn, and the results showed the Early Minnesota was a good variety for this county, where we have cool summers. Many are beginning to plow and some have planted potatoes. The winter has been a mild one, and every indication points to an early spring. In a few favorable places cattle have pastured all winter. The survey of the Warren ranch of several thousand acres has been completed, and this is divided into small tracts, which will be placed upon the market very soon. Plans are made for a large creamery or cheese factory on the land, which will take all of the dairy products of those buying the farms. There is, in the plat of this acreage, about 20 farms, averaging 100 acres each.

MRS. WINNIFRED BUCKINGHAM.

Feed and the Cow.

RAINIER, Thurston County, Wash., Feb. 3.—The two items that interest the ordinary farmer more than other products is feed and the dairy cow. I will herewith name the 10 principal products of this locality in Western Washington. Milk, as sold to the condensery, selling the cream to the creamery and feeding the skim milk on the farm; hay, such as red clover and timothy or some of the grasses; grain, such as oats, wheat and vetch; kale; poultry and Belgian hares; root crops, such as carrots, mangle beets and turnips; white beans; potatoes; small fruits, as strawberries, raspberries, currants, blackberries and loganberries; cattle. Some advocate clover and orchard grass, but I prefer clover and timothy, as timothy is not ready to cut until July and orchard grass should be cut in June. The weather is usually too uncertain for haying in June. Vetch and wheat make excellent hay when sown in the fall or are fine for silage. The potato crop was the most important crop last year, with good prices. Sudan grass was tried by a number of farmers last summer, but it did not give the results, as was expected. Dairying and the raising of feed will be the leading products in line this season, and more silos will be built.

L. F. DAVIS.

School in Private Homes.

GARFIELD, Whitman County, Wash., Feb. 2.—Cold weather and snow came early. Wheat is thought to be safe, as there has been a good depth of snow for two months. Most of the garden vegetables were gathered, but many apples were frozen on the trees and are valuable only to the birds, many of which would have starved on account of the deep snow. We have no grange or farmers' unions in the county, except at Grinnell. East of Garfield near the mountains, the community must furnish its own social life. Their schoolhouse burned last fall, so rooms were secured in private homes for the school until the new schoolhouse is built this spring. Our community built a church last spring, where we have services twice a month and a good Sunday school. We have one literary society and formerly had four. Much wood was hauled to town during the last several weeks on account of good sleighing, but the snow is now too deep. The thermometer has been below the freezing point for the last six weeks, but never reached zero near the mountains, although 16 degrees below zero was reported at Garfield, Potlatch, and other low places. Stock are doing well. Hay is high, but not scarce. Many farmers have put up ice for home consumption, and it is extra good now.

M. KIDWELL.

A Dairying County.

LITTLE ROCK, Thurston County, Wash., Jan. 30.—Perhaps the 10 leading products of this county are: Dairy, poultry, hay, potatoes, vetch (with grains for hay and seed), oats, rye, stock, fruit and roots. As near as I can judge their importance would be in order written. Conditions are so unsettled and changing of late that it is hard to give an accurate estimate of them. A great deal of vetch is being raised because it does well and builds up the land, besides being a fine feed. I believe the coming season is quite promising to the dairymen, as dairy products are up and probably will be a good price through the spring and summer. If so, it will bring up the price of dairy cows, which has been very low for two years. The poultry industry does not look quite as bright on account of the high price of feed, but with a big scarcity of fowls the price of eggs is likely to be high enough this spring to offset the high price of feed.

LEE KEGLEY.

Logging Camp Markets.

DARRINGTON, Snohomish County, Wash., Jan. 24.—Stock of all kinds are in good shape. Very little if any hay will have to be bought around here unless we have a very late spring. Logging camps have started up again after being closed down for some time. This will help the farmer who has potatoes to dispose of at a fair price. A few of the farmers here are going to try raising alfalfa, but I do not believe it can be raised successfully, as I have tried it and the second year it seemed to die out. All the beef cattle and hogs are butchered by the farmers and purchased by the logging camps at a fair price.

C. B. NEIDERPRUM.

Alfalfa Did Not Succeed.

MARIETTA, Whatcom County, Wash., Jan. 27.—The leading products grown in this county are oats, potatoes, berries, field peas, vegetables, barley, wheat, beans and creamery products. Oats rank as first, running as high as 100 bushels to the acre. Alfalfa has been tried here and has been given up. Dairying, of course, is always popular here, and milk is still at $2.05 per 100 pounds. Cattle seem to thrive best on clover, of which two crops are raised in a season. The season looks good for a large oat crop. This would have been an excellent winter for fall wheat, but there is not much raised here in this vicinity.

S. B. MAYHEW.

Berries Lead Product.

SUMNER, Pierce County, Wash., Feb. 3.—Berries and rhubarb are the principle crops here. But few dairies are located in the immediate vicinity of Sumner. Crops are not being changed here on account of the high price of land and small acreage. Fruit in general is a poor crop to rely on for this section.

W. J. LANGDON.

Rentals Are High.

TOPPENISH, Yakima County, Wash., Jan. 25.—The present mild weather has caused a great activity in pruning in fruit section, the present indications are for a heavy crop of bloom in nearly every variety of fruit. Farm work is not very well advanced because the ground is still frozen, but is more forward than last year or the year before. There has been the greatest demand for land on the reservation in the history of the valley, and as a consequence rentals are very high. In some instances land has rented as high as $17 per acre cash rent. A great number of leases have been sold at a substantial price. The present high prices of potatoes have created a desire in many people to plant heavily, but the extreme high price of seed will have a tendency to curtail the acreage to a certain extent. Stock in the fattening pens have done exceptionally well, as there has been practically no mud and no severe cold weather. Hay is more plentiful in the reservation and not so much in demand as last year. But corn is in demand and other feed grains in proportion. Potatoes are selling as high as $53 per ton, f. o. b. cars. Those having potatoes pitted are not yet able to market and many having them in storage are not able to get cars. There is a strong demand for hogs for breeding purposes, and sheep are very high and few offered for sale. Milch cows are variable in price. Feed is high, but butter fat is also high. Reservation dairymen are beginning to realize that they must test their herds and get rid of the poor producers. Poor cows are low in price, but good ones are in demand at good prices. Mr. Kramer of the Mutual Creamery company was in town recently and stated that the company had changed their plans for Toppenish and would put in about twice the capacity they had formerly planned. They now intend, in connection with the cheese factory, to manufacture butter, buttermilk, ice cream and other by-products.

C. A. WYCKOFF.

Bright Future Seen.

PORT ANGELES, Clallam County, Wash., Jan. 29.—The leading products from our farms are dairy products, hay, beef cattle, potatoes, apples, poultry and berries, and they rank in the order named. The increase in the production I should judge will average well to up about 10 per cent, and most marked in the production of dairy products. Alfalfa has only proven successful in some parts of the county, near Dungeness and Sequim. The farmers speak as if the outlook is very good for the potato crop this year and in a general way seem to be taken a bright outlook of matters.

J. P. CHRISTENSEN.

Try Out New Things.

MONTBORNE, Skagit County, Wash., Jan. 31.—The leading products of this county are oats, condensed milk, cabbage seed, canned fish, timothy and clover, potatoes, butter, canning of berry fruit, corn for silage and hogs. Different varieties of oats and barley are being tried out on La Conner Flat Stock farm by experiment station men. Artichokes are being tried out to kill the Canadian thistle and it serves as hog feed at the same time.

JOHN B. PETERSON.

Prunes Sent to London.

A total of 3600 boxes of Clarke county prunes, each weighing 25 pounds, were shipped to London, England, today by the J. K. Armsby Packing company of this city. These prunes will bring a fancy price in London. The prunes required two cars to transport them.

GROWN BY CAREFUL RE-SELECTION; clean, healthy, vigorous stock that will produce big crops of shapely, uniform, salable tubers.

The early demand and short crop has forced a sharp advance—if you intend to buy—ORDER NOW.

Belied Name of Grange

Stock Selling and Commission Making

(Continued from page twenty-one.)

After considerable objection by Attorney Robertson, of counsel for the defense, the letters of O'Gara were admitted and read to the jury. Among other things, they say:

To Defend Suit.

"Laclede, Idaho, Jan. 12, 1914.—Inland Mercantile association, Spokane: Your letter of the 8th came to hand and I see that you still claim that I owe the company $68. It would be clearly a case for the jury to decide and I think that if it goes to a trial I will get my $20 back. I never received one cent of benefit. Just think of it, a man coming into my home and lying me out of $20, was weeks' hard work. He told me that they had declared a 3 per cent dividend and that if a man had four or five shares of stock he would not have to work any more, and all such dope as that. You know yourself what an agent will do to sell his stock. I know that I had not ought to have had anything to do with him, but smarter men than I am have been taken in by slick swindlers. Of course, if you want to take it to court I will have to defend it, even if it does take all I have got.

"J. H. O'GARA."

Claims Self Swindled.

"Laclede, Idaho, April 16, 1914.—Inland Mercantile association, Spokane: In reply to your correspondence, I want to say that I do not owe that company (Northwestern General Trading company) one cent. On the contrary, they owe me $20 that they swindled me out of by false pretenses, misrepresentations and lying. Their agent came to my house for two days, telling me all kinds of lies about that company.

"He said that a fellow could save from 30 to 50 per cent on all goods bought at their store and with the three or four shares of stock would not have to work after two years; that his dividends from the company would keep him, and all such dope as that, until he got me to sign for two shares and got my $20.

"As soon as we investigated the business I demanded my money back, told them they had swindled me, as I could not buy any cheaper than at the other stores in Spokane. Besides, they did not have hardly anything in stock. At that time I could have got my money back if I went after it right.

"I was working in the sawmill at that time and he got two weeks of my wages for nothing, not one cent of benefit have I ever received from my $20 hard earned money. Just think of a rich company like that claims to be around swindling poor working men out of their money.

"I am not the only one in this town that they have swindled. There are a half dozen others in the same boat with me. I was talking to some of them the other day, who said they would all club together and stand suit. I should think they would be satisfied with the money they got for nothing. That agent never came back to this town. He dasn't. If he had he would have been thrown into the river. I don't know whether he is with the company or not now. He told more lies than any man I ever seen.

"My wife went to the store and priced some of the things; they did not hardly have anything but clothing. She told them she could get things as cheap in Laclede. They told her she was foolish to come there and buy, so she did not buy anything, and then I wanted my money back.

"Now, if that wasn't obtaining money under false pretenses I don't know what it was, and I want to say to you that if it was a legal debt it would not be in your hands for collection. I don't think there is any judge or jury in Bonner county that would make me pay any money on that contract.

"J. H. O'GARA."

DEFENDANT TESTIFIES

Tells of Origin of Company.

Olin C. Fowler, one of the five defendants on trial in federal court in the case of the Northwest General Trading company, was the first witness for the defense. He conceived the idea of a cooperative mail order house in 1910, at which time he talked the matter over with an officer of the Oregon state grange in Portland. In December, 1912, he went to Seattle intent upon starting a mail order house of his own and induced his brother-in-law, a grocer, to put in his stock. Afterward the brother-in-law declined to go ahead and he interested H. C. Pickett and J. B. Dabney, together with whom he incorporated the Olympic Trading and Supply company, each taking an interest in the stock.

Finding that considerable money would be needed to carry on the work of the new concern it was decided to convert it into a cooperative company and invite the grange to join. For this purpose D. J. Davis and F. J. Chamberlain of the grange were induced to come in and the first officers on the cooperative basis were: Pickett, president; Davis, first vice president; Chamberlain, second vice president; Dabney, treasurer, and Fowler, secretary.

Fowler said he had never heard of the Northwestern General Trading company except in a competitive way. Later he declared that the Olympic concern was affiliated with the Northwestern General Trading company "in the matter of buying goods and not in the matter of consolidation." "After we called in Gale Smith and asked him to help us with the merchandizing end of the business Knudson remarked that if the company gave Smith $50 as a regular salary every month he would pay him another $50." Gale Smith was elected a director in 1913 to succeed D. J. Davis in the Olympic company.

Never Believed Business Paid.

Judge Van Fleet—Did the books at any time show that the company was doing business at a profit. The witness—Really, I never believed we were on a paying basis.

The court—Then why did you advance the price of stock from $30 to $40 a share. The witness—Eventually we expected the stock to go to $100 a share. This stock was sold not so much because of its intrinsic value as that it was a membership privilege. When the stock was raised the store had opened and this made the stock worth more to the new members, who were taking no chances on coming in.

"Then why did your literature lead people to believe that you expected to pay dividends?" inquired Attorney Garrecht. "We expected to pay dividends eventually, through the patronage of nonmembers, who would get no rebates," said the witness.

S. T. Knudson was the second defendant to be called.

Knudson Was to Get Commission.

Knudson identified a letter from the Olympic Trading and Supply company, written in 1913, inviting him to visit Seattle and see what that company had to offer in a larger field.

"I then went to Seattle to look into the matter," continued the witness. "I met H. C. Pickett, J. P. Dabney and Olin C. Fowler, the managers of the Olympic, and they outlined their proposition. F. J. Chamberlain of the board I knew of through his work in the state grange. We talked of cooperation and its possibilities and agreed that when a man put his money into such a concern and became a buyer he was a valuable asset. After several days spent in an exchange of ideas I drew a form of contract, which the directors of the company approved and accepted after having it passed upon by a lawyer."

"While the contract may have read differently, the understanding was that I was to get my commission when the sales were made, regardless of when the commissions came in."

Denies Intent to Deceive.

Attorney Garrecht produced a letter from Knudson to "Dear Member," written in January, 1915, enclosing a "dividend check" accruing from merchandise purchases. "Wasn't this plan an effort to deceive the shareholder?" inquired Garrecht.

"There was no intention to deceive any one," replied Knudson. Witness said the rebate check plan was conceived by J. B. Dabney.

Court admitted the Miller Freeman letters, in which the writer, a stockholder, after trying to get data on the Olympic company, but without success, charges the promoters with conducting a conspiracy to defraud.

His Widow Defends Sears' Acts.

Mrs. F. B. Sears testified that she was the widow of F. B. Sears, who had managed the collection department for the Northwestern Trading company He had never profited beyond his salary of $125 a month and led an honest and frugal existence, she said. He was in the employ of the company for nearly four years, beginning with the spring of 1910. His death occurred in April, 1916, after he had left the employ of the company. Mrs. Sears said that the connection of her husband with the company was honest and legitimate in every way. She had patronized and saved money at the Northwestern store.

"Many farms have a dipping tank in the hog pen but not in the house."—Professor D. H. Otis, head of the farm management bureau of the University of Wisconsin, at dairy students' banquet, farmers' week, at O. A. C., Corvallis, Ore.

Farms Give Wealth

Food Stuffs Exports on Increase

The American farmer continues to do his part to enhance the growing prosperity of the nation. A statement just issued by the U. S. department of commerce shows that December exports of breadstuffs, cattle, hogs, sheep, meat and dairy products all show substantial increases over exports in December, 1915.

In round numbers we expect $75,000,000 worth of breadstuffs and meat and dairy products in December, 1916, as against $57,000,000 worth in December a year ago. The comparison is as follows:

	1916.	1915.
Breadstuffs	$44,463,000	$33,158,000
Meat and dairy products	30,462,000	24,024,000

December exports of corn were but slightly in excess of exports a year ago, but exports of oats and wheat showed notable increases. The exports of flour decreased. Decreases were reported in the exports of fresh beef, oleo lard, neutral lard and pickled pork. Increases were reported in exports of canned and pickled beef, bacon, hams and shoulders and lard compounds.

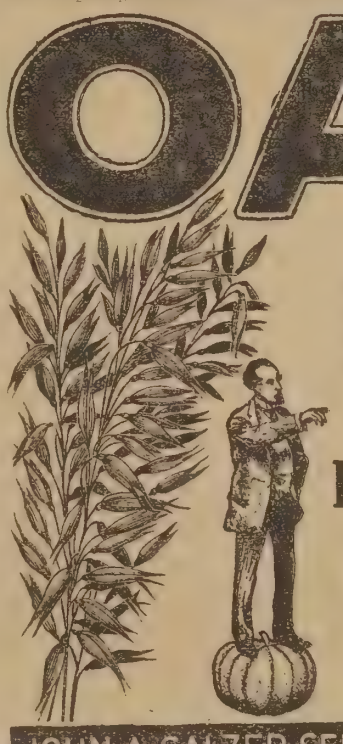
We are making these enriching sales, and yet an abundance remains to feed our own people.

As this big subject is further studied the unwise agitation for an embargo on farm products and other food commodities is swiftly fading out. Thoughtful observers see that it is beneficial in many ways for the United States to sell its agricultural products down to a closer margin than in the past. We are beginning to see that large surpluses foster waste and tend to check production rather than to stimulate it.

Potato Seed

Should Be Harvested Immature

Benz of Toppenish, Wash., sometimes referred to as the potato king of Washington, says that potatoes for seed should not be ripe. His argument is that the ripe potato is "fat," and therefore less capable of speedy and sturdy generation, just as a fat hen is less efficient as a producer of eggs than the one that has worked off surplus fat scratching or hunting for food.



Mr. Benz says that sometimes frosts that kill potatoes just before they would become ripe are highly beneficial, and recommends that when such frosts do not come along, artificial means be taken to kill the tops where it is intended to harvest potatoes for seed.

Potatoes should not be planted in the same patch in which they grew, thinks the Toppenish grower. "The oftener you give a potato a railroad ticket the better," he says. It has been his experience that potatoes from three ounces to one pound are best adapted for seed, and he wants from one to six eyes on each piece planted. His experience also leads him to recommend the following rotation of crops in potato growing in localities where alfalfa will grow, or something similar in other locations: Alfalfa, four years; potatoes, two years; wheat, oats or corn, one or two years.

Baited the Sage Brush.

Two farmers south of Gooding, Gooding county, Idaho, baited the sage brush in their vicinity with five ounces of county strychnine and a few days later harvested 5000 pounds of dead rabbits.

SPOKANE SEED COMPANY

SPOKANE, WASH.

Poultry, Orchard, Dairy and Bee Supplies.

Belied Name of Grange

Stock Selling and Commission Making

(Continued from preceding page.)

C. B. Kegley, master of the state grange, explained an item of $40 on the books of the Northwestern General Trading company, drawn by him under the heading of "commissions" as the proceeds of a share of Northwestern stock sold by him to Gale Smith in 1913.

Kegley testified that he bought for $20 a share of Northwestern stock that had cost a dissatisfied stockholder $75.

Kegley was on a committee of the state grange that voted an indorsement of the Northwestern in 1914.

Edward Walk, accountant, was on the payroll of the Northwestern, according to testimony, when making an audit for the farmers' union to appease dissatisfied stockholders. He was the third representative of the farmers' union shown on Northwestern payroll when acting for the union in matters affecting the Northwestern.

L. C. Crow, former president of the farmers' union, when confronted with items on the books of the Northwestern totaling $119, due the company for associate membership cards issued in 1915, denied any knowledge of the entry. The account is still unpaid. He also denied any knowledge of a daily report of February 1, 1915, in which he was listed as having disposed of associate membership cards.

Fear of the "blue sky" law of Oregon caused the price of Portland Northwestern shares to be cut to $30 at the beginning, when the shares in the same corporation were selling at Spokane for $75.

J. C. Lawrence explained how he labored to secure indorsements of the Northwestern Trading company by the farmers' union executive board, the Farmers' Union Produce company, the state grange and the Spokane Central Labor council. During this period he was drawing $50 a week and expenses from the Northwestern, he said.

Lawrence Activities Varied.

John C. Lawrence, on direct testimony, said that he is age 56, was born in Ohio and came to Garfield, Wash., in 1878, and has maintained his residence there ever since. He has followed farming, the hardware business, grain dealing, banking and, in a public way, was a member of the board of education in territorial days, superintendent of schools, state senator, register of the United States land office at Waterville and a member of the public service commission. He has been a member of the farmers' union and the grange three or four years.

Lawrence testified that he first met Gale Smith fraternally at the East Spokane grange, of which they were both members, in the winter of 1912. He first discussed with Smith the matter of the indorsement of the Northwestern General Trading company by the farmers' union in May, 1914.

Has Cooperative Plan.

"I had in mind the establishment of a wholesale supply house for farmers," testified Lawrence. "The Northwestern Trading company was conducting a business along this line and we saw a possibility of securing a closer cooperation between the farmers' union and the Northwestern. I suggested the possibility of the recognition of the Northwestern as the official supply house for farmers. Smith agreed with the plan and told me to see what I could do along that line with the farmers' union and grange."

"Were you given any compensation at that time?" asked Attorney P. W. Kimball, conducting the direct examination. "No, not at that time," replied Lawrence. "I spent several weeks looking into the matter and visited North Yakima, where I met C. B. Kegley of the state grange and laid the matter before him.

"On the way back from North Yakima I talked with Almer McCurtain, state secretary of the farmers' union, who told me about the Farmers' Union Produce company of Spokane, the affairs of which were not in a satisfactory financial condition. After that I saw President Wiseman of the Whitman County Farmers' union, J. P. Hill, president of the Spokane County Farmers' union; Phil Cox, J. H. Taylor and L. C. Crow, with all of whom I discussed the idea of indorsing the Northwestern General Trading company.

"In the latter part of June, 1914, I again saw Gale Smith and reported that the proposed plan was meeting with favorable consideration by the farmers' union, but that something would have to be done to take care of the produce company in Spokane."

"Did Smith then agree with you on the matter of your compensation?" asked Attorney Kimball. "Yes, he agreed to pay me $50 a week and expenses," replied Lawrence. "It was necessary to travel a great deal and to incur considerable expense in seeing the various members of the executive board of the Farmers' Union Produce company, which had now to be taken into consideration."

"What were you paid for?" "The time given and the expenses."

"Was it understood and agreed that you were to remain permanently with the trading company if the indorsement went through?" "Yes."

"When was the matter taken up with the farmers' union?" "In July, 1914, at a meeting of the executive board, attended by L. C. Crow, A. B. Cross, Phil Cox, Almer McCurtain, I. H. Jennings, H. R. Herman and Louis Delivuk."

No Effort to Conceal.

"Who was with you when you attended this meeting?" "Gale Smith."

"You were present during the discussion?" "I was."

One $5000 Job.

On cross-examination by District Attorney Garrecht Lawrence stated that he had held but one $5000 a year job and that was through what might be called a political appointment.

"You say you saved money on goods brought from the Northwestern; did you make these purchases on an employe's rebate slip such as the others used?" "No, I bought on the ordinary membership card. I knew of no employes' rebate."

"Was there a local of the farmers' union organized at the store of the Northwestern General Trading company?" "Yes, and all employes joined."

"When did you go on the pay roll of the Northwestern?" "The latter part of June, 1914, and continued during July and August. Then I was off until after the indorsement was extended in September."

He Suggests Merger.

"Were you not specifically employed to secure this indorsement?" "No, I suggested it on my own initiative. After I learned of the difficulties of the Farmers' Union Produce company it took a great deal more time than I thought would be required at the beginning and I felt that compensation should be paid me."

"Was there opposition by some of the stockholders of the produce company to the indorsement of the Northwestern?" "Yes, some of the members of the produce company had entertained some old feeling against the Northwestern because they viewed it as a competitor in the same line of business."

"Was there opposiiton among the members of the Tri-State Terminal Warehouse company?" "Yes, they had contemplated putting in a merchandise branch. Mr. Delivuk's idea was to combine the Tri-State Terminal company with the produce company."

"You found a loss of $35,000 in the Northwestern?" "Yes."

"Why, then, did you favor a raise in the price of Northwestern stock to $100 a share?" "Mr. Smith had suggested this and we both approved of it. We needed more capital to develop the business and thought we could get it at $100 a share. Delivuk wanted to put the stock at $5."

His Employment Known.

"You say the first resolution of indorsement by the farmers' union was unsatisfactory to Smith and yourself?" "Yes."

"Didn't Y. C. Mansfield say that it was not best to tell the farmers the whole truth?" "I don't remember."

"Didn't he want to keep these things off the records?" "No, he said he would rather pay his share than influence the board to take that step because of the difficulties of the produce company."

C. B. Kegley, called as a witness for the defense, said that he had been master of the state grange of Washington for 12 years.

"Where do you live?" inquired counsel. "Six miles east of Palouse City."

"How long have you lived there?" "For 29 years."

"When did you become a stockholder in the Northwestern?" "In March, 1910."

"Bought goods there?" "Yes."

"How long have you known John C. Lawrence?" "For 25 years."

"When did Lawrence become associated with the Northwestern Trading company?" "Early in 1914, about June. We were on a committee on cooperation at the meeting of the state grange at North Yakima that year and he told me of his intention to go with the Northwestern."

"You made some investigation into the Northwestern?" "Yes, I was a member of a committee from the state grange, along with J. O. Wing and J. D. Compton, who investigated it in 1914. We came to Spokane for that purpose, and stayed here three days, and were shown over the store by Mr. Lawrence, who exhibited the Wilson report and his joint report with Mr. Delivuk to the farmers' union.

"Did Lawrence mention the earlier losses of the Northwestern?" "Yes. We concluded that they were only incidental to starting the business. Lawrence gave us a full report and we also saw Delivuk."

"Know Lawrence was in the employ of the Trading company?" "Yes, he then said so."

Recommended Concern to Farmers.

"What action did your committee take?" "We recommended it to the armers as a good place to purchase goods. We felt they could save money."

"Appear to be run as legitimate business?" "Yes,"

Attorney Robertson started to inquire about Miller Freeman, the seven sisters' bills, the Stop-Look-Listen league, but Judge Van Fleet ruled this out of order as immaterial and foreign to the purpose of the inquiry.

"Did you receive any commissions, salary or remuneration, except the saving in goods?" inquired Attorney Robertson. "None whatever."

Accepted Reports of Others.

"Did you examine the books when you were at the Trading company's store for two or three days?" inquired Attorney Garrecht on cross-examination. "It was impossible. We simply took the reports of the accountant Wilson, Mr. Lawrence and Mr. Delivuk," said Kegley.

"Chiefly Lawrence's word, wasn't it?" "No."

"Did he tell you of their stock sales commission?" "No, I already knew that myself."

"You knew of the rate of commissions paid?" "Yes, I knew they paid 20 and 25 per cent."

"Know Smith was getting part of the commission?" "No."

"Did you know how much had been

What Words Added to the Word "Jack" Will Give the Correct Name for Each of the Pictures Below:

Any person sending the correct answer to the above question before February 14, together with $2 in the form of money order, 2-cent stamps or personal check, will receive the Washington Farmer for three years and any one of the following standard high class magazines for one year: American Magazine, Metropolitan Magazine, Woman's Home Companion or Every Week.

Just see what these publications would cost you at the regular rates:

Washington Farmer, 3 years	$3.00	Washington Farmer, 3 years	$3.00
American Magazine, 1 year	$1.50	Woman's Home Companion, 1 year	$1.50
	$4.50		$4.50
Washington Farmer, 3 years	$3.00	Washington Farmer, 3 years	$3.00
Metropolitan Magazine, 1 year	$1.50	Every Week, 1 year	$1.00
	$4.50		$4.00

If you send the correct answer, any one of the above club combinations will cost you only $2.

If your answer is incorrect your money will be returned promptly. This offer is limited to replies mailed before February 21, as shown by the post-office dating stamp on your envelope. Address

Quiz Editor, THE WASHINGTON FARMER

Review Building, Spokane, Washington.

paid on commissions." The witness had forgotten.

Told Notes Were Good.

"Did you know how much was due on notes and whether the same was a collectable asset?" "The sum due was then reported and the notes were said to be good."

"Did you know that 75 per cent of the notes were past due?" "No."

"They did not tell you that?" "No."

"Get any special rates on merchandise by being an employe of the company?" "Never was an employe of the company."

"Did you ever receive any commission on stock sales?" "Never sold any stock."

"We notice on the books, under date of August 13, 1913, that C. B. Kegley was paid $40 under the heading of 'commission.' Can you explain that?" "Yes, I sold Gale Smith a share of stock at that time. I had purchased the share in 1910. I had two shares, and needed only one, and sold him the other."

Attorney Garrecht said the records showed that Kegley had purchased but one share of stock in the company, and asked why this was.

Bought Dissatisfied Man's Share.

"At St. John, Wash., a man named Barber made a complaint that a salesman for the Northwestern had jobbed him. He said that the salesman had charged him $75 for a share of stock and that after he went home he found that its par value was but 20. He then offered to sell the stock for par, $20, and I asked him to hand it over."

"That stock was not transferred to you until March, 1915," said Attorney Garrecht. "No, I delayed in having a transfer of it made."

"Prior to that were you not a stockholder?" "During the time I was dealing with the company I was a stockholder."

L. C. Crow Becomes Interested.

L. C. Crow, former president of the farmers' union, said that he was born in Indiana, age 65, had lived in Washington 40 years and is a farmer. He had been president of the Washington and Idaho Farmers' union for six years and on the national board of the farmers' union for two years. He had given considerable study, he said, to the cooperative movement in America and had been connected with cooperative enterprises operated by the farmers' union.

"Was a tentative plan of consolidation with the Northwestern Trading company by the farmers' union submitted to you?" asked Attorney Robertson.

"J. C. Lawrence suggested this to me June 13, 1914," said Crow. "He thought it might be a good thing for the union to indorse the Northwestern as a cooperative institution. He said that he had been talking with Gale Smith, the head of the concern, and thought a great cooperative organization could be built up here by the farmers' union and the grange indorsing the Trading company. The idea being that members of these two organizations could get their goods at greatly reduced prices."

Asked Complete Audit.

"When did you first discuss the idea of consolidating with the Northwestern Trading company?" asked Attorney Garrecht, in opening the cross-examination. "In June, 1914," said Crow.

"You finally entered into an agreement with the company?" "Yes."

"You did not get together on the terms first offered by Gale Smith and J. C. Lawrence?" "No."

"They wanted to increase the capital stock to $1,500,000?" "Yes."

"In April, 1915, did you appoint Edward Walk to make an examination of the stock books?" "Yes, we asked him to make a complete audit of the stock books."

"Who was paying Walk?" "The Northwestern Trading company had employed him before that time as a systematizer. Gale Smith told me that they had lost money and wanted some one to install a correct system in the business. He felt that Walk was capable of doing this and for that reason I had retained Walk to make the examination for the farmers' union, after so requested by a committee of dissatisfied stockholders."

"Was there any audit of the books before the consolidation?" "I am told not. A financial statement had been made by an accountant named Wilson, which was reported to us by Delivuk and Lawrence."

"Never looked into figures of this report?" "No."

"They said the company had made losses?" "The company we had just amalgamated had also sustained losses. It seems that we have never started anything around here, but what sustained losses."

"The name of the company you amalgamated was the Farmers' Union Exchange and Produce company?" "Yes."

"It was in debt for $13,500?" "Yes."

Not a Stock Salesman.

"Were any members of your executive board on the board of the produce company?" "Yes, H. R. Herman of Genesee, Idaho."

"Did you distribute these associate membership cards?" "I don't think I ever did; I may have. I bought one card, paying $5. I consider that I got my money back in goods purchased. I am not a stock salesman."

"Ever have an account with the Northwestern Trading company?" "No, sir."

Attorney Garrecht showed the witness an account on the ledgers of the Northwestern General Trading company, where a total charge of $119 was made against L. C. Crow "on account moneys collected on associate memberships."

On being interrogated as to the correctness of this account, Mr. Crow said he could not recall anything with reference to it.

"Were you to get any credit for the number of cards turned in?" asked Attorney Garrecht. "I turned in no cards," said Mr. Crow. "If there is any account against me on those books I have paid it off."

Record Shows Charge.

The witness was then shown an agent's daily report for February 1, 1915, showing L. C. Crow's name among those who had turned in associate membership cards for that day.

"You say you don't know how those cards came to be on the books?" "No, sir."

"This is an account for membership. You are charged with having collected money and not turning it in. Can you explain this?" asked Garrecht. "Each speaker took out so many cards with him in the winter membership campaign. These cards were delivered to associate members at $1 each. It is possible that these cards were charged to me, as I, as president of the union, had charge of the organizers in the field. I did not go out myself, but received daily reports on the campaign. Taylor assisted me in handling this work."

"When you went east you appointed Taylor to act for you?" "Yes, I left matters in the hands of Taylor."

"Do you know if he was then in the employ of the Northwestern Trading company?" "I knew he had been up to that time."

"Did you know that he would have the appointment of a man to audit the books?" "No, I did not know that any trouble was coming up when I left."

"Did the men who secured associate memberships get any commissions?" "Different arrangements were made with different men. Some probably got commissions. Some were employed on salaries."

"Didn't you express some objection to the payment of commissions when the matter of consolidation first came up?" "Yes, we favored placing the men on a salary basis. Later we were informed that the company lost money, and the commission plan was restored."

"In February, 1915, did Louis Delivuk ask for a further investigation of the Northwestern General Trading company?" "Yes, I understand that he did."

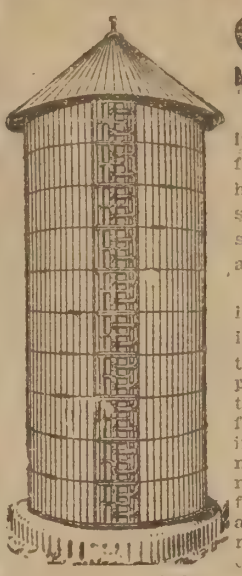
"After trouble began some opposition to the consolidation appeared?" "Delivuk was the only one. He made the report on which we brought the consolidation around and he should have known what he was doing.

"At the meeting of March 8, 1915, of the executive board of the farmers' union, did Delivuk make charges that J. C. Lawrence and J. H. Taylor dominated a preceding meeting in which an effort was made to have an examination of the Northwestern?"

Witness said that Delivuk had been called on the carpet, as some of the board members resented these charges.

Lawrence's Standing Good.

"How long have you known J. C. Lawrence?" asked Attorney Robertson on redirect examination. "Thirty-five to 40 years. I have known him in every walk of life and met him soon after I came here. We used to teach school together."



"Do you know his standing for honesty, integrity and probity?" "Yes, it is good." Witness said that Lawrence had told him on entering the employ of the Northwestern Trading company that he proposed to retire from politics and give his time to building up a great cooperative business.

"Do you think that it is right to appoint a man on a committee to investigate a concern of which he is on the payroll?" inquired Attorney Garrecht, referring to Lawrence.

"No. I did not know that he was on the payroll," replied Crow.

The result of the present trial of the former officers of the Northwestern General Trading company in the federal court at Spokane will be given in next week's issue of the Farmer together with tables summarizing the business of the company together with that of its alleged branches in Seattle, Portland, and in Iowa.

INTER-STATE SILO

Your [illegible] In the farmers have considered a silo just a silo."

But a silo is the most important, the most profitable, the most far-reaching investment ever made on a farm and as much care, as much knowledge, as much thought should be applied in its selection as any equipment bought for the farm.

The Inter-State Silo and the Hinge-Rod Door are superior to all other makes.

Larger Share for the Producer

Standard Packing Wholesale Terminal Markets Under State Control

By JOHN J. DILLON

Our readers, who have followed the brilliant and successful fight of New York dairymen to compel the big distributers to pay them living prices for their products, will be interested in the following article from the pen of John J. Dillon. As New York's state commissioner of foods and markets Mr. Dillon organized the dairymen, fought their battles and led them to victory.

In this article he discusses the much broader problem of marketing all the products of the farm. He thinks he has a solution that will give the producer better prices and, at the same time, enable the consumer to buy more cheaply than now. His subject is "The High Cost of Living and Causes Therefor."

The cost of living is high, mainly because men of means and large affairs are not, as a rule, concerned about it. The portion of their income that is paid out for food is not important to them. Whether the cost of the food be high or low, the difference to them is not important. They may growl a little at the end of the month at an increased provision bill, but neither themselves nor their families are in any way disturbed by the price. They are never obliged to lessen the amount or quality of the food because of its high price. Hence their indifference to the matter.

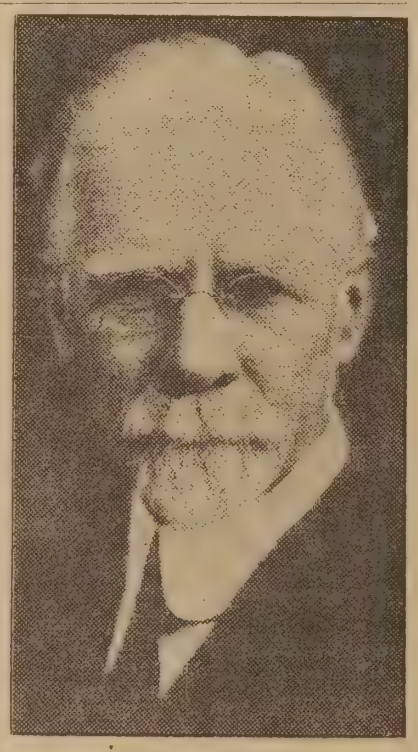
Needless Waste.

Another reason for the high cost of living is waste. This includes the waste of food on the farms, because the farmer is unable to market it for enough to pay the cost of transportation and selling. Waste in transit because of the lack of proper grading and packing and standardizing of the product as it leaves the farm. Waste in the city due to the delay in delivery because of the practise of passing the food from one dealer to another in speculation; and waste due to the total destruction in compliance with the law by the city inspectors in condemning whole packages of food, particularly fruits and vegetables, and in some cases eggs, when only a small fraction of the article itself is damaged, and the balance might well be preserved.

Wrong Methods.

Generally inefficient and extravagant methods of distribution are still another factor in the high cost of food in the city. Agents or drummers go to the country to solicit the shipments for a particular dealer. He has heavy expense and usually a good salary. This comes out of the food. The produce is largely shipped in small lots at double the freight rates of carload shipments. When it reaches the city the commission dealer often buys it for his own account, or for the account of some company in which he is interested. As a trustee of the producers, he deals with himself. It then goes through the hands of several wholesalers and jobbers, frequently as many as seven in all before it reaches the retailer. With it all is a duplication of cartage charges, first from the dock to the commission dealer, and then from one to another of the wholesalers and jobbers who speculate in it. When the housewife buys her daily supply she pays her portion of the accumulated cost of wastes, commissions, extravagance and profits.

Middlemen and Speculators.



This system of sale and resale and speculation is encouraged, abetted and maintained by a system of credits extending all the way from the commission dealer through to the retailer. Losses are frequent and sometimes heavy. The loser is obliged to cover himself for these losses, and the producer and consumer bear the burden of the losses because the losing dealer is in a position to shift the burden upon them.

The shipper is obliged to entrust the sale of his goods to the dealer in the city. Sometimes the dealer is honest and does the best he can with them, and makes a fair return. Sometimes he takes his duty to the shipper lightly and manipulates the sale as best he can to his own advantage, and the producer in this case gets an insufficient return, and sometimes no return at all.

The Remedy.

The remedy for this condition is a direct, efficient and economic system of distribution from the farm direct to the consumer through a terminal wholesale market and the retail store.

The plan of the New York state department of foods and markets is to establish assembling rooms for food at the railroad in the local producing centers throughout the state. The producers under this system would organize into cooperative associations and they would down the market or assembling room. They would bring their products to this local packing house as it comes from the tree or the ground, and an employe in charge of the packing house would grade and pack the produce, and, if located in a village or city, would supply the local needs and ship the balance in carload

JOHN J. DILLON.

lots straight to a terminal wholesale market in the city. The food would be received in this terminal market by an auctioneer or salesman licensed by the state and operating under the supervision of the state, who would cause an inspection of the goods, make an open sale and keep an open record of the receipt of the goods, of its condition, of its weight, of its price and of the person who bought. The sales would be made in quantities to accommodate the city retailer so that he could buy his supply direct from the agent of the producer, and, of course, the housewife would be supplied daily from the retail stores.

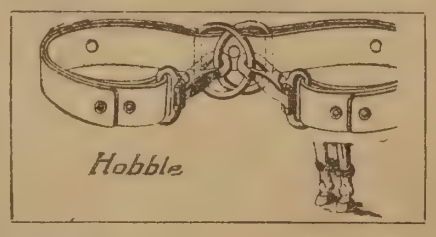
The expense of grading and packing of freight to the terminal market, and for the sale to the wholesale market, would be a charge against the producer, and this expense would be less than the present commission for selling alone. There would be but one charge for cartage from the wholesale market to the retailer. In addition to the open public sale at the wholesale market, the prices for the different grade of goods would be made public and official by the state commissioner. This would be a protection to the housewife in buying at retail, and the commissioner of the department would have the duty of seeing that the retail prices were commensurate with the wholesale prices, and that no retailer demanded an excessive profit.

Extravagant System.

This system will not appeal to the statesmen and others who insist on preserving the status quo. They refuse to consider any measure that could possibly interfere with the present system and with the men who are now established in the trade and who speculate in food products. If their contention prevails, we might just as well stop talking about reducing the cost of living. If we authorize unnecessary middlemen and speculation to take toll out of every pound of food that comes into the city, the housewife must pay that toll in increased cost of her food supply. There is no other place for the dealer and speculator to get it, and there is no way for the housewife to escape it.

If we conclude to preserve and perpetuate this extravagant and speculative system, there is no hope for the farmer to get more money for his produce. It now costs the farmer 65 per cent of the price paid by the consumer to distribute his product. The farmer must be content with 35 cents of the consumer's dollar.

What Could Be Saved.

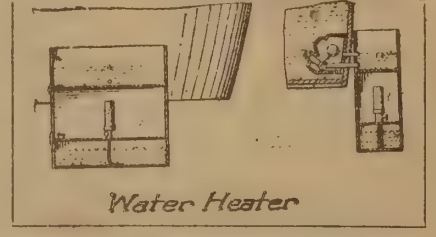


The purpose of the New York state foods department has been to reduce this 65 per cent of distributing cost by at least 25 to 30 per cent, and through the saving in the cost of distribution to pay the farmer a little more and to sell to the consumer a little less. The only certain method of accomplishing this end is by the system of grading and packing and wholesale terminal markets under state control. If this system be adopted the useless handling, the excessive profits, the continual wastes and the speculation in food products would be eliminated. The food would move in a straight channel from the producer to the consumer, and if properly supervised would undoubtedly save the consumers of New York City from $150,000,000 to $200,000,000 annually.

Inventions

By C. J. LYNDE, Macdonald College, Quebec.

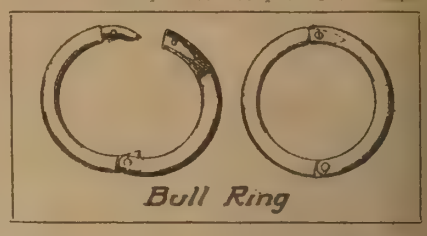
Hobble.



The rings of this hobble slide between two straps riveted together at the middle and ends; the rings are crossed and each attached to the op-

posite snap hook when it is desired to hobble the animal completely; but they are left uncrossed and each attached to the near hook, to leave it some freedom.

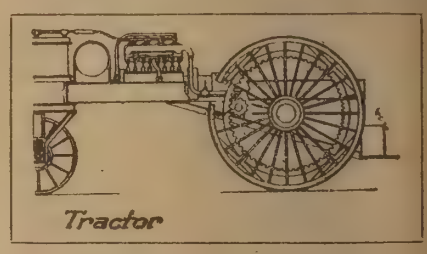
Stock Waterer.



The idea here is to prevent the water in the drinking trough from

freezing. A small water-tight metal box, containing the float valve, is placed in the tank and connected with the trough by two pipes; one pipe supplies water to the trough through the float valve, the other keeps the water in the box and trough at the same level. The heating is done by a lamp.

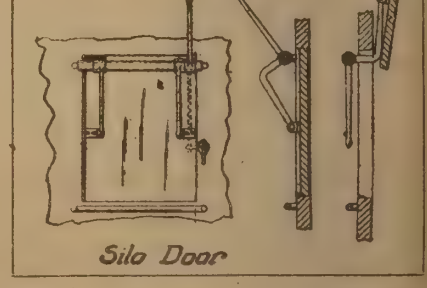
Bull Ring.



The special feature of this ring is the pointed end of one section which enables the operator to pierce the sep-

tum of the nose without a special tool. The sections are held together by bolts.

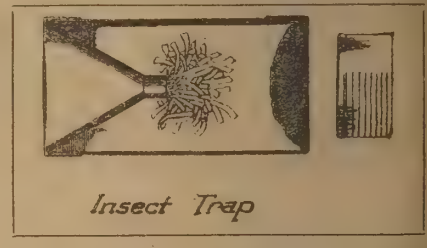
Traction Engine.



The new point about this tractor is that the exhaust of the engine is discharged between the gears at a point

just before they meet. This keeps the gears free from mud and earth.

Silo Door Operator.



This operator swings the door up and thus permits it to be opened be-

fore the ensilage is below the level of the lower sill.

Roach, Bug and Insect Trap.

The entrance of this trap is covered with tissue paper cut into ribbons; this permits the bug to enter

readily but prevents its escape. The bait is placed at the opposite end of the trap.

California Dairies.

California's dairy industry has increased over $6,000,000 in value within the last four years and the total yield for 1916 is $40,627,039, according to the annual report of F. W. Anderson, secretary of the state dairy bureau.

New Cheese Factory.

Site has been secured and work will be pushed on a new cheese factory at Oakville, Grays Harbor county, Wash.

One at a Time, Please.

A lanky youth entered the crossroads general store to order some groceries. He was 17 years old and was passing through that stage of adolescence during which a boy seems all hands and feet, and his vocal organs, rapidly developing, are wont to undergo sudden and involuntary changes from high treble to low bass.

In an authoritative rumbling bass voice he demanded of the busy clerk, "Give me a can of corn" (then, his voice suddenly changing to a shrill falsetto, he continued) "and a sack of flour.

"Well, don't be in a hurry. I can't wait on both of you at once," snapped the clerk.—Chicago Daily news.

All the World's a Stage, and All the Men and Women Merely Players

Belgian King in New Uniform

At the right of the above photograph is shown King Albert of Belgium in the new uniform with which the Belgian troops are now equipped. The uniforms which they are wearing now resemble the khaki ones worn by the British to a very great extent, although it will be noticed that the Belgian steel helmet is more on the order of the ones used by the French.

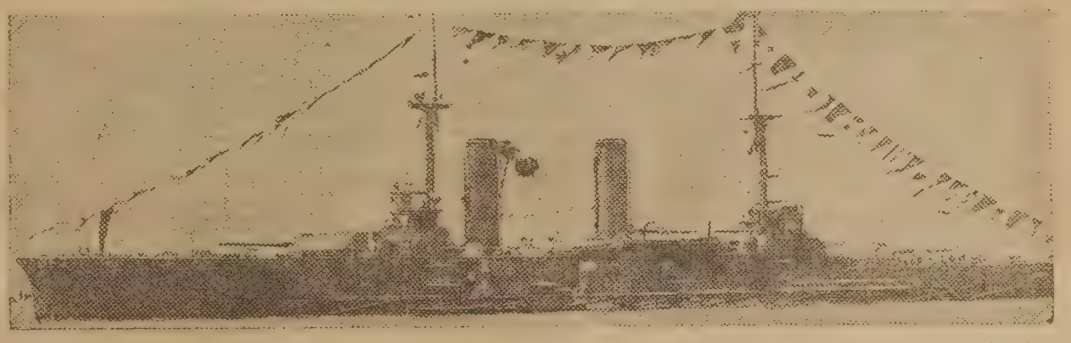
Does Terrific Damage.

One of the most deadly small weapons of the war is the trench mortar. It is small, but fires a large projectile, which usually does terrific damage. Because of the smallness of these weapons large numbers of them may be placed in the trenches.

Wild Sea Dash by German Officers

Copyrighted by International Film Service.

One of the most original and daring exploits of the war came to light through the capture, within 12 miles of their destination, of 20 German officers, who made a wild dash from Spain for the German-held Belgian port of Zeebrugge, in an ancient little sailing craft. The vessel was fitted out secretly in Vigo, Spain. She evidently sailed around the north end of Scotland, passing through a storm so severe that for 12 days the hatches were battered down and the men had to be lashed to the ship while working on deck. Finally when within 12 miles of Zeebrugge, the direction of the wind changed, the gale blowing the vessel down the English channel, directly into the lines of the British patrol fleet. The photograph shows the Virgen Del Socorro, the vessel in which the cruise was made.



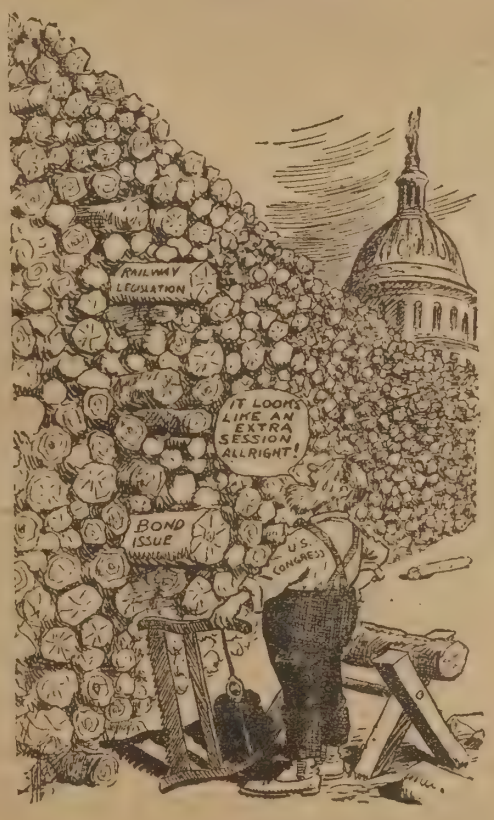
Watching for Enemy Air Scouts

Copyrighted by International Film Service.

Serbian soldiers posted in a place of vantage in the outskirts of Monastir to watch for the approach of Austrian and Bulgarian aeroplanes. As soon as one is sighted word is flashed to headquarters and Serbian birdmen rise to meet and turn back the enemy.

War Cruiser on Which 153 Perished

Copyrighted by International Film Service.



The Japanese battle cruiser Tsukuba, which has been destroyed by a magazine explosion in the harbor of Yokosuka, killing 153 of the crew and injuring 157. Fire originating from an unknown cause is believed to have reached the magazine.

Farm Loan Associations

What They Can Do and For What They Are Liable

By N. W. DURHAM

Chairman Spokane Committee on Federal Land Banks

Many inquiries have been received by The Farmer regarding the organization and management of national farm loan associations. These inquirers will be especially interested in the following by Mr. Durham, which is the third of the present series.

Already scores of national farm loan associations have been organized in the Spokane district, embracing Montana, Idaho, Washington and Oregon, and many others are in process of formation.

The powers of these associations are broadly defined in section 11 of the law:

First, to indorse, and thereby become liable for the payment of mortgages taken from its shareholders by the federal land bank of its district.

Second, to receive from the federal land bank of its district funds advanced by said land bank, and to deliver said funds to its shareholders on receipt of first mortgages qualified under section 12 of the law.

Third, to acquire and dispose of such property, real or personal, as may be necessary for the transaction of its business.

Fourth, to issue certificates against deposits of current funds bearing interest for not longer than one year, at not to exceed 4 per centum per annum, after six days from date, convertible into farm loan bonds when presented at the federal land bank of the district in the amount of $25, or any multiple thereof. Such deposits when received shall forthwith be transmitted to said land bank, and be invested by it in the purchase of farm loan bonds issued by a federal land bank, or in first mortgages as defined by this act.

How It Is Managed.

The management of a farm loan association is by a board of "not less than five directors" chosen by the members of the association, "in the manner prescribed for the election of directors of national banking associations," "who shall hold office for the same period as directors of national banking associations."

These directors will choose, "in such manner as they may prefer," a secretary-treasurer, and determine his compensation.

The board of directors will elect a president, a vice president and a loan committee of three members.

The directors and all officers, except the secretary-treasurer, will serve without compensation unless the payment of salaries to them shall be approved by the federal farm loan board. This part of the law is wisely made flexible. Some farm loan associations will grow into a membership of hundreds, while others will remain small. It may be found, on experience, that the duties of directors and officers of large associations will become so burdensome that it will be necessary to give them moderate compensation. But they can be paid only with the approval of the national board at Washington.

Reasonable Expenses.

The law further provides that "the reasonable expenses of the secretary-treasurer, the loan committee and other officers and agents of national farm loan associations, and the salary of the secretary-treasurer shall be paid from the general funds of the association, and the board of directors is authorized to set aside such sums as it shall deem requisite for that purpose and for other expenses of the association. When no such funds are available, the board of directors may levy an assessment on members in proportion to the amount of stock held by each, which may be repaid as soon as funds are available, or it may secure an advance from the federal land bank of the district, to be repaid with interest at the rate of 6 per centum per annum, from dividends belonging to said association."

On the secretary-treasurer will fall the detailed work of the association. He is authorized by the law to "act as custodian of its funds, and to deposit the same in such bank as the board of directors may designate, to pay over to borrowers all sums received for their account from the federal land bank upon first mortgage, and to meet all other obligations of the association, subject to the orders of the board of directors and in accordance with the bylaws of the association.

"It shall be the duty of the secretary-treasurer, acting under the direction of the national farm loan association, to collect, receipt for and transmit to the federal land bank payments of interest, amortization instalments, or principal arising out of loans made through the association.

"He shall be the custodian of the securities, records, papers, certificates of stock and all documents relating to or bearing upon the conduct of the association.

"He shall furnish a suitable security bond, to be prescribed and approved by the federal farm loan board.

"He shall make a quarterly report to the federal farm loan board upon forms to be provided for that purpose.

"He shall assure himself from time to time that the loans made through the national farm association, of which he is an officer, are applied to the purposes set forth in the application of the borrower as approved, and shall forthwith report to the land bank of the district any failure of any borrower to comply with the terms of his application or mortgage. He shall also ascertain and report to said bank the amount of any delinquent taxes on land mortgaged to said bank and the name of the delinquent."

The Loan Committee.

We come now to the duties of the loan committee of the association. An application for a loan will first be referred to this committee, which "shall examine the land offered as security for the desired loan and make a detailed written report signed by all three members, giving the appraisal of said land as determined by them, and such other information as may be required by rules and regulations to be prescribed by the federal farm loan board. No loan shall be approved by the directors unless said loan committee agrees upon a favorable report.

"No borrower under this act shall be eligible as an appraiser, but borrowers may act as a member of a loan committee in any case where they are not personally interested in the loan under consideration. When any member of a loan committee or of a board of directors is interested, directly or indirectly, in a loan, a majority of the board of directors shall appoint a substitute to act in his place in passing upon such loan."

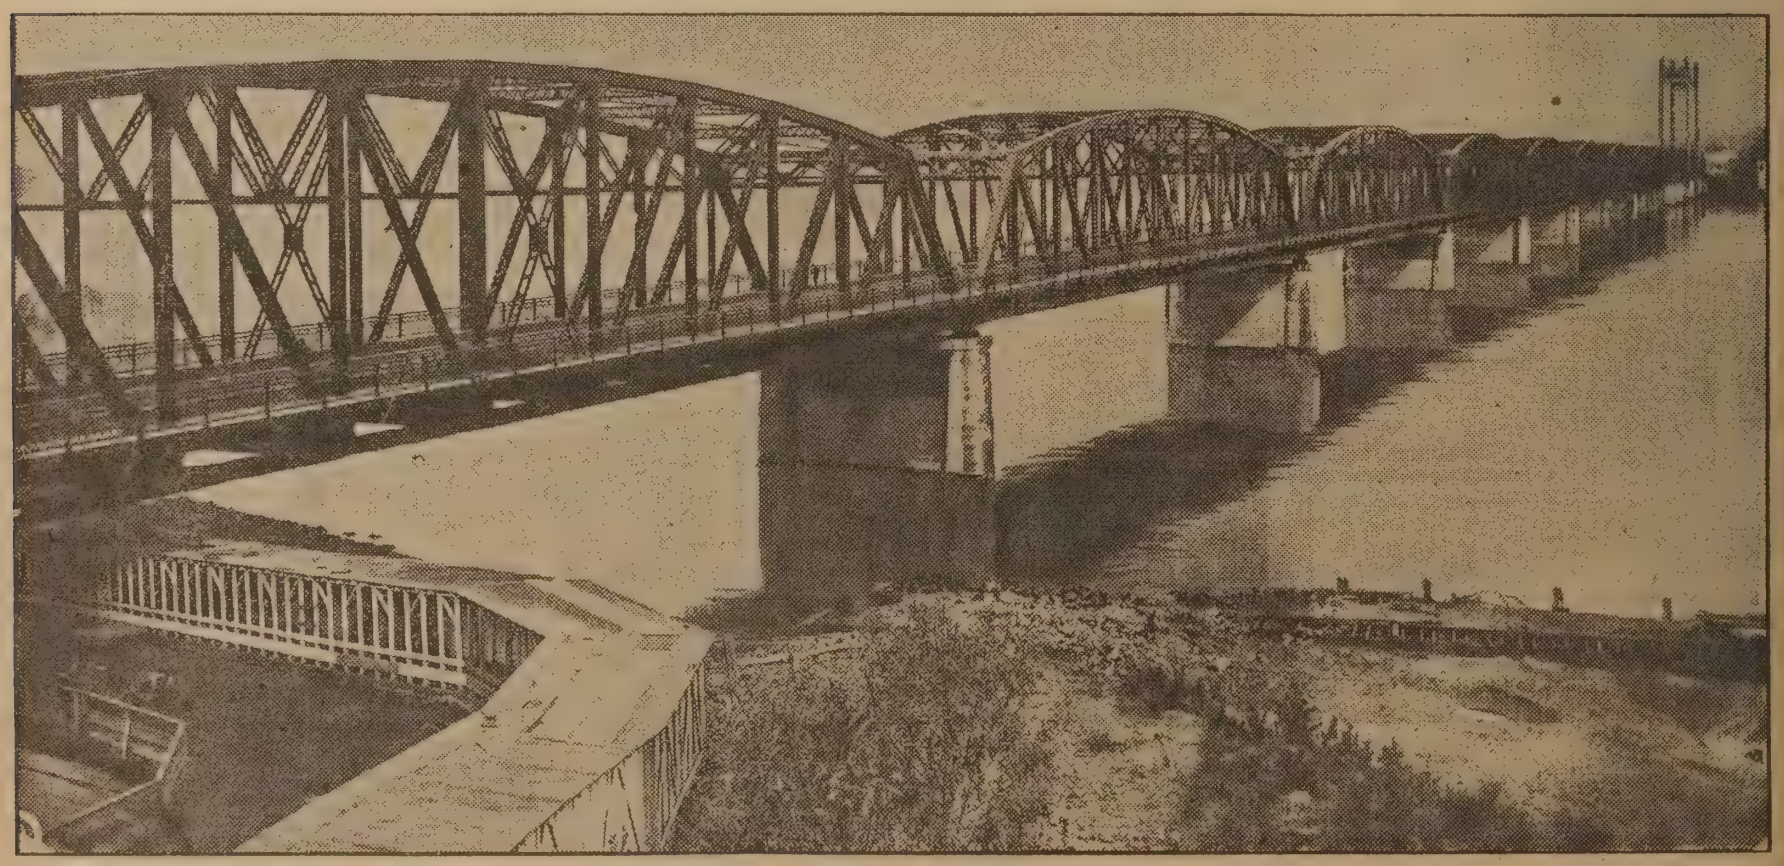
The next article in this series will tell in detail how loans are to be made.

AT WHITE BLUFFS

Eighteen Farmers Request Loan.

Eighteen farmers qualified at White Bluffs, Benton county, by signing up the request for loans under the association provided by the federal farm loan act. The amount they desire to borrow varies from $600 to $8000. The following board of directors was elected: Will angle, L. N. Fry, R. J. Roberts, B. R. Johnson, M. S. Meeks, H. E. Robinson, R. D. Barge, Emil Cords and M. M. Wiehl. The board of directors organized by electing the following officers: M. S. Meeks, president; Will Angle, vice-president; W. J. Kincaid, secretary-treasurer. The members then selected the following board of appraisers: R. J. Roberts, H. E. Robinson, L. N. Fry.

M. S. Meeks acted as chairman of the meeting and Will Angle as secretary. A resolution was passed fixing the following boundaries for the local association: All that territory adjacent to the south side of the Columbia river from the west line of Benton county east to and including the Hanford district. Also that portion of Franklin county lying along the Columbia river from White Bluffs to and including the Hanford district.



WHATCOM COUNTY

New Loan Association at Laurel.

Nels Jacobson of Lynden was elected temporary chairman of a farm loan association organized recently at Laurel. Twenty-six farmers at this meeting decided to petition the government for loans totaling $45,000. The association formed at Laurel will handle all loans in the townships of Lynden, Ferndale, Ten Mile and Marietta. Trustees elected included Mr. Jacobson; A. E. Rusco, Lynden; B. S. Hillier, Laurel; Fred Urfer, Ten Mile; E. S. Griff, Marietta; E. Edwards, Ferndale; Alvin Minor, Laurel; W. H. Kaufman, Ferndale, and R. Metcalf, Laurel.

"Farmers need to know their cows and a cow testing association furnishes the best means of knowing the cows. A cow testing association, if kept up, tests the bull as well as the cow."—Gustav Kunze, president Idaho State Dairy association, cheese manufacturer and dairyman, Buhl, Idaho.

Bridge Four Miles in Length Joins Oregon and Washington as Highway Link

The completion and opening to traffic of the Oregon-Washington interstate bridge between Portland and Vancouver, shown above, marks one of the great engineering triumphs of the generation. This bridge, which is a link in the Pacific highway, running from the British Columbia line to southern California, is claimed to be the longest bridge in the world. Its entire length is over 23,000 feet, nearly four miles. It is composed of three sections, however, the main bridge of 3500 feet crossing the Columbia river, and the other two sections crossing Columbia slough and Oregon slough, respectively. It cost one and three quarters million dollars ($1,750,000), and was built with money raised by the issuance of bonds by Clarke county, Wash., and Multnomah county, Ore., which bonds it is expected the two states will ultimately redeem. The structure contains besides hundreds of tons of concrete, more than 8000 tons of steel.

WHEN KNIGHTHOOD WAS IN FLOWER

or, the Love Story of Charles Brandon and Mary Tudor, the King's Sister, and Happening in the Reign of His August Majesty, King Henry the Eighth.

By EDWIN CASKODEN (Charles Major).

Copyright, 1898, The Bobbs-Merrill Co.

SYNOPSIS.

Charles Brandon, who has neither wealth nor title, wins distinction for having defeated the heretofore unconquerable duelist, Judson. Brandon is installed as one of the captains of the guard of King Henry VIII. Edwin Caskoden (who tells the story) is Master of the Dance at London Court. The two young men become fast friends. Edwin tells Brandon of the willful, but adorable Mary Tudor, who had coaxed her royal brother Henry out of many proposed marriages which had been arranged for Henry's advantage. Edwin confesses that he, like scores of other men, had fallen in love with Mary, but upon Mary's refusal to marry him, he immediately became attracted to the good and beautiful Lady Jane Bolingbroke.

At their first meeting, Mary and Brandon have a tilt, in which Mary comes off second best and acknowledges it. Wondering as to Brandon's social accomplishments, and to settle a wager with Sir Edwin that he could not dance, Mary invites Brandon, Edwin and Jane to her drawing room. To her surprise and Edwin's delight Brandon is perfectly at ease and proves that he knows more about dancing than the Master of the Dance, himself. He teaches the Princess Mary one of the new French dances. At a ball, given by Mary, Brandon makes an enemy of the Duke of Buckingham, the most powerful nobleman in the realm. The evening is spent with the new dance, which greatly pleases the king. Brandon begins to realize that he loves the unattainable Mary, and, what is worse, Mary knows she loves Brandon. A party, including Brandon, spends a few days at Windsor, during which time the king makes several knights. Brandon would have been one of these had not Buckingham poisoned the king's mind against him. In the meantime, the old French king, Louis XII., whose wife, Anne of Brittany, had just died, has asked Mary's hand in marriage.

CHAPTER VII.—(Continued.)

Mary had not seen Brandon for nearly two weeks, and was growing anxious, when one day she and Jane met him in a forest walk near the river. Brandon was sauntering along reading when they overtook him. Jane told me afterwards that Mary's conduct upon coming up to him was pretty and curious beyond the naming. At first she was inclined to be distant, and say cutting things, but when Brandon began to grow restive under them and showed signs of turning back, she changed front in the twinkle of an eye and was all sweetness. She laughed and smiled and dimpled, as only she could, and was full of bright glances and gracious words.

She tried a hundred little schemes to get him to herself for a moment—the hunting of a wild flower or a four-leaved clover, or the exploration of some little nook in the forest toward which she would lead him—but Jane did not at first take the hint and kept close at her heels. Mary's impulsive nature was not much given to hinting—she usually nodded and most emphatically at that—so after a few failures to rid herself of her waiting lady she said impatiently: "Jane, in the name of heaven don't keep so close to us. You won't move out of reach of my hand, and you know how often it inclines to box your ears."

Jane did know, I am sorry for Mary's sake to say, how often the fair hand was given to such spasms; so with this emphasized hint she walked on ahead half sulky at the indignity put upon her, and half amused at her whimsical mistress.

Mary lost not time, but began the attack at once.

"Now, sir, I want you to tell me the truth; why do you refuse my invitations and so persistently keep away from me? I thought at first I would simply let you go your way, and then I thought I—I would not. Don't deny it. I know you won't. With all your faults, you don't tell even little lies; not even to a woman—I believe. Now there is a fine compliment—is it not?—when I intended to scold you!" She gave a fluttering little laugh, and, with hanging head, continued: "Tell me, is not the king's sister of quality sufficient to suit you? Perhaps you must have the queen or the Blessed Virgin? Tell me now?" And she looked up at him, half in banter, half in doubt.

"My duties——," began Brandon.

"Oh! bother your duties. Tell me the truth."

"I will, if you let me," returned Brandon, who had no intention whatever of doing anything of the sort. "My duties now occupy my time in the evening——"

"That will not do," interrupted Mary, who knew enough of a guardsman's duty to be sure it was not onerous. "You might as well come to it and tell the truth; that you do not like our society." And she gave him a vicious little glance without a shadow of a smile.

"In God's name, Lady Mary, that is not it," answered Brandon, who was on the rack. "Please do not think it. I can not bear to have you say such a thing when it is so far from the real truth."

"Then tell me the real truth."

"I can not; I can not. I beg you not to ask. Leave me! or let me leave you. I refuse to answer further." The latter half of this sentence was uttered doggedly and sounded sullen and ill-humored, although, of course, it was not so intended. He had been so perilously near speaking words which would probably have lighted, to their destruction—to his, certainly—the smoldering flames within their breast that it frightened him, and the manner in which he spoke was but a tone giving utterance to the pain in his heart.

Mary took it as it sounded, and, in unfeigned surprise, exclaimed angrily: "Leave you? Do I hear aright? I never thought that I, the daughter and sister of a king, would live to be dismissed by a—by a—any one."

"Your highness——" began Brandon, but she was gone before he could speak.

He did not follow her to explain, knowing how dangerous such an explanation would be, but felt that it was best for them both that she should remain offended, painful as the thought was to him.

Of course, Mary's womanly self-esteem, to say nothing of her royal pride, was wounded to the quick, and no wonder.

Poor Brandon sat down upon a stone, and, as he longingly watched her retiring form, wished in his heart he were dead. This was the first time he really knew how much he loved the girl, and he saw that, with him at least, it was a matter of bad to worse; and at that rate would soon be—worst.

Now that he had unintentionally offended her, and had permitted her to go without an explanation, she was dearer to him than ever, and, as he sat there with his face in his hands, he knew that if matters went on as they were going, the time would soon come when he would throw caution to the dogs and would try the impossible—to win her for his own. Caution and judgment still sat enthroned, and they told him now what he knew full well they would not tell him after a short time—that failure was certain to follow the attempt, and disaster sure to follow failure. First, the king would, in all probability, cut off his head upon an intimation of Mary's possible fondness for him; and, second, if he should be so fortunate as to keep his head, Mary could not, and certainly would not, marry him, even if she loved him with all her heart. The distance between them was too great, and she knew too well what she owed to her position. There was but one thing left—New Spain; and he determined while sitting there to sail with the next ship.

The real cause of Brandon's manner had never occurred to Mary. Although she knew her beauty and power, as she could not help but know it—not as a matter of vanity, but as a matter of fact—yet love had blinded her where Brandon was concerned, and that knowledge failed to give her light as to his motives, however brightly it might illumine the conduct of other men toward whom she was indifferent.

So Mary was angry this time; angry in earnest, and Jane felt the irritable palm more than once. I, too, came in for my share of her ill temper, as most certainly would Brandon, had he allowed himself to come within reach of her tongue, which he was careful not to do. An angry porcupine would have been pleasant company compared with Mary during this time. There was no living with her in peace. Even the king fought shy of her, and the queen was almost afraid to speak. Probably so much general disturbance was never before or since collected within one small body as in that young Tartar-Venus, Mary. She did not tell Jane the cause of her vexation, but only said she "verily hated Brandon," and that, of course, was the key to the whole situation.

After a fortnight, this ill humor began to soften in the glowing warmth of her heart, which was striving to reassert itself, and the desire to see Brandon began to get the better of her sense of injury.

Brandon, tired of this everlasting watchfulness to keep himself out of temptation, and, dreading at any moment that lapse from strength which is apt to come to the strongest of us, had resolved to quit his place at court and go to New Spain at once. He had learned, upon inquiry, that a ship would sail from Bristol in about 20 days, and another six weeks later. So he chose the former and was making his arrangements to leave as soon as possible.

He told me of his plans and spoke of his situation: "You know the reason for my going," he said, "even if I have never spoken of it. I am not much of a Joseph, and am very little given to running away from a beautiful woman, but in this case I am fleeing from death itself. And to think what a heaven it would be. You are right, Caskoden; no man can withstand the light of that girl's smile. I am unable to tell how I feel toward her. It sometimes seems that I can not live another hour without seeing her; yet, thank God, I have reason enough left to know that every sight of her only adds to an already incurable malady. What will it be when she is the wife of the king of France? Does it not look as if wild life in New Spain is my only chance?"

I assented as we joined hands, and our eyes were moist as I told him how I should miss him more than any one else in all the earth—excepting Jane, in mental reservation.

I told Jane what Brandon was about to do, knowing full well she would tell Mary; which she did at once.

Poor Mary! The sighs began to come now, and such small vestiges of her ill humor toward Brandon as still remained were frightened off in a hurry by the fear that she had seen the last of him.

She had not before fully known that she loved him. She knew he was the most delightful companion she had ever met, and that there was an exhilaration about his presence which almost intoxicated her and made life an ecstasy, yet she did not know it was love. It needed but the thought that she was about to lose him to make her know her malady, and meet it face to face.

Upon the evening when Mary learned all this, she went into her chamber very early and closed the door. No one interrupted her until Jane went in to robe her for the night, and to retire. She then found that Mary had robed herself and was lying in bed with her head covered, apparently asleep. Jane quietly prepared to retire, and lay down in her own bed. The girls usually shared one couch, but during Mary's ill temper she had forced Jane to sleep alone.

After a short silence Jane heard a sob from the other bed, then another, and another.

"Mary, are you weeping?" she asked.

"Yes."

"What is the matter, dear?"

"Nothing," with a sigh.

"Do you wish me to come to your bed?"

"Yes, I do." So Jane went over and lay beside Mary, who gently put her arms about her neck.

"When will he leave?" whispered Mary, shyly confessing all by her question.

"I do not know," responded Jane, "but he will see you before he goes."

"Do you believe he will?"

"I know it"; and with this consolation Mary softly wept herself to sleep.

After this, for a few days, Mary was quiet enough. Her irritable mood had vanished, but Jane could see that she was on the lookout for some one all the time, although she made the most pathetic little efforts to conceal her watchfulness.

At last a meeting came about in this way: Next to the king's bed chamber was a luxuriously furnished little apartment with a well-selected library. Here Brandon and I often went, afternoons, to read, as we were sure to be undisturbed.

Late one day Brandon had gone over to this quiet retreat, and having selected a volume, took his place in a secluded little alcove half hidden in arras draperies. There was a cushioned seat along the wall and a small diamond-shaped window to furnish light.

He had not been there long when in came Mary. I can not say whether she knew Brandon was there or not, but she was there and he was there, which is the only thing to the point, and finding him, she stepped into the alcove before he was aware of her presence.

Brandon was on his feet in an instant, and with a low bow was backing himself out most deferentially, to leave her in sole possession if she wished to rest.

"Master Brandon, you need not go. I will not hurt you. Besides, if this place is not large enough for us both, I will go. I would not disturb you." She spoke with a tremulous voice and a quick, uneasy glance, and started to move backward out of the alcove.

"Lady Mary, how can you speak so? You know—you must know—oh! I beg you——" But she interrupted him by taking his arm and drawing him to a seat beside her on the cushion. She could have drawn down the Colossus of Rhodes with the look she gave Brandon, so full was it of command, entreaty and promise.

"That's it; I don't know, but I want to know; and I want you to sit here beside me and tell me. I am going to be reconciled with you, despite the way you treated me when last we met. I am going to be friends with you whether you will or not. Now what do you say to that, sir?" She spoke with a fluttering little laugh of uneasy non-assurance, which showed that her heart was not nearly so confident nor so bold as her words would make believe. Poor Brandon, usually so ready, had nothing "to say to that," but sat in helpless silence.

Was this the sum total of all his wise determinations made at the cost of so much pain and effort? Was this the answer to all his prayers, "Lead me not into temptation"? He had done his part, for he had done all he could. Heaven had not helped him, since here was temptation thrust upon him when least expected, and when the way was so narrow he could not escape, but must meet it face to face.

Mary soon recovered her self-possession—women are better skilled in this art than men—and continued:

"I am not intending to say one word about your treatment of me that day over in the forest, although it was very bad, and you have acted abominably ever since. Now is not that kind in me?" And she softly laughed and peeped up at the poor fellow from beneath those sweeping lashes, with the premeditated purpose of tantalizing him, I suppose. She was beginning to know her power over him, and it was never greater than at this moment. Her beauty had its sweetest quality, for the princess was sunk and the woman was dominant, with flushed face and flashing eyes that caught a double luster from the glowing love that made her heart beat so fast. Her gown, too, was the best she could have worn to show her charms. She must have known Brandon was there, and must have dressed especially to go to him. She wore her favorite long flowing outer sleeve, without the close fitting inner one. It was slit in the shoulder, and gave entrancing glimpses of her arms with every movement, leaving them almost bare when she lifted her hands, which was often, for she was full of gestures as a Frenchwoman. Her bodice was cut low, both back and front, showing her large perfectly molded throat and neck, like an alabaster pillar of beauty and strength, and disclosing her bosom just to its shadowy incurving, white and billowy as drifted snow. Her hair was thrown back in an attempt at a coil, though, like her own rebellious nature, it could not brook restraint, and persistenly escaped her face and lay upon the soft white nape of her neck like fluffy sheeds of sun-lit floss on new ivory.

With the mood that was upon her, I wonder Brandon maintained his self-restraint even for a moment. He felt that his only hope lay in silence, so he sat beside her and said nothing. He told me long afterwards that while sitting there in the intervals between her speech, the oddest, wildest thoughts ran through his brain. He wondered how he could escape. He thought of the window, and that possibly he might

When Knighthood Was in Flower

BY EDWIN CASKODEN

(Continued from preceding page.)

break away through it, and then he thought of feigning illness, and a hundred other absurd schemes, but they all came to nothing, and he sat there to let events take their own course as they seemed determined to do in spite of him

After a short silence Mary continued, half banteringly:

"Answer me, sir! I will have no more of this. You shall treat me at least with the courtesy you would show a bourgeoise girl."

"Oh, that you were only a burgher's daughter."

"Yes, I know all that; but I am not. It can't be helped, and you shall answer me."

"There is no answer, dear lady—I beg you—oh, do you not see—"

"Yes, yes; but answer my question; am I not kind—more than you deserve?"

"Indeed, yes; a thousand times. You have always been so kind, so gracious and so condescending to me that I can only thank you, thank you, thank you," answered Brandon, almost shyly; not daring to lift his eyes to hers.

Mary saw the manner quickly enough—what woman ever missed it, much less so keen-eyed a girl as she—and it gave her confidence, and brought back the easy banter of her old time manner.

"How modest we have become! Where is the boldness of which we used to have so much? Kind? Have I always been so? How about the first time I met you? Was I kind then? And as to condescension, don't—don't use that word between us."

"No," returned Brandon, who, in his turn, was recovering himself, "no, I can't say that you were very kind at first. How you did fly out at me and surprise me. It was so unexpected it almost took me off my feet," and they both laughed in remembering the scene of their first meeting. "No, I can't say your kindness showed itself very strongly in that first interview, but it was there nevertheless, and when Lady Jane led me back, your real nature asserted itself, as it always does, and you were kind to me; kind as only you can be."

That was getting very near to the sentimental; dangerously near, he thought; and he said to himself: "If this does not end quickly I shall have to escape."

"You are easily satisfied if you call that good," laughingly returned Mary. "I can be ever so much better than that if I try."

"Let me see you try," said Brandon.

"Why, I'm trying now," answered Mary with a distractingly little pout. "Don't you know genuine out-and-out goodness when you see it? I'm doing my very best right now. Can't you tell?"

"Yes, I think I recognize it; but—but—be bad again."

"No, I won't! I will not be bad even to please you! I have determined not to be bad and I will not—not even to be good. This," placing her hand over her heart, "is just full of 'good' today," and her lips parted as she laughed at her own pleasantry.

"I am afraid you had better be bad—I give you fair warning," said Brandon huskily. He felt her eyes upon him all the time, and his strength and good resolves were oozing out like wine from an ill-coopered cask. After a short silence Mary continued, regardless of the warning:

"But the position is reversed with us; at first I was unkind to you, and you were kind to me, but now I am kind to you and you are unkind to me."

"I can come back at you with your own words," responded Brandon. "You don't know when I am kind to you. I should be kinder to myself, at least, were I to leave you and take myself to the other side of the world."

"Oh! that is one thing I wanted to ask you about. Jane tells me you are going to New Spain?"

She was anxious to know, but asked the question partly to turn the conversation which was fast becoming perilous. As a girl, she loved Brandon, and knew it only too well, but she knew also that she was a princess, standing next to the throne of the greatest kingdom on earth; in fact, at that time, the heir apparent—Henry having no children—for the people would not have the Scotch king's imp—and the possibility of such a thing as a union with Brandon had never entered her head, however passionate her feelings toward him. She also knew that speaking a thought vitalizes it and gives it force; so, although she could not deny herself the pleasure of being near him, of seeing him, and hearing the tones of his voice, and now and then feeling the thrill of an accidental touch, she had enough good sense to know that a mutual confession, that is, taking it for granted Brandon loved her, as she felt almost sure he did, must be avoided at all hazards. It was not to be thought of between people so far apart as they. The brink was a delightful place, full of all the sweet ecstasies and thrilling joys of a seventh heaven, but over the brink—well! there should be no "over," for who was she? And who was he? Those two dreadfully stubborn facts could not be forgotten, and the gulf between them could not be spanned; she knew that only too well. No one better.

Brandon answered her question: "I do not know about going; I think I shall. I have volunteered with a ship that sails in two or three weeks from Bristol, and I suppose I shall go."

"Oh, no! do you really mean it?" It gave her a pang to hear that he was actually going, and her love pulsed higher; but she also felt a sense of relief, somewhat as a conscientious house-breaker might feel upon finding the door securely locked against him. It would take away a temptation which she could not resist, and yet dared not yield to much longer.

"I think there is no doubt that I mean it," replied Brandon. "I should like to remain in England until I can save money enough out of the king's allowance to pay the debt against my father's estate, so that I may be able to go away and feel that my brother and sisters are secure in their home—my brother is not strong—but I know it is better for me to go now, and hope to find the money out there. I could have paid it with what I lost to Judson before I discovered him cheating." This was the first time he had ever alluded to the duel, and the thought of it, in Mary's mind, added a faint touch of fear to her feeling toward him.

She looked up with a light in her eyes and asked: "What is the debt? How much? Let me give you the money. I have so much more than I need. Let me pay it. Please tell me how much it is and I will hand it to you. You can come to my rooms and get it or I will send it to you. Now tell me that I may. Quickly." And she was alive with enthusiastic interest.

"There now! you are kind again; as kind as even you can be. Be sure, I thank you, though I say it only once," and he looked into her eyes with a gaze she could not stand even for an instant. This was growing dangerous again, so, catching himself, he turned the conversation back into the bantering vein.

"Ah! you want to pay the debt that I may have no excuse to remain? Is that it? Perhaps you are not so kind after all."

"No! no! you know better. But let me pay the debt. How much is it and to whom is it owing? Tell me at once, I command you."

"No! no! Lady Mary, I can not."

"Please do. I beg—if I can not command. Now, I know you will; you would not make me beg twice for anything." She drew closer to him as she spoke and put her hand coaxingly upon his arm. With an irresistible impulse he took the hand in his hand and lifted it to his lips in a lingering caress that could not be mistaken. It was all so quick and so full of fire and meaning that Mary took fright, and the princess, for the moment, came uppermost.

"Master Brandon!" she exclaimed sharply, and drew away her hand. Brandon dropped the hand and moved over on the seat. He did not speak, but turned his face from her and looked out of the window toward the river. Thus they sat in silence, Brandon's hand resting listlessly upon the cushion between them. Mary saw the eloquent movement away from her and his speaking attitude, with averted face; then the princess went into eclipse, and the imperial woman was ascendant once more. She looked at him for a brief space with softening eyes, and, lifting her hand, put it back in his, saying:

"There it is again—if you want it."

Want it? Ah! this was too much! The hand would not satisfy now; it must be all, all! And he caught her to his arms with a violence that frightened her.

"Please don't, please! Not this time. Ah! have mercy, Charl—— Well! There! There! Mary mother, forgive me." Then her woman spirit fell before the whirlwind of his passion, and she was on his breast with her white arms around his neck, paying the same tribute to the little blind god that he would have exacted from the lowliest maiden of the land. Just as though it were not the blood of 50 kins and queens that made so red and sweet, aye, sweet as nectar thrice distilled, those lips which now so freely paid their dues in coined bliss.

Brandon held the girl for a moment or two, then fell upon his knees and buried his face in her lap.

"Heaven help me!" he cried.

She pushed the hair back from his forehead with her hand, and as she fondled the curls, leaned over him and softly whispered:

"Heaven help us both; for I love you!"

He sprang to his feet. "Don't! don't! I pray you," he said wildly, and almost ran from her.

Mary followed him nearly to the door of the room, but when he turned he saw that she had stopped, and was standing with her hands over her face, as if in tears.

He went back to her and said: "I tried to avoid this, and if you had helped me, it would never——" But he remembered how he had always despised Adam for throwing the blame upon Eve, no matter how much she may have deserved it, and continued: "No; I do not mean that. It is all my fault. I should have gone away long ago. I could not help it; I tried. Oh! I tried."

Mary's eyes were bent upon the floor, and tears were falling over her flushed cheeks unheeded and unchecked.

"There is no fault in any one; neither could I help it," she murmured.

"No, no; it is not that there is any fault in the ordinary sense; it is like suicide or any other great, self-inflicted injury with me. I am different from other men. I shall never recover."

"I know only too well that you are different from other men, and—and I, too, am different from other women—am I not?"

"Ah, different! There is no other woman in all this wide, long world," and they were in each other's arms again. She turned her shoulder to him and rested with the support of his arms about her. Her eyes were cast down in silence, and she was evidently thinking as she toyed with the lace of his doublet. Brandon knew her varying expressions so well that he saw there was something wanting, so he asked:

"Is there something you wish to say?"

"Not I," she responded with emphasis on the pronoun.

"Then is it something you wish me to say?"

She nodded her head slowly: "Yes."

"What is it? Tell me and I will say it."

She shook her head slowly: "No."

"What is it? I can not guess."

"Did you not like to hear me say that—that I—loved you?"

"Ah, yes; you know it. But—oh!—do you wish to hear me say it?"

The head nodded rapidly two or three times: "Yes."

And the black curving lashes were lifted for a fleeting, luminous instant.

"It is surely not necessary; you have known it so long already, but I am only too glad to say it. I love you."

She nestled closer to him and hid her face on his breast.

"Now that I have said it, what is my reward?" he asked—and the fair face came up, red and hosy, with "rewards," any one of which was worth a king's ransom.

"But this is worse than insanity," cried Brandon, as he almost pushed her from him. "We can never belong to each other; never."

"No," said Mary, with a despairing shake of her head, as the tears began to flow again; "no! never." And falling upon his knees, he caught both her hands in his, sprang to his feet and ran from the room.

Her word showed him the chasm anew. She saw the distance between them even better than he. Evidently it seemed further looking down than looking up. There was nothing left now but flight.

He sought refuge in his own apartments and wildly walked the floor, exclaiming, "Fool! fool that I am to lay up this store of agony to last me all my days. Why did I ever come to this court? God pity me—pity me!" And he fell upon his knees at the bed, burying his face in his arms, his mighty man's frame shaking as with a palsy.

That same night Brandon told me how he had committed suicide, as he put it, and of his intention to go to Bristol and there await the sailing of the ship, and perhaps find a partial resurrection in New Spain.

Unfortunately, he could not start to Bristol at once, as he had given some challenges for a tournament at Richmond, and could furnish no good excuse to withdraw them; but he would not leave his room, nor again see "that girl who was driving him mad."

It was better, he thought, and wisely too, that there be no leave-taking, but that he should go without meeting her.

"If I see her again," he said, "I shall have to kill some one, even if it only myself."

I heard him tossing in his bed all night, and when morning came he arose looking haggard enough, but with his determination to run away and see Mary no more stronger than ever upon him.

But providence, or fate, or some one, ordered it differently, and there was plenty of trouble ahead.

(To be continued in the next issue.)

Sidelights

Far From It.

The Reason.

"And now, Johnny," said the Sunday school teacher, after an elaborate explanation of the flood, "can you tell me what caused the flood?"

"Yes, ma'am," said Johnny, beaming with pride, "it rained."

No Time to Argue.

Man With One Leg—Yes, sir, I fell over the side of the ship and a shark came along and grabbed me by the leg.

"Good gracious! And what did you do?"

"Let 'im 'ave the leg, o' course. I never argues with sharks."

Inside Information.

The archbishop had preached a fine sermon on "Married Life and Its Duties." Two old Irish women were heard coming out of church commenting on the address.

"It's a fine sermon his reverence would be after giving us," said one to the other.

"It is, indeed," was the quick reply, "and I wish I knew as little about the matter as he does."—Chicago Daily News.

He Recognized It.

In honor of a visit to his plant by the governor of the state, an automobile manufacturer once had a complete car assembled in something like seven minutes.

Some weeks after the feat was heralded in the daily papers the telephone at the factory rang vigorously.

"Is it true that you assembled a car in seven minutes at your factory?" the voice asked.

"Yes," came the reply. "Why?"

"Oh, nothing," said the calm inquirer, "only I've got the car!"—People's Popular Monthly.

Not Even a Hesitater.

A professor traveling in the country had occasion to investigate the running time of the trains that passed through the small place where he was stopping. Carefully searching a time table he found apparently that there would be an express train due at 4 o'clock that afternoon. The professor was in time, and so was the express train. The intending passenger watched it approach and thunder by the station at the rate of 50 miles an hour. The traveler was annoyed, and, turning to a porter who stood near, remarked:

"That train didn't stop!"

"No, sir," replied the porter cheerfully, "it didn't even hesitate."

Add Up the Figures—Send in the Total

OTHERS ARE FIGURING, WHY NOT YOU?

MARCH 17

Only Four Weeks Remain, and You May Regret It If You Let This Opportunity Glide By! It's Worth Remembering. This Contest Closes

MARCH 17

Sets Her Troubles to Rhyme

Contestant Cleverly Describes the Fickleness of Figures.

To the Contest Editor:

True, as wise ones love to state, figures can't prevaricate. But to me it doth appear that they can act very queer. I may wrestle till I sweat, and what answer do I get? Never one that seems quite right, though I try with all my might.

How those sprightly twos and threes dance like leaves upon the trees! Fours, I find, can be most rude. Fives my vigilance elude; and I never dreamed a six could descend to seven's tricks! Seven! No squirrel upon a limb ever was so sly and slim! I can corner eights and nines, add them in well ordered lines. But to keep them all in bounds, ears must spurn distracting sounds, mind be clear and eye well trained, or I lose all I have gained.

There's the rub! Some one will speak and I'm baffled for a week! Friends and family must I muzzle, if, at last, I solve the puzzle? Yours distractedly,

PEGGY.

Forest Grove, Oregon.

"To the Contest Editor:

"In telling the plan of the contest I notice you say: "Simply add up the figures in the puzzle chart as if they were in one long column." Does that mean literally? If it does it would take a sheet of paper over 30 feet long. I have gone over that chart four different times and I am going over it once more, and I find the trick is in putting down every figure in the chart and in not putting down any figure twice. After that is done it's "pie" to add them up. But it's a job all righ not to put a figure down twice or miss any."

It is not necessary that the figures be set down in one long column. Set them down any way that best suits your purpose for adding them. It is only desired that your solution be the result of an honest effort to add the figures, and not merely a guess.

Some Misunderstand.

Several contestants seem to have the mistaken impression that they are expected to save all the issues of the paper in which the figure problem has appeared, and to secure a total of all figures in the twelve issues. The requirement is only the total of the figures appearing on one copy of the paper, or in one chart.

GET BUSY NOW

Only four weeks remain of the big figure contest in which this paper is giving away $750 in 32 pries, the largest to be $275 if the winner has paid $150 for thre years' subscription to the Farmer.

The advantage of beginning your count now is that should you find your first solution to be wrong, you will have time to send in a corrected solution to the Contest Editor with another subscription payment as provided by the rules. A solution when once entered can not be changed.

To enter the Figure Contest it is necessary that you remit a new or renewal of subscription to the Farmer at the regular rate of $1 for one year or $1.50 for three years.

This Is How to Do It

Simply add up the figures in the puzzle chart as if they were in one long column. Your success depends on the accuracy of your total thus obtained.

Figures run from two to nine, and there are no double figures or characters which are not figures. The tail of the "6" has a decided curve, while the tail of the "9" is straight. All other figures have the usual characteristics, allowing no question as to the identity of any figure.

In event that no one submits the correct total, prizes will be awarded for the next nearest solutions.

This contest is restricted to persons residing in Washington, Idaho, Oregon and Montana.

A payment of $1 to $1.50 on subscription to the Farmer entitles the subscriber to enter the contest.

If your subscription is already paid in advance, your expiration date will be set ahead beyond this date to which you are now paid the full period for which you pay at this time. The advantage of paying $1.50 instead of $1 is that the winner of any of the first four prizes receives additional prize dividends apportioned on the amount paid in on subscription, besides the fact that $1.50 during this contest pays for a three-year subscription to the paper, while $1 pays for only one year.

More than one solution may be submitted by any contestant, by an additional subscription payment of not less than $1 nor more than $1.50. It is not necessary to pay the same amount with each solution if more than one is submitted.

You can send in a subscription for some one other than yourself and have the solution registered in your own name. Remember that by paying $1.50 instead of $1 on subscription, the larger will be your dividends if you win one of the four leading prizes; but not more than $1.50 will be received with one solution.

$750—Prizes—$750

FIRST PRIZE, $200,

to which will be added 50 times the amount paid by the subscriber with the winning solution. For example, if you pay $1.50 on subscription, this prize will be worth $275.

SECOND PRIZE, $100,

to which will be added 30 times the amount paid by the subscriber with the winning solution. This prize may be worth $145.

THIRD PRIZE, $60,

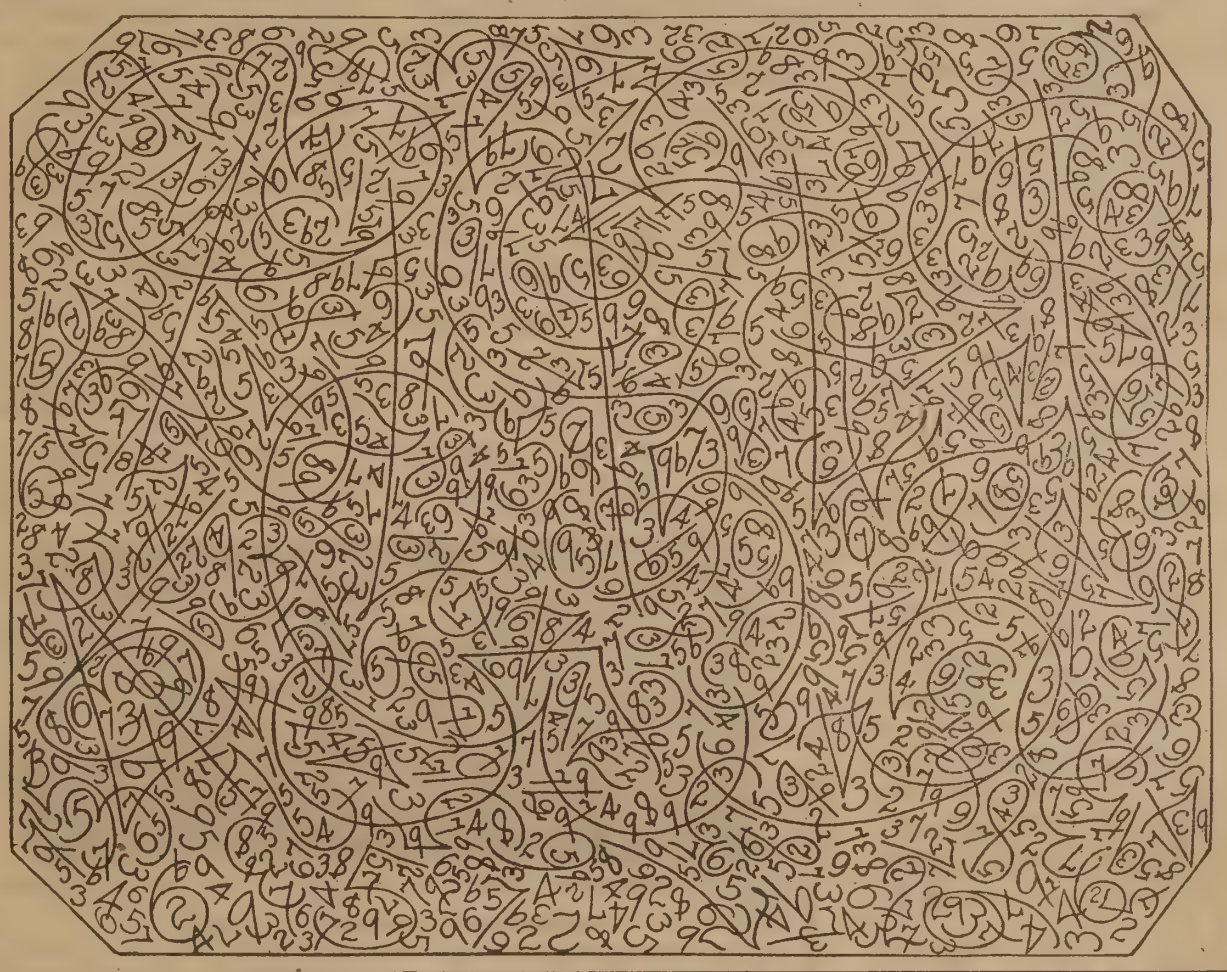
to which will be added 20 times the amount paid by the subscriber with the winning solution. This prize may be worth $90.

FOURTH PRIZE, $50,

to which will be added 10 times the amount paid by the subscriber with the winning solution. This prize may be worth $65.

FIFTH PRIZE, $40.

SIXTH AND SEVENTH PRIZES, Each $20.



EIGHTH TO SIXTEENTH PRIZES, Each $7.

SEVENTEENTH TO THIRTY-SECOND PRIZES, Each $2.

CASH MUST ACCOMPANY.

Don't send in your charts and working papers unless called for by the Contest Editor. Simply write your solution in blank space provided in "Registration Blank."

Remember, the contest closes March 17, 1917.

Be Right

When Sure of This, Go Ahead

What is the quotation or what are the words which have helped you in the journey of life?

Is it a phrase from some famous author, or was it the words from some neighborly soul who helped you over a hard place and left you the invaluable legacy of a life motto?

What are your favorite motto, your favorite quotation, your favorite words?

Send them to the editor of the Farmer and let those words help another which have helped you.

To the Editor of The Farmer: The quotation which has influenced me more than any other is Davy Crockett's "Be sure you are right, then go ahead."

To follow this rule has involved many sacrifices, and sometimes has made enemies of those I deemed friends, but, on the whole, the approval of my own conscience has been ample compensation for all losses.

Another excellent maxim comes from St. Paul: "Prove all things; hold fast that which is good."

ELSIE COLE WILCOX.

Retsil, Wash.

Read and Learn

Is a Big Help in Self-Education

By Mariella Ladd.

That reading has a definite place in education, that it creates imagination, and a few of the things imagination has accomplished, are shown in the following, the second of a series of short articles on "Reading," by Mrs. Ladd.

If you happen to be in the Spokane public library on Friday afternoon, you will see a group of bright and eager youngsters waiting patiently for the story hour, which has become an institution there, as it is in most American city libraries.

The object of the story hour is to arouse interest in reading. Stories are arranged by the children's librarian with this in view. Books are taken out of the central library to satisfy the thirst created, or they are sent to outlying stations in care of the teacher who happens to preside there. Some teachers are so firmly convinced that reading helps their scholars to do better grade work that they are trying to arrange matters so that they can give credits for reading.

This goes to show that reading has its definite place in education. This place is mainly to arouse the imagination. Do you ever think what a wonderful power imagination is and what a place it has taken in the history of the world? All the great events that have happened, all the great inventions that make modern life so wonderful began in the imagination. Just now, when we are hearing so much about the doings of submarines, how strange it is to think that the submarine first lived in the imagination of Jules Verne! It is hard to realize when reading "Twenty Thousand Leagues Under the Sea" that the Nautilus is absolutely a creature of imagination.

Science, too, begins in imagination. All the knowledge we have of the elements and the soil, the knowledge that is yearly increasing our yields and fattening our pocketbooks, began with somebody's imagination. First, the imagination creates an idea, throws it on the screen of the mind, and finally puts it into action, tests it out and places it at the service of the community.

When we see what a big part the imagination plays in the world around us, we begin to notice how very imaginative most children are by nature. Give a child a few bare spools and he will make out of them a smokestack or anything else that he fancies resemblance to. The imagination of the child is so strong by nature that he can amuse himself for hours by its means better, than a grown-up person, whose imagination has grown less powerful, could amuse him.

The problem of education is the problem of training the childish imagination along right lines. This is best done by means of good books. The best of us know little of a child's possibilities. All we can do is to give opportunities of development and correct bad tendencies. It is necessary to select good books. Librarians are trained for that purpose. A school library is what no rural district should be without, because its absence handicaps the farm child unfairly in the race of life.

City librarians tell us that children who have been reading stories and have had their imaginations trained a little, begin to ask of their own accord for books about things they can make. This shows the practical value of story reading, when it is wisely directed. It does not kill inventiveness and energy. It quickens both into new life.

Parents must cooperate with teachers to gain the full benefit of the wonderful chance now being offered to the rural districts by the Farmer. Every parent who wants to give his children the best possible chance should insist on a school library in the school where his children attend. After all, it is the parent who is most interested in his children, though the American teacher is a good second. If both agree, the children will reap an incalculable benefit.

The third article in this series will tell how Mrs. Ladd, herself a farm woman, finds time for reading.

BREAKFAST DISH

Properly Made Corn Meal Mush.

Here is a fine breakfast dish: The day before make a good sized dish of corn meal mush in the following manner: Have a kettle with about two quarts of boiling water well salted. Wet up thoroughly with cold water two cups of corn meal and slowly stir it into the boiling water till the mush is very thick.

Set it on the back of the stove and let it simmer 15 or 20 minutes, being careful not to burn it, then turn out into a dish and make it smooth over the top. In the morning it will cut into fine solid slices and when fried in fat till brown on both sides it makes a very nice breakfast dish, to be eaten with or without syrup.

Corn meal mush to be eaten with milk while warm should not be made as thick as for frying, as it is too solid and heavy. On the other hand, the mush made properly for eating with milk contains so much moisture that it does not fry well, but spatters the hot grease and is hard to make brown. I used to drop the dry meal slowly into the boiling water, but find it much easier to wet the meal in cold water first.

Popular Crochet Designs

By WINIFRED WORTH

Guest Towel.

The supply of towels can not be too large. Add this beautiful design to your collection and it will come in handy at some future time if you can not use it now.

Satin stitch combined with French knots. There is no embroidery stitch, unless it be the feather stitch, as difficult to make as the French knot, and many workers do not realize that much depends on the quality and texture of thread used. This work was done with six-strand

filochet, using two strands for the knots and one for the satin stitch work.

Embroidered and Scalloped Edge of Towel.

For the embroidery use lazy daisy stitch with centers of French knots, the design shown in this very attractive towel. The daisy is in pink, but the little branches of feather stitching from between the petals are made of green.

Detail of Scallop of Towel 53.

Mark scallop as large as desired; begin in center of towel, and mark toward each end, stitch twice closely on machine around each scallop; cut out, dc. closely around for foundation.

1st Row—Make 6 open meshes on each scallop. Thus, 3 ch., skip 3 dc.,

sl. st. in 4 dc., 4 ch., and continue at point of scallop. Pull thread through next st., holding on needle until there are three stitches, then pull through all three at once, thus tying corners so they will not stretch. Treat each scallop in same manner. Be sure and have six open meshes to each scallop.

2d Row—2 dc., 1 p., 2 dc., 1 p., 2 dc., 1 p., 2 dc.; repeat until the 6 meshes are filled. Repeat to end of work.

Our Father which art in heaven.

Hallowed be thy name.

Thy kingdom come.

Thy will be done on earth, as it is in heaven.

Give us this day our daily bread.

And forgive us our debts, as we forgive our debtors.

And lead us not into temptation, but deliver us from evil.

For thine is the kingdom, and the power, and the glory, for ever.

Amen.

Plan Gardens

More Time Now Than Later On

By Ruth Gipson Plowhead.

When planning your spring garden, did you ever stop to think what it means, not only to yourself, but to the town and community, to have a really beautiful or "show" yard? When we see the wonder and admiration which one such yard attracts, we think how it would be if each home dweller made his surroundings as attractive as is in his power. The power of some would of course be small — time, money and strength being lacking—but even a dime and a few hours' time will do a great deal. It will plant a whole row of hollyhocks along that shabby fence, a row of four o'clocks about the foundations, or a big, bright bed of petunias or nasturtiums—all these are so easily grown.

This seems a bleak time in which to think of gardens, but most of us have more time now to plan our campaign than at any other time of the year. It pays to study the seed catalogues—some of them are almost a short course in agriculture, so complete are they. It is well to try a few novelties each year. It is thus that we get out of the ruts and progress. We are eating vegetables and gathering flowers of which our grandparents never dreamed, and our descendents will have delicacies we have never known.

Added to the high cost of living comes the admonition of physicians and dietitians to eat vegetables, and then more vegetables. So let us all who can raise as many vegetables as possible.

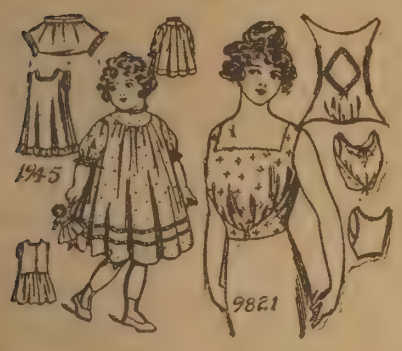
Uncle Sam advises all to plan their gardens on paper. If this seems not worth while, at least think about it, and have your seeds ready, so that when the spring rush comes they will be all ready and not delay the busy planter. Perhaps there is little time to spend on a vegetable garden, and you are too busy to think about many successive plantings. If so, it is a good idea to have the earliest and latest varieties of green vegetables put in at the same time, and one will get a longer crop with no more trouble than if you planted the one variety.

About Your House Bulbs.

If you have hyacinths, narcissus or easter lilies which you are now bringing to the light, remember that one of the great causes of failure is the giving of too great heat, so that the buds blight without developing. Keep them cool and not in too bright sunlight until the buds are well developed. If the hyacinth bulbs are inclined to choke among the leaves, as they so often do, a roll of dark paper inserted among the leaves about the flower stalk will cause the stem to grow toward the light and give the blooms more room to expand.

He—"What my son needs is to get some will-power, somehow."

Neighbor—"Oh, he'll marry."—Judge.



Patterns

1961-1962—Ladies' costume. Waist 1961 cut in 7 sizes: 34, 36, 38, 40, 42, 44 and in 7 sizes, 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt, 1692, cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 46 inches bust measure. Skirt 1962 cut 34 inches waist measure. It requires 8 1-4 yards of 44-inch material for the entire dress in a medium size. The skirt measures about 2 1-2 yards at the foot. Two separate patterns, 10 cents for each pattern.

1726—Ladies' house dress. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7 yards of 36-inch material for a 36-inch size. Price, 10 cents.

1945—Child's set of short clothes. Cut in 5 sizes: 6 months, 1 year, 2, 3 and 4 years. It will require for the

dress, 2 5-8 yards of 36-inch material. For the drawers, 3-4 yard. For the slip, 1 1-2 yards, for a 2-year size. Price, 10 cents.

9821—Ladies' one-piece corset cover. Cut in 6 sizes: 32, 34, 35, 38, 40 and 42 inches bust measure. It requires 1 3-8 yards of 36-inch material for a medium size. Price 10 cents.

1970—Ladies' kimono. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 5 5-8 yards of 44-inch material for a medium size. Price, 10 cents.

1955—Ladies' overall apron. Cut in 4 sizes: 34, 38, 42 and 46 inches bust measure. It requires 6 1-2 yards of 36-inch material for a 38-inch size. Price, 10 cents.

What's the Idea?

School Boy Brings Home Notion

By H. B. HOWELL.

"What is this strange idea that my boy is bringing home from school about wanting to raise pigs in some new-fangled way?" is often the query of many a fond parent when first broached by his son, who has heard of the Boys' Pig clubs at the public school. Again, the question arises as to whether there is anything to be learned from him, and what it will cost to allow the boy to carry out this whim.

Time and experience, however, have taught that there is something for all to learn from these lessons taught by the small boy, and that the satisfaction of this whim has often returned many dollars to the family coffers, not to mention the content with which the boy remains on the farm as he grows older.

A few examples would perhaps tell the story better than can be done in any other way. Over in eastern Oregon, in Wallowa county, a little boy 12 years old came home from the public school, where he had heard about the pig club and its work. Immediately he became interested and he was met with more than the average enthusiasm when he arrived home, for his father promised him the pick of his herd at that time. Not satisfied with this, the boy finally got together $10, with which he purchased a pure-bred gilt. The pure-bred made a more rapid growth from the start and at state fair time was taken to the fair by the first owner, where the gilt won first prize in its class. The father of the boy, seeing these advantages, bought all the females and from this start has now become one of the leading breeders of swine in the state.

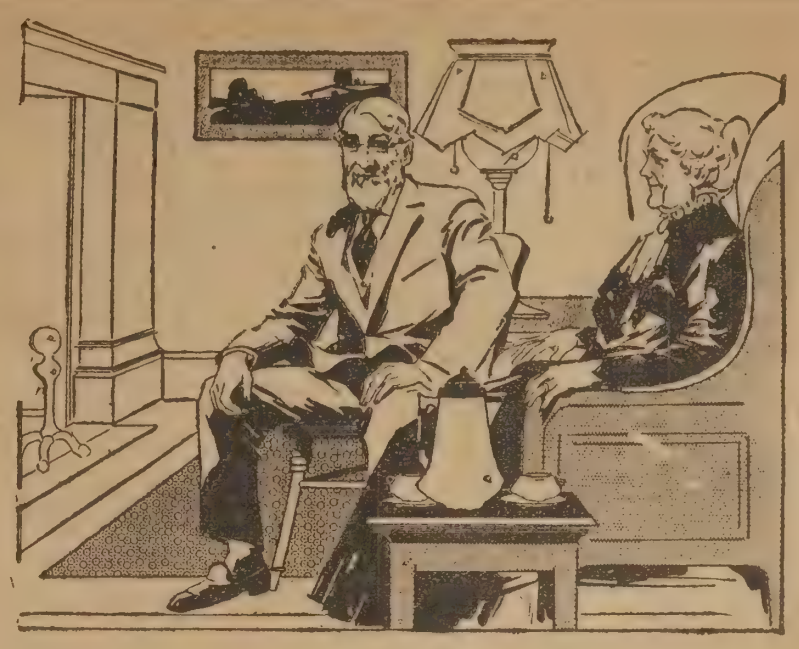
Dish Washing

Round Drainer Found to Be Handy

What is the most helpful thing you have learned during the last year in your experience with housekeeping? Let us pass it along to other housekeepers.

To the Editor of the Farmer: Referring to the above, would say I fear I haven't learned anything very new in regard to housekeeping, unless it's to use a dish drainer. It's a round one, made of heavy wire, and really one of the greatest time savers and most satisfactory contrivance one can imagine, providing one has an abundance of boiling water, and is a clean dish washer to begin with.

MRS. M. A. BROOKS.



Wapato, Wash.

Looking Backward Party.

By LISSIE C. FARMER.

A "looking backward" party affords much amusement. For this the guests must be dressed so that their backs present a similar appearance to their faces and front parts of their body. Ladies should do up their hair on the top of their heads, and then wear a mask on the back of the head. The collar and waist finish must be the same as that usually put in front. In the same way the gentlemen should reverse their coats, tie and collars.

A good stunt for the evening's fun is a backward run race; that is, all in the race must walk or run backward. The supper or luncheon menu should be written backward; also the place cards. Another stunt is to spell words backward. All stand up in a row as for an old fashioned spelling class, and as the leader pronounces the words, the class spell them backward instead of in their regular order of letters.

"John, I haven't missed my cup of Ghirardelli's Ground Chocolate for forty years."

Ghirardelli's Ground Chocolate

is used in more than a million homes in the West.

It comes PROTECTED—as all chocolate should—in ½-lb., 1-lb., and 3-lb. hermetically sealed cans.

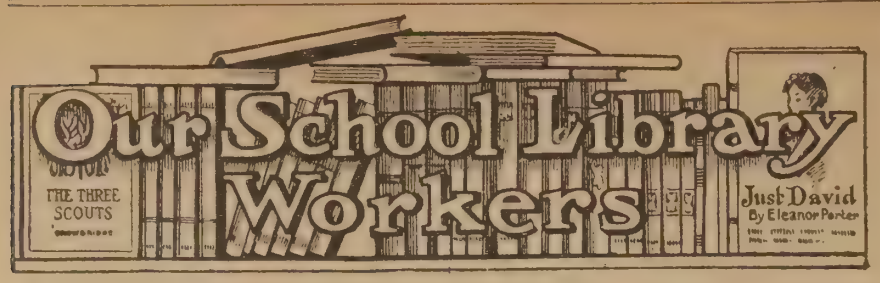
Boys' and Girls' Poultry Club

Free Hatching Eggs from Prize Winning Pens



Any thrifty boy or girl can get a start in purebred poultry by devoting a little time to pleasant work outside of school hours. We offer nothing but eggs from prize winners. Each setting contains 15 eggs and you can make your selection from the following breeds:

S. C. Reds, R. C. Reds, Barred Plymouth Rocks, White Rocks, White Wyandottes, Buff Orpington, Blue Orpington, Black Orpington, White Orpington, Light Brahmas, Anconas, S. C. Andalusians, R. C. Andalusians, R. C. Brown Leghorns, S. C. Leghorn, R. C. White Leghorn, S. C. White Leghorn, S. C. Buff Leghorn, Black Minorca, Bantam, Buttercup, Campine, Houdan.

Write today if you want to join the Poultry Club. You will want to have your eggs hatching before long, so don't delay.

Address:

Washington Farmer Room 37, Review Building Spokane, Wash.

Miss Florence Woodward, teacher of Deep Creek school, Espanola, Wash., writes us the following very pleasing letter:

"In behalf of the children as well as myself I wish to say that the books arrived safely and we appreciate them very much. Their arrival was indeed a pleasure, and an unexpected one as well, for we did not expect them so soon. We wasted no time in looking at them. The children feel more than repaid for securing subscriptions to your paper. Personally, I was especially pleased with the copy of Pollyanna and know I shall enjoying reading it."

Miss Woodward and her eight enthusiastic pupils secured their books after a whirlwind campaign of just three days. In that short time they scoured their district most thoroughly, you may well believe. If anybody of an inquiring turn of mind ever asks you whether Deep Creek school has a resourceful and capable teacher you can truthfully say with emphasis—"Yes, indeed, it has." And you can speak right up for her eight girls and boys too, for they are hustlers, every one.

"We want to learn to work with our hands," said the scholars of Pleasant Prairie school some weeks ago. "Can't you send us a set of good tools for manual training work?"

Now, of course, this question came directly from Miss Kathleen Flanagan, teacher. So we readily agreed to send tools in place of books. The scholars went to work with a will and now their school is equipped with a splendid lot of tools with which we know they will be delighted and from the use of which they will get a big lot of valuable practice.

From up Colville way comes another acknowledgement of books received. This is from W. Ivan Montayne, teacher of North Basin school, who says: "The books for our school library came in due time. We like them very much and hope to get more in the future."

Mr. Montayne and scholars are only getting started. They have found a way to get books that beats the plan of Andrew Carnegie in a hundred ways.

Books Sent This Week.

Books sent this week to the following teachers to supplement their school libraries:

C. D. Gray, Downs school, Downs, Wash.; J. F. Hargroves, superintendent, Zillah public school, Zillah, Wash., and Elizabeth Karrer, Alpowa school, Unfried, Wash.

F. E. Wentz, Windsor school, R. D. No. 9, Spokane, Wash.; Ruth E. Rollins, Upper Hunters Creek school, Hunters, Wash.

Starting Out to Win Libraries.

Ford school, Stevens county, Clara E. Gollehon, teacher; Salkum school, Lewis county, Mrs. Tillie S. Gish, teacher; New Century school, Garfield county, Lillian Brown, teacher; District 122, Grant county, Margerie Leighton, teacher; Le Rone school, Yakima county, Noella Gendron, teacher, and Waits school, Stevens county, May Esveldt, teacher.

Cedar Mountain school, Belmont, Idaho, Mabel Coles, teacher; Independent school, Athol, Idaho, F. V. French, superintendent; East Greenacres school, Post Falls, Idaho; Charles Milliron, teacher; Home school, Lake Bay, Wash., W. F. Smith, teacher; Burn school, Humptulips, Wash., G. Branshaw, teacher; Wolf Lodge school, Coeur d'Alene, Idaho, Georgia Mooney, teacher.

HONOR ROLL.

White Lake school—Elizabeth McNeilly, Lee Skiles and Leon Thexton.

Lower Naches school—Ruth Keene, Lovell Collins, R. D. Low, Louis Knight and Gladys Fife.

Marcisse school—George E. Fox.

Deno school—Earle De Rusha and Inez Crossett.

Zillah school—John Farquer and Robert Fanbion.

Glenn Wilkins, Mildred Cochran, Violet E. Hills, Springdale school, Jonathan, Wash.; Gladstone Pease, Ernest Johnson, Ethel Johnson (2), Groebli school, Spokane, Wash., R. D. No. 2; Lyle Wellman (2), Sunnyside school, Kiesling, Wash.; Marjory Weir, McKinley school, Toppenish, Wash.; Auget Drivdahl, Granite Lake school, Cheney, Wash.; Ada Lovelace, Bayview school, Bayview, Wash.

Garden Plans

Cold Frames Quite Easily Made

By RUTH GIPSON PLOWHEAD.

February is the time to attend to a number of garden operations, none of which can well be delayed. Already some of my friends are starting a few boxes in the house, so that a few of the earlier vegetable and flower seeds may be well advanced. In the case of vegetables, it is presumably rather early unless one has a hotbed or cold frame, but a few flowers may easily be retransplanted to other boxes and pots. Pansies, for instance, now started may be placed outside in March.

Do you plan a hotbed? If so, you must be thinking of it. If you have but a small garden, a hotbed is more in the nature of a luxury than a necessity. Aside from the satisfaction you get in starting your own vegetables, there is little saved for the small gardener, as vegetable plants especially are cheap. The upkeep of glass, fresh manure, etc., amounts to enough each year to buy many plants. But if you want the pleasure and have the time to experiment, a hotbed is a great pleasure in your gardening. Inexpensive cold frames, which take the place of hotbeds quite well for our mild climates, are easily made in a sheltered spot, with any frame over which may be placed a frame, oiled cloth or other sheltering cover. This will do splendidly for starting head lettuce, celery, cabbage, tomatoes and your early perennial flowers.

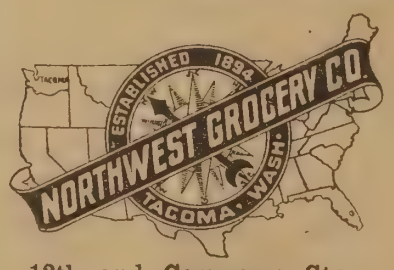
Height of Working Surfaces

As a Rule Tops of Stoves, Tables, Are Too Low

Different Types of Blocks to Raise Table.

This represents one of the simplest means of raising the height of tables. (A) Block of wood with metal strips and screws or nails for fastening. (B) A block of wood with a wooden pin or bolt. This piece is set into the block and fits into a hole in the table leg. (C) A block of wood sawed to fit a corresponding notch in the table leg. It can be fastened by means of long nails.

As a rule working surfaces—tops of stoves, tables, sinks—are too low for the person of average height, says Carrie L. Pancoast in a bulletin entitled, "The Farm Kitchen." This causes straining of the muscles and undue stooping and is largely responsible for tired backs and rounded shoulders.



Tables too low may be placed on blocks of wood or the legs may be spliced with gas pipes or small slats.

The stove may be blocked with brick or cement. Legs on a stove are generally regarded as unsatisfatcory. The space beneath too often proves a catch-all for overshoes, mittens and domestic pets.

Most sinks, especially, are too low for a person of average height. The bottom of the sink should not be less than 30 inches from the floor, if the housewife stands at her dishwashing.

The height of any working surface will, of course, vary with the height of the worker, and whether or not she sits or stands at her work, but in general it should be about 32 inches for a woman of average height (five feet five inches.) It is wise for each housewife to perform the same task at different heights and see at which one she exerts least effort.

MAIL ORDER DEPARTMENT

13th and Commerce Sts.,
TACOMA, WASH.

Coffee By Mail

We will try anything once. Will you?

As a trial proposition, send us 50 cents and we will send you 1½ pounds of Northwest's Best Coffee, and after using it, if you believe it is not honestly the best Coffee you have ever used, we will refund the purchase price without question.

You take no chances.

This is not a package coffee, but a bulk coffee, freshly roasted and ground for you the way you want, after the order is received.

1½ lbs. by Parcel Post to any point in First or Second zone ..... $ .50

3 lbs. by Parcel Post to any point in First or Second zone $1.00

All good coffee; no tin cans to throw away, or premiums you do not need.

Fill in the coupon below and send with 50 cents or $1.00, in stamps, coin or money order, to

Northwest Grocery Company
TACOMA, WASH.

Send me 1 1-2 lb.—3 lb. Northwest's Best Coffee,

Whole, Ground (How?).....

Name .....

Address .....

Coffee sent whole or ground, as ordered. If you want it ground, state whether coarse, medium, fine, for percolator, or pulverized.

FARM BOYS AND GIRLS CAN HAVE THE MOST FUN

Dear Aunt Nellie; I have written before, but am writing again. I will write about "Fun on the Farm." We have 160 acres. Seventy-two are under cultivation and 88 are in timber. We do not live on this because it has no house on it, but we rent a farm close by, and I am sure it is just as good; at least, it will do until summer comes again. Our papa will build a house then. On the farm a person can have lots of fun because you can pick wild flowers, milk cows, ride horses and do all sorts of things that the city children can not do. We have three cows and six calves. I do not milk any of the cows. Papa does all the milking. There are lots of hills here, as I guess there is all over Washington. We go and gather violets and johnny jump-ups. Of course we do this in the spring, but in summer we get wild roses, which I like a little better than cultivated ones. I love the rocks, although there are lots of snakes in them. There are hundreds of rattlesnakes and other snakes killed here in the summer. We have to be very careful of them when around the rocks. I forgot to mention that we have three horses, two of them white and one a roan. Their names are Little Dick, Big Dick and Nell.—Ethel Greely, Riverside, Wash.

ANNIE TELLS US WHAT SHE DOES WHEN HOLIDAYS COME

Dear Aunt Nellie: I received the doily for a prize, and I thank you very much for it. I read all the letters in the Corner and I think some of them are quite interesting. This is the third time I have written to you. I am 12 years old, and my birthday is October 9. I am going to write about "The Holidays." Most children think of holidays as days of fun and amusement. I am one of those who think so. We have most of our fun in the summer, although in the winter we can coast and skate. Some of us spend our holidays away from home. I am staying home this vacation and studying arithmetic, physiology and geography, also piano music. Last summer, however, I took long rides in uncle's auto. The summer before that I went to Portland and one of my uncles accompanied me to Council Crest, City park, the movies, theaters and to the city hall. We intended to go to the "Oaks," but failed to get there. We also attended the rose festival. The following winter I spent the Christmas vacation coasting down a little hill near the house. What I will do the next holidays remains to be seen.—Annie Mathews, Husum, Wash.

HELEN TAKES DOMESTIC SCIENCE AT HER SCHOOL

Dear Aunt Nellie: My father takes The Washington Farmer. We like it very much. I took music lessons for about a year. I can play pieces in the seventh grade of music. I can sing, but I don't sing very much any more. I play most of my spare time. I am going to write about my school room. I am 14 years old. I am in the eighth grade. There are about 100 pupils in our high school. There are about twice that many in the grades. I am on the same floor as the high school, so we can play the piano in the assembly if we want to. One day the high school students didn't come to school, and we played the piano all noon. There are about 30 pupils in our room. Our teacher is Mr. Craig. I walk about a mile to school. I can crochet and sew. We have domestic science in our school. We have to walk about a half a mile from the schoolhouse to the place where we take domestic science. This is my first letter to the Children's Corner, but I would like to join. I would like to correspond with any girls of my age.—Helen Beckes, Grandview, Wash.

ALICE LOVES TO HELP MOTHER WITH THE WORK

Dear Aunt Nellie: We have been taking the Farmer for a long time and I enjoy reading the Children's Corner. I am a girl 11 years old and I can make good bread. My mamma said that I was a great help to her. She told old Santa to bring me a sewing box for Christmas. My little sister got one, too. We were very proud of them. I love to help mother do the work and she is going to let me make a cake, Sunday. I am going to make some candy tomorrow.—Alice Miller, Box 63, Mayview, Wash.

COWS WON FIRST PRIZE AT THE COWLITZ FAIR

Dear Aunt Nellie: I saw my name in the paper, so I thought I would write again. I live on a 160-acre farm. My papa has 14 cows and 18 calves. They won the first prize at Cowlitz County fair at Woodland. We have two horses. Their names are Sallie and Bell. I have four brothers and two sisters. My brothers' names are Bill, Clarence, Andrew and Hjalmar. My schoolmates are Julia Sours and Bessie Skalle. I play with them all the time. We live five miles from Kalama. The mail man brings our mail up to our gate. We live on the left side of the road. There are 27 pupils in our school. There are six in my grade. My father is 52 years old and mother is 47 years old. I am four feet and four inches tall, and I weigh 99 pounds. I have blue eyes and light brown hair. I like to go to school. I haven't been absent this term yet. At school we play ten step. First thing in the morning we have singing. My favorite studies are reading, spelling and geography. I help mother wash dishes, sweep the floors and in many other things. On Saturday, my sister Ina and I clean every room in the house. My sister is 15 and my sister Sophia is 21. She is married and has a little boy.—Marie Anderson, Kalama, Wash.

LOLA STAYS IN TOWN SO SHE CAN GO TO SCHOOL

Dear Aunt Nellie: You do not know who I am for this is the first time I have written to you. I have three pets. The dog's name is Sport, the cat's is Birdie and the chicken's name is Nancy. I am eight years and my birthday is the third of March. Will some of my cousins please write to me? We live 10 1-2 miles out of town, but I have to stay in town to go to school. My address is Miss Lola E. Stannard, E528 Astor avenue. I am in the fourth grade. My teacher's name is Miss Hart. I like her yey much. I should like to correspond with Katherine Bowen, if she will correspond with me.—Lola Alice Stannard, Colville, Wash.

POOR PUSSY'S TAIL IS BROKEN IN TWO PLACES

Dear Aunt Nellie: My father takes the Farmer. We do not live on a farm but I am going to write just the same. We have a horse named Gyp and she is a buckskin. We just sold our two acres of land and our loghouse. I have two brothers. The smallest will be 10 years old in March and the oldest is between 19 and 20. My father has a gasolin drag saw and saws wood for the people. I have a pet cat named Lim. He is yellow and white. His tail is broken in two places. I am thirteen years old and in the eighth grade. My teacher's name is Mr. Orris J. Hunter and the principal's name is D. A. Drew. The school has six rooms and there is another little school off to one side—LEE ROWE, Rochester, Wash.

THE TWO LITTLE DUCKS ARE ALMA'S VERY OWN

Dear Aunt Nellie: I live on a farm of 19 acres. I have four brothers and no sisters. My oldest brother is one and a half years younger than I. His name is Victor, and I have twin brothers whose names are Ernest and Carl. Carl is sick. I have another little brother whose name is Oscar. He is so fat and pretty. We have a big house with 10 rooms. It is green with white trimming. We have three cows, two heifers, one calf, one dog, two cats whose names are Puss and Diana, but they look so much alike that I can not tell them apart. The dog's name is Prince. Our horse's name is Dixie. Then, we have four swine, 100 chickens and two ducks which are my very own. I have a light complexion and am four feet ten inches tall and weigh 120 pounds. I can crochet and embroider and sew on the sewing machine. I am in the sixth grade at school. My teacher's name is Miss Lucy Smith, our sewing teacher's, Miss Sanders, and the music teachers's Miss Heater.—Alma Lunn, Box 133, Bothell, Wash.

THE CANARY BIRDS SING ALMOST ALL THE TIME

Dear Aunt Nellie: This will be the first time I have written to the Children's Corner. I enjoy reading their letters very much. I am 11 years old and my birthday is April 26. If I have a twin I wish they would please write to me. I am in the sixth grade and my brother Arnold is in the fourth. My teacher's name is Miss Livesey and she is very nice to us. We have three canary birds and they sing almost all the time. I am taking piano lessons and my teacher's name is Mr. Cross. I have two little pet cats at home and their names are Mouse and Coon and they are very cute. There is a big hill by our place and we have lots of fun coasting down it with our sleds, for it has been snowing here.—Lucile Peterson, R. F. D. No. 5, Box 348, Foster, Wash.

The Old Man and His Calf

EDITH JAMES STARTED THE NEW YEAR RIGHT

Dear Aunt Nellie: I enjoy reading the letters in the Corner very much. I live on a farm of 160 acres of land. We have 17 head of horses, three cows, 72 chickens and five ducks. I am 11 years old and in the sixth grade at school. My birthday is the 10th of August. We drive three miles to school. Our teacher's name is Miss Daisy F. Porter. I have gone to school every day this year. I have three sisters and one brother. My oldest sister's name is Beulah and she is 14 years old. My brother's name is Dean and he is 9 years old. My other sisters' names are Blanche and Artie. Blanche is 5 years old and Artie is 3 years old. I go to church every Sunday. I am a Christian and love the Lord Jesus Christ. I am entering the New Year a different girl. I found Christ during last year.—Edith James, Box 2, Krupp, Wash.

VELMA AND HER CAT ARE EXACTLY THE SAME AGE

Dear Aunt Nellie: I have been reading the Children's Corner and thought that I would write, too. I am 11 years old, my birthday is the 10th of April. I would like to correspond with Alice Merwenhuzen. I live on a 43-acre farm. We have three horses, Flory, Jess and Bolly. We have seven cows, Boss, Cherry, Gip, Turner, Spot, Norton and Polly. I have three cats and one dog for pets. The cats' names are: Tab, Dandy and Frisky. My dog's name is Rover. Two of the cows are mine, Polly and Turner. We have an Angora cat named Teddy that is the same age as I am. I go to school and am in the fifth grade. My teacher's name is Miss Connell. I like her very much. I am in the third grade in music. I like my music. At school the boys play basket ball and the girls play volley ball.—Velma Simpson, Elma, Wash.

On Aunt Nellie's Desk.

On Aunt Nellie's desk are letters from the following little boys and girls, which as yet we have not had space enough to print. They will all be printed in the order that they are received:

Frances McManamon, Othello; Clara Olson, Bothell; Vesta Johnson, Mansfield; Ethel Mortensen, Cathcart; Ward Rowe, Rochester; Derla McManamon, Othello; Edna Reinbold, Hubby; Flora Ransier, Belmont; Myrtle Weberg, Poulsbo; Mary Von Pressentin, Concrete; Phoebe Reeves, Elma; Hildreth Hicks, Coulee City; Reva Ada Lamb, Coulee City; Theodore Carlson, Shelton; Dea T. McManamon, Othello; Cora Kanouse, Elma; Mary Boppert, Winlock; Ruth Safe, Republic.

Nellie Salvage, Addy; Dollie Moss, Davenport; Rosey Johnson, Hassan; Ione Tuce, Stanwood; Ruth Eaton, Kent; Addie Russell, Deer Park; Gertrude Nelson, Puyallup; Hazel Hillerud, Lawrence; Lyda Augst, Beebe; Viola Augst, Beebe; Clara Olson, Bothell; Lorena Schultz, Lost Creek; Mabel Nicholson, Bothell; Margery Hawley, Bellingham; Mary France, St. John; Walker Tompkins, Prescott.

Myrtle Sodorff, Johnson; Agnes Halle, East Stanwood; Gladys Carlson, Everett; Naomi Canady, Almira; Inza Staiff, Freeland; Esther Carslin, Olalla; Evalena Clement, Tampico.

Senia Hulk, Kent; Myrtle Ledbetter, St. John; Thela Bowen, North Yakima; Elizabeth Bowen, Oroville; Kathryn Bowen, Oroville; Teddie Taylor, Riverside; Harvey Heath, Mondovi; Laura E. Hatley, Waitsburg; Liv Blekstad, Southworth; Pearl Faye, Monroe; Violet Hicks, Coulee City; Oliver Schilling, Withrow; Ethel Sprong, Sunnyside.

Dorthea Hicks, Coulee City; Exenia Matson, Shelton; Donald Ancil Fox, Cunningham; Ruth Wagner, Gilmer; Margaret Cox, Leahy; Pearl Rubie Johnson; Evalene K. Maurer, Mohler; Irene M. M. Glissler, Odessa.

Blanche Cantrell, Winlock; Agnes Lauer, Pomeroy; Verda Johnson, Rochester; Vonda Boulden, Elma; Flora Lamurs, Johnson; Alvana Forsman, Rochester; Ruth Friday, Puyallup; Mary Limmer, Winlock; Ruth Zuaschka, Everson.

Exenia Matson, Shelton; Myrtle Veronica Faye, Monroe; Edith Crabb, Marengo; Inez Lockwood, Raymond; Doris Streeter, Bow; Edith Annetta Parmeter, Reardan; Dorothy Blaisdell, Creston; Ivah Jump, Creston; Vera V. Gensel, Aeneas; Mildred Elizabeth Marks, Wapato.

Myrtle Gooch, Uniontown; Frank Clinton Steger, Shelton; Cecil Wayne Bramhall, Dayton; John Hayden, Mold; Goldie Miller, Mayview; Jennie Peterson, Thomas; Glynes Simenson, Corfu; Virginia Brockmiller, Wheeler; Ella Jane Love, Beebe; Grace Deharte, Latah; Charles Lee, Othello; Maybell Firth, Friday Harbor; Inza Staiff, Freeland; Margaret Stephens, Willapa; Emma Short, Lowden; Honer Bonita Lovette, Mansfield.

vette, Mansfield; Annie Van Dam, Oak Harbor.

Abreast With the Times.

J. T. Harrah has purchased a moving picture machine of the standard size, which he will install in the new home on his ranch in the lower Yakima valley. He expects to show the latest reels in his own home at the same time they are making the northwest theater circuit. It will be a great pleasure to his wife and three children and neighbors and friends.

Grain and Produce Markets

Chicago Grain.

CHICAGO, Feb. 10.—Wheat prices ran up swiftly today, influenced to a large extent by reports that the British government had commandeered numerous South American line steamships and would undertake to convoy from United States ports to Europe as many cargoes of foodstuffs as might be required. After an extreme advance of 5 3-4c a bushel, the market closed strong at gains of 2 1-4c to 5 3-8c net, with May at $1.74 5-8 to $1.74 7-8, and July $1.49 3-4 to $1.50. Other commodities, too, finished higher, corn up 7-8c to 1 1-4c; oats, 1 1-4@1 3-8c to 1 3-4@1 7-8c, and provisions 7 1-2c to 25c.

Broadening out of wheat trade was especially notable in the last hour, when the prospects of a revival of export business looked better than had been the case any time before in over a week. On the other hand, some holders were uneasy in regard to the uncertainties of development during a double holiday, and were inclined to make realizing sales, but such transactions failed to become plentiful enough to alter vitally the prevailing bullish sentiments.

Dullness of offerings had a bullish effect on corn. Strength of oats was due to a considerable degree to reports that the southern winter oat crop had been badly damaged by severe cold weather.

Provisions climbed with hogs and grain. The chances of better shipping facilities, both by rail and sea, gave renewed confidence to buyers.

Pacific Northwest Grain.

PORTLAND, Ore., Feb. 10.—Wheat—Stronger; no trading; spot bids 2c to 3c higher. Bluestem, $1.55; fortyfold, $1.52; club, $1.50; red Russian, $1.48.

Barley—Higher; No. 1 feed, $39.25.

SEATTLE, Feb. 10.—Wheat—Bluestem, $1.55; turkey red, $1.55; fortyfold, $1.52; club, $1.52; fife, $1.52; red Russian, $1.50.

Barley—$39.50 per ton.

TACOMA, Feb. 10.—Wheat—Bluestem, $1.54; fortyfold, club and red fife, $1.49; red Russian, $1.44.

WILBUR, Wash., Feb. 10.—Wheat—Bluestem, $1.32; club, $1.27.

Oats—$37.

Barley—$37. No activity in the market.

Minneapolis Grain.

MINNEAPOLIS, Feb. 10.—Bigger demand sent wheat prices upward today and corn and oats hardened in sympathy. Wheat receipts, 180 cars. Holiday a year ago.

Wheat—May, opened $1.74 1-8 to $1.75; high, $1.78 1-4; low, $1.74 1-8; closed, $1.77 3-4 to $1.77 5-8.

July opened at $1.71 1-4 to $1.71; high, $1.74 3-4; low, $1.71; closed, $1.73 7-8.

Cash—No. 1 hard, $1.83 5-8@1.87 5-8; No. 1 northern, $1.78 5-8@1.81 5-8; to arrive, $1.77 5-8@1.79 5-8; No. 2 northern, $1.75 5-8@1.81 5-8; No. 3 wheat, $1.65 5-8@1.77 5-8; No. 2 durum, $1.81 5-8@1.92 5-8; No. 2 Montana, $1.77 5-8@1.79 5-8.

Corn—No. 3 yellow, $1.03@1.05 1-2.

Oats—No. 3 white, 54@55c.

Flax—$2.81 1-4@2.87 1-4.

Flour unchanged. Shipments, 42,822 barrels.

Barley, 86c@$1.18.

Rye, $1.35@1.36.

Bran, $31@32.

San Francisco Grain.

SAN FRANCISCO, Feb. 10.—Wheat—Firm; no trading.

Barley—May, $2.22½ bid, $2.30 asked; December, $1.63 bid, $1.64¼ asked.

Car Receipts at Coast Points.

Receipts of grain and hay in car lots at Coast points for the fiscal year beginning July 1 up to Saturday night for 1916-17 and 1915-16 were as follows:

Seattle—	Wheat.	Oats.	Barley.	Hay.
1916-17	3,997	864	276	2,881
1915-16	6,547	785	1,112	2,932
Portland—				
1916-17	3,843	1,740	155	1,620
1915-16	9,233	832	1,337	1,613
Total—				
1916-17	7,840	2,604	431	4,501
1915-16	15,785	1,617	2,447	4,595

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer:

Potatoes—Potatoes, $2.50@2.75 cwt; sweet potatoes, $6.

Apples—Washington apples, cooking, 60@85c; eating, $1@1.25; Wageners, 85c@$1.35 box; Jonathans, $1.25@1.35 box; Delicious, large, $1.75@2.25 box; Rome Beauties, $1.25 box; Winesaps, $1.75@2 box; Y. N. Pippins, $1.75@2 box.

Butter—Blanchard cartons, 43c lb; Medo-Maid, 43c lb; Cascade, 43c lb; Gold Coin, 36c lb; Gold Leaf, 43c lb; Better Butter, 43c lb; Hazelwood, 43c lb; Peerless, 39c lb; Jersey Belle, 42c lb; Attalia, 43c lb; Diadem, 43c lb; Jersey, 39c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 28½c; Hazelwood full cream triplets, 23c lb; Hazelwood Young America, 24c lb; Wisconsin limburger, 29c lb; brick cheese, 28c lb; domestic Swiss, 33c lb; Young Americas, 26c lb.

Eggs—Fresh local ranch eggs, $11.50; fresh eastern eggs, $11@11.50 case; eastern storage eggs, $9.50@10.50.

Live Poultry—Springs, 15@16c lb; hens, 15@16c lb; old roosters, 7@9c lb; ducks, 11@13c lb; turkeys, 20@27c.

Dressed Poultry—Hens, 19c lb; springers, 19c; old roosters, 12c; ducks, 16c; geese, 14c; turkeys, 28c.

Hide Quotations.

Green cows and steers—25 lbs. and up, 16½c; salted cured, 19c; green bulls and stags, 13c; salted cured, 15c; kip, 15 lbs. to 25 lbs., 21c; calf skins up to 15 lbs., 30c; dry flint hides, 32c; dry salted, 27c; dry calf skins, under seven lbs., 38c; dry sheep pelts, full wooled, 20@23c; dry shearlings, 75c each; green horse hides, $3 to $5 each; dry horse hides, $1 to $2 each.

Seattle Market.

SEATTLE, Wash., Feb. 10.—Although there has been a relaxation in the demand from the east for Yakima potatoes, the market shows no reactionary tendency with the chief bullish factor in part removed. There have been many sales during the week of No. 1 gems at $58 to eastern buyers, and holders are naming the same figures to Seattle jobbing interests. This has compelled selling prices of $70 here, with a strong supporting undertone. Dealers who understand the potato trade will not say the market has hit the top. On the contrary, quotations up to $100 per ton are being predicted for the spring cleanup.

Onions are following potatoes upward. Jobbers raised quotations on both Yakima and Oregon onions today to 8 cents per pound. There are a few British Columbia onions here which can be sold at the same level, but in normal years, due to the secondary quality, imported stock would never have had a buyer.

Live Stock Quotations.

At Chicago.

CHICAGO, Feb. 10.—Hogs—Receipts, 21,000; strong, mostly 5c above yesterday's average. Bulk, $12.30@12.50; light, $11.80@12.45; mixed, $12.15@12.50; heavy, $12.05@12.55; rough, $12.05@12.20; pigs, $9.75@11.10.

Cattle—Receipts, 10,000; weak. Native beef cattle, $7.80@12.25; western steers, $7.90@10.30; stockers and feeders, $6.10@9.25; cows and heifers, $5.15@10.50; calves, $10.25@14.75.

Sheep—Receipts, 4000; weak. Wethers, $10.60@11.80; lambs, $12.10@14.60.

At Omaha.

OMAHA, Neb., Feb. 10.—Hogs—Receipts, 13,000; higher. Heavy, $11.90@12.20; light, $11.60@12.10; pigs, $9.75@11.50; bulk, $11.90@12.10.

Cattle—Receipts, 300; steady. Native steers, $8.50@11.50; cows and heifers, $7.25@9.25; western steers, $7@10.50; Texas steers, $7@8.50; stockers, $8.50@10.

Sheep—Receipts, 1500; steady. Yearlings, $11.50@13; wethers, $9.50@11; lambs, $13.25@14.25.

At Portland.

PORTLAND, Ore., Feb. 10.—Hogs—Firm; receipts, 171. Bulk of packing grades, $11.75@11.85; heavy packing, $11.90@12; light packing, $11.60@11.90; rough heavy, $10.50@11; pigs and skips, $10.40@11.10; stock hogs, $9.75@10.25.

Cattle—Firm; receipts, 55. Steels, prime light, $9@9.20; prime heavy, $9@9.20; good, $8.40@8.80; cows, choice, $7.50@7.75; medium to good, $7@7.25; ordinary to fair, $6@6.75; heifers, $4@7.50; bulls, $3.50@6; calves, $6@9.

Sheep—Firm; receipts, none. Lambs, east of mountains, $12.25@12.50; lambs, valley, $11.75@12; lambs, good, $11.25@11.75; choice yearling wethers, $10@10.50; good yearlings, $9.75@10; choice ewes, $9.25@9.50; heavy ewes, $8.75@9.25.

At Seattle.

SEATTLE, Feb. 10.—No receipts today. Market strong on all lines at yesterday's quotations.

Hogs—Prime light, $12.10@12.25; medium to choice, $10.65@10.95; smooth heavy, $10.40@10.85; rough heavy, $9.45@10.15; pigs, under 150 lbs., $8.50@9.15.

Cattle—Prime light steers, $9.25; medium to choice, $8.50@8.75; common to good, $6.75@8; medium to choice, $7.25@7.50; common to good, $5@6.50; best bulls, $5@5.75; common bulls, $3.50@4.50; calves, $7@9.

Sheep—Prime lambs, $10.25@10.50; good lambs, $9.75@10; wethers, $8.50@9; ewes, $6.50@8.

Spokane Stockyards Saturday.

Hogs—Receipts, 13; market strong. Prime heavy, $11.75@11.85; prime light, $11.60@11.70; prime mixed, $10.50@11; stockers, $7.50@9.

Cattle—Receipts, none; market strong. Prime heavy steers, $9; prime light steers, $8.50@8.75; good steers, $8@8.50; stockers and feeders, $5.50@6.50; prime cows, $7.35@7.85; good cows, $6.50@7; best heifers, $7.10@7.85; bulls, $3.50@6; calves, $6.50@9.

Sheep—Receipts none; market strong. Prime lambs, $11.50@12; common lambs, $10.50@11; best yearlings, $9.75@10.50; good yearlings, $8@9; best mutton ewes, $7.75@8.25; common ewes, $6.50@7.50.

Seattle Wheat.

SEATTLE, Feb. 10.—Not at all alarmed commercially over the war crisis of the week, eastern Washington farmers have become bulls almost without exception. This was established when miller buyers attempted to get a little wheat on bids in the country of $1.40@1.45 for bluestem and turkey red and 2@3c under for fife. Holders frankly said they were not interested in present quotations, and would continue to hold on to what they had.

In numerous localities buyers for the milling concerns were not even asked what they were willing to bid. In others it was boastfully asserted that England would have to buy grain, that some method would be found for getting it to destination and that if they held on long enough they would get $2 for every bushel sold. This position was regarded as extreme in view of the fact that only a few eastern buyers are left in the field to bull the market, and that those who are still active are carrying on their business through local resident buyers. Puget sound millers were not heavily interested either. They are well stocked up for the run to the end of the season and with rush orders for the south and east well along toward completion, they feel rather easy as to futures and are not inclined to tone up their bidding.

Portland Market.

PORTLAND, Ore., Feb. 12.—Only 31 cars of onions are now left in first hands in Oregon, 10 cars having been shipped out in the last week. Except for a few cars that may be held over, the stock is likely to be exhausted by the end of the month. The market now stands at $7.50 to the grower, with good prospects of going higher.

No outside onions will be available until March 10, when a steamer is due at Vancouver, B. C., with a small shipment of 3500 crates of Australians. Part of them are consigned to Portland. The grst large shipment of Australian onions is due at San Francisco on April 10.

The potato market is firm; with buyers offering up to 3 cents for fancy stock. No accurate figures are available as to the unsold supply here.

Out-of-town orders, particularly from eastern Washington and Montana, have been sufficient to absorb the large receipts of eggs and the market has held steady at the 30-cent basis for current receipts. Future prices here will depend on the continuance of this demand.

Butter was firmer at the close of the week. The local demand for cubes was only fair, but the shipping inquiry was good.

Outside orders were also responsible for poultry prices holding at a high level. Country dressed meats were scarce and firm, with live hogs selling at $12 at the yards. A 15-cent market for dressed pork was easily maintained.

Hops sales during the week were light and there was no interest in contracts.

Hides did not decline as some dealers expected, the eastern markets recording a slight advance after the break with Germany.

Butter and Eggs.

ELGIN, Ill., Feb. 10.—Butter, 25 tubs at 42 1-2c.

SAN FRANCISCO, Feb. 10.—Butter—Fresh extra, 38c.

Eggs fresh extras, 34c; pullets, 32 1-2c.

CHICAGO, Feb. 10.—Butter unchanged.

Eggs higher; receipts, 2623 cases; firsts, 44 1-2@45c; ordinary firsts, 42@43c; at mark, cases included, 40@44 1-2c.

PORTLAND, Feb. 10.—Butter—Prints, extras, 41@43c; cubes, extras, 38c; prime firsts, 37c; dairy, 30c.

160 ACRE FARMS IN WESTERN CANADA FREE

Canadian Farmers Profit From Wheat

The war's devastation of European crops has caused an unusual demand for grain from the American Continent. The people of the world must be fed and wheat near $2 a bushel offers great profits to the farmer. Canada's invitation is therefore especially attractive. She wants settlers to make money and happy, prosperous homes for themselves by helping her raise immense wheat crops.

You can get a Homestead of 160 acres FREE and other lands at remarkably low prices. During many years Canadian wheat fields have averaged 20 bushels to the acre—many yields as high as 45 bushels to acre. Wonderful crops also of **Oats, Barley and Flax.**

Mixed farming as profitable an industry as grain raising. The excellent grasses full of nutrition are the only food required for beef or dairy purposes. Good schools, churches, markets convenient, climate excellent.

Military service is not compulsory in Canada, but there is an extra demand for farm labor to replace the many young men who have volunteered for the war. The Government is urging farmers to put extra acreage into grain. Write for literature and particulars as to reduced railway rates to Supt. of Immigration, Ottawa, Canada, or

J. N. Grieve, Cor. 1st and Post sts., Spokane, Wash. Canadian Gov't Agt.

SPOKANE, WASH.

ACRE TRACTS—FOR SALE 669

CALIFORNIA LANDS.
2 miles from Corning, California, on concrete state highway, with electric, phone and mail service; I offer a choice 5-acre lot, all in bearing fruit trees, with alfalfa sown between trees; cottage, barn, chicken house, pumphouse, well, centrifugal pump and motor, all ready for business, for $1750; choice location and good neighborhood. Write for particulars. Traders don't write.
W. N. WOODSON, owner, CORNING, CAL.

WE OWN 3000 ACRES OF BENCH AND meadow land which we will close out on easy terms in 40-acre tracts or more at bargain prices, ranging from $10 per acre up.
FIRST STATE BANK,
MAHONEY & BAXTER,
BONNERS FERRY, IDAHO.

FOR SALE OR EXCHANGE 702

FOR SALE OR EXCHANGE.
A first-class dairy farm of 760 acres, located at Washougal, Wash.; 1 block from depot, 3 blocks to school; fronting 2200 on a main highway, and fronting on the Columbia river a distance of two miles; only 25 miles from Portland. This place is fully stocked and equipped. Can raise plenty hay, alfalfa, corn, oats, etc., and pasture enough for a large quantity of live stock. At present we have 178 head of stock. Price $125,000. Mortgage $25,000, at 7 per cent, due in four years. This place must be seen to be appreciated. It has fine barns, two good houses, city electric lights and water. In fact, 40 acres are suitable for subdivision into acre lots, which would sell from $400 to $500 per acre. Owner is city resident, and is not a farmer, and has other business to take his attention. He would, on that account, exchange it for income property or straight stock ranch in eastern Washington or Oregon.
L. GERLINGER,
506 GERLINGER BLDG.
PORTLAND, Ore.

TO EXCHANGE—REAL EST. 705

COMBINATION.
217 a., Idaho; 170 cultivated; about 110 in fall wheat; fenced. Price $8000. Mtge. $1000. To exchange for land in Whitman, Lincoln or Spokane county, and assume $5000, or will put in $3000 cash.
High-class, income-bearing 50-a. apple orchard to exchange for stock or wheat ranch or Spokane property. Price $25,000, clear.
Five houses, 2 fine lots, in Spokane, for land.
200 acres near Vale, Ore.; 30 a. in crop; 3-room house, barn, garage, 3 wells and windmill; fine range adjoining; 5 horses, 5 cattle, including 2 milch cows; 50 chickens; wagon, harness, plow, harrow. Want to exchange this for a good house and few acres, close to Spokane. Price, with stock, $4500; without stock, $3700.
All kinds of city property to exchange for land. If you have the land, write us at once.
J. MELVIN THOMAS & CO.
214 EXCHANGE BANK, SPOKANE.

NEWS FOR BREEDERS

D. Warnock & Sons of Loveland, Col., whose great young Shorthorn bull, Model Type, was grand champion at the Pacific International stock show at North Portland, received several letters of inquiry from northwest parties as a result of a news item printed in the Farmer.

During the Denver stock show, the third week in January, George C. McMullen, a commission man of Kansas City, purchased 24 carloads of cattle to fill an order for feeders from Junction City, Kan. He paid $52,000 for the consignment and the size of the order as well as the price paid do not indicate any decline in the live stock business.

The sale of the second prize carload of bulls at the Denver stock show, shown by L. G. Davis of Saratoga, Wyo., to the Tompkins Cattle company of Denver at $500 each, was almost as sensational as the sale of the George Chandler champion carload at $575. Those bulls were very smooth and true of type, but did not have the great bone and vigor shown by the Chandler bulls that so well fitted them for range breeding.

J. M. Fruitts of Enterprise, Ore., has been a Hampshire breeder for many years and a persistent and consistent showman and a winner in open competition. He says: The future of the hog business is sure greater than it has ever been before. As the high priced grain is bound to bring the hog market up in pork production as well as breeding purposes, the scrub hog will be cut out. The people can not afford to feed the high priced grain to scrubs. The market for the pure breds is good. People are waking up and are beginning to see they must get better stock to head their herds to keep in touch with the world, as the scrub hogs are a thing of the past. Every breeder of pure bred stock realizes that every year he must compete with other breeds and to do this requires better herd headers and improvement of his own herd.

F. A. Koser, Rickreall, Ore., breeder of Cotswold sheep, who won grand championship on ram one year at the National Sheep show and another year first on pen of 10 rams as well as notable winnings at the Chicago International stock show says: "Generally speaking, pure bred sales are contingent on the wool and mutton market. So far as pure bred sheep are concerned, Europe is depleted and must come to this country to replenish her supply. This means continued high prices for pure bred grade sheep, for mutton is higher than ever before and will continue high, adding to the demand for pure bred rams, a demand always good if mutton prices are good."

The sale of the carload of bull calves shown by the Hereford Corporation of Cheyenne, Wyo., at the Denver stock show, for $300 a head, was one of the best sales of the week, when the age of the animals is considered. They are a fine lot of calves and this corporation is turning off many of that kind. They have a ranch of 30,000 acres six miles from Cheyenne, on which for many years Henry Altman bred up a great herd of Herefords. Mr. Altman from time to time purchased the best bulls and cows money would buy, but insisted on raising the calves on their mother's milk and grass alone, and he points to this sale from this great herd as proof of the fact that the succulent buffalo grass of Wyoming still has the same qualities for producing growth and fat as when the buffalo and later the great herds of Texas cattle were trailed across the state. This company recently purchased the ranch and all of its euipment from Mr. Altman, including 1100 of as great breeding cows as can probably be found together in America. The ranch, six miles from Cheyenne, was a point of great interest during the meeting of the National Live Stock association at Cheyenne, and was visited by many. Luke Brite of Marfa, Tex., who bought the calves, will take them to his Texas ranch to use on his big purebred herd there. H. A.

A KIGER DUROC JERSEY.

The above picture shows Mr. Harvey, who handles F. M. Kiger's Duroc Jerseys at Walnut Grove farm, near Gresham, Ore. The animal standing beside him is one of the Kiger Duroc sows. Mr. Kiger has announced a large sale of his hogs of this breed at the farm for February 21, and it is reported to be attracting considerable interest among swine breeders.

MOHAIR INDUSTRY

Looks Good for United States.

U. S. Grant of Dallas, Ore., who was elected president of the National Mohair Growers' association at its annual meeting at Galveston, tells me that the most important business transacted was the incorporation of the association and the adoption of a new constitution and bylaws to conform to the incorporation laws of Texas.

Mr. Grant says that the mohair industry was never in a better condition in the United States. There are just three countries that raise mohair, Turkey, South Africa and the United States. At the present time not a pound of mohair can be gotten out of Turkey. There has been a two years' drouth in South Africa, which resulted in no kids being raised.

At one time mohair was used mostly for fancy articles of apparel, but now it is used for rugs, auto tops and even sweaters, which are said to shed rain for hours.

There was a time when western Oregon was one of the largest growing regions of mohair in the country, but after the boom of some years ago, when prices slumped and there was scarcely any sale for goats, many went out of the business and the production of Oregon mohair was decreased. Now, however, most of those growing Angoras are good, experienced breeders; they are making money and increasing their flocks.

The principal increase in flocks has been in Arizona, New Mexico and Texas, with considerable in the lower half of California. Texas alone now raises four and one-half million pounds of mohair annually. They shear twice a year down there and get a little more hair per head than in Oregon, but nowhere else do they get the luster of our western Oregon hair. On account of the sudden and extreme changes of climate it is impossible to carry hair over a year on the goat down there while up here the growing of "long" mohair is possible and quite a number of breeders carry one or more kids over every year and successfully raise long hair like that shown in the photo of Mr. Grant's young buck.

Asked as to the care of Angoras, Mr. Grant says shelter must be provided during winter and the goats must be housed at night and in bad weather. Feed some hay all the time and in bad weather feed a little oats. But the most important thing in raising Angoras is the care of the kids. His kids come in March and the doe needs about the same care as a ewe. Kids should have a regular weaning time. He weans in August and immediately puts the kids on green feed, rape, clover or even native grass will do if there is enough of it. He also feeds grain from the start and says to feed them plenty. The first year of a goat's life determines its size and vitality and Mr. Grant's goats are noted for their good size. A goat is a good rustler; it will eat browse, berry bushes and some weeds, but the man who starves his young goats to this kind of diet makes a great mistake.

Mr. Grant says that not only will mohair goods absolutely turn water, but a mohair blanket will not gall a horse's back and is the only material so far known of which this can be said. Mr. Grant had the opportunity to bring these facts to the attention of a high army officer, who has brought it to the attention of the U. S. government. This officer favors the making of tents and even uniforms, as well as saddle blankets of mohair.

Mulefoot Hogs.

Last year T. W. Everall, near Toppenish, Wash., conducted some experiments by crossing pure bred Mulefoot sows on a pure bred Poland China boar. The result was a hog of very fine feeding quality. He advises not to go beyond the first cross and to use nothing but pure bred dams and sire. It is claimed the Mulefoot hog is immune from cholera. Mr. Everall expects to conduct some experiments along that line during the present year and find out for himself whether the claim is true or fake.

Lewis County Cow.

A graded Jersey cow, owned by Lloyd Owen of Centralia, Lewis county, Wash., made the best record in 1916 of any cow owned in the Lewis County Cow Testing association, according to a statement by W. T. Myer, official tester of the association. In 305 days the cow gave 9281 pounds of milk, which showed 454.46 pounds of butter fat. The profit on the cow for the year was $96.58.

Registered Herefords.

Two registered purebred Hereford bulls have been added this week to the stock of high-grade cattle in the Kittitas valley of Washington. B. F. White, Woldale rancher, has just made the purchase of the bulls at Mabton.

SHORTHORN SALES.

Frank Brown of Carlton, Ore., one of the foremost breeders of Shorthorn cattle in the northwest, and who judged the Shorthorn classes at the western international livestock show at Denver, is now actively engaged in arranging for the Shorthorn sale which will be held in Spokane on April 5, at which time there will be about 50 bulls and 25 females offered by breeders of purebred Shorthorns in the northwest. All of the individuals offered at this sale will be registered purebreds. The sale will be conducted by Colonel N. G. Kraschel, who has acquired prominence in Shorthorn sales held during recent years in the middle west.

Mr. Brown has commissioned F. M. Rothrock of Spokane, one of the proprietors of the Hercules stock farm, to arrange details in connection with this sale, and requests that all those interested in securing catalogues correspond with Mr. Rothrock at Spokane, who will supply their wants.

Mr. Brown will also conduct a Shorthorn sale at Portland April 3.

BUY HEREFORD BULLS.

Just and Reid of Presto, Idaho, who have for years been breeders of pure bred Herefords, have just bought of E. M. Kennedy two fine highbred Hereford bulls. One is Beau Donald 74th. The other bull is a son of Beau Mystic, the biggest bull that has won the grand championship at the international show, when he weighed 2800 pounds.

DIRECTORY OF BREEDERS.

Breeders of pure-bred live stock in Washington, who have not already done so will help on a most valuable work by sending their names and addresses to William Hislop, animal husbandry department, Pullman, Wash., as the state college has undertaken and has almost completed a directory of breeders of purebred live stock in Washington.

BUYS BELGIAN STALLION.

John H. Belcher of Oakley, Idaho, has purchased the Blue Boy Brilliant Belgian stallion, 5 years old in July, of A. C. Ruby & Co., of Portland, Ore., for the price of $2100.

WORK THE STALLION

Is Advice of Live Stock Expert.

Dr. S. B. Nelson of the department of veterinary science at the state college at Pullman, is an ardent advocate of making the stallion, regardless of how big or valuable he may be, work like the other horses on the farm during the non-breeding season.

Dr. Nelson declares that he is confident hard work from the age at which a gelding would be put into the teams would make the stallion a sturdier animal and enable him to inject a vitality into his offspring that they otherwise could not receive. He says it is a great mistake to allow him to develop into a great mass of soft fat with muscles and bone and nervous system undeveloped. Apply to the boy the rule that the average horse breeder applies to the horse and you develop a weakly, unhealthy man, says Dr. Nelson. He cites instances of where horses that have been subjected to this pampered life have been brought into the veterinary stables and found incapable of enduring the violence that is necessary in handling them for treatment. The bone of such animal is improperly developed—large enough but improperly knit—he says.

He says that in some countries it is quite customary to work the breeding stock in regular farm teams, citing Italy for an example. If no other way is available, if the horse is hard to manage in a team, he recommends that a tread mill be constructed and the stallion allowed to pump the water, milk the cows, churn the butter, operate the washing machine or run the electric generator for the storing up of electricity.

HORSES

Purebred Stallions

We have for sale a few 1-year-olds, 2 this spring, Shire stallions, our own breeding; also a 5-year-old and an 8-year-old Shire stallion, both brown; a 3-year, a 7-year-old and 1 aged Percheron stallion, all black; one 2-year-old Brown Clyde stallion, bred by Canadian government. We sell at the barns only, and tell you all we know about each and every horse, guaranteeing them to be as represented or refund your money.

Our horses won all firsts and champions at Spokane Interstate Fair, N. W. Live Stock Show, Lewiston, Ida., and Pacific International, Portland, Ore., last year. If you need a horse, or want to exchange, write us or come and see before buying. It will pay you.

G. M. WILSON, WILBUR, WASH.

Smith, Knudson, Fowler and Davies Are Convicted; Lawrence Is Acquitted

Gale Smith—One year in the city jail and $10,000 fine.

S. T. Knudson—One year in the city jail and $7500 fine.

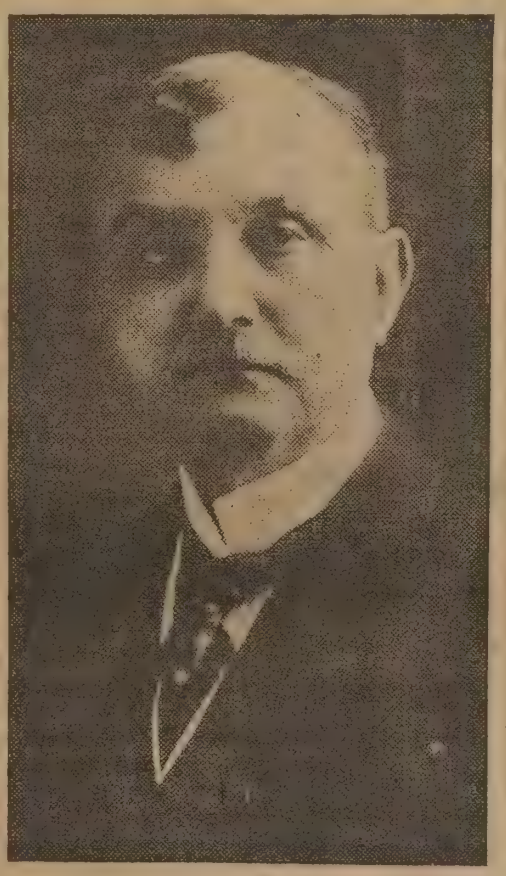
C. L. Davies—Nine months in the city jail and $5000 fine.

O. C. Fowler—Three months in the city jail and $750 fine.

These were the sentences meted out by Federal Judge Van Fleet to the four men convicted of conspiracy to defraud the public through the use of the mails in operating the Northwestern General Trading company and its allied branches.

Appeal bonds were fixed as follows: Smith, $20,000; Knudson, $10,000; Davies, $7500; Fowler, $2500.

Attorney F. C. Robertson was given 60 days in which to perfect a bill of exceptions as a basis for perfecting an appeal of the sentence to the United States circuit court of appeals.



Sentence was passed after Judge Van Fleet had denied a motion of the defendants' attorney for a new trial.

Judge Van Fleet declared that consideration for the defendants' wives and families prompted him to spare them the ignominy of a felon's stripes and a term in the federal penitentiary.

"I always hesitate to make a felon of a man who never has been convicted of a felony," he declared. "I have made up my mind that I will not subject the wives and little children who may be dependent upon the defendants to the disgrace of a sentence in the penitentiary."

By its verdict the jury holds that the trading companies named in the indictment, the Northwestern General Trading company of Spokane, the Olympic Trading and Supply company of Seattle, the Portland branch of the Northwestern company and the Iowa Mercantile company of Cedar Rapids, Iowa, were operated as a part of a conspiracy to defraud the public.

Judge W. H. Van Fleet

—Photo by Shively & Ihrig, San Francisco.

Judge Van Fleet's instructions to the jury in the Northwest General Trading company case made exceedingly clear the nature of conspiracy in swindling methods. These instructions will be given in next week's issue of the Farmer.

Gale Smith was president and general manager of the Northwestern. Knudson was president and general manager of the Olympic. Davies was treasurer of the Northwestern and manager of its Portland branch, and Fowler was secretary treasurer of the Olympic.

Gale Smith had been a newspapeman at Washtuena and Ritzville, Wash., before coming to Spokane 10 years ago. He followed mining before launching the Northwestern, being a brother-in-law of Conrad Wolfle, the well known mining man.

S. T. Knudson was originally a farmer's son near Genesee, Idaho, and later a storekeeper at Greenacres, Wash., before he entered the employ of the Northwestern as stock salesman in 1909. In 1913 he went to Seattle and took charge of the stock sales for the Olympic.

C. L. Davies was born near Waverly and at 23 was farming 1000 acres of leased land. His folks were well-to-do and Davies had financial backing. He became interested in the Northwestern in October, 1909, when elected director, and went to Portland in 1914 to take charge of the branch store there.

O. C. Fowler is an advertising and catalogue specialist, who has been employed at Spokane, Portland and Seattle for six or seven years. In 1913 with some Seattle friends he aided in the incorporation of the Olympic Trading company, which operated on a very small scale until S. T. Knudson came.

My K Hand Stump Puller Gives Your Hand 96,000 Pounds of Power

Big stumps! stumps and trees with deep tap roots! any stump that can be pulled with the best inch steel cable!—you *alone* can pull with my "K" Hand Power Stump Puller—*without digging and without the expense of teams and powder.* I guarantee it. I refer you to U. S. Gov. officials. I give highest banking references. If you have stump land, the cheapest way of clearing it is with the

HAND POWER

K Stump Puller

Frank Hance, a *one-armed* farmer of Bowie, Md., pulling a double silver maple 3 ft. 8 in. in diameter at the ground, with deep tap roots. This is an easy pull for the "K," as the cable can be hitched high and the leverage is consequently greater.

How the "K" Pulls Biggest Stumps

The "K" works on the leverage principle of the ordinary lifting jack, except that the power is applied on a cog-wheel instead of a standard. 100 lbs. push on the lever develops a 48-ton pull on the stump—all an inch steel cable will hold. One man operates it alone—no teams to pay for—no walking.

A Mechanical Wonder

Made of the very best steel—guaranteed against breakage. Weighs only 171 lbs.—easily carried or hauled about on its own truck wheels. Has two speeds—60 feet per minute for hauling in cable or for small stumps—slow speed for heavy pulls. *Works equally well on hillsides and marshes where horses can not go.*

Owners Praise It

H. Sinclair of the Dept. of the Interior, a U. S. Gov. official, writes "The stump puller is a wonder."

Ernest Thompson Seton, author and naturalist, declares the "K" "a great success."

Hundreds of owners write in, telling of pulling six- and seven-foot stumps, of pulling faster and pulling bigger stumps than by any other machine.

Special Offer I am making a special offer to get a "K" Stump Puller introduced in every neighborhood. Write me today for full information and for free book on Land Clearing.

Live Stock Men in Convention

Consideration of Special Stock Train East Next Fall May Be Taken Up

For some time the agricultural committee of the Spokane Chamber of Commerce has been considering the proposition of a northwest live stock special train of show animals to be sent to the middle west and eastern fairs this year. The Farmer sent out inquiries as to how stockmen regarded this and has received a number of representative replies. These replies were almost uniformly in favor of the project. Some of the leading stockmen have expressed themselves doubtful of its advisability, but declined to be quoted, largely for the reason that they did not wish to put themselves in the position of doing anything that would seem to depreciate the quality of stock that could be raised in the northwest. It was merely a matter as to whether the time was ripe for such a special.

The northwest live stock convention, which begins a two days' session in Spokane today, February 22, will doubtless dispose of this matter.

Outside of local speakers on the program are to be included Dr. J. Madsen, bureau of animal husbandry, U. S. department of agriculture; E. M. Ammons, president of the Denver Live Stock show, and Professor Thomas Shaw of St. Paul.

What some stockmen think:

B. T. Burns of Latah county, Idaho, a man of wide experience in farming as well as in business matters and a persistent advocate of better stock in the Palouse country for many years, writes that he is convinced that a special live stock train would be a great factor in educating people of the middle west and eastern states with reference to what "we can and are doing in this part of the great west. A special train load can be selected that we would have cause to be proud of and the benefits to be derived from such an advertisement would be hard to determine."

Herbert Willard of Yamhill county, Ore., breeder of Poland Chinas, believes that the Pacific northwest has a great advantage in climate as compared to most eastern and middle west states as a live stock producing section, but the marketing of live stock remains the big question. Mr. Willard has raised hogs in Iowa and in Minnesota, but much prefers Oregon for this industry and does not think that there is a great difference in the cost of raising live stock between this section and in the east.

Roy G. Adams, formerly county agriculturist of Adams county, Wash., now farming in Spokane county, writes that there is no question that the Pacific northwest is a natural stock producing section and should surpass the middle west in a very few years. "The proposed live stock special should prove a great stimulus to the growing of better stock here and also show the corn states that good stock can be grown on alfalfa, field peas and wheat."

W. N. Birch, county agriculturist of Twin Falls county, Idaho: "I think the Buhl Cow Testing association gives the indication of what we may expect in the line of dairy products. This association made an average of over 8000 pounds of milk and 300 pounds of butter fat per cow during the first year's work. We are not yet certain, but if any association in the United States has equaled this record there is only one." Mr. Birch add: "I think that the Pacific northwest live stock special is a grand idea."

Curtis J. Miller, breeder of registered Hereford cattle of Lewis county, Idaho, believes that the "Pacific northwest stock special would do more good for the northwest than any proposed action of the past in regard to convincing the east and middle west that we do grow live stock that would compare favorable with the best grown in those sections. This will bring more farmers west in my opinion than could be interested in any other way."

Julius Fisk, Spokane county, Wash., believes that a properly gotten-up live stock special "will be of great interest to those of us who are doing something in the line of producing good stock and it will be hooted at by many of those who think that this country will continue yielding large crops of wheat from the fertility still in the soil."

R. W. Hogg, Marion county, Ore., who specializes in Poland China swine, says: "The breeders of the northwest have always been heard from in competition with the eastern breeders. It would be useless for a western breeder of medium type Polands, and I believe they are the kind for the northwest, to go to the east to exhibit, where all of the breeders are breeding the big types."

William Hanley, Burns, Ore., every one knows Bill Hanley: "In my judgment it would be a fine idea to run a live stock special train east, as exhibiting and advertising are always good, but the great success would be developing by financing. We have our big Harney valley basin yet untouched and the idea of developing through water supply not yet out of the litigating stage."

H. R. Boomer, the well known stock breeder of Canyon county, Idaho, says the live stock special "would no doubt be good advertising for the west if some of the best stock can be secured," adding: "we have good corn substitutes, I believe grass and small grains more than offset the corn fertility."

R. R. Graves, professor of dairy husbandry, Oregon agricultural college, says: "I believe that a train load of northwest live stock on a middle west show circuit would be a splendid advertisement for the northwest. A big Pacific Northwest Interstate show would serve to attract the attention of the dairymen and breeders to the northwest."

W. F. Howard of Canyon county, Idaho, and vice president of the American Poland China Record, heartily approves of the live stock special and says that if he has "anything in the line of purebred stock that is good enough to go he will gladly put it in with the bunch."

E. E. Flood, Spokane county: "It is true that as yet we are not in competition with the eastern purebred breeders, but it will not be long until the east must necessarily look to the west for their purebred sires."

J. R. Lichty, Bonneville county, Idaho, says that though stock raising in this section is in its infancy, it is already past the stage of experimenting. He believes that united effort will make the live stock special a success.

W. J. Jordan of Lewiston, Idaho, who has been a great factor in the success of the Northwest Live Stock show, says of the proposed live stock special that: "I believe that it is a splendid idea and one that deserves a great deal of consideration."

C. Wesley Brown, Gray's Harbor county, Wash., whose specialty is standard bred horses, is a little doubtful of the advisability of the live stock special, as the live stock industry is still in its infancy. He believes that "strife and time will develop it."

Dwight A. Smith of Lemhi county, Idaho, who has a herd of milking Shorthorns, says with regard to the live stock special: "There is nothing we could do that would inspire the interest that sight of the animals grown here would cause."

J. B. Peterson, Skagit county, Wash., believes the live stock special would advertise the northwest as one of the principal breeding sections of the United States.

Victor d'Hondt, Spangle, Wash., breeder of goats, believes the northwest live stock special would be one of the best ways to advertise the Pacific northwest.

L. J. Campbell, Stubblefield Home, Walla Walla, Wash., would include in the live stock special all grains and forage crops used to fit the animals.

F. A. Philips, Baker county, Ore., believes the idea a good one, but he doesn't think he could have anything ready to go east in 1917.

V. Van Houton, Whatcom county, Wash., sees in the live stock special one of the "biggest advertising propositions for this section."

L. D. Johnson of Whitman county, Wash., still thinks the east has an advantage in raising stock, as corn is the cheapest feed.

F. R. Steel, prominent Josephine county breeder in Oregon: "I approve heartily the plan of sending the live stock special."

T. M. Meikle, Cowlitz county, Wash., says he is not in favor of the live stock special proposition.

G. E. Steward of Adams county, Idaho, says: We can show good stock without corn that is king in the east."

C. M. Stevenson, Jefferson county, Idaho, is heartily in favor of the live stock special.

Grain Standards.

Some time between now and the harvest season of 1917 the U. S. department of agriculture will announce a complete standard of grades for grain as provided under the recently adopted federal grain standardization act. This announcement likely will be made within a month or six weeks, as the law requires that the standard must be announced 90 days before becoming effective, and the department is confident that it will be ready to govern the 1917 crop of northwest wheat.

Led by Charles J. Brand, chief of the office of markets and rural organizations, federal officials are now nearing the completion of a long series of hearings in the grain-growing districts.

Next week's issue of the Farmer will contain an article outlining the work of these officials, the probable provisions of the new standard and the basis upon which it is founded.

Dairy Meet

Of Inland Empire Producers

A group of producers representing nearly every section tributary to Spokane met February 10 at the Spokane Chamber of Commerce and organized the Inland Empire Dairy Producers' association. H. S. Findley of Cheney was elected president and B. E. Smead of Opportunity, secretary-treasurer. The few men who met are in earnest and have issued a call for a meeting to be held in the Spokane Chamber of Commerce at 10 a. m., February 24, 1917, at which time constitution and bylaws will be adopted. It is expected that one of the principal subjects discussed will be that of individual testing of milk for butter fat by dairymen themselves as well as the proposition of organizing a cow testing association. Cooperative buying of supplies and selling of products come up although this is deemed to be a subject that will require much consideration. The committee in charge has sent out a letter to every producer of dairy products throughout the Inland Empire whose name they could learn.

For Bulk Grain.

The Farmers' Elevator company of Mansfield, Douglas county, will build another elevator for bulk grain.

Some of Washington's Maxims.

Let your heart feel for the afflictions and distresses of every one.

It is a maxim with me not to ask what, under similar circumstances, I would not grant.

Be courteous to all, but intimate with few; and let those be well tried before you give them your confidence.

I shall never attempt to palliate my own foibles by exposing the error of another.

I never wish to promise more than I have a moral certainty of performing.

Every action in company ought to be with some sign of respect to those present.

Be not hasty to believe flying reports to the disparagement of any.

Labor to keep alive in your breast that little spark of celestial fire—conscience.

Associate yourself with men of good quality, if you esteem your reputation; for it is better to be alone than in bad company.

Sleep not when others speak; sit not when others stand; speak not when you should hold your peace; jog not the table or desk on which another reads or writes; lean not on any one.

Grade or Average Cow Best?

Dairymen Debate Question of Which Is Most Profitable to Owner

We present our readers this week an unusually interesting debate between two experienced dairymen. The question could be stated in this form: "Resolved, that there is a place in the dairy for the average cow, as well as for the high-grader." D. W. Ainey of Payette, Idaho, appears for the affirmative; A. A. Stauffacher of Buhl, Idaho, for the negative. Both reason well, and both are just a little caustic in their remarks, but that helps to spice the controversy. Mr. Ainey writes:

To the Editor of the Farmer: I would like to take one more little "slant" at the dairy business. I hope not many understood me to be advocating the superior virtues of the "scrub" cow. I wish we had all high-class dairy cows, cows that would produce more than 300 pounds of butter fat per year, but we have not; so what is to be done about it? We have not near enough cows to supply the needs of the race for dairy products and not even enough to answer for breeding purposes. Therefore, as unsatisfactory as the scrub cow may be, we are bound to make use of her both for breeding and producing milk.

Protest Is Entered.

It is idle to talk of killing them off and replacing them with the 300-pound variety, at least until we have established commercial relations with some other planet. I, therefore, protest against the contemptuous references to the 'common" man who has only "common" cows, that are found in the writings of those who assume to teach.

It doesn't help matters to tell the dairyman what he ought to have unless you can suggest a practical way for him to get it, and it is most unkind and unjust to denounce him as a dolt for not having something—he can not get. I think it is rather to his credit that he is able to make so much with his poor stock. As before stated, I know of some dairies of very ordinary cows that are paying a profit. I also know of some dairies of very superior cows that are not. I do not mean by that that the poor cow is better than the good one. The good cow is to be preferred all the time. It is very desirable that all the poor cows be supplanted by good ones. I believe that is orthodox. We are all agreed on that. The problem, then, is how can the exchange be effected.

Where Teachers Fall Down.

Our teachers tell us to get rid of the low producers and put in their places cows of high production. There is where our teachers fall down. If I sell my poor cows to a dealer he will take them over and sell them to some other dairyman at a big price on the reputation of my herd, and then gather up a bunch of old skates and sell them to me on an iron-clad guarantee that "they are well marked." What has the dairy industry gained by the transaction?

Then our astute teachers tell us we must clear the decks by butchering all the poor cows. Well, we should then be in the position of the woman of the fable who killed the hen that laid the golden egg.

Of course, some one will say, "Now, Smarty, how would you do it?" I am frank to say that although I have been in the game for more than 40 years, I do not know. There is a way and it is by the way of breeding, which is a slow way and subject to many backsets. I believe there is no other way, so my advice is to keep hammering along the right way even though progress is rather slow. Nature furnishes but few short cuts to the summit. We can slide down, but we have to toil up.

Breed Scientifically.

Fellow dairymen, am I right about this? If I am let us employ our energies in the solution of the problem rather than in descanting an Utopan conditons, or anathematizing each other for not performing the impossible. Let some one who understands the principle of breeding tell us how to bring our herds up to a higher standard in the most practical way.

How about cross breeding? One of my neighbors has a Jersey cow that gives very rich milk, but only a small quantity of it. He tells me he is going to cross her with the Holsten. Will he succeed? Is that a practical way to improve the dairy cow? What are the chief difficulties in breeding up a herd of dairy cows and how may they be overcome? There are many things I would like to know, and when I inquire among my neghbors I find them as much in the dark as I am.

Stick to the Business.

To the question, is it best to stick to the business, I say "yes," in fact, we must stick to it. The people must be fed. The farmer's lot is a hard one, but his calling is a necessity. From every source comes the cry to the farmer to produce greater crops of greater excellence. I have, in my life, witnessed wonderful strides in this direction. The farmer is a marvel in resourcefulness, and yet he has hardly been able to keep up with the demands made upon him.

Now, just a word in response to Mr. Boomer. I am in full accord with Mr. Boomer in nearly all he had to say. A good cow is always to be preferred to a poor one. What I tried to do was to refute the theory of butchering dairy cows that fall below 300-pound production. I ventured the statement that to follow the advice of some advocates of the wholesale butchery of dairy cows would reduce an already inadequate supply of food products 75 per cent. No one has disputed the statement, but Mr. Boomer intimated that from a business standpoint that would be a good thing for the fellows in his class. I admit it.

Wholesale Murder.

In discussing the threatened strike of railroad trainmen, some men prominent in the life of this country characterized it as a conspiracy to commit wholesale murder, because to stop the trains carrying milk into the cities would result in the death of thousands upon thousands of children. What, then, may be said of the conspiracy to destroy the source of this indispensible food supply? It is not so easy to separate the dairy business from philanthropy. Surely Mr. Boomer was thinking more of his rights than of his responsibility, and I am in some doubt about the dairy men, in whom the ownership of the cows happen to be lodged, having even a right to slaughter their cows.

I also stated that some dairies of excellent cows under the supervision of very capable men are not paying. I cited Mr. Boomer's dairy as one of them. I make no charge of mismanagement. I credit him with top-notcher cows and the best of management and he confesses failure. Over against that, I place the ordinary man with the ordinary cow, making a profit out of the business. I don't do that to humiliate Mr. Boomer, but it ought to suggest the impracticability of the demand of the men of the Boomer class that the common man kill his common cows. Suppose the common men demand that Mr. Boomer turn his unprofitable cows over to the butcher.

Business Not Paying.

But all this is idle. Every practical observer is aware that the dairy, as a whole, is not a paying business. A few men under especially favorable conditions are making a small profit, but as a whole the business is not a paying one. I fully believe that the movement for better cows is in the right direction, but better cows, alone, will not put the business on a paying basis. The market for the product will continue in the future, as it has in the past, to be the controlling element.

In my experience I have sold butter between the extremes of 60 cents and 7 cents a pound. When production increases the price decreases. What, then, is the incentive to increase production? A short crop frequently makes the farmer a greater profit than the big crop. D. W. AINEY.

Payette, Idaho.

THE OTHER SIDE

Mr. Stauffacher, who is a breeder of Holstein-Friesian cattle, writes:

To the Editor of the Farmer: We suppose the letter published in your issue of January 4 and under the caption: "Takes a Squint at Dairy Problem," was given space not because of any facts or helpful ideas it contained, but rather to get some dairyman or breeder of dairy stock who is really interested in the development of the industry and who has made a study of its principles to take exception to the wild statements and show why such senseless ideas should have perished along with the last "Hay-Seed."

Certainly no one would expect to be taken seriously when he says, first, "That he has had about 45 years' experience in the dairy business" and then follows that statement by offering to wager the extravagant amount of a whole quart of buttermilk to back up his statement, "That there is more clear profit made on dairy cows that produce 180 pounds of butterfat or less (a year) than there is on cows that produce more than that."

But the real joke is sprung when he reveals his great secret of how he gets this "something from nothing." He "turns this common cow—but here we must take exception, and insist that she would be a most uncommon cow—loose in the morning along the highways and byways to gather up waste and come home at night bringing four gallons of milk and one and a half pounds of butter, worth about six bits." What a shame it is that we find herd laws on the statute books of the state forbidding us from following this precept and reaping this "six bits" from nothing. Your experienced dairyman does not inform us whether or not he milks this cow in the morning. If she did as well in the morning as she did at night she would have produced twice "six bits," or "twelve bits" a day, and that from "practically nothing."

Now, if this cow can keep this up for an average of nine months in the year she will have produced 8640 pounds of milk and 405 ponnds of butter, valued at $202.50, if she is milked but once a day, but if the gentleman thought he could afford to milk her in the morning and she gave as much as she did at night this amount would, of course, be doubled, and she would have produced 17,280 pounds of milk and 810 pounds of butter, valued at $405, for one year's production from "practically nothing." And with a herd of 20 such cows a man would have the nice income of $8100 annually from "practically nothing." Fine business.

Now, it is evident that this is not the cow on which this gentleman has offered to wager the quart of buttermilk, for she certainly would not come in the 180-pound class. And he was reckless enough to wager that the cow that produced but 180 pounds of butter fat would make more real profit than this one, for she certainly would have produced over 300 pounds.

We can not say that we have had 45 years' experience in the dairy business, but we have been connected with and interested in the dairy and

(Continued on page eleven.)

The Ups and Downs of a Bunchgrass Boy

Vital, Throbbing Days of Youth in the Big Bend Country of Eastern Washington; Your Playgrounds as Many Miles as Your Pony Could Carry You Over in a Day; Your Playmates the Wild, Four-Footed and Feathered Things of the Range.

The part which our older pioneers played in taming the wilderness has been often told, yet in the columns of The Farmer will be told for the first time the story of this supremely important phase of our life in the new northwest from the standpoint of a boy—a wholesome, normal, every-day sort of boy—whose best friends during the long years of pioneer boyhood were his dog and cayuse.

You who think you know what it is to battle with the unsmiling forces of adversity, read what the men and women and boys and girls, now just slipping over the horizon of the past, have paid to help make this state of Washington what it is today.

Do not miss the first chapter of "The Ups and Downs of a Bunchgrass Boy" in the Farmer of March 8, by Joe L. Ashlock, who recounts his own early years in the Big Bend country of central Washington.

Washington Portraits No. 3.

George E. Sellick.

"The old idea that 'any man can be a farmer' is due for a revision," writes George Sellick of Kennewick. "Eight years of intimate acquaintance with farm problems proves to my satisfaction that modern farming is the biggest business in the world." Mr. Sellick, one of the representative farmers of Benton county, began irrigation farming in the autumn of 1908 without any previous farming experience, and today has a profitable live stock farm.

An interesting account of Mr. Sellick's farm experiences is given in another part of this issue.

The next in the series of Washington portraits will be that of J. E. Buckingham of South Bend, and will be given in next week's issue of The Washington Farmer.

Aeroplane Decorations.

Belgian war aeroplanes are sometimes decorated with Brownies or other grotesque figures.

Washington "Bone Dry"

Bill Passed and Signed, Becomes Law in June

Ninety days after the present session of the legislature closes, the state of Washington will become "bone dry." The absolute prohibition bill introduced several weeks ago by Representative Halsey of Asotin county, sponsored by the anti-saloon league, was passed by the lower house some time ago, later passed by the senate, and has now been given the official signature of Governor Ernest Lister.

The measure did not bear an emergency clause, nor was the referendum attached to it, as had been frequently predicted. Therefore, it becomes a law in accordance with the constitutional provision making measures effective 90 days after the close of the session.

Under the terms of the act, it is unlawful for intoxicating liquor to be manufactured in the state, brought into the state, sold, drunk or had in the possession of an individual. The adoption by Washington of the bill makes all three states of the northwest—Idaho, Oregon and Washington—"bone dry."

Ten Days Left.

There are 10 days of the present session of the legislature left. This means that from now on bills will be considered rapidly and in many cases without full consideration. Some will be killed for lack of time to consider them, while others will be passed without complete consideration of their merits.

Emergency Clauses.

Last session the most bitter fight of the session between the governor and the legislature was brought about by the legislature's placing emergency clauses on measures with a view to preventing a possible referendum being started against hem. Governor Lister vetoed many of these emergency provisions. He has begun the same tactics this session, and the spirit of harmony that has existed up to this time between him and the legislature is threatened with violation.

The first veto of the session came when a measure by Senator Cox of Walla Walla, providing that penitentiary grain or oyster or wool sacks be apportioned pro-rata among those applying for them in accordance with the actual needs of the applicants, carried an emergency clause. Governor Lister vetoed this caluse. Senator Cox accepted the bill without it, preferring to make no attempt to pass this clause over the governor's veto. As a result, the apportionment of bags will be made this year on the basis of county production of grain, oysters or wool, with the first-come-first-served method of allotment.

FIBER FLAX

Possible on Puget Sound.

Dr. A. W. Thornton of Ferndale, Whatcom county, Wash., is certain that a high grade of fiber flax can be grown in many localities on Puget sound. He bases his assertion on experiments and observations.

Dr. Thornton was for a number of years a student of the subject as a special agent of the U. S. department of agriculture. His investigations have covered a period of more than 20 years in Washington.

DEPTH FOR POTATOES

Depends on Condition of the Soil.

To the Editor of The Washington Farmer: I want to ask about raising potatoes. We live in western Washington, near the navy yard. How deep should potatoes be planted? Could they be raised successfully more than two years on the same ground? What time should early potatoes be planted?

N. J.

Clarkston, Wash.

Answer by Leonard Hofnauer, state college extension specialist.

The depth at which potatoes should be planted will depend somewhat upon the condition of the soil and also the time of planting. If the soil is loose and in good condition one is able to plant deeper than where the soil is out of condition. Also, potatoes that are planted early are usually planted shallower than those planted later. The difference is that the soil at the time the early plantings are made is not as warm, and the moisture conditions are usually not so good, and therefore, the shallower planting is safer.

However, one may say that potatoes should be planted at perhaps a depth of three and one-half to four inches. It is not good practice to plant potatoes for a number of years in succession on the same ground. We have a good many diseases of the potato, and by planting in succession on the same ground the probability of injury from diseases is increased. For the best results one should grow potatoes in a distinct rotation of crops; and in that way improve the yield as well as the quality and at the same time lessen the damage from plant diseases.

Early potatoes may be planted on well drained land as soon as the soil can be worked satisfactorily. There is occasionally some danger of freezing, but one needs to take a chance on that.

Winona Chautauqua.

Three-day Chautauqua has been arranged for Winona, Whitman county, next fall.

Pit Silo

Cost $5 and Four Days' Work

To the Editor of The Washington Farmer: I want to give you my experience with the pit silo. I dug one this last fall, 8x19, at a cost of four days' labor for myself and boy. I used my hay derrick to elevate the dirt and scattered it out with a slusher. We gave it one coat of cement at a cost of $5 for material, which was the total cash outlay. I find this very satisfactory as it is absolutely air tight. There has been no loss since I got the top off. In filling, I put green cut alfalfa on top, which kept the air from the corn silage. Hence, there was no loss. After the silage gets fed down so that we can't lift it out, I will rig up a derrick to elevate it.

It all depends upon the soil whether it will pay to dig one or not. If your soil is solid enough to hold in place till you can get it cemeted it will be all right. If there is gravel or sand it will not work. Or should it be where water will sub in, it would not be satisfactory. If you have some sand rock it may be blasted out and still be made economical. But in either case before cementing, mix up mud and plaster in all the holes or scratches in the walls, this will save the cement just that much.

GEORGE E. MALTBY.

North Yakima, Wash.

It is well to remember, as is pointed out by a North Dakota experiment station bulletin that there are certain precautions to following in the building and in the use of the pit silo.

1. Do not put the silo below the ground water line; the water will come in and turn the ensilage black and lessen its feeding value, if it does not destroy the ensilage altogether. In North Dakota, those sections having comparatively low water-table, that is, 30 feet or more, are declared suited to this type of construction.

2. There must be some provision for lifting the ensilage out at feeding time. Usually the apparatus that is used to lift the earth out of the pit is later used to hoist the ensilage.

3. The pit silo, no doubt, would have come into general use long before it has, says the bulletin, had it not been for a fear of poisonous gas.

The greatest danger is during filling. At this time the green silage ferments and forms carbonic acid gas. This gas is heavier than air, and therefore tends to settle near the bottom of the quiet air in the pit. If the silo is left for any length of time, partially filled, the owner should take the precaution of lowering a lighted candle before entering, or to stir up the air by means of a limb of a tree, or with any other contrivance that will cause the air in the pit to move and mix. While the silo is full or nearly so, and after the silage has been in the silo about a month, there is very slight danger from poisonous gases in a pit silo.

That $21,500 Calf Sale Is Not Yet Cleared Up

E. A. Stuart of the Carnation Stock Farms stated in last week's Farmer that he had received a letter from B. Meyer, offering him the Holstein bull calf Finderne Mutual Fayne Valdessa for $5000, and another letter from Mr. Meyer stating the animal had been sold; also that Mr. Meyer's herdsman had told him, Stuart, that the bull had been sold to J. Von Herberg of Seattle for $2500.

All this was before the sensational price of $21,500 for this animal at the Portland Stock show in December.

On the other hand, a statement by Mr. Von Herberg included a copy of the letter from Mr. Meyer to Mr. Gue, the auctioneer, that the calf had been sent to the sale without any restrictions whatsoever.

The situation was further clouded by telegrams to the Farmer from Mr. Meyer himself, one to the effect that the bull was sent by him to the Portland sale under a guarantee of $5000 and that the alleged statement of his herdsman to Mr. Stuart was not true.

In the light of these contradictory statements, a representative of the Farmer called upon William H. Daughtrey, president of the Portland Union Stock Yards company, under whose auspices the Portland show and sale took place, and asked him for a statement with regard to this whole matter. Mr. Daughtrey's statement follows:

PORTLAND UNION STOCKYARDS COMPANY, NORTH PORTLAND, Ore., Feb. 15, 1917.—To the Editor: As we know that record prices are apt to create some suspicion of the genuineness of any live stock sale, when the Holstein bull calf Finderne Mutual Fayne Valdessa brought $21,500 at the Pacific International Live Stock show in December, I began an investigation, as this institution does not tolerate any underhand work at this or any other sale under our control. I satisfied myself, as did the other officials of the company, that the sale was bona fide and genuine in every particular, and I have no reason to change my opinion today.

WILLIAM H. DAUGHTREY, President.

In a statement made by J. Von Herberg in last week's issue to the Farmer, he named among those bidding on the Holstein bull calf, Finderne Mutual Fayne Valdessa, the well-known Holstein breeder, John L. Smith, of Spokane. With reference to this, Mr. Smith makes the following statement:

HAZELWOOD FARM, SPOKANE, Feb. 16.—To the Editor of the Farmer: In regard to the sale of the bull calf, Finderne Mutual Fayne Valdessa, sold at the Portland show December 8, 1916, will say I did not bid one dollar on the bull. JOHN L. SMITH.

Mason Pomona

$21,000 for Farm Loan Association

By Mrs. R. R. Williams, Shelton, Wash.

There was a small but live gathering at the regular meeting of the Mason County Pomona Grange No. 20 recently. A resolution was adopted which will be communicated to the other Pomona granges throughout the state, which in substance protests against taking the tax off standing merchantable timber, and a committee composed of W. G. Rex, L. C. Shelton and M. B. Schumacher was elected to obtain all possible information on the subject and take it up with the other Pomona granges.

The temporary cimmittee in charge of forming a farm loan association reported subscriptions amounting to nearly $21,000.

An interesting feature of the Pomona meeting was an open meeting in the afternoon, at which the officers of the Mason County Fair association read their reports, and then called upon the assembly to elect officers for the association for the coming year. Probably more than half of those present had been members of the association, but it was felt that the association should more thoroughly represent the farmers of the county, and that this could be done in no better way than by having the grangers elect officers.

For the past three years most of the officers have been residents of the town of Shelton, and while their work has been thoroughly satisfactory they themselves have felt that the association would have the benefit of heartier cooperation from the outlying parts of the county if the farmers themselves were represented in greater numbers on the board of directors. With this in mind, there was the unusual feature of a public election of officers of an association which has no members until this year's membership tickets are put on sale.

In addition to the officers thus elected, it was voted to have each of the subordinate granges in the county, five in number, elect from their membership one member to be added to the board of directors of the Fair association. It was also voted to carry on an active campaign for membership throughout the county, which has never been canvassed before for members. The association is now on its feet for the first time in several years, with a small balance to start work for the coming year. The officers elected represent both new life and previous experience; both town and country; and it is hoped that this year the association may follow the gain it made in the past year in greater degree. The officers elected were: President, W. G. Rex, first vice president, Mrs. R. R. Williams; second vice president, Jacob Wingert; secretary, M. F. Knight; treasurer, Eli B. Robinson; board of directors, in addition to the above, L. C. Shelton and G. C. Angle.

Big Horse Sale

At Spokane Union Stock Yards

The Spokane union stock yards has announced its first stock sale for the present season. On March 1 and 2 not fewer than 300 head of horses will be put up at auction at the yards, and Walter D. Roberts of the yards says that it is likely the number will approximate 500.

All the horses to be sold will be brought in by farmers or stock men. No animals belonging to the stock yards company will be offered. "Consignments consist principally of well-bred, draft type, farm chunks—mares and geldings," says the announcement. It explains the nature of the sale further as follows:

"All horses will be inspected by a competent horseman, and guaranteed as represented, purchaser to be given until 10 a. m. the following day to reject horses bought in the ring that were not as represented."

To Reclaim 700 Acres.

Work on the Kletsch-Rush dyke in Cowlitz county is in progress. The dyke will reclaim about 700 acres of valuable agricultural land. The contract requires completion of the dyke by May 1.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

N. W. General Trading Co. Case Should Be a Lasting Warning

Incidentally the trial and conviction in the United States court of a group of men charged with conspiracy and swindling farmers of the Pacific northwest out of several hundred thousand dollars is serving the public beneficially by revealing the inner workings of the Northwestern General Trading company and the Olympia Trading company.

Records, letters between officials and employes and other evidence make it plain that to a large extent the business of these concerns was selling stock, paying heavy commissions and providing handsome salaries.

The costly experience of several thousand farmers in the Pacific northwest should be a guide for the future and a lasting warning to the officials of the grange and the farmers' union against ill-advised official boosting of any kind of a stock-selling scheme.

The men who were running the trading company understood the value to themselves of these indorsements. They considered them powerful agencies for selling stock to farmers, who otherwise would have been cold and properly cautious. And they were delighted to get these vouchers at a time when, as it now appears, the company was losing money, their stock-selling campaign was slacking down and they were in need of just such a powerful stimulant to revive their languishing fortunes.

Proceedings in open court have shown the modus operandi. The indorsement of the farmers' union was sought. The farmers' union had on its own hands a trading company that was a losing venture and had gone $13,500 in debt. Some of the union's officials and committeemen had become personally liable for these debts. So the enticing plan was invented of letting the Northwestern General Trading company pay off that indebtedness with commissions on future sales of stock to farmers.

Preliminary to their indorsement the executive committee of the farmers' union delegated John C. Lawrence and Louis Delivuk to investigate and report, and a little later the executive committee ratified the deal. The farmers' union officials were to urge their members to take stock in the Northwestern General Trading company, and 40 per cent of such stock sales was to go toward the cancellation of those $13,500 of debts.

Next came the indorsement of the grange, acquired through the cooperation of State Master C. B. Kegley, J. C. Wing and J. T. Compton, and published in the 1915 catalogue of the Northwestern General Trading company.

"Your executive committee," said Messrs. Kegley, Wing and Compton, "have made a personal investigation of the resources and liabilities, methods of business and quality of merchandise of the Northwestern General Trading company. We are satisfied that it is on a sound financial and cooperative basis, and through the proposed cooperative plan of a distributing center with each subordinate grange, and the active cooperation of the patrons, can be made to fill the need of a wholesale supply house for the grange members."

Out of these entanglements have come loss and grief for many members of the grange and the farmers' union. These losses can never be recovered, but the United States government, by probing the whole tangled affair and turning its searchlight into dark places, has made it impossible for these operators to play a "return engagement," and difficult for others to flourish on unsound and tricky business methods.

The $21,500 Calf Sale Should Be Probed to the Bottom

An oldtime evil of the New York stock exchange was known as "Wash sales." That is, two or more brokers conspired to make large bogus sales on the floor of the exchange for the purpose of running up the quoted price of the stock they were manipulating. That evil is now practically stamped out in Wall street.

Circumstances surrounding the auction sale of the Holstein bull calf Finderne Mutual Fayne Valdessa, for a reputed price of $21,500, at the Portland stock show, last December, have excited a deepening fear that the principals in the transaction resorted to "wash sale" methods.

The Farmer regrets that its fair efforts to bring out the facts in this matter have not been met with candor which ought to come from the breeder of this animal. A concise review of the record will be found illuminating.

In a letter dated October 2, 1916, B. Meyer, the breeder, offered the bull to E. A. Stuart, president of the Carnation stock farms, near Seattle, for $5000.

In a letter of November 17, 1916, Mr. Meyer told Mr. Stuart that the animal had been sold. He failed to give the price, but his own herdsman told Mr. Stewart that a Mr. Von Herberg was the purchaser and the price was $2500.

The animal's next appearance was at the Portland sale, and Mr. Meyer, its breeder, was its reputed owner. In his transmitting letter to Mr. Gue, the auctioneer, Mr. Meyer said, "I consign this bull to your sale without any restriction whatsoever." But in his answer to the Farmer's telegram of inquiry of February 4, Mr. Meyer says: "Bull was sent by me to the sale under the recommendation of Von Herberg, guaranteeing me $5000 at least, and all he would bring above it. What my herdsman said was not true."

When the Farmer sent another telegram, asking Mr. Meyer to be more explicit, he telegraphed this reply: "The bull was sold at auction for $21,500 to Mr. Von Herberg. After deducting commission, freight and expense, I received the balance of my money in full. Exact amount what I got is my business."

According to the record as made by Mr. Meyer, he was willing to sell the animal last October for $5000. He was willing to send it to the Portland show on a $5000 guarantee and did so send it.

The public, then, is asked to believe that Mr. Von Herberg paid $21,500 at auction, on December 8, for a bull whose owner was willing to sell at $5000.

Just what does Mr. Meyer mean by the term "commission," deducted from the reputed sale price of $21,500? Was that commission 5 per cent, or 50, or 90 per cent? Why does he say the exact amount he got is his business? It is the public's business too. He is engaged in a business that should be conducted in open view and above-board.

This is a matter that should not be lightly dropped. The good name and the fair fame of the Portland stock show are involved, and its directors owe a duty to the public to probe the transaction to the bottom.

No only this, but the stability and prosperity of the live stock industry itself throughout the Pacific Northwest depends upon sales whose genuineness can not be questioned.

Washington Gleanings

M. Reilly of Palouse district reports a profit of $90 an acre from four acres of Canadian field peas.

C. A. Marlhugh of Mt. Vernon has refused $46 a ton for his large crop of potatoes. At the price offered his crop would have brought him in excess of $9000.

It is reported that a California concern is taking over a large acreage on the Coast in Pacific county for the purpose of developing the cranberry growing industry.

For the purpose of extending the work of the Hanks strawberry farm near Naches, Yakima county, the Hanks Fruit Products company has been organized with a capitalization of $4200.

The American Shorthorn Breeders' association is advertising their breed throughout the northwest by the use of a moving picture film showing the animals displayed at the Chicago International last fall.

Cle Elum—Kittitas county farm returns from hay, grain and live stock estimated at $2,200,000, while production from coal industry in Roslyn-Cle Elum coal field totaled $4,200,000,—nearly twice value of farm products.

The boys of Aberdeen are being organized into a potato club to produce potatoes on vacant lots in the city during the present season. Secretary W. C. Mumaw of the chamber of commerce is fathering the organization.

A report from Lynden, Whatcom county, says that a Mrs. Thompson of that place had successfully hatched a brood of chickens during weather that neared zero, and that they were promising to make early friers.

A measure has been introduced in the legislature at Olympia by Senator Iverson of Kitsap county creating the office of director of farm markets, his idea being to establisch a state marketing system. The measure is not thought likely to be passed.

Wool growers are expecting the coming season to be the best from the standpoint of price in the history of the wool industry. Forty cents a pound is the price already written in some contracts, and some producers are holding for even higher prices.

A branch of the federal farm loan association was recently organized by 10 farmers near Fan lake, just out of Deer Park. E. J. Carey was elected secretary and Charles Rivers, Swan Peterson and A. Reiter was appointed a committee to make the necessary arrangements.

Hops sold on contracts made from one to five years ago in the state of Washington brought more money the last season than did those sold in the open market. Contract prices were usually as high as 13 cents, while the open market brought only from 6 cents to 12 cents.

It is reported that the requirement of the 640-acre homestead act that no land may be so homesteaded which has a general watering place on it has resulted in a large number of the first applications being worthless, as applicants nearly always chose lands which did have the watering places.

The large bridge spanning the Columbia river at Vancouver, Wash., thus connecting the states of Oregon and Washington as a link of the Pacific highway from Canada to Los Angeles, is nearing completion. The last rivet has been put in, and only the finishing touches, including hard surface of the roadway, remain to be placed.

What Others Say

Ohio Farmer: Birds more than pay for their keep.

Southern Agriculturist: The garden requires constant care, but it is worth it.

Hoard's Dairyman: We have great faith in liberal feeding of dairy cattle.

Farmer and Stockman: Plan your garden so it can be tilled with horse machinery.

Indiana Farmer: The first thought every one who buys an automobile should have in mind is a due consideration for sensible driving of his machine.

How the Loans Are to Be Made

Must Subscribe to Certain Amount of Stock in the Federal Land Bank

By N. W. DURHAM,

Chairman of Spokane Committee on Federal Land Board.

Ten or more farmers in a community, we shall say, have organized a farm loan association, and the federal land bank for their district having organized for business, these farmers want to borrow money on their farms. What steps are to be taken to that end?

Their association will first forward its articles of association to the federal land bank of the district, in this region embracing the four states of Montana, Idaho, Washington and Oregon, with the federal land bank at Spokane. Each association, as previously explained, will have a loan committee consisting of three of its members. We now quote the law direct:

"They (the articles of association) shall be accompanied by the written report of the loan committee, and by an affidavit stating that each of the subscribers is the owner, or about to become the owner, of farm land qualified under section 12 of this act as the basis of a mortgage loan; that the loan desired by each person is not more than $10,000 nor less than $100, and that the aggregate of the desired loans is not less than $20,000; that said affidavit is accompanied by subscription to stock in the federal land bank equal to 5 per cent of the aggregate sum desired on mortgage loans; and that a temporary organization of said association has been formed by the election of a board of directors, a loan committee and a secretary-treasurer, who subscribes to said affidavit, giving his residence and postoffice address."

Appraiser Investigates.

The directors of the federal land bank at Spokane will then "send an appraiser to investigate the solvency and character of the applicants and the value of their lands, and shall then determine whether, in their judgment, a charter should be granted to such association. They shall forward such articles of association and the accompanying affidavit to the federal farm loan board (at Washington) with their recommendations. If said recommendation is unfavorable the charter shall be refused.

"If said recommendation is favorable the federal farm loan board shall thereupon grant a charter to the applicants, therefore, designating the territory in which such association may make loans, and shall forward said charter to said applicants through said federal land bank. Provided that said federal farm loan board may for good cause shown in any case refuse to grant a charter."

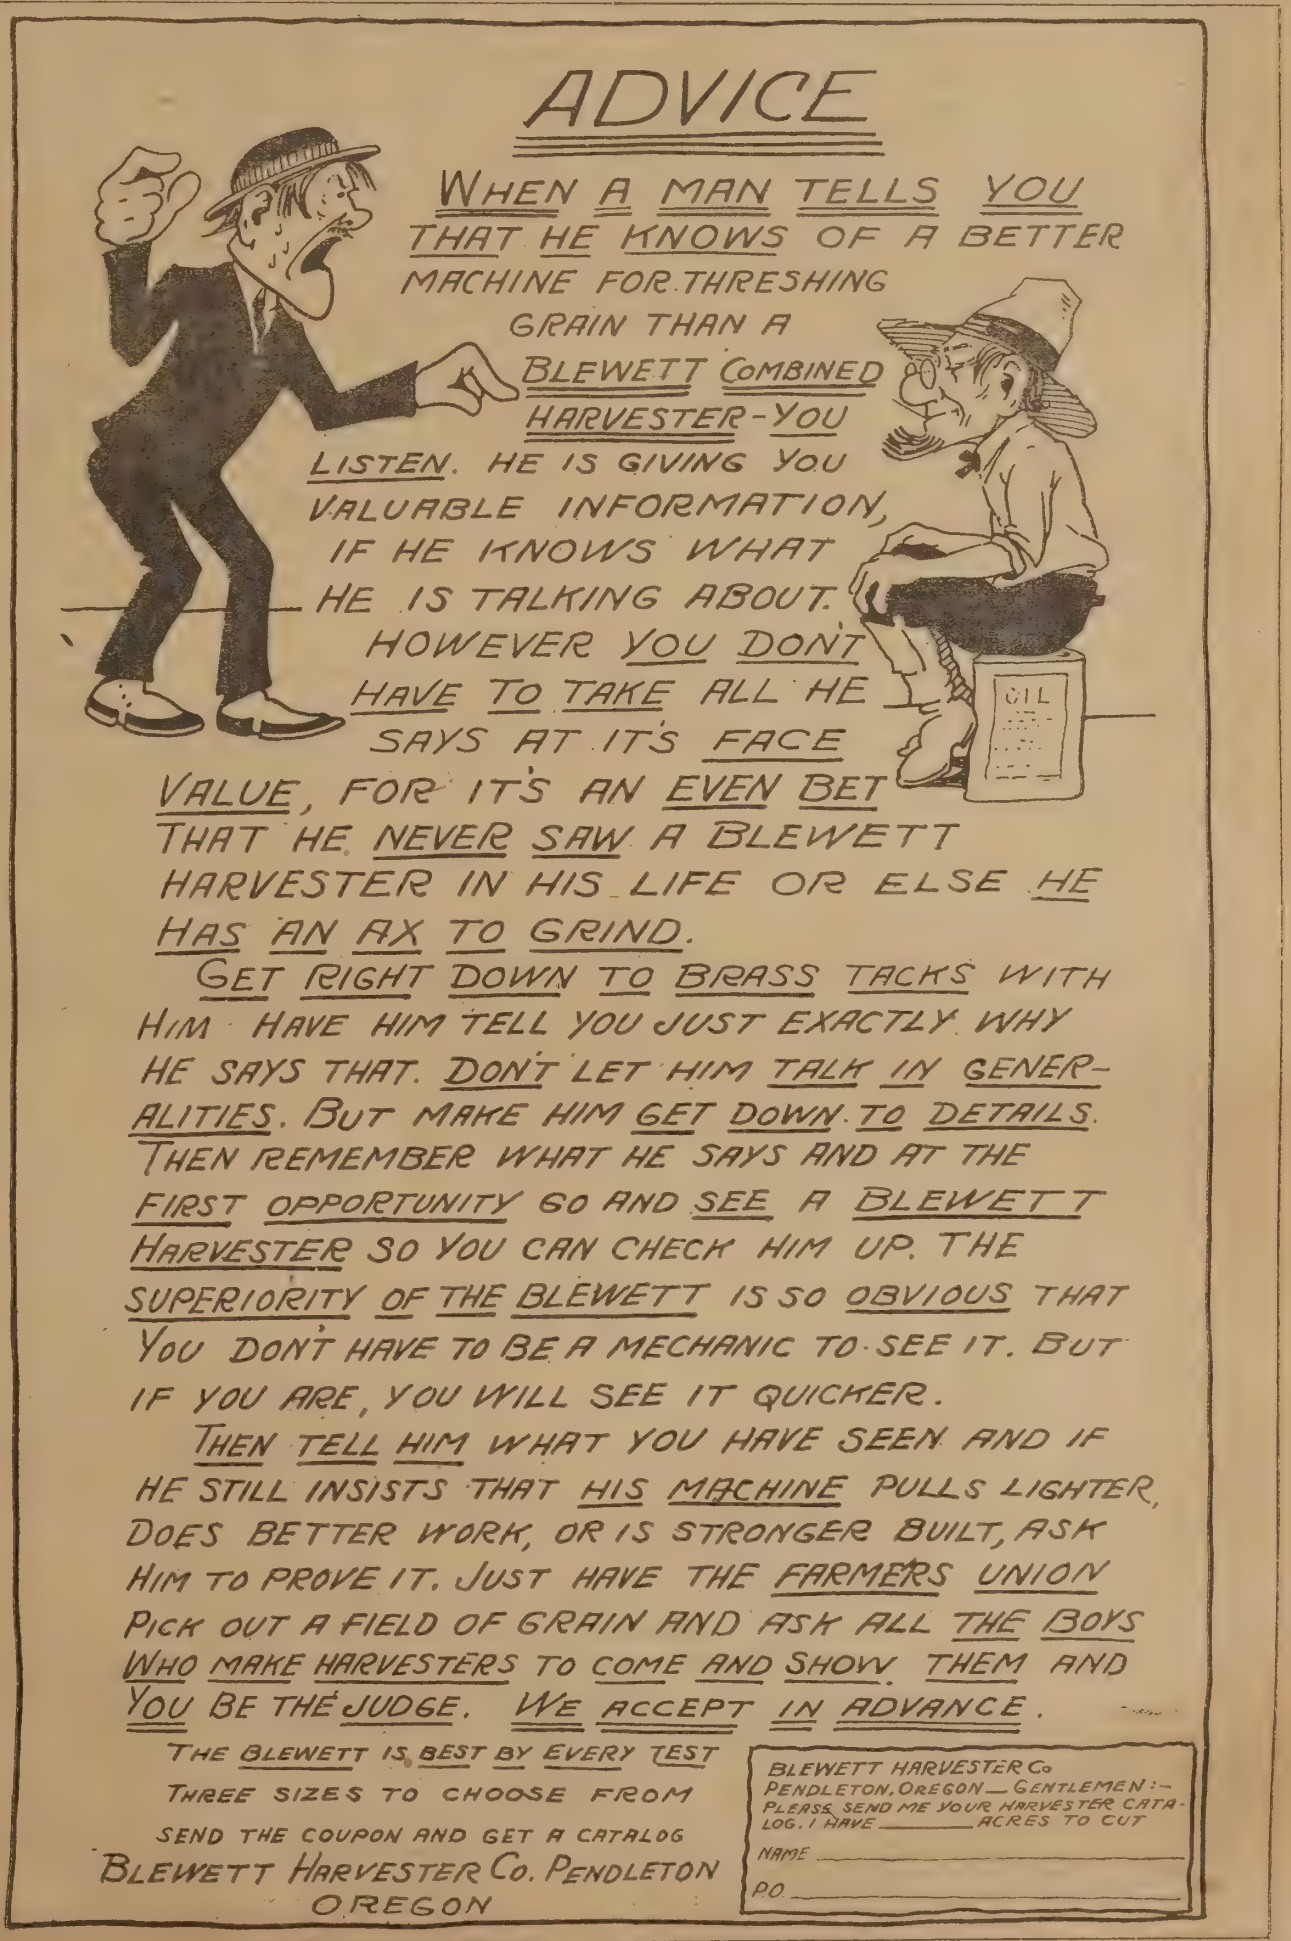
A member of a farm loan association must subscribe for the capital stock of that association to the extent of 5 per cent of the loan he desires. Thus, if 10 members apply for loans aggregating $20,000 their stock subscriptions will aggregate $1000.

Then the association in turn must subscribe for a like amount of the capital stock of the federal land bank of its district. The farm loan association will hold in trust the local stock of its members, and the federal farm loan board will hold in trust the district bank stock of the association. "Such capital stock shall be held by said land bank as collateral security for the payment of said loan, but said association shall be paid any dividends accuring and payable on said capital stock.

After Charter Was Granted.

"After a charter has been granted to a national farm loan association any natural person, who is the owner, or about to become the owner, of farm land qualified as the basis of a mortgage loan, and who desires to borrow on a mortgage of such farm land, may become a member of the association by a two-thirds vote of the directors upon subscribing for one share (par value $5) of the capital stock of such association for each $100 of the face of his proposed loan or any major fractional part thereof. He shall at the same time file with the secretary-treasurer of the association his application for a mortgage loan.

"Before any mortgage loan is made by any federal land bank, or joint stock land bank, it shall refer the application and written report of the loan committee to one or more of the land bank appraisers appointed under authority of section three of this act, and such appraiser or appraises shall investigate and make a written report upon the land offered as security for said loan. No such loan shall be made by said land bank unless said written report is favorable."



Norris Johnston of Council, Idaho, asks: "Suppose a farmer borrowed $2000 from the assoiation in his neighborhood, and that the farmer that borrowed the $2000 did not make good or pay his interest; who stands the loss—the farmer or the association or the government? If the 10 or more farmers have to stand the loss do they fall into possession of said land?"

On that point the law provides that "shareholders of every national farm loan association shall be held individually responsible, equally and ratably, and not one for another for all contracts, debts and engagements of such association to the extent of the amount of stock owned by them at the par value thereof, in addition to the amount paid in and represented by their shares."

This means that each member of the association is held liable to the extent of 10 per cent of his own loan and no more. If his own loan is $100 and if losses result from a loan made by his association his $50 of stock may be taken towards making good that loss. It that should prove insufficient he could be assessed to the extent of another $50. After that his liability would cease.

Another section of the law provides that "if there shall be default under the terms of any indorsed first mortgage held by a federal land bank under the provisions of this act the national farm loan association or agent through which said mortgage was received by said federal land bank shall be notified of said default. Said association or agent may thereupon be required, within 30 days after notice, to make good said default, either by payment of the amount unpaid thereon in cash, or by the substitution of an

How Many Seconds in the Month of February 1916?

$300 SOMEBODY WILL WIN — SIXTY QUESTIONS — SOMEBODY WILL WIN $300

Read the Plan and Rules of This Big Free-for-All

FARM INFORMATION CONTEST

There are 60 questions which everybody should try to answer. They are interesting, they are entertaining, and the prizes make it worth your time to try to answer them. Look into the contest plan and fix your aim on the big cash awards.

READ THE RULES
Answer These Questions

16. How many stars in the American flag?

17. What grain is used in making graham flour?

18. Does the book of Hezekiah come in the old or new testament of the Bible?

19. Which anniversary of a marriage is known as the Golden Wedding anniversary?

20. What breed of chickens bears the same name as the landing place of a group of early American colonists?

(Five more questions will appear next week.)

The announcement of this contest, February 1, brought quick responses from all the four northwest states from persons who sent in the order coupon on this page with subscription remittances, expressing their intention to register for the $300 prize provided in "Enlarged prize list plan."

$800—IN CASH to Be Paid—$800

We will positively give EIGHT HUNDRED DOLLARS in cash awards (and more in event of ties) to the winners. As explained in the rules which follow, there will be five questions run in every issue of the Farmer for 12 weeks. The last five questions will appear in the issue of April 19.

You Can Enter Without Cost

You do not even have to be a subscriber of the Farmer to enter. As has already been stated, any resident of Washington, Oregon, Idaho or Montana is eligible to compete in this contest.

Five Questions Each Issue

The contest will be composed of 60 questions. Five will be run in each issue of the Farmer for 12 issues.

Answers to each question except No. 45 can be given correctly in from one to 10 words and will be given a score of 100 if correct. Answers to question No. 45 will be limited to 100 words each, and will be graded as to the common sense and general knowledge of farm conditions shown by the contestant without regard to spelling, grammar or penmanship. As with the other 59 questions, a perfect answer to No. 45 will be scored 100.

Perfect Score Is 6,000

The contestant who comes nearest to a score of 6000 and complies with all the conditions of the contest will receive the first prize; the next nearest, second prize, and so on. In case of a tie each tying contestant will receive the full amount of the prize.

There are 35 prizes as follows:

$150 is amount of First Prize. **$50** is amount of Third Prize. **$10** is amount of Fifth Prize.

$100 is amount of Second Prize. **$20** is amount of Fourth Prize. **$5** each, Sixth to Tenth Prizes.

$4 each Eleventh to Fifteenth Prizes. **$1** each, Sixteenth to Thirty-fifth Prizes.

OTHER RULES

The answers will be passed upon and graded by a fair-minded, thoroughly competent judge.

Two weeks will be allowed for sending in answers after April 19, 1917, date of the issue containing the last five questions.

Remember, your failure to answer all the questions will not necessarily exclude you from the contest. There are 60 questions to be answered and it is not reasonable to suppose that all our prize winners will attain a perfect score. Your answers must all be sent in at the same time. Do not send any answers until you have completed the full list or as many as you can answer.

Those who use our CONTESTANT'S HELPFUL OUTFIT will be able to send in their complete set of answers without delay, there being no need of their waiting for the questions as they appear in The Farmer from week to week down to the final issue of April 19. In order to get as prompt returns as possible from those contestants who use our CONTESTANT'S HELPFUL OUTFIT, extra inducement is made in the prize awards. SEE ENLARGED PRIZE LIST.

Announcement of prize winners will be made and prize checks mailed as soon after close of contest as possible.

If any point is not clear, do not hesitate to write the Farm Information Editor.

All answers must be mailed on or before midnight, May 3, 1917, as shown by postoffice dating stamp on your envelope.

ORDER COUPON—If your subscription is paid ahead, the time paid for herewith will begin at the date to which you are now paid.

FARM INFORMATION EDITOR.
Review Building, Spokane, Wash.

Enclosed find $1 for one year, or $1.50 for three years' subscription to

THE WASHINGTON FARMER.

and enter me as a contestant in the Farm Information Contest. I am also to receive at once the complete CONTESTANT'S HELPFUL OUTFIT, consisting of guide against wrong answers, reply blanks, rules and all information to aid me to win a reward.

Name .....

R. F. D. .....Town .....

State .....

Notice—Amount of remittance to be either $1 for one year's subscription to the Farmer or $1.50 for three years' subscription.

Answer this question: Are you now a subscriber?.....
If you wish paper sent elsewhere, fill in name and address.

A Valuable Aid to Contestants

One complete CONTESTANT'S HELPFUL OUTFIT, including all of the 60 questions and instructions and helpful warnings as to answers which would be wrong, and the correct answers to some of the most difficult questions, will be sent to any public library free of charge, upon request.

To each contestant who sends in a new, renewal or an extension of his subscription at the time of registering for the contest, this complete CONTESTANT'S HELPFUL OUTFIT will be sent in combination.

We feel that those beginning on the contest will find these suggestions as to what to avoid distinctly useful. This equipment supplies in convenient form everything needed to enable you to apply your ability to the best advantage, and will contain information enabling you to answer the most difficult questions correctly.

Puts Questions in Reach of Children

This CONTESTANT'S HELPFUL OUTFIT puts the solution of the questions in the reach even of the children, it being the purpose to make it possible for everybody in Washington, Oregon, Idaho and Montana to compete. This outfit includes, besides general information about the plan of the contest, the following:

Guide against wrong answers, which includes either correct answers of more difficult questions or easy references as to where to find the correct answers; and blank forms on which to write your answers in such a way that there can be no confusion when your answers are taken up by the judge for scoring.

It will be worth considerable to you to be assured that your answers are reaching the Farm Information Editor in such form that he will know in every instance exactly what question you intended to answer. This CONTESTANT'S HELPFUL OUTFIT will make it possible for you to

Begin Work at Once

On account of the large number certain to send for our CONTESTANT'S HELPFUL OUTFIT, thus making it possible for them to answer the entire 60 questions without delay, it is deemed advisable to offer some special inducements to secure prompt returns from this particular class of contestants. By securing the early replies of those who are thus supplied with the entire 60 questions, we will be able to have their papers carefully scored before the final rush of answers toward the end of the contest.

Understand, it is not absolutely required that those who use our CONTESTANT'S HELPFUL OUTFIT send in their replies at once, but, in order to induce them to get in early, the following plan for enlarging the awards to those prize winners whose answers come in early is offered:

ENLARGED PRIZE LIST—$300 CAN BE WON—ENLARGED PRIZE LIST

For those who use our CONTESTANT'S HELPFUL OUTFIT.

Thirty-Five Prizes	Amt. of prize if winner sends in answers during 1st period, Feb. 1- Feb. 21	Amt. of prize if answers sends in winner during 2d period, Feb. 21 Mch. 14	Amt. of prize if winner sends in answers during 3d period, Mch. 14 April 5	Amt. of prize if winner sends in answers during 4th period, April 5 April 19	Amt. of Prize for winner who does not send in answers before April 19
First Prize	$300.00	$225.00	$200.00	$175.00	$150.00

Binder Twine

Another Advance in Sisal Price

Another advance is announced in the price of Yucatan sisal, the base for binder twine. New York agents of the Commission reguladora, the Yucatan state monopoly, have put up the price 2 cents to American binder twine manufacturer. It is now at 16 1-2 cents a pound. When the commission took control of the Yacatan output less than two years ago users in the United States were paying around 5 cents.

The situation has grown up so serious and burdensome to American farmers that the subject came up for discussion at a recent meeting of President Wilson's cabinet, and government agencies investigating the operations of this rapacious trust have been directed to speed up their labors.

The U. S. government has filed a suit in the federal court in New York against the Pan-American commission corporation, the American company that is financing the Yucatan trust, charging conspiracy under the anti-trust laws to restrain interstate and foreign trade in sisal and to increase the market price throughout the United States.

Injunctions were asked against the corporation, the Commission Reguladora; the Yucatan Combination of Sisal Producers, which received its financial assistance, and against several individuals connected with them, to prevent further operation in interstate or foreign commerce.

"The combination attacked was formed late in 1915 to monopolize the field and increase the price of sisal in the United States," according to a statement issued by Thomas W. Gregory, United States attorney general, in filing the suit.

"Sisal is produced as an article of commerce only in Yucatan, and is the only fiber available for the manufacture of binder twine, of which 250,000,000 to 300,000,000 pounds is required annually for harvesting the grain crop of the United States.

"The parties to the combination are American bankers, the Pan-American Commission Corporation, organized and controlled by them, and the Commission Reguladora, which has an office in New York and imports and sells sisal in the United States.

"To enable the commission to purchase the entire output of Mexico, and import and sell it at the prices and on the terms fixed by the combination, the bankers, through their corporation, are supplying the commission in the United States a continuous credit of $10,000,000 and otherwise assisting the commission in the United States. For this service the corporation receives a minimum compensation of $450,000 a year, in addition to the regular rates of interest on loans made to the commission.

"At the time the combination was formed the price of sisal at New York was 5 1-4 cents a pound, and for five years before had averaged about 5 1-2 cents. As a result of the combination the price has been advanced until it is now 16 1-2 cents. This price, if maintained, means probably an increase to the farmers of more than $25,000,000 in the cost of twine for 1917 over the cost for 1915."

CHAR-PIT METHOD

Dupertuis Farm of 135 Acres.

The sale of the Henry Dupertuis farm of 135 acres to his son, Paul H. Dupertuis, is announced. The consideration was $7000. The farm is located seven miles west of Chehalis on the National Park highway and is bench land. Henry Dupertuis is widely known throughout the northwest as one of the men who made a remarkable personal success of clearing stumps from his logged-off land by the char-pit method.

Pupils Win Prizes.

George R. Bright, C. S. Brown and G. R. Walker, judges, announced their decision on the winners of the special cash prize offered by the Chehalis Citizens' club for the best essays on the recent farmers' extension school held in this city. There were 19 papers submitted. First prize was awarded to Gladys Murphy of school district No. 27, R. F. D. 3, Mrs. Anna B. Hilton, teacher. Second prize was awarded Eva Severs of the Union school, M. Edna Newby, teacher.

Has Fed from the Field.

A Stuart Island farmer in San Juan county has finished putting in his crop of yellow Danver carrots, having fed from the field until the present time.

Salt of the Oceans.

There is enough salt in the oceans to cover the United States to a depth of 8500 feet.

We offer you liberal credit. You can take a year to pay for your purchase.

$3.00 Down and $1.25 a Month Buys This Beautiful Bed Outfit

THE BED ALONE, if you were to purchase it at a regular retail furniture store, would cost you almost the price of the outfit. When you have this bed made up in your home you will find that it will add refinement and a neat, cheerful effect in the room in which it is placed.

DIMENSIONS—Bed can be furnished in 4½-foot width, the full size only. The posts are 2 inches in diameter. Fillers ⅛ of an inch. The head piece stands 52 inches high and the foot piece 35 inches high. Can be furnished in gold Vernis Martin, giving the bed a most delightful appearance.

THE MATTRESS will be furnished in the full size, 4½ feet only. It is a great deal better mattress than you ordinarily find in the outfits. It is a 40-pound mattress and we do not hesitate to recommend it in every way. A good quality elastic sanitary cotton felt is used in making this mattress and it is covered with a splendid grade of fancy art ticking, securely tufted and finished with a heavy roll edge. The scientific construction assures a wonderfully comfortable and durable mattress.

THE SPRINGS are something new and a most extraordinary value. They are noiseless and durable. The double rust proof wire fabric is attached to the heavy angle iron frame by oil-tempered helical springs. The weight is well equalized and distributed all over the entire spring.

No. 1133. Outfit complete as pictured. Weight about 160 lbs. Price $19.85

$2.25 Down and $1.00 Monthly Buys This Fine Solid Oak Arts and Crafts Dining Table

THIS BEAUTIFUL TABLE, though simple, is so nicely proportioned and handsomely finished that it makes a wonderful table for any family to have. A nice dining table that will be serviceable and neat, and not be a big item of expense. You will notice that the pedestal is truly mission in shape and 6 inches in diameter. The legs are very massive. Every part of the table, both base and top, is carefully sandpapered and smoothed before the finish is applied. Top measures 42 inches when closed, extending to 6 feet. Furnished in fumed or golden oak.

No. 1418. Weight about 117 lbs., furnished complete with leaves. Price..... $13.95

Nine Cows When Three Give Same Returns

By C. H. BERGSTROM, Tester.

Following is a list of cows producing 50 pounds of butter fat or over for the month in the eighth monthly report of the Snohomish Valley Cow Testing association:

Owner.	Name of cow.	Breed.	Age.	Date fresh.	Lbs. milk.	Test.	Lbs. B. F.
Roe Bros.	No. 12	Gr. Ays.	6	11-30	1535	4.5	69.00
Shadinger Bros.	Alma	Holstein	2	11-3	1341	4.4	59.00
Shadinger Bros.	Ginger	Gr. Holstein ...	3	10-22	1143	4.6	52.37
Shadinger Bros.	Cascade Clara	Holstein	3	8-7	1479	3.5	51.77
Dennis Metz.	Pansy	Gr. Jersey	5	10-14	978	5.2	50.86

In the 40-pound class Shadinger Bros. have 3, D. F. Sexton 2, Glenwood Farm 1, P. A. Weber 1, F. L. Krassin 3, George Stecker 1 and T. G. Bowen 1.

Below is a table of averages for three groups—50 pounds B. F. or over, 40 pounds B. F. to 50 pounds B. F. and 25 pounds to 30 pounds B. F. respectively:

Av. lbs. milk.	Av. test.	Av. lbs. B. F.	Av. value of product.	Av. feed cost.	Av. profit above feed cost.	Av. feed cost per 100 lbs. milk.
1243	4.37	56.61	$27.34	$11.16	$15.97	.846
979	4.45	43.67	21.12	9.16	11.99	.943
628	4.1	25.73	12.70	7.70	5.09	1.30

The averages for the 50-lb. group are taken from the records of five cows, while those for the other two groups are taken from 12 cows. The cows in the last group are with but one or two exceptions taken from the same herds as are those in the second group, attention being given to lactation period, age, etc., i. e., for each cow of the second group, fresh, for instance, three months, a cow of approximately the same age and weight, fresh for nearly the same time, was chosen from that herd. This makes the production conditions as nearly equal as possible. Study of this table will show which cow is actually the cheapest producer and will also substantiate the statement that the large majority of our herds are too large. It will be noted that three cows of the first group make as much profit as four cows in the second group and more profit than nine cows in the third group. Why keep nine cows when three will make the same returns?

Profitable Dairy Stock.

The increased interest that farmers are taking in more profitable dairy stock is gratifying, says R. A. Blanchard, agricultural agent of Crook county. The farmers of central Oregon are convinced that purebred stuff pays in dividends on the investment and are not slow to express that conviction by paying good prices for high class stock. E. C. Park, chairman of the live stock committee of the county agricultural council, has been particularly active in arranging for the importation of dairy calves. Messrs. Wood, G. N. Rader, M. E. Landes and Park have arranged to bring in $850 worth of high class Golden Glow blooded stock. J. A. Foss of Terrebonne is another importer of fine blood and John Kemmling of Prineville recently imported two fine animals at $500.

The county agent, under the direction of the county agricultural council, is at work on the formation of a bull association, which it is believed will prove of equal benefit in the upbuilding of our dairy industry.

Bee Disease

Now the Time to Prevent Spread

By ED VANCE, Twin Falls, Idaho.

Watch your bee hives. This is the time of the year to prevent the spread of foul brood among bees. A little cooperation among people keeping bees can do more than the inspector can do all the rest of the year. When I say cooperation I mean for every one who has a hive of bees to do his part.

Some warm day in February go out and find if any colonies are dead. You can tell by plowing into the entrance if they are alive they will answer with a buzz. If you can not get a response look inside and make sure they are dead. If dead remove at once into a cellar building that is bee tight so the bees can not rob out the honey as that is the way foul brood is spread to other colonies. If you do not know foul brood when you see it keep it till the inspector or some one who does know it sees it before you use the hive to put bees in again.

One hive left out to be cleaned out when warm weather comes will infest a whole community and cause the loss of hundreds of dollars worth of bees. Any colonies that are weak should have the entrance contracted so as to admit only one bee at a time, that a small force can guard their hive against rodents. Then as soon as the weather will permit examine all weak colonies to see that they are not infected with foul brood. If you do not know the disease when you see it you can learn by writing to the department of entomology, Washington, D. C., and receive bulletin on foul brood.

The Book of Dairy Books

It's *the* book, because it's *the* authority on *the* breed—the beautiful, ever-paying Jersey.

This book, "About Jersey Cattle," goes way back to the beginning of the breed, shows how it was line bred and protected from mixture by law, and shows why it has developed into the most economic and most persistent-milking of all breeds. It gives tests, yields, etc., proving that the Jersey is the *money* cow—the "Giant of The Dairy."

The book is free but worth a lot. Send a postal for your copy *today*.

Build a Concrete Stock Tank

A concrete stock tank keeps the water sweet and cool. A concrete floor surrounding it does away with the muddy bog where the stock must stand and drink. The stock tank and the floor are simple and inexpensive to build.

Concrete can never rot nor rust. There are no rusty nails, splinters or sharp edges about a concrete stock tank. Use common lumber for the forms—haul your own sand and pebbles from the pit—and see your local dealer for your Portland cement. Mix the materials ONE part Portland cement, TWO parts sand and THREE parts pebbles. This is the same material as that used in the Galveston Sea Wall, which saved that city from destruction in the great storm of 1915.

Write today for our booklet "Concrete Troughs, Tanks, Hog Wallows, Manure Pits and Cisterns." Just say "Send me Booklet No. 142."

Purebred Registered HOLSTEIN CATTLE

The scope of its labors and the numerous details involved in the administration of the affairs of the Holstein-Friesian Association are best comprehended by a consideration of the fact that, during the fiscal year ending April 30, 1916, $158,994.50 was received by the secretary's office for the registration of pedigrees and for transfers. This volume of business required 46,760 entries in the cash books, and the issuance of 143,130 certificates; this prodigious labor is demanded for the conduct of but one department of the greatest dairy cattle breeders' association in the world.

High Grade Cow

More Profitable Than Average?

(Continued from page four.)

stock business for several years and have always striven for high production in the individual and are glad to be able to add that our efforts have thus far been fruitful, for while we do not have the honor of having any world's record cows, but only a good working dairy, the records of our cow testing association showed that the 23 head which we were milking last year, including 11 2-year-olds, averaged over 377 pounds of butter fat for the year, at an average cost of production for the feed consumed of 8.8 cents a pound. And with the average price of 27.5 cents a pound paid by the local creameries for butter fat we can figure a profit even from cows producing over 300 pounds. And the record also shows that the cow that produced over 545 pounds of fat in our herd last year made us a greater margin of profit than did those that produced around the 300-pound mark.

In conclusion, we are most pleased to state that the official report has just reached us that one of the best "managers" in the dairy business has just produced a cow, Segis Fayne Johanna, 114,658, a Holstein-Friesian, that made 50.68 pounds of butter in seven days from 722 pounds of milk, under strictly official test. How many 180-pound cows would one have to feed to be able to produce the same amount of butter in a week? Yours for better cows, A. A. STAUFFACHER.

Get the Best.

To the Editor of The Farmer: Going out of or going on with the dairy business is the talk when a bunch of dairymen meet. The writer has been doing some close figuring this winter and has concluded to go on. I have been milking 38 head this winter, six heifers, and two we are drying off now. This week we have been getting as high as 255 gallons per day and at those figures I can not see why it will not pay a handsome profit. My herd is of all pure Holsteins. I am using Hazelwood Bracelet Korndyke at the head of my herd. His dam has 133 pounds butter record in 30 days, his sister was grand champion at the Chicago and the San Francisco dairy shows. The average of this herd this winter at the present rate is 67 pounds per cow, including the six heifers.

Get the best to do the best.

JOHN L. SMITH.

Wants a Uniform Price.

To the Editor of The Washington Farmer: I would like to see a law in the state of Washington for the benefit of the dairy industry. That is, to prohibit creameries paying two or three different prices for cream and milk condenserics from doing the same.

In central Lewis county the creameries pay 1 to 2 cents more anywhere that there is competition and where there is no competition they pay from 1 to 3 cents per pound less. Now, that is not giving the farmers a square deal.

The condenseries in Lewis county pay us now from 10 cents to 25 cents less per hundred-weight than they pay in King, Snohomish and Whatcom counties, which is not giving the farmers in Lewis county a fair deal, and the milk is all used for the same purpose, as is the cream.

Now, I would like to have this reach as many of the farmers as possible and see what they think about it. The creameries ought to pay all who ship the cream 40 cents, but at present they are paying some 30 cents and some 40 cents.

I would like to hear through the paper what all who read this think about it. HUGH G. CORP.

Forest, Wash.

Farm Loans

Borrowers Must Take Some Stock

(Continued from page seven.)

equal amount of farm loan bonds issued by said land bank, with all unmatured coupons attached."

While the law is not specific on one point raised by Mr. Johnson we think there is no doubt that if a mortgage were foreclosed and the mortgaged land later sold at a price that made the association whole, the members of the association would be repaid such sums as they might have been assessed.

The next article in this series will relate to the opportunity of the landless man to acquire a farm under the new system.

Dairy of H. G. Anderson & Son, Jackson, Minn.

"It is now about three months since we got our new hired man. His name is HINMAN, and right here we want to say he is the best ever. He milks three cows in the time that it took to milk one; and that is not all; the work is done with neatness and dispatch. No running off on a Saturday evening and gone till Monday; always on the job seven days every week. One more great advantage: You know the dairy cow is quite different from the society woman; she doesn't want any change of style. She wants the milking done on time, and always the same. No change of style goes with her, and that's where Hinman is Johnny-on-the-spot and always does his work the same; therefore we could not afford to let him go at any price. We consider him by far the best, cheapest and most reliable hired man."

H. G. Anderson & Son, Dec. 14, 1915.

HINMAN MILKERS WILL SURELY INCREASE DAIRY PROFITS

because they save where the only saving is possible in a dairy. You can't save on feed without losing milk yield, but you can save on hand labor. A 3-unit outfit costs less than wages and board of one hired man for six months. So simple a boy can milk 18 to 25 cows an hour.

No complicated pulsating mechanism — no air pipe lines — no vacuum tanks.

Just a simple combination of pump, vacuum in valve chamber and natural action teat cups—no upward squeeze.

Simplicity That Means Low Cost

"9 Years' Success."

HINMAN The Valve Chamber **MILKER**

Built by Practical Dairymen.

The Hinman soon pays for itself and adds its first cost to profits every six months to a year.

Service Dealers Everywhere.

A cow can not *tell* you when she is sick, but her milk yield is a very accurate indication of her condition. The fact is, thousands of cows are allowed to remain unprofitable or below their reasonable standard of productiveness through their owner's failure to act on the hint of the milk pail. Don't pass it off by simply calling her a "backward cow"—correct the trouble and reap the extra profit.

Kow-Kure is a medicine for cows that are "off color." It is in no sense a food, but it promptly acts on the digestive organs and enables the cow to thrive on her natural food. Its great curative powers act on the genital organs where many cow ailments originate. The success of Kow-Kure is positive in the prevention and cure of Abortion, Barrenness, Retained Afterbirth, Milk Fever, Scouring, Lost Appetite, Bunches and other common ills.

You can buy Kow-Kure from feed dealers and druggists, in 50c. and $1.00 packages.

Sheep

Owner Finds Them Profitable

To the Editor: I have a few sheep and I like them very well. I just lately completed a new sheep barn on my place on Lamar Gulch, with N. Buroker superintendent of construction. It is said to be the most complete and convenient building of its kind in the country, being 70x14 feet. It provides ample accommodations for 65 sheep to eat at once. I have 55 sheep on my place and I commenced lambing the first of January. I have to date 25 lambs.

Just a word or two about sheep. What animal can be fed on so little during the winter? What type of animal will eat so many weeds and keep the ranch so clean as will the sheep? What animal gives such a quick threefold profit, wool, mutton and lambs? A sheep matures almost as soon as a chicken and in three or four years, with ordinary care and success, the number will be quadrupled. What will 20 to 50 ewes do on the average ranch? With ordinary care they will live on what other animals disdain. Their wool will pay the taxes, their extra lambs buy the gasoline. Their increase will amount to several hundred dollars per year and in two or three years the original investment will be netted and the band will be pure velvet.

These results will be obtained from a small bunch kept under average conditions and taking into consideration the yearly losses that are bound to occur.

I have a spring on the south side of my place practically in the middle and flows all the way through the place with abundant shade along this branch of the creek. I live in the northeastern part of Umatilla county, 25 miles from Walla Walla and 23 miles from Pendleton. J. M. SWAGGART.

Weston, Ore.

Sheep Dipping in Honduras.

The cattle and other stock in Honduras suffer from ticks, mange, flies, lice and worms. Nothing has been done until recently to remedy these troubles, but last year an experienced stockman from St. Louis spent some months at Ceiba demonstrating how cattle could be freed from ticks, and he is there again to continue the work, with the expectation of shipping cattle from this port to the United States within a few months. Under his direction a few cattle-dipping tanks have been constructed, and the use of an arsenical dip made from ingredients secured in New Orleans is being used by two or three cattle owners.

Packing-House Concession.

The Argentine government has granted a concession for a packing house in Tierra del Fuego to Alejandro Menendez Behety, who expects to organize a syndicate to finance the project. The packing house is to be built on the bank of the Rio Grande, and the concession contains an authorization for the building of a metal suspension bridge over the river, this bridge to pass to the control of the government 15 years from the date of the concession.

WHERE IS HE LAME? CAN HE BE CURED?

IT is surprising how accurately it is possible to diagnose the most chronic, complicated and uncertain form of lameness,—and treat ALL such cases successfully by the aid of our FREE BOOK. It is a book of facts—nowhere else found—our discoveries of over 21 years. No horse owner should be without it.

SAVE-The-HORSE

Grandview, Wash.

There is no medical treatment that is satisfactory in treating poll evil. The best treatment is the radical operation which extends down on the poll to the place where the ligaments of the neck fasten, scraping the injured part of the head and giving it free drainage. Any competent veterinarian can perform this operation, known as Williamson's operation, for you, and that is what you should have done.

I have a young horse that has a small white or grayish growth near the pupil. It has the appearance of a hard lump and has been that way about two weeks. I do not know what caused it. J. E.

Benge, Wash.

I take from your description that the growth is on the eyeball near the pupil. If a veterinarian was treating the animal he would drop a few drops of cocaine into the eye and then give it a very careful examination to see whether or not there is a growth or ulcer there; as it may not be possible for you to get the services of a veterinarian I am going to suggest that you drop a few drops of a 5 per cent solution of argyrol into the eye three times a day. That may give some relief.

I have a yearling colt that came in off the range about six weeks ago. He was very poor and is getting poorer. He eats well. I feed all the hay he will eat, both wheat and oat hay. I gave it some turpentine a few days days ago, but it did no good. It will pass as high as four worms at a time. The worms are black and white and about two inches long. W. S. S.

Hanson Ferry, Wash.

There are two things that can be troubling your colt. One is that the teeth might be causing trouble, but it would be a little early for that, but it might occasionally happen to come this early. Secondly, parasites could be causing the trouble and give the symptoms you mention, and I think probably that this is the trouble. I would recommend that you give the colt one dram of iron sulphate morning and evening for a week. Then give it one pint of raw linsed oil with one-half ounce of turpentine in it. If necessary you could repeat this dose in about three weeks or four weeks.

I had a 9-month-old calf that got the diarrhoea a little over a month ago. It grew worse all the time, becoming very poor, and the eyes became greatly sunken. It ate well, and was almost as lively as my other calves of about the same age—in fact it was a week before I discovered which one it was, as they have good bedding and it kept itself clean. It died in about three weeks after the disease started. About two weeks after this one died I noticed the bowels of another one a little loose. The first one I tried different feeds and care, the second one I bought some guaranteed remedy for scours, etc., which I started giving, and the calf grew worse right away and within two days was dead. At the present time they are getting good clover hay night and morning, with a trifle of rye grass and mosquite mixed in with it. In the daytime they run outside. Could you tell me what causes this diarrhoea, and what is the best thing to stop it? N. J. W.

Silver Lake, Wash.

The trouble with your calf is probably an infectious diarrhoea. I would advise taking away the feed and giving a dose of castor oil, from one to two ounces, depending uopn the age and size of the calf. After this feed very carefully, giving as good clover hay as you possibly can—a little whole oats, and then at the same time you may give either a teaspoonful of glycerine morning, noon and night in a little water, or you can give from 15 to 25 grains of sulfocarbolate of zinc three times a day for a few days.

I have a horse eight years old that has a swelling on the left side of his neck at the throat. The left side of his head is feverish and water drips at times. N. L.

Blewett, Wash.

The trouble which you describe is probably a trouble with the salivary glands situated just below the ear. Your description, however, is not quite clear. I would advise you to give your horse once daily for a week one dram of potassium iodide on his feed if he will take it, otherwise in his drinking water. Then paint the swelling once daily with tincture of iodine.

I have lots of apples and as there is no market for them I throw a sack of apples in the yard for my horses every day. Is there any harm in feeding them? E. G.

Wilbur, Wash.

Apples have not very much food value in themselves, but they are a good adjunct to the rest of the ration. However, you are very liable to have an accident with this some day, when a horse forgets to chew the apple and lodges in the throat and causes the horse to choke. It would be wiser, I think, if you would slice the apple so that the horse could not choke on it.

I have a mare that seldom lies down, perhaps twice a month. Lately she kicks up toward her belly with her hind feet, also kicks out behind with one leg at a time, usually after having been driven. I have her in a stall by herself. Thinking she had kidney trouble I have given her ground mustard, but it does not help much.

Tyler, Wash. J. W. B.

Try taking your mare off feed for 24 hours, then begin giving her the following: Iron sulphate, two drams; tartar emetic, five grains; giving her that morning and evening for two days. Then give her five days more, morning and evening, two drams of iron sulphate. The following morning give her a quart of raw linseed oil with ounce of turpentine well mixed with it. Rest her for a couple of days, after which go on and use her. I am taking for granted that the mare is not with foal.

I have a horse that became lame a little after shoeing, which was about a month ago. Now the leg is swollen from the knee up. I pulled the shoe off and the foot seems to be all right. I poulticed and bathed the foot in hot water, but it seems that the trouble is not there. C. W.

Tieton, Wash.

Lameness is one of the most difficult things for any one to diagnose and treat even when you have the animal to make an examination and the very fact that the only symptom you can give is that the leg is swollen makes it impossible for me to make a diagnosis for you. Consult one of your local veterinarians and I think that he can, after a careful examination give you diagnosis and advise treatment. In the meantime I would advise you to bathe the swollen parts with the hot salt water in order to take out the swelling and soreness.

1. I have a mare that drags her toes on both her left front and hind feet and walks a little sideways. She shows no signs of fever in her legs and seems perfectly well, apparently has no soreness at all.

2. I have a heifer that freshened a few days ago and she does not give any milk out of one back teat. I inserted a tube and got no milk. That quarter of her udder is quite hard. R. P. R.

Comiche, Wash.

1. It is quite likely that your mare is suffering from a nervous disorder which shows in the fact that certain muscles of the body are not well supplied with their nerve functions. I do not know whether I can be of any service to you or not, but suppose you try giving the mare 10 grains of powdered nux vomica on her feed night and morning for some days.

2. Regarding the heifer, it is quite likely that there is a membrane unperforated at the top of the teat. I think the best thing for you to do is to consult your local veterinarian and ask him to puncture the membrane and slit it for you. It takes a special instrument for this operation.

Food Freaks.

An Italian pig's foot stuffed with ham meat looks like a toy. Everything but the tail of cord is eaten. This is but one of many food freaks that one finds in a visit to Sunny Italy.

FARM VALUES AND RAILROADS

Transportation Problem Must Be Solved Nationally in Order to Assure Agricultural Prosperity.

THE greatest industry of the United States is farming. Next to that comes transportation.

Efficient transportation is essential to the continued welfare and business progress of the nation. To the farmer it means wider markets and better prices for his crops.

Speaking for 90% of the railroad mileage of the country, we invite your cooperation in the solution of the railroad problem to that end.

Make Regulation Efficient

There is no question that public regulation of transportation has come to stay. The railroads accept it. They ask only that such regulation be made efficient. They ask that the functions properly subject to public supervision—incorporation, the issuance of securities, the making of rates—be placed under the direction of a single responsible national body such as the interstate commerce commission, with regional subcommissions, in order that regulation may be kept close to the people. They ask that such regulation be so administered as to permit the railroads to earn a living return, to attract new capital and to make the improvements and extensions necessary to enable them to serve the American people fairly and efficiently.

In the federal reserve and rural credit banking systems the operation of regional divisions under federal supervision is well illustrated. The railroads seek a similar solution of their problem.

Commerce Is Nation Wide

The farmer wants free trade among the states.

Commerce in farm products is not confined to state lines. It is nation wide. Its regulation should also be national. The fundamental state right is the right of each state to be protected against discriminations by other states such as exist today. Every barrier that a state erects to the free movement of commerce across its borders limits the farmer's market, makes it easier for speculators to control products and depress prices and tends to increase the cost of what the farmer has to buy.

The railroads can not serve 49 masters—48 states and the nation—and serve efficiently. The present system of multiple and conflicting regulation is wasteful and destructive.

In the interest of all, regulation should be in behalf of all the states. We invite discussion of this question and shall be glad to answer questions and to supply information on request.

This is the first of several brief talks on this subject.

Chickens

How to Dress for the Market

In the first place poultry should be well fed and well watered, and then kept from 15 to 20 hours without food before killing, according to W. H. Plath, meat cutter at the Greenough-Hurley company of Spokane. Stock dresses out better when well watered and adds to the appearance. Full crops injure the appearance and are liable to sour, and when this does occur, correspondingly lower prices must be accepted than obtained for choice stock. Never kill by wringing neck.

Kill by bleeding in the mouth or opening the vien of the neck; hang by the feet until properly bled. Leave head and feet on and do not remove intestines nor crop. Scalded chickens sell best. For scalding chickens the water should be near the boiling point as possible without boiling— 160 to 175 degrees Fahrenheit; hold by the head or feet and immerse and dip up and down five or six times; the feathers and pin feathers should then be removed immediately, while the body is warm, very cleanly, and without breaking the skin; then "plump" by dipping 10 seconds in water nearly or quite nearly boiling hot; then plane in very cold water for three or four hours, or until chickens are properly cooled, it being advisable to change water once or twice or place a piece of ice in water; when chickens are properly cooled place on shelves to dry; do not pack for shipping unless they are dry and wrap heads; during the hot weather it would be advisable to ice chickens, if ice is obtainable.

Brooders

How to Make the Fireless

To the Editor: Is it possible for you to give me directions for making a fireless brooder? D. H. G.
Roy, Wash.

The best fireless brooder we have ever used was a box 3x3 feet, for exercising the chicks in, and a small box and a warm piece of cloth for a hover. When it comes to raising chicks without artificial heat one has to become an old hen for the first few days, as the chicks must be made to retire to the warm sleeping room often, and the two boxes, when used in some large room, make the handiest kind of brooding device, as they are so easy to clean and change litter in, and if one has the time, he can raise many units of 50 chicks each in this way, and all the equipment needed for each unit is the two boxes and a piece of cloth, a drinking dish, and plenty of fine litter; and some room that can be warmed for the first few days, so that the chicks may learn to scratch in the exercise boxes without becoming cold. H. F. H.

YAKIMA SHOW

Quality of Birds Above Average.

By D. G. Sutherland.

At the Lower Yakima Valley Poultry association's annual show at Sunnyside, Wash., the number of exhibitors were not so many as on previous years, only 129 birds being on exhibition. The quality on the whole was above the average.

The breeds best represented were the White Leghorns, the White and Barred Rocks, the White Wyandottes, Rhode Island Reds and Black Minorcas.

Oscar Nelson of Coeur d'Alene, Idaho, acted as judge. The highest scores were made by J. F. Rehbock, White Leghorn pullet, 93½, and for hen 92½. The next highest was made by Mrs. Harry Turner on White Rock cock and pullet, each scoring 92 points.

The silver cup for best pen in American class was won by Ira Allen of Wapato, with White Wyandottes. The silver cup in the Mediterranean class by Sprony Brothers of Mabton, Wash., with White Leghorns.

The following officers were elected for the ensuing year: President, Frank Taylor; vice president, Mr. Strong, Mabton, Wash.; secretary-treasurer, Mrs. G. E. Longnecker. The directors are as follows: Fred Rehbock, E. N. Marton, J. D. Knight. S. H. Schreiner is superintendent and Oscar Nelson is judge. The date for the next show is the first week in December.

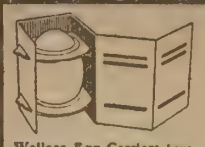
Sells Bunch Grass Mules.

W. S. Oliphant of Pomeroy has sold to Watts Phillips $1750 worth of young mules, which he says were net income to the farm, as they never had anything to eat but bunchgrass.

IMPROVE HERDS

Whatcom Dairymen Sell Culls.

It is reported that in Whatcom county 10 or 12 carloads of dairy cows have been sold and shipped out in the progress of a countywide move toward improvement of herds during the past year.



Progressive Rural School.

One of the progressive schools of Stevens county is that of Narcisse district No. 58. There are 38 pupils in attendance this winter. Mrs. Daisy Lorenz, the teacher writes:

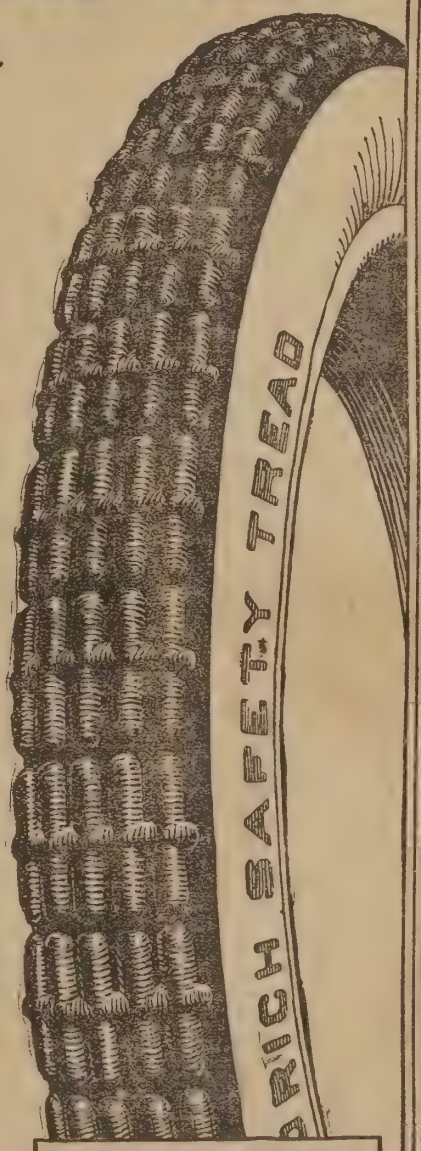
"We have a garden club that meets twice a month. Good interest is shown. We use the schoolhouse for club meetings. We have a grange, Narcisse grange. D. Klingler is the master; Mrs. J. Gnagy, secretary; Mrs. M. Fox, treasurer; A. L. Bradly, chaplain; Mrs. C. M. Baker, lecturer. Pomona will be held here March 23, and the school is to give an entertainment."

This little school is 12 miles east of Colville. It is well along in the race for one of the libraries offered by The Washington Farmer.

Make More Money
Market your eggs by Mail

Each egg is held in suspension in an individual container (see illustration on left). Containers pack 1, 2, 3, 6, or 15 dozen in strong corrugated shipping cases (see 3-dozen size illustrated below). Carriers come complete with address and end labels, nothing extra to buy. Good for 10 to 30 round trips by Parcel Post or Express.

Wallace Egg Carriers have been on market over two years. Endorsed and recommended by U. S. Parcel Post and Express officials. Popular because simple, no extra interior packing necessary (tissue paper, cotton, etc.). No outside wrapping required. Eggs carry safely, breakage unknown. We also manufacture Shock Absorber Hatching Egg Carrier for 15 or 30 eggs and have special method for packing 50 and 100 egg shipments. Sample carrier 15c (stamps).



FREE. Send for our new book "Marketing Eggs by Mail" and price lists of table and hatching egg carriers. Write at once, don't delay.

Fair List Prices — Fair Treatment

Bring Back Any
GOODRICH
BLACK SAFETY TREAD TIRES
That Owe You
—Anything—

FROM Maine to California, and on around the world, The B. F. Goodrich Company sends forth this all-including invitation:

Bring back any Goodrich tires you feel have failed to give you right service.

Goodrich will at once make good *all* their shortcomings—generously and gladly.

There are no strings to this offer—no conditions—no catch words.

THE GOODRICH
SUPER-GUARANTEE

For a Goodrich Black Safety Tread Tire carries with it in the market an unwritten SUPER-GUARANTEE that it is the best fabric tire, the largest, oldest, and most resourceful rubber manufacturer can produce.

The very name of Goodrich pledges it to the best service a fabric tire can give—*style*, safety, *comfort*, durability, freedom from tire trouble, and mileage.

The buyer takes no risk of imperfection in it. A Goodrich tire must deliver the high standard of service Goodrich pledges for it, or Goodrich Fair Treatment squares the account in full.

"BEST IN THE LONG RUN"

Grape Growing

Possible in Western Washington

By PAUL E. TRIEM.

To be strictly accurate it should be stated that you can not raise grapes in western Washington, unless you do it right. The result of experience in grape culture is the proof of this.

Among the more successful attempts at grape culture on Puget sound is the work done by Adam Eckert of Detroit, Wash. He made his first planting in his present location on the Sound in 1890, and since that time has grown and fruited about 75 varieties. Recently Mr. Eckert has put his experience with grapes into book form, and from this booklet we condense the following suggestions:

Hillside land, preferably with an eastern or southern slope, and with soil ranging from light, warm clay to gravelly loam, should be chosen for grapes. Rocks not large enough to interfere with tillage are an advantage rather than a detriment, as they hold heat stored in them during the day and radiate it at night, thus tending to equalize the temperature.

A deep soil is not required, and soils rich in organic matter are to be avoided because of their tendency to increase vine growth at the expense of fruit. If organic matter proves to be actually deficient at a later stage of growth this lack can be supplied by sowing and turning under cow peas, which will supply all the plant food needed except potash.

The variety or varieties chosen should be those which have demonstrated their ability to do well in this locality. Mr. Eckert says that no variety will do well in all localities, and that that old time favorite, the Concord, has come the nearest of all the kinds tested to being a total failure in this part of the state.

Alkali Land

Is Good for Growing Asparagus

There are three good reasons why asparagus should be grown extensively in the irrigated sections of the northwest. The first is that it is in good demand in the markets at prices that insure a good profit to the producer. Asparagus should yield a net profit of $100 per acre after three or four years from the time of planting and after the roots are well developed. This is a minimum yield for a crop in this country if planted in the right kind of soil and if given proper care.

The second reason for growing it is that in all the irrigated sections of the northwest there is more or less of alkali land, too strong in salts for ordinary crops, but on that account all the better for asparagus. It is a vigorous feeder and will consume more alkali than any crop we know anything about at the present time. Originally it grew on the sea coast, where the salt water washed the land on which it grew and left deposits of mineral salts somewhat similar to those on alkali soils. For this reason salt is used as a fertilizer for asparagus beds, and it will flourish where the salt is strong enough to kill some kinds of vegetables. Some years ago I hauled a wagon load of the strongest alkali soil I could find, dug a square basin into which I threw it, planted asparagus roots, and also planted roots near by in soil that had not been thus treated. My object was to see whether there was any difference in the plants set in alkali as compared with those in the ordinary volcanic ash. The result proved, in so far as one such test could prove, that alkali for asparagus is a fertilizer. I am aware that one test is not satisfactory, yet considering the original habitat of asparagus I am convinced that much waste land in this country could be utilized at a good profit, a profit similar to that of the profits on our orchard lands, be made to support a dense population and bring wealth to the country. In other words, it would add to the industries we already have, add to the wealth and the population of the country.

My Third reason is that it can be made to supplement the fruit industry. Canneries seem necessary in order to make the most possible out of our waste fruits. Yet up to this time canneries have not been generally profitable. One reason is that with fruits alone a cannery can only run about half the year. But suppose we began early in the season canning asparagus. Then in May began with strawberries. Later the cherries are ready, then early peaches, apricots and plums. By this time the general crop is on and there are overripe peaches, not good for shipping, but just right for canning. Late in the season and all winter cull apples might supply the cannery, so that with proper management a cannery could run every month in the year. This would enable its managers to conduct the business at a profit, whereas if they run only about half the year they run at a loss. In this way asparagus is not profitable alone for what it brings in the markets, but because it so supplements other products as to enable us to maintain canneries at a profit, and thereby make profits from fruits that are now mostly waste.

To to able to maintain a cannery at a profit, increases the wealth and population of both the country and the city. The time will come when we will seek by every means possible to bring our alkali lands under cultivation. We will either drain them at considerable cost and grow alfalfa, corn and other crops on them, or we will grow crops adapted to alkali soils. Doubtless both systems will be employed, but if the land we now call waste land is better for asparagus than the average soil, and if we can find a profitable market for that product there is good season why we should grow it. G. L.

CANNING CLUB
Demonstrates Possibilities.

The Bellevue Belle Home Canning club, which was organized about one year ago, has 27 members at the present time. During the last canning season the club canned 8238 quarts of fruit, 787 quarts of fruit juice, 2162 quarts of vegetables, 12,147 glasses of jelly and about 2500 quarts of miscellaneous supplies. This is a "mothers and daughters'" club, organized under supervision of the department of agriculture, and even at this early stage of its development it has demonstrated its importance in the community.

TO BUILD PLANT
Store and Pack Fruit Products.

Plans are being laid by the Stanfield Fruitgrowers' union, Umatilla county, for the construction of a cold storage and packing plant. Professor C. I. Lewis, head of the department of horticulture at the Oregon Agricultural college, and Paul H. Weyrauch, president of the Fruitgrowers' Exchange, Inc., will assist in planning the structure.

At the Editor's Desk.

Caspar's Veterinary Guide, a booklet treating of diseases and cures of live stock. It is published by C. N. Caspar Co., E454 Water street, Milwaukee, Wis., and is priced at 50 cents. It contains some interesting colored charts showing the internal arrangement of organs of stock.

The Strawberry, by W. S. Brown. This is a short, crisp bulletin issued free to farmers by the Oregon Agricultural college, and uses no unnecessary words. It is Extension Bulletin No. 146.

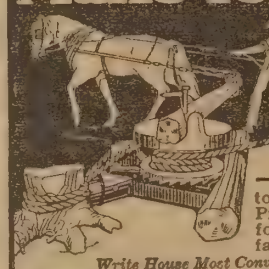
The Planet Jr. catalogue, published by S. L. Allen & Co., Philadelphia, is out and ready for distribution to those who may be interested in tools of cultivation in particular.

INCREASED PROFITS MAKE A BETTER FARM

Uncle Sam advises farmers to grind the feed for their cattle. Why? Cattle thrive better on ground feed. Use the "New-Way Engine and grind your feed in one-half the time and with absolutely no loss of time for repairs, hang-ups, etc. The "New-Way" Engine is especially adapted to running cob crushers, grinders and other power apparatus within its power.

The "New-Way" Engine "Goes and Goes Right"

This "New-Way" Engine is equipped with high tension magneto and many improvements not found in other Engines. You will find the "New-Way" a simple, sturdy, reliable, powerful outfit and it will save you considerable time and money. Don't fail to investigate before buying.



Send for Catalogue No. 29 A Postal Card will do.

Built in all sizes and types—1 to 12 H.P. Price $49.00 and up according to size and equipment.

City Boy Becomes Good Farmer

Holsteins, White Leghorns, Alfalfa, Asparagus and Strawberries

To the Editor of The Washington Farmer: I was born and raised very near the center of the great city of Chicago, receiving my education in the city schools and attending one year of high school. In the autumn of 1908 I came to Kennewick with the family. We had absolutely no farming experience.

We purchased 20 acres of land partially under cultivation, but with no buildings worthy of the name. The live stock consisted of one cow, two calves and a team of geldings, one of which died the first winter.

The farm is located on a small hill overlooking the confluence of the Snake and Columbia rivers and commands a splendid view of the surrounding country.

I spent the next two years trying to grasp the rudiments of agricultural practice. During the winter of 1910-1911, through the kindness of a newly acquired friend, I was able to attend the winter short course at Washington State college, I had always been a student and while at the college I utilized every available minute of the nine weeks in the lecture room, laboratory and library. I regard those nine weeks as a very important element in our success. Since that time I have continued to study agriculture. I subscribe to a number of farm papers, have a small library and read the state traveling library books. I also consult the county agriculturist when occasion arises. I consider the county agriculturist's office of great value not only to the individual farmer, but to every county so fortunate as to have one. We keep a careful system of accounts with each department of the farm. These practices have given me the local title of the "lead pencil farmer." Our entire 20 acres are now in cultivation and we rent 10 acres more. We have adequate though not expensive buildings, a 36-ton silo, which was filled from one and a half acres of corn last year. Silage and alfalfa make a splendid ration for the dairy herd and materially decreases the cost of the ration.

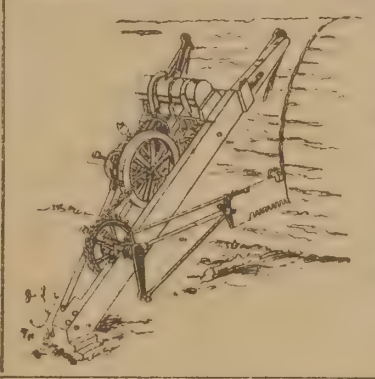
Our Holstein herd has numbered 25 head, four of these are purebred. A purebred sire of good pedigree and conformation has always been used. We have a large covered yard that serves the double purpose of sheltering the cattle and protecting the manure from the leaching effects of the weather. We follow a six-year rotation of alfalfa, corn and potatoes, using cover crops and manure in the fall. Fall plowing is practiced almost entirely. Our potatoes yielded 17.5 tons per acre last season.

We have bred S. C. White Leghorns for three years. Our strain has been trapnested for many years. The flock has made an average yearly net profit of $2 per bird from market eggs. Our present flock of 300 show a net return for November and December of $275.

Three brood mares are used to do the farm work. They are mated to the best available stallions and two or three colts raised each year. I hope soon to replace our grade mares with purebred Percherons. One fact stands out preeminently in the stock business, aside from the initial investment, it costs very little more to raise a purebred animal than a grade and the profit is decidedly greater.

Asparagus and strawberries are also raised. These crops are our most stable perennial products and splendid money makers. We also expects to add seed corn production to our lines next season. Our constant aim is to increase the fertility of the land. Large crops yield the greatest profit.

I will offer the following outline for the guidance of the beginner in irrigation farming. If he has a foundation of farm experience he should progress faster than the inexperienced man. Twenty acres is large enough to start. Put the land to alfalfa as soon as possible. Do not put too much money into buildings, but purchase good, high grade live stock. Start a small herd of cows, high grade, with a predominance of the greed you favor, add a purebred cow as soon as possible, use the best purebred sire that can be purchased or patronized and gradually build up to a purebred herd by replacing the grades with purebred cows as fast as conditions allow. Start the poultry plant early, it is one of the best money makers.



Formulate a good rotation, conserve the manure and make use of green cover crops. Plowing is perferably done in the fall. Use the best seed obtainable. Experiment to find if the use of commercial fertilizers will be profitable. These methods with thorough intertillage will insure good crop yields. The principles of proper irrigation can only be learned from experience. Plant and take good care of an acre or two of asparagus and strawberries.

Study the methods of the best farmers in the district, ask questions when in doubt. Take all the advise that is offered you and run it through your own common sense "winnowing machine." Study scientific agriculture, attend the agricultural college if possible. The old idea that "any man can be a farmer" is due for a revision. Eight years of intimate acquaintance with farm problems prove to my satisfaction that modern farming is the biggest business in the world. Success in farming is largely dependent on the individual. No hard and fast races for success can be laid down, but I am sure that the man with some capital who is willing to work, endure some reverses and not anticipate premature success will find irrigation farming a pleasant and renumerative occupation.

GEORGE E. SELLICK.
Kennewick, Wash.

Riveting Machines.

To obviate the noise of pneumatic riveting machines, one has been invented that squeezes rivets into place with a pressure of a ton.

The Vaughan Portable Drag Saw

This is the original machine. They have been in use over three years and are past the experimental stage.

Simplest, Strongest, Lightest and Fastest Drag Saw Built

Chain drive: can be used in any position. Bad weather does not hinder operation; one man operates it and moves it on the log; two men can carry it anywhere.

Send for full information and prices to

WATER

Water is the farmer's short cut to financial independence. With water, when it is needed, the average industrious farmer can increase the income from his land from 100% to 200%. It is not necessary, in order to irrigate your land, that you be near or on a water ditch, or that you buy water. The Hill Hydraulic Ram will deliver you plenty of water, with no operating cost, if you are near a pond, or stream that has a drop or head of water.

CONSULT OUR IRRIGATION EXPERTS FREE

We maintain a large staff of engineering experts, one of whom is Mr. Sterling B. Hill, the inventor of the Hill Hydraulic Ram. These men will advise you at no expense to you. No matter what your irrigating problems are, this staff will solve them for you FREE. This service places you under no obligations.

All that you are requested to do is to clip the coupon in the right hand corner of this advertisement and send it to us. Or write us at length what your irrigation problems are, and we will advise you promptly and freely. Tell us how many acres you have to irrigate, how much water you have, how far it has to be piped.

The Hill Hydraulic Ram Waters Your Land—It's Guaranteed

We guarantee every Hill Ram we make—guarantee that it will do the work efficiently and for an indefinite period. If you have the head of water, we have a Hill Ram that will suit your needs. We manufacture Hill Rams in 12 different sizes, from our No. 1, for household systems to our huge No. 24, for large irrigation projects. No matter how much or how little water you need, a Hill Ram will do the work at a less cost than any other irrigating system. If you want to make more dollars per acre from your land than you have ever made before just clip the coupon and mail it today.

A Hill Ram relieves you from the worry and financial loss of drouth. It reclaims your waste unwatered land, and puts water in your house and barn.

THE HILL HYDRAULIC RAM NEEDS NEITHER ENGINE NOR ELECTRIC MOTOR. It is automatic in operation, therefore it needs neither gasoline fuel oil nor electricity. It is operated by water, which costs you nothing but the supply pipe to get it to the Ram. Other systems require constant attention and care, but the Hill Ram is so simple in principle that IT DOES ITS WORK WITHOUT THE ATTENTION OF ANY HUMAN BEING.

Need Market Standardization

Market Union succeeds with strawberries and should be developed to apply to all products that are produced on the farm.

KENNEWICK, Benton County, Wash., Feb. 7.—There is no increase of live stock at the present time. Many cows have been culled out of the dairies, but dairy products have not decreased to any appreciable extent, because in most cases it was poor cows that were disposed of. One very noticeable improvement in the line of crops is in the way the strawberry beds are being cared for. In previous years, since I have been in the county, there were many strawberry beds decidedly neglected. I have yet to find the first strawberry bed this year that has been neglected. The results of the marketing union in selling last year's crop is being remarkably well reflected in the methods of production. The present care of the strawberry plants will mean an exceedingly small per cent of poor berries. The one great need of our district is the same standardization and system of marketing other crops that the growers have now adopted for the strawberries. There is some new building of houses and barns. Many new silos were built last season and many more planned for the coming season. The fall grain has not been noticeably damaged by the cold weather. The snow and rainfall have been very light this winter.

LEE M. LAMPSON.

Hay and Oats Decrease.

LA CONNER, Skagit County, Wash., Feb. 16.—Some of the products of Skagit county that are leaders are: Hay, grain, live stock, dairying, cabbage seed, potatoes, forage crops, field peas, garden products, fruit and timber. Live stock, forage crops, cabbage seed, garden seed, potatoes and field peas seem to be increasing faster in importance from the fact that the income per acre is much greater than the others. While hay and oats are grown on a much larger scale and are sure croppers, yet they are on the decrease. There are very few crops, if any, that are being abandoned for the reason that they have proved unsuccessful. Generally when there has been a failure the fault has been on the part of the producer rather than the kind of crop. There seems to be an increasing interest taken in the growing of field corn. Mangels are going to be a heavy crop for this coming year. All forage crops are rapidly increasing each year. The coming season has every indication of being a very promising one. The high prices at the present time and the past season have stimulated the farmers to such a pitch that they seem to be determined to make their land produce an increased crop.

I. W. ALEXANDER.

Hop Acreage Decreases.

CHEHALIS, Lewis County, Wash., Feb. 10.—Ten leading products of Lewis county are lumber, milk and dairy cattle, oats, hogs, beef, potatoes, eggs and chickens, vegetable and fruit cannery products, draft horses, and hops. Lumbering is the big business with farming rapidly taking the commanding place. The production of milk, milk products and dairy stock, especially Holstein cattle, are making big increases. The production of hops is declining, there being about one-fourth as many raised as were produced 20 years ago. Corn for ensilage is being successfully tired out and alfalfa is also being tried. The coming season looks very promising. The lumber business is improving and the milk business is unusually good, also other lines of farming. At least six organizations to take advantage of the farmers' bank scheme are being organized in the county.

J. C. BUSH.

Moisture Deficient.

BRUCE, Adams County, Wash., Feb. 12.—The snow has disappeared and the farmers will begin some farm work this week, although there is some frost in the ground. The prospect is not very bright for a crop for this year if we are to depend on our winter moisture to make it, as there is the least moisture for spring that we have had in 16 years. Some lands are changing hands. The big sale of John M. Phillips near Othello was attended by about 300 people and stock sold well. Three teams brought $500, $530 and $565. Good roads movement is taking a share of the farmers' attention. A plan is on foot to gravel the road from Cunningham to Othello.

A. O. LEE.

Sheep and Wool Lead.

VALE, Malheur County, Ore., Feb. 10.—The ten leading products of this county in the order of their value are as follows: Sheep, including wool and mutton, cattle, hay, grain, horses, hogs, fruit, honey, alfalfa seed and dairy products. Of these, measured by the amount of capital invested, sheep and cattle are the most important. Hay, however, is of equal importance for the reason that the herds that our summer pasture will keep, could not be wintered without it. There is a gradual increase in all kinds of products mentioned above, but not a marked increase in any particular one. I do not think that any crop that has ever been tried here has proven an entire failure. The outlook now is for about the usual crop and satisfactory prices.

W. G. THOMSON.

Sheep and Wheat Lead.

REDMOND, Crook County, Ore., Feb. 7.—The leading industry in Crook and Deschutes counties is live stock. The two most important would be sheep and wheat, and dairying and root crops, such as potatoes, would follow in line. This condition is rapidly changing such that the dairying and potato industry will be highly expressed, though the live stock industry will remain first for years to come. Our farmers are becoming very much interested in the use of field peas and it indicates that the county will soon have an appreciable acreage set to this excellent legume crop, in which event an attempt will be made to secure a market for these peas similar to that industry in adjoining states. Just at present this irrigated section of Crook and Deschutes counties contains an abundance of excellent alfalfa hay which is not moving off very fast, and the farmers are looking for a market for this.

Due to the dry winter we are having, the prospect of dry land farming is not so bright just now, but the irrigated section of the country is rapidly coming to the front. About 30 per cent of our farmers in our irrigated section are making money, which is a good showing, indeed, compared with similar projects. The potato industry will soon be on a very stable basis here, Our potato growers' association is putting out an excellent market product and securing prices all the way from 25 cents to 50 cents above similar localities.

R. A. BLANCHARD.

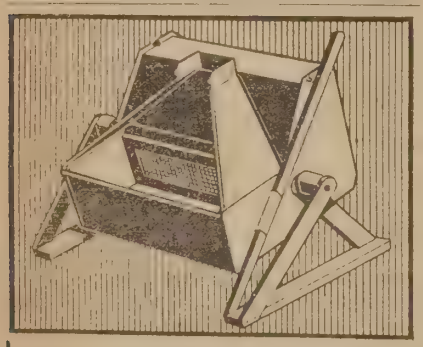
Timothy Is Popular.

CANYON CITY, Grant County, Ore., Feb. 12.—Potatoes, timothy hay, clover and timothy mixed, alfalfa, clover, oats, barley and wheat and rye are the leading products of this county. Timothy hay is used for feeding cattle and sheep. It is the best hay we have for fattening stock. The other hay is mostly used for feeding range stock through the winter. Alfalfa is increasing. No crops are being abandoned. There are no new products being tried. Live stock is in good demand, dairy products are very light this time of the year. It is hard to tell about the coming season as yet. We have plenty of snow, so we are sure of plenty of water.

E. M. FISK.

Hogs on Decrease.

MIKKALO, Gilliam County, Feb. 7.—The present prospects are not very favorable for a crop this year, as there has been a great shortage in the fall of moisture up to the present time. Live stock are about holding their own, with the exception of hogs, which are quite on the hum, caused by the scheme the packers worked on the hog raisers last year.



J. B. ASHENFELTER.

VOGELER'S
Purity
SEEDS

are carefully selected and tested. This means bigger crops, of better quality. Our Alfalfa, Red Clover, Alsyke Clover, White Clover, Sweet Clover and Timothy are all hardy western-grown seeds.

Our wheat, oat and barley SEED are grown in the Mountain Valleys of Utah and Idaho. Our FREE catalog tells all about Vogeler's Purity Seeds—the best money can buy. Write today.

Should Wilson Act?

Protection of Ships Demanded

One of the big questions that has been heard during the past few days is this: Should President Wilson take radical action against Germany's submarine policy without waiting for a so-called "overt act?"

The country continues to be divided into two camps, those who are anxious to have peace maintained at almost any price and those who are equally anxious that the honor of the country, the rights of humanity and the rights of American shipping on the seas be protected by a resort to actual warfare, if need be.

Shipping Tied Up.

The latter contend that the blockade by Germany against shipping from the united States to England and her allies is nearly as effective in so far as American ships and products are concerned as if American ships were actually destroyed by submarines. They declare that because of fear of submarines ships are not sailing, and advocate that the United States provide them with arms or convoys and send them on their way to Europe to defy Germany's opposition.

Wilson Wants Power.

While it is understood that President Wilson it not looking for an immediate opening of hostilities between this country and Germany, it is expected that he will go before congress before March 4 and ask for authority to take any action that may become necessary at any time to protect American interests on the seas. The present session of congress expires on March 4 in accordance with law, and it is said that the president is anxious to receive authority from congress to deal with emergencies that may come up thereafter, without having to call a special session of the new congress, should such emergency arise. He has discussed the question with his cabinet from this point of view.

Seamen Are Released.

Serious controversy between this country and Germany appeared last week when it was announced that Germany was holding prisoner 72 seamen taken some time ago with the prize ship Yarrowdale. The report stated that Germany intended to hold the men as a guarantee that German subjects in America, especially crews of ships interned, would be properly treated. President Wilson started an investigation of a nature indicating a demand that the men be released, which they were shortly after.

Sinking of Ships.

Sinking of ships by submarines continues unabated. Large numbers of vessels, both neutral and belonging to belligerents, have been sent to the bottom by German undersea vessels, but as a rule those on board are rescued, especially in the cases of neutrals.

The sinking of the Lyman M. Law, a United States schooner, threatened to prove the "overt act" required to bring about hostilities, but when it was learned that the sinking was not done without precautions looking to the rescue of the crew, eight of whom were reported to be American subjects, the seriousness of the act became minimized.

Ambassadors Embark.

Count von Bernstorff, German ambassador to this country prior to the breaking of diplomatic relations with his country by the United States, sailed last week for Germany in company with his official family and a number of other German subjects. Ambassador Gerard, U. S. representative in Germany, who was reported to be held by German authority for a time following the break, is not so held, and will arrive in America within a short time. Foreign countries, both neutral and belligerent, have expressed readiness to cooperate in securing safe passage of the ships carrying the two ambassadors.

Strong hope is now expressed that it will be found unnecessary to sever diplomatic relations with Austria or any of Germany's other allies as was at first feared. Correspondence between those governments and this country have borne evidence of desire for the maintenance of peaceful relations.

Car Shortage Affected.

Owing to the congestion of freight at Atlantic ports due to the failure of vessels to sail the car shortage is becoming more acute than it has been for a number of weeks. Vessels are not venturing out with cargoes in normal number owing to fear of the submarine blockade, and it is reported that thousands of cars are standing unable to unload because there is neither warehouse room nor vessels in which to place their freight.

Long White Type Potato

Market Demands of Standard and Main Crop

Chester C. Farr, county agricultural agent for Snohomish county, delivered an informal lecture on potato raising before the annual meeting of the Snohomish County Fruit Growers' association, outlining practical points on potato production. Referring to marketing, he said:

"The market demands, for its standard and main crop potato, a tuber of the long white type, such as the Burbank. For the early market, of course, a red potato is satisfactory. The greatest need of any community which intends to go into the potato business in earnest is to have enough of one type to attract the attention of buyers. Standardizing production and pack is important."

This led to the practical suggestion that the growers in and around Snohomish take immediate steps to agree on the variety of potato to be given preference by growers, and also on cultural methods. A marketing plan can be worked out later, but this is the psychological moment for determining these features which must soon be put into operation.

Turning for a moment to the subject of grading, Mr. Farr told his audience that the medium sized potato, which will weigh from three to eight ounces, is the best for the general market. Above that size comes the restaurant grade, while the smaller potatoes go into a cheaper grade used by cheap restaurants and by some of the logging camps.

"In getting a smooth, marketable potato, two points of great importance are the spraying of the vines, keeping always in mind that spraying is a method of prevention rather than of cure in dealing with potato diseases; and the handling of the potatoes, from the time they are taken out of the ground to their final delivery to the consumer. The matter of seed for this year's crop is apt to prove somewhat serious, as many of the growers have been tempted by the high prices to oversell. Seed should be selected at the time of harvesting the crop, taking tubers rather under the market size, from hills which have produced well and which have shown good resistence to disease. In raising potatoes for seed it is a good plan to cut off the vines at about the time the skin begins to slip on the tuber. The small, immature potatoes so secured make the best seed. A large tuber is like the water sprout which you cut from your fruit tree—it has gone so fully to sappy growth that it has lost its vitality. Remember that the potato is a scion, like a bud, and it not a true seed."

In concluding this important matter of seed selection and preparation, the Snohomish county man advised the use of whole tubers, treated with corrosive sublimate, one to one thousand. This is better than the use of formaldehyde in western Washington, he explained. In regard to the old practice of clipping off the bud end, Mr. Farr stated that this enabled the grower to detect blight, but that otherwise it was useless. The belief that vines from the bud end were lacking in vitality has proved without foundation.

RAISING GARLIC.

Same Process as Given to Onions.

To the Editor of the Washington Farmer: Can you give me any information on the raising of garlic?

M. G. GUTIN.

Republic, Wash.

Garlic is raised by the same processes of cultivation that are ordinarily given to onions, says Professor O. M. Morris, of the Washington State college. It is propagated by the division of the old bulbs. These small bulbs are seeded the same as onion seeds. Its yield would be approximately the same as the average for onions, running in the neighborhood of 250 to 500 bushels per acre, depending upon soil, season and other growing conditions.

The price for garlic is altogether seasonal. Some years it is high and again it is very low. There is comparatively little demand for it so that an over-supply would be difficult to sell. The price ranges, usually, all the way from half a cent to 3 cents a pound.

May Kill Dogs

New Law Requires Use of Muzzle

The legislature has passed and Governor Lister has approved a law bearing an emergency clause that authorizes the state department of agriculture to establish quarantine districts against rabies or other like diseases of animals.

In conformity with the new law, Acting Commissioner H. T. Graves of the department has designated all eastern Washington a quarantine district with a view to stamping out the alarming spread of rabies. Under the rules of the new district, after the measure shall have been approved five days, any person may legally shoot any dog found at large unless muzzled. It is not necessary that the animal be shown to have rabies.

The measure is considered drastic, but was enacted by agreement between the department of agriculture, the two houses of the legislature and Governor Lister in view of the difficulty experienced in controlling the rabie infection reported extensively in all districts where live stock are raised.

The measure was signed Monday, February 19, and became a law immediately because of the emergency clause.

Good Silo

Is Desirable on Ten Acre Tract

To the Editor of the Washington Farmer: Would it be possible to have a silo on 10 acres? Also, allowing for pasture and hay, how many cows could one keep? Could you give me a good balanced ration for my cows? I have no silage or roots.

I feed cut alfalfa hay, equal portions of dried beet pulp, shorts, bran and alfalfa meal. MRS. JOE FINGER.

Bothell, Wash.

James N. Price, specialist in dairy extension, State College of Washington, answers the above questions as follows:

It is entirely possible to have a silo on 10 acres. In fact, if you are intending to handle dairy cattle on a 10-acre farm, it would be extremely desirable to make use of the silo. I think you would find it more practical to use silage and hay the entire year, rather than to depend upon pasture on a small farm.

It is not possible to say just how many cows could be kept on 10 acres, because the yield of silage and hay will vary so much on different types of land. In order to use a silo with best success, you should have at least eight cows, unless you wish to build a pit silo. It is often practical to build a pit silo small enough for four or five cows. You should be able to develop your farm by the use of barnyard manure so that it will yield silage and hay enough for 10 cows.

You can improve the ration given in your letter by adding a larger amount of the dried beet pulp. I would suggest the following grain mixture to be fed with your alfalfa:

Five or six parts of beet pulp, one part wheat bran; two parts shorts; one part alfalfa meal.

European Success With Nitrate

European farmers use 600 pounds to the acre of a fertilizer containing 4½ per cent of available Nitrogen.

American farmers, on the average, use 200 pounds to the acre of a fertilizer containing 2 per cent of mostly unavailable Nitrogen.

Average European yields of Wheat, Oats, Potatoes, and Cotton in Egypt, are double American yields.

The difference is due to amount of available Nitrogen applied per acre.

Is Bulk Grain Handling Inevitable?

Convention Hears Both Sides; Majority Sentiment Favors Bulk Method

The second annual bulk grain convention, held last week at Spokane, after lengthy discussion of both sides of the question, adopted a resolution indorsing the movement toward bulk grain handling in the northwest.

Dock commission officials from Portland, Ore., announced that their investigations had convinced them that the handling of grain in bulk was inevitable, and that the commission was going to put up to the people of Portland early this year a proposal to issue municipal bonds to build elevators for the receipt and transmissing to ships of bulk grain.

The convention adopted resolutions also indorsing the Portland proposal and supporting a bill now before the Washington legislature designed to extend the powers and scope of the Seattle port commission, enabling it to receive and transfer bulk grain.

The measure now before the Washington legislature providing that grain be not assessed for taxation until September 1 of the year following its harvest was formerly indorsed in a resolution. It was argued that with the grain becoming assessable on March 1, as under the present law, there was a tendency for farmers to sell without being able to take advantage of later improvement in the market.

Go Slow, Urge Speakers.

That there was a large number of steps to be taken before bulk handling would be the complete success that was desired was the assertion of Samuel Glasgow, pioneer producer and miller of the northwest. He declared that seven steps of preparation were necessary: Preparation on the farm, for hauling to the warehouse, for storing and transferring at the warehouse, for shipping on the railroads, for storing and transferring at the tidewater terminals, for shipment on vessels and for receipt at oriental or other foreign ports to which export would be made.

Others joined Mr. Glasgow in advising the grain growers and dealers to make haste slowly.

Experiences Are Cited.

Of the 200 or more farmers present at the convention a score or more discussed the questions that arose. Almer McCurtain of Davenport, chairman of the committee appointed last year to investigate the practicability of the bulking system, took a prominent part in the discussions. He declared that sentiment was increasing in favor of the bulk system, and that he had yet to hear one farmer who had tried it say he was willing to go back to the sack method.

F. N. Stockert, secretary of the Northwest Grain Dealers' association, outlined the methods followed in Montana, where the bulk system is much more fully developed than in Oregon, Washington or Idaho. He spoke enthusiastically for the system.

Sacks Expensive.

A letter from the Balfour-Guthrie company was read, predicting that grain bags this season would be offered at approximately 11 1-2 cents. Frank A. Smith of Bemis Bros. Bag Co., of Seattle, stated that his concern could not state prices at this time, supply and demand as harvest approached largely determining the price.

Portland Men Present.

Charles M. Moores, president of the Portland docks commission, and Engineer J. B. Hegardt of the same commission were present. They told of personal investigations made in the Inland Empire, which convinced them that "bulk handling of grain is inevitable," and led the dock commission to plan a movement for the construction and operation by the city of Portland of bulk grain terminal elevators. They said it was proposed to make the first unit of such elevator system one of a million bushels capacity, which would mean that several millions of bushels could be handled through it during a season if shipping facilities were available.

Dennis Sullivan of the Farmers' Warehouse company of Rockford, Wash., told of that company's successful conversion of a flat warehouse into a bulk house. He said that he converted a floor space 40 by 100 feet for bulk bins; that on the old 2 by 6 studding he placed shiplap for lining; that he thus secured a 40,000-bushel capacity; that he had handled 65,000, of which 25,000 had been shipped out; that the remodeling cost approximately $2300; that he used an air conveyor for transferring from the warehouse to the cars, this conveyor having a capacity of 600 bushels and being driven by a 40 hoursepower electric motor, which gave plenty of power; that it required two men to load cars with the equipment; that he figured a charge of 1 1-2 cents a bushel for handling, but that since no other buyers than the company he represented purchased wheat in that warehouse, such charge was not actually made; that the cleaning effected in the air conveyor process increased the grade of the wheat an average of 1 1-2 per cent, thereby more than making up for the loss in weight actually resulting from the removal of smut and other foreign matter. Mr. Sullivan declared that the experiment had proved the practicability and economy of using a flat warehouse for handling grain in bulk.

Others who had tried the system spoke along the same general lines. O. W. Collins of Thornton, Wash., said that the electric power required to put 125,000 bushels into the cooperative warehouse and there load 25,000 of it out, cost $17.40 last season. He said he used only one man to handle the entire 125,000 bushels. He used a centrifugal washing machine for the elimination of smut. He said personally he had produced 14,000 bushels of grain; that he paid $500 for a share of stock in the company; paid $155 for three road tanks; figured the sacks he would otherwise have used at 12 cents and on that basis saved $200 and had his share of stock and his three road tanks left at the close of the season.

While the bulk handling of grain was enthusiastically indorsed by the convention last week in Spokane, it was not until after the question had been discussed for several hours. The following are some of the points in the arguments made for and against the system:

FOR.

That actual experience has proved it cheaper to handle grain from threshing machine to cars in bulk than in sacks.

That the great cost of sacks would be eliminated.

That grain may be cleaned during the transfer from wagons to warehouse or cars, thus eliminating freight on foreign material and producing a higher grade.

That the grain can be stored on the farm and hauled to the warehouse or elevator at the leisure of the producer.

That the bulk system would tend to reduce the number of varieties grown, thus helping to standardize and simplify the production, shipment and milling of grain.

That it may be stored on the farm, saving warehouse storage charges.

That it can be handled in bulk much more rapidly at the warehouses from wagons, from warehouses to cars or from cars to ships.

That one man can take the place of four or five who would be required in sack warehouses.

That the more rapid handling would do much toward relieving car shortage due to congestion of cars.

That bulk grain is becoming the standard for market quotations, and should be adopted throughout the entire country.

That the price of grain in sacks is rarely enough higher than grain in bulk to pay for the sack.

That it would eliminate the payment of freight on sacks, which aggregate thousands of tons during a season.

That ships will gladly prepare to handle bulk grain and favor ports which receive it in bulk, owing to the less delay in loading.

That the difficulty heretofore experienced with bulk grain heating on ship board while passing through the tropics in eliminated by the Panama canal.

That threshermen charge less for threshing in bulk than when required to sack grain.

That experience shows flat warehouses can be converted cheaply into bulk grain storage houses.

AGAINST.

That the change, if it comes, must come slowly because it requires a complete reversal of system and preparations must be made not only by the individual farmers and warehouses, but by the transportation companies and the terminal concerns.

That the common flat warehouses can not readily be converted into bulk warehouses.

That the great number of varieties of grain grown make it difficult to handle in bulk without mixing them.

That the presence of smut in the grain of the northwest makes mixing frequently impracticable because a small quantity of smutty wheat turned into a bin of clean wheat reduces the grade of the entire content of the bin.

That vessels as now constructed are inadequately prepared to ship grain in bulk.

That the railroads are not prepared with cars suitable for bulk shipments.

That handling in bulk causes the wheat belonging to a given farmer to lose its identity, so that all he can demand on his storage ticket is a like amount of wheat of like variety and grade.

That it would be difficult to fix adequately the responsibility of an elevator company to insure against losses or its inability to deliver to the holder of a storage ticket grain in the amount and like character of that which he had delivered to it.

That the equipment for storage both on the farm and in the warehouse and for transportation is too expensive.

That the usual difference in market price between bulk grain and sacked grain is sufficient to counterbalance the saving in sack bill and other items of handling.

That it is more difficult to borrow money on grain stored in bulk than on grain stored in sacks.

That a more elaborate system of grading is necessary in bulk handling because of the loss of its identity.

That the present abnormal shipment of wheat eastward instead of westward to tide water creates favor for bulk handling, which will be destroyed when the world war ceases and shipping is resumed on the Pacific.

Selling Garden Truck "On the Hoof."

The exhortation to sell hay and grain as a finished product rather than as a raw material has long been heeded by wise farmers, but it is not often that this injunction can be carried out in regard to garden truck and poultry, which are looked upon as the final product in themselves. On Thompson's farm, near Kent, in King county, however, the yield of the gardens and the poultry runs is carried a step farther than is usually the case, for most of it is used through a Seattle restaurant.

Mr. Thompson has always been something of a farmer, at least in his interest in farming. He owned several farms before his present place, which comprises 12 acres of White river valley land—as fine land as any in the state or in the world. One of the features of the place is the chicken house, built to accommodate 2000 chickens and said to be one of the most scientifically equipped in the entire country. At present Mr. Thompson has about 400 chickens, with a bunch of thrifty youngsters coming up to fill the empty space.

There are some 45 hogs on the place now, but this is the minimum number kept. There are ample quarters for a much larger number. Part of the pork produced is sold through other channels than the restaurant, but practically all the other products of garden, orchard and poultry plant are consumed by the patrons of the Thompson restaurant.

Lots of Corn Silage to Acre.

W. A. Goff of Snohomish considers himself a farmer even though his "farm" is of but one and one-third acres' extent. It is bottom land, and although Mr. Goff is an old Kansas man, he states emphatically that there is no better land in the world. He is willing to admit, however, that the same kind of corn can not be raised in Snohomish that they raise in the middle west.

"You've got to have hot weather and plenty of sunshine to mature good ear corn," Mr. Goff explains. "We simply can't do it here, and there's no use pretending we can; but when it comes to corn for silage, then we can talk. We can raise more corn silage to the acre on this bottom land than they can anywhere else on earth!"

In the matter of feeding dairy cows, Mr. Goff has his own ideas, which he is convinced are correct, even if they are not in harmony with modern agricultural orthodoxy.

"I'm not going to feed my cows any more beets," he declares. "I bought several tons and tried them out—had thought of planting part of my farm to them; and after testing them out as thoroughly as I could, I am satisfied they don't begin to equal in feeding value the grain or hay that could be raised on the same acreage. Adding them to the ration I was feeding my cows didn't increase the milk flow a drop. They're mostly water, and I've decided to water my cows with a bucket after this."

SUGAR BEET EXPERT
To Act as Field Superintendent

H. C. Rosenfeldt, a brother of F. W. Rosenfeldt of Ellensburg, is preparing to move to that city, where he will act as field superintendent for the sugar beet factory, now in course of erection near North Yakima. Mr. Rosenfeldt has had seven years' experience as a sugar beet grower at Scots Bluff, Neb. In that locality the crop averages 15 tons per acre and is found exceptionally profitable.

Four Guilty in Trading Co. Case

Smith, Knudson, Fowler and Davies Convicted; Lawrence Is Acquitted

(Continued from page one.)

District Attorney Garrecht joined Attorney Robertson in a plea for leniency for O. C. Fowler. "On behalf of members of the jury I am requested to state that in the conviction of O. C. Fowler the jury looked upon him more as the instrument of those older and more experienced than himself," said Garrecht.

Judge Avers Verdict Justified.

In remarks preliminary to passing sentence Judge Van Fleet said:

"The duty of the court in administering punishment is never a pleasant one for me and becomes more disagreeable as I grow older. However, this disagreeable necessity is forced upon us as a result of our position and can not be evaded because of sympathy or sentiment. Happily, in criminal cases the court is saved the necessity of passing upon the facts, which rests with the jury.

"I would do less than my duty if I refrained from expressing entire satisfaction with this verdict. I would ignore one of the moving forces in this case to say that evidence did not exist that compelled a verdict of guilty. One could not follow this case without being impressed that during the progress of these enterprises the defendants devoted their best efforts toward putting stock upon the market regardless of whether the public received any benefit or not. Had it appeared that the enterprise made a profit it would not have prevented a conviction under the showing as to representations made to the public to induce stock purchases. The evidence shows that these enterprises never were carried on at a profit.

Declares Fair Trial Was Had.

"These defendants have had an absolutely fair trial. No ruling has been made by the court for which my conscience takes me to task. Able counsel has defended these men and the district attorney has tried simply to present the plain, cold facts.

"The evidence of the government experts was given solely to lay before the jury the facts in this case as disclosed by the records. I have never seen functionaries of this kind make less effort to place deductions on their findings than in this case. Under this evidence the jury could not have done other than what it did.

Deterring Effect Is Sought.

"The offense is a serious one; in which the defendants are charged with having defrauded a large number of people. To uphold the majesty of the law the gravity of the offense must be taken into consideration and adequate punishment provided. The object of punishment is not primarily to reach the individual, but for the deterring effect it will have in preventing a recurrence of such things."

Motion for New Trial Denied.

"If I felt the slightest doubt that the jury had in any way been subjected to coercion in this case I would grant a new trial, but I do not so feel," said Judge Van Fleet. "The remarks of the foreman did not even convey an impression as to how the jury stood beyond that they could not agree. The motion for a new trial is overruled."

The court instructed Attorney Robertson that a motion to vacate the judgment could be made at any time before the end of the present term in April. Counsel was further informed that he could extend his grounds for a new trial in the bill of exceptions to be filed later.

Foreman Discusses Jury's Work.

Members of the jury as a rule declined to discuss the case, referring all inquiries to Foreman David Gorman.

"The first question to be determined," said Mr. Gorman, "was whether a conspiracy existed, and this was the rock on which we split. Without the existence of a conspiracy we could not proceed with the question of guilt or innocence.

"The first ballot was eight for the existence of a conspiracy and four against it. We then talked the matter until midnight, taking numerous ballots, probably 100 in all, and finally won over two more jurors, making 10. All during the morning hours today and until we again went before the court at 11 o'clock the vote stood 10 to 2 for the existence of a conspiracy. We then seemed to be hopelessly deadlocked and the suggestion was made that we go before the court for further instructions. After these were given we lost no time in reaching an agreement as to the existence of a conspiracy, after which we balloted separately on the question of guilt or innocence. One ballot each was taken as to Gale Smith, S. T. Knudson, C. L. Davies and O. C. Fowler, in each of which the verdict was guilty. One ballot was taken on J. C. Lawrence in which the verdict was acquittal.

What They Thought of Lawrence.

"The jury seemed to regard Lawrence as a servant or employe of the leaders in the conspiracy, and as it was not shown that he had profited beyond his salary he was placed in a different class from the others. Members of the jury have requested that I mention no names of the jurors in connection with the various ballots. Their differences were all honestly formed and finally removed after hearing further instructions from the court.

"Members of the jury worked faithfully all the time in discussing the case. It was a hard case, with many angles and complications, and I have never seen a jury work harder or more faithfully."

ON THREE PAYROLLS.
How Farmers' Money Was Spent

Gale Smith, the chief defendant in the trial for conspiracy to defraud through the use of the mails, in his direct examination for the defense denied all conspiracy charges and branded as false everything alleged by the government to be crooked.

In opening his testimony Mr. Smith said that he was born in Illinois, and prior to becoming connected with the Northwestern General Trading company was employed on the Ritzville Times and the Washtucna Enterprise, both in Washington, and later followed mining.

Conceived Trading Idea in 1908.

"The first suggestion as to the organization of the Northwestern General Trading company came from A. G. Stall, an acquaintance, in the latter part of 1908," said Smith. "Early in 1909 we started to form the company, and sold a few shares of stock before it was incorporated in June of that year. The original incorporators were Joseph Kaufman, A. G. Stall, A. H. McGregor, A. J. Miller, Charles W. Haynes and myself.

"About this time I met S. T. Knudson and a man named Laird, with whom we arranged to sell stock in the new company, first at 25 per cent commission, then 20 per cent and again at 25 per cent. Laird went insane in 1910, and after that I took up the stock sales jointly with Mr. Knudson."

"Prior to 1910 had you received any commissions?" inquired Attorney Robertson. "No."

Authorized Commissions in 1911.

"State if payment of commissions was approved by the company." Yes, at the meeting of the trustees in June, 1911."

"Did you get anything that you were not entitled to?" "No."

"What assistance did you give Knudson in the sales department?" "Helped him manage it and look after the agents."

"At your first annual meeting in 1909 were any new men placed on the board of directors?" "Yes, C. L. Davies, W. W. Jeffries and W. H. Sprague, none of whom I had met before."

"When did your store begin business?" "In the fall of 1909 or early in 1910."

"When did you buy the building on Division street?" "In 1911."

Business Was $390,000 in 1914.

"What was the approximate volume of mercantile business after you opened the store?" "As I recollect it, it was about $200,000 in 1912, $280,000 in 1913 and $390,000 in 1914."

"Did hard times change your estimates as to the probable growth of the store?" "Yes, many concerns failed during those years."

"Have a loss in 1912?" "Yes, but it was less than in 1911."

"What did you understand about the clause in the prospectus, saying officers should receive nothing except their salaries?" "I wrote the prospectus, and meant this to refer to merchandise; that no officer in this line was to profit beyond the salary paid him."

"Ever buy in carload lots?" "Yes, besides the commodities bought locally we purchased 47 carloads of goods from transcontinental points."

Conceived Portland Branch in 1913.

"Who conceived the idea of the Portland branch?" "C. L. Davies first suggested it in 1913. He was later placed in charge after it opened."

"Did you get any commissions out of the Portland store?" "No."

"Have anything to do with starting the company at Seattle or at Cedar Rapids, Iowa?" "No."

Under Cross-Examination.

"At the time you entered the contract with Knudson to sell stock for the Northwestern did the board of trustees know that you were to share in the commissions," asking District Attorney Garrecht in cross-examination. "Yes," replied Smith.

"You wrote the minutes?" "Yes."

"Why didn't you put that in the minutes?" "I did not think it necessary."

"Did you put it in the report of the next annual meeting?" "No, but we talked it over."

"Were not copies of your prospectus sent to Seattle and Cedar Rapids for use in forming the companies there?" "Possibly; they may have secured copies of it."

"In your letter to Isaac Kendall you tell him to be quite sure that the officers draw nothing but their salaries. In view of the payment to you of commissions what did you mean by that?" "The commissions were a part of my salary."

"According to the minutes, when your salary was raised or lowered there is no mention of commissions." "No, it was not thought necessary."

Invited to Cedar Rapids.

"Why did you go to Cedar Rapids at the request of Wilder and McGregor?" "McGregor and I were acquainted. When Knudson failed to go there they asked me to come."

"Why did you place the stock of the Portland house at $30 on the opening, when stock was selling in Spokane at $75? "The corporations commissioner of Oregon asked us to place it at that figure."

"At the time you were getting a salary and commissions at Seattle and commissions at Cedar Rapids, you were drawing a salary at Spokane?" "Yes."

"Did the Spokane stockholders know of this?" "No."

"The Iowa Mercantile company had gotten under way when you went back there in 1914, and you helped get out the stock register?" "I don't recall. I may have done this."

The Court—You were president of the Northwestern at the time you went to Iowa? Smith—Yes, sir.

Shared in Commissions.

"Did you take a contract to organize and manage the stock sales department of the Iowa Mercantile company?" continued Mr. Garrecht. "Yes, with Thomas R. Wilder and A. H. McGregor."

"Each got a third of the commissions?" "I believe we did."

"When you left Cedar Rapids your intention was to go back there?" "Yes, if I could arrange my plans to get away."

"Did you engage agents at Cedar Rapids?" "I did."

"Was it run along the same lines as the Northwestern?" "It was while I was there."

"You wrote to A. C. Kelly, a sales agent of Chicago, to go there?" "I did."

Wolfle Frequently Consulted.

"When did you borrow $15,000 from the bank?" "In June, 1912."

"When was this loan ratified?" "Some time after that."

"Look at the minutes. Wasn't it in January, 1913?" "It seems to have been."

"You did not tell the stockholders' annual meeting of 1912 about this loan?" "I think it was paid back about that time."

"Why, then, was it ratified?" "Because Sprague and Haynes were raising some question about going into debt."

"Did this have anything to do with Conrad Wolfle's election?" "No."

"The meeting at which this loan was ratified was the only one attended by Conrad Wolfle?" "He was frequently consulted."

"What became of the money secured in this $15,000 loan?" "Used to pay for merchandise."

"Who objected to the confirmation of the loan?" "Directors Sprague and Haynes."

Queries on Collection Company.

"What was the reason for Sprague's objection?" "He objected to my management of the company. He wanted to fire some of the employes and I would not consent to it."

"Because of having trouble with Haynes and Sprague you wanted them off the board?" "No, some of the other members thought they should step down and spoke to them about it."

"The Inland Mercantile company was organized and operated with the funds of the Northwestern Trading company as a part of the business?" "Yes."

"You directed its policy?" "Yes."

A series of letters sent out to delinquent stockholders were submitted and identified by the witness, tending to show the character of the correspondence carried on by the Inland Mercantile company.

"Then you did have a general knowledge of what Sears was doing?" asked Garrecht. "Yes. I directed him to use the language employed. I did not, however, see all of the letters that he wrote."

"About the time J. C. Lawrence suggested the indorsement by the Farmers' union you placed him on the payroll?" "About that time."

"At the time Lawrence was appointed to make investigation of your books with a view of securing the indorsement of the Farmers' union he was then on your payroll?" "Yes."

"Were your books ever audited?" "Not all the way through, unless Mr. House did it. Mr. Walk had started to make an audit when the bankruptcy proceedings began."

Witness denied that he had opposed an effort by stockholders to have the books audited by Lemasters & Cannon, but wanted them to work with Robert Porter, an accountant employed by the farmers' union. Neither Lemasters & Cannon nor Porter made a complete audit.

Agreement on Stock Sales.

"You agreed to pay $40 a share on the debt of the farmers' union warehouse in Spokane for every share of stock sold by members of the union?" "Yes."

"How many shares were sold under this agreement?" "About 167."

"Any of this money applied on the

Credit for exposing the first of these trading companies belongs to Miller Freeman, then publishing The Washington Farmer, whose patrons had called to his attention some smaller concerns operating under the guise of cooperating institutions. While thus engaged the attention of the Farmer was directed to the Olympic Trading and Supply company of Seattle. Calls were made twice at the company's store and later two letters of inquiry were written before the first article exposing the company appeared in the Farmer of March 15, 1915. An editorial in this same issue declared: "This case appears to be typical of a number of such institutions operating throughout the northwest, and where the merchandizing end is merely a cloak for the extensive stock manipulations of the officers, who are willfully and knowingly practicing gross deception on the people."

This was followed by articles and editorials in the Farmer laying bare the swindling methods of business pursued by the Northwestern General Trading company and its allied branches. Local and national authorities were time and again urged to make an investigation until finally the federal department of justice in connection with the postal authorities began and carried on for a year the searching inquiry which has now resulted in the conviction of four of the officers of these trading companies.

The wide benefits which come from genuine cooperative efforts depend largely upon the wiping out of swindling concerns that prey upon the public in the name of cooperation.

debt?" "I think the trustee in bankruptcy paid about $800."

"Any shares sold after the company went into bankruptcy?" "No."

"How did you know the company was running at a profit or a loss?" "We had financial statements made."

"Were they presented at your annual meetings?" "No, they were generally made at the end of the year, after we invoiced."

"You issued a statement for 1911 saying that all bills were paid and the company out of debt. Isn't it a fact that you were in debt then?" "I couldn't say without looking at the books."

Bills Hint Indebtedness.

At this point Attorney Garrecht read a number of letters and telegrams addressed to the Northwestern General Trading company in 1911 urging the payment of past due accounts. A pink slip issued by the company for 1911 showed no indebtedness of any kind. Other dunning letters dating down to 1915 were read showing that the company was also behind in its bills in later years.

"Your published policy of paying cash for all things was not adhered to, it seems?" "No, the board relied upon the notes."

"Doesn't your charter provide that you could not go into debt?" "Yes, sir. The first debt was authorized by the stockholders in the purchase of the building."

"And this was the only indebtedness ever authorized by the stockholders?" "I think that is correct."

"Some of these dunning letters came before the building was bought. Didn't you deceive the stockholders then?" "No, sir."

Bought on Credit.

"At one time you talked of creating a surplus fund to be invested in mortgages?" "That was dependent on the stockholders and the payments for stock."

"But you did not restrict the matter in this way in the minutes?" "No, sir."

"Isn't it a fact you never wrote a line in the minutes about going into debt except for the building?" "Yes."

"Isn't it a fact you bought on credit the whole of the time you were doing business?" "Yes, we bought on the usual 30 days."

"Speaking of the Olympic, you wrote to a gentleman in Iowa that you were putting in a concern 'similar to ours'?" "Yes."

"You were also a director and vice president of the Seattle company, which would indicate that you were pretty closely affiliated?" "Yes."

By-Laws Not His.

"You were present at the meeting that ratified Knudson's contract?" "Yes."

"You knew that the by-laws prohibited an officer from receiving anything but his salary?" "I had nothing to do with Knudson's Seattle contract. It was drawn before I got there."

"At this meeting you voted yourself a salary of $50 a month, Knudson $100 a month, and raised O. C. Fowler to $175 a month?" "Yes."

The court—I thought you said you got $100 a month. Witness—I did.

Witness explained that $50 was paid by the company and $50 by Knudson for assistance given him.

No Split With Knudson, Fowler.

"Was Knudson voted that $100 to split with you and Fowler?" "No."

"Then Knudson must have paid you his $50 from his commissions?" Witness was unable to say.

"The money received by the Olympic to pay salaries came from the sales of stock?" "Yes."

"They had no store then?" "No, sir."

"You raised the price of stock—what was that based upon?" "The future growth of the business."

Lawrence Met Labor Council.

"Did J. C. Lawrence attend the meeting of the labor council in Spokane, as you requested?" "Yes, he said he did."

"You wired him to get this indorsement?" "Yes, we wanted this to satisfy the labor unions of Cedar Rapids, to show them the standing of our house in Spokane."

"What connection did your house in Spokane have with investors in the Iowa company?" "It did not make a great deal of difference, people back there wanted it."

"So you picked Lawrence to do it?" "Yes."

Points to Coincidences.

"At the time J. H. Taylor was about to select an auditor to go over your books for the farmers' union he was on your payroll?" "Yes."

"That is just another coincidence, the same as J. C. Lawrence being on the payroll when he went to investigate your company for the Farmers' union. These men were evidently on the pay roll for a purpose?" To this witness made no reply.

"Lawrence was your right hand man and looked after stock selling when you were not around?" "Yes, sir, after the indorsement of the union."

More Letter Writing Is Shown.

District Attorney Garrecht read a letter written by Gale Smith to Edward Thomman, an agent operating at Eugene, Ore., who was trying to secure an indorsement of the Northwestern by the local grange. Thomman's letter outlined a series of questions suggested by the grangers, and to these Smith had replied. One of his replies stated that the company's merchandise obligations were of merely a temporary character and would be paid by the end of the month. Garrecht then had Smith read a series of entries showing that the Northwestern General Trading company was then indebted and had been for months to a number of wholesale houses in Spokane, some of them in amounts running as high as $7000.

"You sold $495,000 worth of stock in the Spokane and Portland houses and had assets, with the unpaid notes taken into consideration, of $316,000. What became of the other $182,000?" asked Garrecht.

Had Good Will Worth $1,000,000.

"We had good will worth $1,000,000," replied Smith, while the audience laughed.

"Upon what do you base your estimate of $1,000,000 for the good will?" inquired Attorney Robertson.

"On an organization of 8000 people, together with the farmers' union, which brought in 8000 more."

CHECKS IN BLANK

Signed to Be Used by Gale Smith.

C. L. Davies, one of the defendants in the case, said that he was born near Waverly, had gone through the eighth grade of school and had leased 1000 acres of land when 23 years old. He became connected with the Northwestern General Trading company in 1909 and went to Portland to take charge of their branch there in 1913. He was elected a director at the first annual meeting of the company in 1909 and has since continued in that capacity. He had urged the opening of the store at Portland and fell heir to its management after that branch was put in.

In preparing for the Portland activity Davies said he visited Corporation Commissioner R. A. Watson of Oregon, who asked him to place the selling price of the stock at the outset at $30 per share. Watson told him Oregon had a rigid blue sky law which placed restrictions around the issuance of capital stock. The state commissioner authorized the payment of commissions of 20 per cent.

Paid Gale Smith Commissions.

Witness knew of the payment of commissions to Gale Smith of Spokane and said that was generally known by members of the board of directors.

"Explain the $1000 check which you drew from the Portland house about the time the company went into bankruptcy," asked Attorney Robertson. "That was $1009 for commissions due me. The money had been due for some time, but I did not want to take it out of the business."

"Explain how Directors Sprague and Haynes resigned." "They had gone around the country roasting the company. Sprague said that if we would buy his stock he would resign. It was concluded to buy his stock."

"What about the steam roller?" "That expression was started in 1912 when Teddy Roosevelt was running for president on the bull moose ticket. Sprague and Haynes said steam roller methods were used around the store and from that the expression was taken up."

Denies Proxies Conspiracy.

"Did you conspire to use proxies in the control of the meetings?" "No, sir. Proxies came in in due form and were not generally used."

"Isn't it a fact that at every meeting the proxies outvoted the shareholders?" inquired Attorney Garrecht in cross-examination. "I don't know."

"When you promised to start branch stores at Eugene and Roseburg, Ore., and failed to do it was the money for the stock returned?" "No, the patrons bought stock in the Portland house and nothing more."

"Why did you vote to pay commissions to Gale Smith?" "To keep from raising his salary."

"But at the next meeting, according to the minutes, you did raise his salary?" "Yes, but we would have had to raise it more had he not been paid the commissions."

Signed Name to Blank Checks.

"After you went to Portland, you, as treasurer of the Northwestern, signed up a lot of checks in blank to be used by Gale Smith?" "Yes."

"And for this you received $10 a month?" "Yes."

"Didn't you know that it was against the state law to buy back the stock of Director W. H. Sprague?" "No, I didn't know that."

"What did you do with this Sprague stock?" "Turned it over to the company."

"Didn't go out to sell it?" "Not to my knowledge."

District Attorney Garrecht called attention to the Sprague stock which indicated that it had been canceled in lieu of later stock issued to some other purchaser. Exhibiting a check for $450 to the witness, Attorney Garrecht asked:

Turned Money Over to Sprague.

"Didn't you get this money yourself?" "I got the money from the company, but turned it over to Sprague."

"In March we find another check for $450 issued to you. We would ask if you didn't get that also?" "It shows that it was made out to me."

"Please explain this." "I don't know anything about it. I sold a car of potatoes to the company about that time."

THINGS HIDDEN

Miller Freeman Began to Probe.

Miller Freeman of Seattle, called by the prosecution in rebuttal, testified that he had lived in the state since 1884 and knew the defendants Knudson and Fowler, and had discussed with them the affairs of the Olympic Trading and Supply company of Seattle in the latter part of February, 1915.

"In these meetings did you ever express the purpose of wrecking the Olympic Trading company?" asked Attorney Garrecht. "No, sir," replied the witness.

"What did you say?" "My conversation began with Mr. Knudson while I was publisher of the Washington Farmer," said Mr. Freeman. "I asked for definite information for publication, and explained that if the showing was satisfactory I would get behind the company and boost for it. I was told that the stock had been sold broadcast over the state and the northwest, and said that some complaints were being made as to the operations of the company. I wanted to know how much stock had been sold; how much money collected; the commissiones paid; the assets and the cash on hand. I also inquired if the so-called dividends or rebates on merchandise purchases were paid out of the earnings of the store or from cash received for capital stock.

"Knudson gave me a copy of the Olympic Trader, the official organ of the company, in which he said these questions were answered. I found that the report in the Olympic Trader related to the merchandise sales and not the sales of stock. Knudson said that it would not do to give this information to the farmers, who are not familiar with business matters and that therefore the matter would be misunderstood and cause harm.

Information Denied.

"Knudson, Fowler and J. P. Dabney were present at this meeting. I insisted on having the information that I sought so that I might get an intelligent idea as to the operation of the company, but Knudson finally declined to give it. I then told him that it seemed to me that their printed prospectus did not give all of the facts. I asked him if some inside ring existed that was getting a commission on sales of stock. Fowler then spoke up and said that Knudson did have such a contract and received 25 per cent commission on the stock sold. He attempted to justify it as being an advantageous contract for the company. I said it was all right if they placed their cards on the table and let their stockholders know."

"Did you see them again before you published anything?" asked Garrecht. "Yes, sir. We had another conversation in which I said that I would be glad to publish anything they had to say exactly as they wrote it."

"Did they write anything for you?" "No, sir."

"What further did you do?" "I called a second time and found F. L. Chamberlain, Knudson and Fowler there. Mr. Chamberlain was then a high official of the state grange. I called Chamberlain's attention to the fact that representations he was making as an officer of the grange were inducing many people to invest in the Olympic company. I asked him if he were familiar with the contract for the sale of stock held by Knudson, and he replied that he was."

"What position did Chamberlain hold with the Olympic?" "He was editor of the official organ, the Olympic Trader."

Wouldn't Tell Farmers.

"What further did you say to Chamberlain?" "I asked him if he believed in the principle of keeping people in the dark. He replied that farmers do not understand business, and if some things were explained to them they would create a bad impression. He admitted that the so-called dividends or rebates on merchandise were paid from the treasury to people who were favorable to the company."

"What did he say as to assets?" "He placed the merchandise assets at $20,000. I tried to get him to say how much stock had been sold, but I could not get this information."

"Thereafter you wrote this letter?" inquired Attorney Garrecht, presenting a letter from Freeman to the Olympic Trading company, dated in February, 1915, seeking information along the lines that he had previously solicited orally. The witness said he had sent the letter.

"Did you get an answer from Knudson?" "Yes; on March 6."

"You then wrote a second letter to which you received no reply?" "Yes."

"How long after the second letter was written before you made any publication with reference to the Olympic Trading company?" "The last letter was written March 6 and the article did not appear until March 15, 1915."

"You were furnished with no further information by Knudson, Fowler or Chamberlain?" "No."

"When was the action for receivership started in the superior court?" "The latter part of April, 1915."

Father's Will Not Mentioned.

In opening cross-examination Attorney Robertson asked Mr. Freeman about the will of his father and if the same were not called to his attention at one of their meetings. He replied that it had not been mentioned.

The witness was interrogated as to charges made against him by W. H. Paulhamus at the 1913 session of the legislature that he represented the special interests. Freeman recalled the charges, but stated that they were untrue. Freeman also said that he had opposed the "seven sisters" measures in 1913. He emphatically denied that his opposition was influenced by the fishing industry or any one else.

The witness stated that he had since disposed of his interests in the Washington Farmer and other farm papers and is now engaged in the publication of the Pacific Fisherman and an automobile journal.

COMMISSIONS $101,000

Total Losses Were $180,538.

H. S. House, an examiner for the department of justice, called as a witness for the prosecution, read his report on the financial affairs of the Northwestern General Trading company to the jury.

Totals Are Interesting.

From three sheets of typewritten figures Examiner House read the following totals to the jury:

Sales of Stock.

1495	shares at $20	$ 29,900
1264	shares at $25	31,600
500	shares at $30	15,000
249	shares at $35	8,715

Olympic Trading Co.

State Examiner H. S. House testified as to the showing made by the books of the Olympic Trading & Supply Co., reading to the jury the following figures from the books after they were taken over by the government:

Sales of Stock.

785 shares sold at $20 per share.
1093 shares sold at $30 per share.
2767 shares sold at $40 per share.
1465 shares sold at $50 per share.
391 shares sold at $60 per share.
6503 shares sold for $255,970.
Average sale price per share, $39.35.
Total amount collected on stock sold, $142,963
Total amount of commission paid, $74,267.50.
Per cent of commission paid on amount collected, 51 2-3.

Full Commission.

Sales on which the entire commission was paid, but where payments of less amount were made by the purchasers:

Shares.	Total price.	Total pay'ts.	Total com.
29	$ 580	$	$ 232
70	1,400	337	560
52	1,560		546
241	7,230	1445	2530
480	19,200		5760
608	24,320	4940	7296
71	3,550		887
605	30,250	4883	7562
1	60		15
182	10,920	1710	2730
2339	$99,070	$13,316	$28,119

Comission paid on above exceeds amount collected on stock by $14,793.22.
Number of sales on which the purchaser made no payments, 484.
Number of sales on which small payments were made, 1220.
Total number of sales, 1704.

Assets.

Assets derived by the Olympic Trading and Supply company from money collected on stock sales to December 31, 1915:

Cash	$ 644.56
Merchandise	12,081.14

Less interest, discount and profit on merchandise	520.73
Net losses	$ 8,287.35
Commissions paid	9,044.62
Total losses	$17,331.97

ITEM OF $98,000
Added to More Than $500,000

The finances of the Iowa Mercantile company were brought out in the testimony of Lewis H. Jacus, an accountant of Cedar Rapids, Iowa.

"State your relation with the Iowa Mercantile company," said United States District Attorney F. A. Garrecht. "A director and bookkeeper until the company went into the hands of a receiver in September, 1916."

"After the receivership had you any connection with the company?" "Yes, I helped to make a financial statement for the trustee."

"How much was collected from the sale of stock?" "It was $98,745."

"How much was paid in commission?" "The total was $35,547."

Through the failure of the Iowa Mercantile company of Cedar Rapids, Iowa, another item of $98,745 was added to the more than $500,000 charged by the federal government to have been lost in a conspiracy to mulct innocent stockholders in the operation of a string of alleged cooperative mercantile companies in three states.

WILDCAT SCHEME
Stock Selling Was the Big Aim.

"All of the evidence in this case goes to show that at the time the farmers' organizations were called together to indorse the Northwestern General Trading company it was nothing more than a wildcat stock selling scheme, intended to deceive those who were asked to invest their money in it," said District Attorney Garrecht in his closing address to the jury.

"At the very inception of the Olympic Trading and Supply company, when the defendant, O. C. Fowler, issued a large catalogue to make people think that he had a big house with a great stock, the evidence shows that all he had was a lot of nerve and some printer's ink.

"They say that the Iowa Mercantile company of Cedar Rapids, Iowa, has no connection with this case, yet we find A. H. McGregor, an incorporator of that company, was one of the original incorporators of the Northwestern General Trading company and a close friend and associate of Gale Smith. We find E. F. Roach, a stock salesman of the Olympic, on his way to Cedar Rapids, writes to Knudson that he had located an opening for a new cooperative store at Fort Dodge, Iowa, and lined up a 'good bunch of directors.'

Sees Other Fraud Evidence.

"We see in this letter from the Inland Mercantile company to Matilda C. Pleasant, the aged woman who took the stand here to tell her story, another evidence in the general fraudulent scheme. Mrs. Pleasant had been advised by an attorney that she did not have to pay the note she had given for stocks.

"In reply the Inland Mercantile, writing as if it were a separate and distinct corporation, threatened her with suit if the matter were not paid. The Inland Mercantile company was financed by the Northwestern General Trading company and operated from its building by Frederick B. Sears, who signed the letters with the initial B to conceal his identity.

"Another of the numerous evidences of the intent to defraud is the long list of instructions to agents issued by S. T. Knudson, in which it was said that the company was bound to be a great success and had no chance to fail since it bought and sold only for cash. At that time the company was heavily indebted and running behind at the rate of $25,000 a year.

Federal Agents Assaulted.

"An assault has been made here upon H. S. House and J. S. Swenson, employes of the government, who have merely performed their duty in this case. Yet the figures prepared by Mr. House have been accepted by the accountant for the defense, who based his report on the figures of Mr. House.

"What hurts in this connection is the evidence produced from the books and papers in this case, as such evidence has been produced in all other great mail fraud cases, such as the wireless cases and others. An attempt was made to have it appear that Mr. House had said that J. C. Lawrence drew commissions when Mr. House merely pointed out what the books showed, that Lawrence's payments were charged to the 'organization and commissions' account.

"You are not here to convict Mr. Crow and Mr. Kegley, and in suggesting this counsel would take you away from the facts as far as possible. The only criticism we have to offer is that they made a serious mistake, and, having taken a position, they were too proud to change it, even though they were parties to indorsing this crooked scheme.

Kegley's Explanation Damnable.

"When Kegley was asked if he had received commissions he indignantly denied it. We then showed him the records of the Northwestern General Trading company, where, in 1913, he received $40 listed as commissions. His explanation of the transaction was just as damnable as the record in the case. He said that he sold back to Gale Smith one share of stock, which was in violation of the state law prohibiting a corporation from repurchasing its own capital stock.

"When poor widows of hard-working miners asked that their stock be taken back they met with a chilly reception and were threatened with the courts if they refused to pay. Yet when the master of the state grange wanted his money refunded it was done without loss of time.

Flays Davies Check Explanation.

"When confronted with two checks for $450 issued to him by the Northwestern General Trading company C. L. Davies was unable to explain them that night. The next day he made an even worse attempt at it, when he said that he repaid it through some bank in Montana, which he had reached by long distance telephone.

"On their face these checks betray the attempt to cover up the purchase of stock of an obstreperous director. After Davies acquired this stock from W. H. Sprague we next find him trading it for land in Montana. There is no evidence that the company was benefited by this transaction.

"You have the figures as to how the price of stock was raised from time to time by the Northwestern in spite of its losses, for no other reason than to secure larger commissions for Smith and his associates. That is the very reason why so much secrecy existed as to the payment of commissions.

Paid $219,323 Commissions on $584,748.

"The records of the trading companies at Spokane, Portland, Seattle and Cedar Rapids, Iowa, show that $584,748 were collected from stockholders in these companies and $219,-323 paid out in commissions. For this vast amount of money there is nothing to show, as the companies have gone into bankruptcy.

"The disappearance of this vast sum of money is the reason why the restriction against indebtedness was placed in the bylaws of these companies. Had the condition of these organizations been known we doubt very much whether the farmers' organizations would have indorsed them. It is for these things that the defendants have been brought before you to make answer."

F. C. Robertson Praises Court.

F. C. Robertson, in opening the concluding argument for the defense felicitated the court on the fair treatment it had given the defendants.

"These men are alleged to have conspired, not singly but as a whole in the commission of the acts charged in the indictment," said Mr. Robertson "They are not charged with any particular dishonest act, but with having conspired to defraud, through the use of the mails. The Spokane Chamber of Commerce spend $80,000 a year to invite men to come here and engage in competitive business. One of the men thus induced to come was A. G. Stall, who first interested Gale Smith in the organization of the Northwestern General Trading company.

"At that time the payment of 25 per cent commissions was considered reasonable, and a contract was made with S. T. Knudson and Robert Lair. Afterward Lair went insane and Gale Smith took over the contract jointly with Knudson. I contend that there was nothing criminal or dishonest in this act; that it was a legitimate effort to start a straight and honest business enterprise.

"We have had such men as G. B. Dennis testify here that the commissions paid in this case are reasonable and less than those as a rule given for promoting work with other companies.

Says Fowler Was an Enthusiast.

"Now, take O. C. Fowler, one of the defendants. Like my friend Garrecht, he is an enthusiast. He went to his friends, told them about his great idea for the organization of a mail order house that would some day be a Sears-Roebuck. They were impressed with his idea and agreed to back him.

"They secured some of the literature of the Northwestern Trading company and made use of it, which accounts for the similarity in the publications of the two companies. They then secured the services of Knudson, an expert stock salesman, with whom they closed a contract. Later Gale Smith was induced to give his assistance in the purchase of merchandise, and Knudson told him that he would pay Smith $50 and the company $50, making $100 a month. There was nothing irregular or dishonest about this transaction, was there?

"Thomas R. Wilder established the company in Cedar Rapids, Iowa. Testimony has been introduced here that he was indicted in the state courts, but he has not been convicted. Wilder found himself opposed by powerful interests and Gale Smith went back there to help him get the organization started.

Got Farmers Interested.

"The business of the Northwestern Trading company grew faster than they anticipated, and soon they had 8000 stockholders and doing a business of $300,000 a year. Then J. C. Lawrence, who had made a study of cooperation and owned two large stores, was interested.

"Through Lawrence the support of C. B. Kegley, L. C. Crow and other farmers was secured, men with enough land to raise all the wheat between here and Tekoa. The farmers agreed that they would combine their produce company with the Northwestern for the mutual benefit of all concerned.

"Yet W. L. Niehorster, secretary of the grand jury, comes here like a German submarine to tell us that J. C. Lawrence received other than his salary in the work of effecting this consolidation. About this time the gallant young H. S. House, government detective, imagined that he had found where L. C. Crow had made a sale of stock for the trading company. When the book was stuck under his nose Mr. Crow had not even heard of the transaction.

"When these farmers gave their indorsement to the Northwestern Trading company they pledged their honor with it. They are men of integrity and high honor and were determined to make it win. If you convict J. C. Lawrence and Gale Smith in this case you will necessarily convict these farmers who gave their indorsement to that enterprise.

The charge to the jury by Judge Van Fleet is a remarkably clear and comprehensive statement of the law of conspiracy which has been the basis of the trial of the former officers of the Northwestern General Tarding company. This will be of great interest to our readers and will be published in the next issue of the Farmer.

Draft Horse

Still the Main Farm Dependence

By PAUL E. TRIEM.

The coming of the tractor does not mean the passing of the heavy horse. This fact has been apparent to close observers for some time, and is emphasized by late reports from various authentic sources. For instance, Professor William Hislop of the state experiment station at Pullman recently reported the sale of a plain gelding weighing 1525 pounds at $275 cash, and adds that this transaction is typical of many others. The prediction of pessimistic breeders and farmers that the heavy horse was doomed has not been fulfilled. Dollars and cents tell the story, and the big horse is selling higher than ever.

The Explanation.

There is a flexibility of power in the draft horse unequaled by any man made mechanism. A good team of mares or geldings can deliver vastly more than their rated horsepower in times of emergency. They can not keep this up, but emergencies are of short duration. The ten-twenty tractor will deliver its 10 horsepower at the drawbar 24 hours a day, if need be, but it will not deliver 15 horsepower or 20 horsepower for a three-minute stretch of hard going. Flexibility of service is one of the advantages of the heavy team. Custom, or habit, is another—farmers have been using horses for generations, and they do not change their ways of thinking and working over night. The tractor for big operations—the cultivation of fairly level tracts in large units; and the horse for smaller operations, is probably a fair summary of present tendencies.

Cause of High Prices.

This being the case, an explanation of present high prices for draft horses, issued by the Washington State college, may be worth considering.

"The root of the matter lies in the steadily decadent interest manifested by farmers in horse raising. Farmers owning mares hold the key to the situation."

And here is a final bit of advice from the same source: "Let it be said without equivocation that the scrub is costly if the feed is ever so low. Unfaltering patronage of the high class sires will automatically drive the nondescript breeding horse from your community, a service every one will welcome."

LIVE STOCK SALE

Record Prices in South Africa.

At the kaffrarian live stock sales held at King Williamstown on December 1 prices obtained were the highest ever recorded in South Africa, is the report of Consul E. A. Wakefield, Port Elizabeth.

One slaughter ox was sold for $209.25, four others were knocked down at $165.50 each, and Merino sheep for slaughter sold up to $9.30 each. Prices for meat in South Africa have been reasonable as compared with other parts of the world, but have recently been advanced by all retailers.

From the prices quoted it is evident that further advancement will be made at once.

NEED OF CARE

In Blasting Holes for Trees.

Using dynamite to blast holes in which to insert fruit trees cost Oscar McCann of Felida his right hand. He was blowing out the holes for the trees by using half a stick of dynamite, lighting a short fuse and pushing it into a small hole with a stick. At the time of the accident the dynamite came out with the stick, and exploded before Mr. McCann could drop it. His hand was shattered so badly that amputation above the wrist was resorted to. Mr. McCann is 38 years old, and a brother-in-law of Charles Nichols, on whose place he was working.

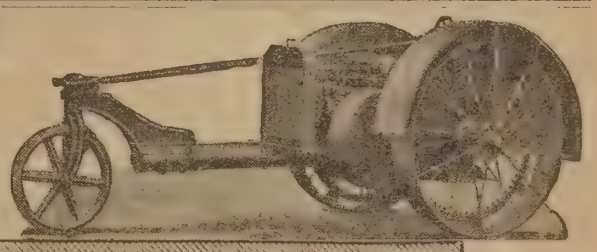
Beef Steers $9.25.

James Judge of Grasshopper, in southern Montana, has contracted beef steers to W. J. Boomer, buyer for the Carsten Packing company of Seattle, for $8.75, the highest price received in the Grasshopper district this year. William Montgomery, the veteran cattleman of the Big Hole basin, is reported to have refused $9.25 for his beef steers.

Vaughan's Portable Drag Saw

WILL CUT 15 TO 20 CORDS OF WOOD IN 10 HOURS

Can be operated by one man. Two men can carry complete machine. 3½ H. P. gasoline motor mounted on frame. One gallon gasoline required to cut 8 to 12 cords of wood. Engine can be used for other work without removing from frame. No gears, cogs, belts or pulleys. Friction clutch prevents breakage if saw pinches. Saw makes about 125 strokes per minute. Will cut any size log up to 6 feet. Sprockets and cranks, etc., made of cast steel. All working parts guaranteed against defects in material and workmanship.



Net cash price for complete machine as shown in cut, $150 f. o. b. Spokane and common points.

$275 THE DROP FALLS ON MARCH 17TH $275

Then Your Opportunity to Grasp This Big Prize Will Fade Away

Only Three Weeks to Win

Besides the Possibility of Your Winning One of the Thirty-Two Cash Prizes You Get This Paper at the Very Low Special Rate of 3 Years for $1.50

Read the Conditions

Simply add up the figures in the puzzle chart as if they were in one long column. Your success depends on the accuracy of your total thus obtained.

Figures run from two to nine, and there are no double figures or characters which are not figures. The tail of the "6" has a decided curve, while the tail of the "9" is straight. All 6ther figures have the usual characteristics, allowing no question as to the identity of any figure.

In event that no one submits the correct total, prizes will be awarded for the next nearest solutions.

This contest is restricted to persons residing in Washington, Idaho, Oregon and Montana.

A payment of $1 to $1.50 on subscription to The Farmer entitles the subscriber to enter the contest.

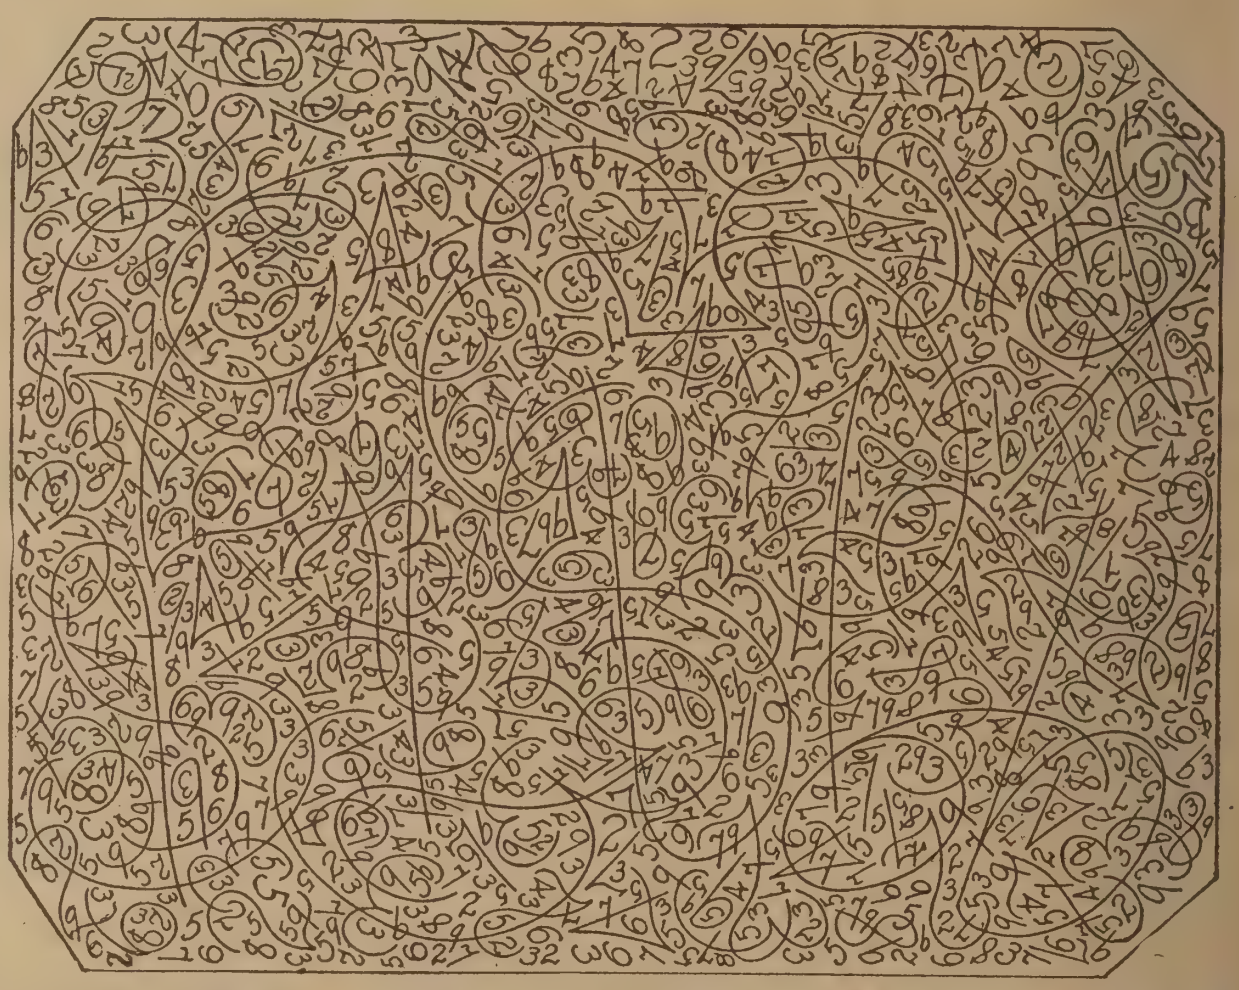
If your subscription is already paid in advance, your expiration date will be set ahead beyond this date to which you are now paid the full period for which you pay at this time. The advantage of paying $1.50 instead of $1 is that the winner of any of the first four prizes receives additional prize dividends apportioned on the amount paid in on subscription, besides the fact that $1.50 during this contest pays for a three-year subscription to the paper, while $1 pays for only one year.

More than one solution may be submitted by any contestant, by an additional subscription payment of not less than $1 nor more than $1.50. It is not necessary to pay the same amount with each solution if more than one is submitted.

You can send in a subscription for some one other than yourself and have the solution registered in your own name. Remember that by paying $1.50 instead of $1 on subscription, the larger will be your dividends if you win one of the four leading prizes; but not more than $1.50 will be received with one solution.

$750-Prizes-$750

FIRST PRIZE, $200,



to which will be added 50 times the amount paid by the subscriber with the winning solution. For example, if you pay $1.50 on subscription, this prize will be worth $275.

SECOND PRIZE, $100,

to which will be added 30 times the amount paid by the subscriber with the winning solution. This prize may be worth $145.

THIRD PRIZE, $60,

to which will be added 20 times the amount paid by the subscriber with the winning solution. This prize may be worth $90.

FOURTH PRIZE, $50,

to which will be added 10 times the amount paid by the subscriber with the winning solution. This prize may be worth $65.

FIFTH PRIZE, $40.

SIXTH AND SEVENTH PRIZES, Each $20.

EIGHTH TO SIXTEENTH PRIZES, Each $7.

SEVENTEENTH TO THIRTY-SCOND PRIZES, Each $2.

CASH MUST ACCOMPANY.

Don't send in your charts and working papers unless called for by the Contest Editor. Simply write your solution in blank space provided in "Registration Blank."

Something to Know

If your subscription is paid in advance, further payment will be credited on an extension of your subscription from the time to which it is now paid.

Any solution unaccompanied by payment on subscription will not be entered.

REGISTRATION BLANK

Cut out this blank closely around the border and send it in with your solution and money.

HOW THE STATE COLLEGE CAN HELP IN THE COMMON THINGS OF FARM LIFE

In the last number I pointed out that the value of the agricultural college in helping in the common things of farm life is to be perceived more in its constant overshadowing, all pervading wholesome influence than in some startling remedy for more specific difficulties or some marvelous recipe which will bring big and sudden profits. Nevertheless, we all like the concrete and the specific and so I will try to give some instances in which help may be obtained.

Whether on the little farm or on the big farm, a fundamental necessity is the "plant" which forms the center and the instrument of farm operations.

The "plant" includes the farm house, the farm barn and all constructions from a pig pen to a power plant.

I need not say that an efficient plant is as essential to a modern farm as it is to the modern factory. Our farmers as a class are not yet awake to this fact. They have not generally thought of it from this point of view. They are content to inhabit a dwelling that has neithor comfort, convenience, beauty nor efficiency. They permit the "better half" to operate her important end of the work with an equipment which they would not tolerate in in the field, and at a disadvantage which means a clear lack of economy. The barn too often is the counterpart of the house. It is neither sanitary, convenient nor economical. In farm tools and machinery alone the generality of farmers are awake to more modern ideas, and this because of the glittering advertisements, the smooth agents and the credit system of distribution.

Now when he (or she) does awake to the situation so far as house or barn is concerned, and when an unusual crop or a high price has occurred, or when the budding womanhood of the eldest daughter has warned the anxious mother to provide a suitable "parlor" for eventualities, or when the enterprising neighbor has erected an ostentatious "barny" house or a huge, illy designed barn, gaily painted and decked with flashy lightning rods, which proclaims to the community that neighbor Jones has taken on a new life and is coming up in the world; the desire to tear down and build anew often becomes irresistible.

Now, if the stirrings within have prompted consideration, on the ordinary farm, of conditions of better living, greater convenience, comfort and health, or, to put it otherwise, if a more efficient farm plant, right here your own agricultural college is in a position to help you both generally and specifically.

It will help you, generally, if you are enrolled on its mailing lists in the extension department, for the popular bulletins, which treat of a multitude of subjects of the common farm life. It will help you, generally, also, if you are enrolled on the experiment station list for the bulletins on subjects in which you are specifically interested.

It will help you, generally, further by advice as to books or government bulletins treating of the particular subjects in which at the time you are interested. But for this help you must ask: "Ask and ye shall receive."

Then it will help you personally and in detail by advice suited to your particular case. Now, don't make a mistake right here. Don't expect that the college will build a house for you or send you a washing machine or supply you seed, gratis, for the season's crops. That is impossible. Let us illustrate the possibility of help in the case of a wish to begin improvements with the house—new or old.

The college contains a department of architecture. This department makes a special study of all kinds of farm buildings—houses, barns, bunk houses, shops, machinery sheds, silos, poultry houses, pig pens—what not. In some of these cases it has designs, prints or blue prints, for such constructions, which it will send free. It also gives much instruction in the internal arrangements of farm houses—not only the living parts but especially the working parts.

The college also has a home economics department, in which, from the woman's standpoint, every detail of interior arrangement and decoration is studied and planned to give the best results with the least waste of energy. The farm home should be built around the kitchen, rather than around the parlor. The water supply, the waste, the position of range, work table, cupboards, bins, closets, stores, everying should be so arranged as to give the highest efficiency with the fewest steps. Now, the architectural department and the home economics department will cooperate with you, if you will state your case in time and will be a little patient, in every step of interior detail. Then the college has a department of sanitary engineering, which, in adition to its published bulletins on the development of water supply and farm sewage disposal, will give you specific advice, if you state your case and will be patient, remembering the heavy load of other duties to be carried also.

The development of an efficient farm center does not necessarily mean large outlay, though it must be confessed that in comparison with the lavish waste on new styles of farm machinery the average farm kitchen has been most penuriously provided for.

The good man stares at the cost of an enameled sink, water supply and waste, cold storage, a washing system or a septic tank, but doesn't hesitate a moment at a new piece of machinery that runs into three figures, that has been recommended by an oily agent.

The college will advise on the lighting system, if you want that, on water supply or sewage disposal, on cold storage, on house ventilation, external design or internal arrangement. It will not act as your architect or superintendent, however.

Here in the northwest, on the larger farms, the farm house should be small, compact, designed for the living of the family. Its adjunct should be the bunk house—the separate inexpensive but comfortable building, where the "hands" live. It should be sanitary and provided with comfortable beds, adequate heat, lounging rooms, and sometimes may properly have a kitchen and dining room attached. The college will help with this design also.

E. A. Bryan

Ireland

Compulsory Tillage of Lands

Regulations affecting the cultivation of land in Ireland have been recently issued.

Generally speaking, every occupier of arable land in this country is to be required to cultivate in the year 1917 a certain proportion of such land. The proportion to be cultivated shall be one-tenth of the area where no part of the holding was cultivated last year. If any part was cultivated in 1916 the proportion shall be equivalent to the extent previously cultivated, with an addition of one-tenth of the whole area, the compulsory maximum amount to be cultivated being one-half of the total area of the holding.

The regulation is not to affect holdings of less than 10 acres in extent or those regarding which the department of agriculture certifies that they can be or are used to better advantage in some other manner than by cultivation for the production of food.

Land under a first or second year's crop of rye grass or cultivated by any person under a conacre letting approved by the department of agriculture shall be deemed to be "cultivated."

Unnecessary.

"Did you ever try the hot water treatment in the morning?"

Does a Cow Rise Fore or Aft?

And How About the Horse? A Discussion

By Farm Information Editor

"In getting up from the ground what part of its body does a cow raise first? A horse?"

The fellow who framed that question, of course, intended to be real serious and must have been thinking of perfectly able-bodied, good natured cows and well-behaved horses.

Certainly a cow would look funny getting up sideways unless she had lost her cud, which sometimes causes cows to do weird things.

But to answer the question that way would be about as inteligent as the reply of the darky when asked why a watermelon had black seeds, to which he answered with another question, "how would lavender seeds look?"

Somebody has answered that the first movement of a horse when he starts to rise from the ground is to prick up his ears, which causes me to wonder if that is what the fellow meant who propounded that question. No, I think not. The question doubtless is whether the animal rises fore or aft, and then you must consider only those horses which are in full possession of all their faculties, both mentally and physically, because there is a story of a horse which on account of a wooden leg always rose to starboard, the other leg being the deficient member.

The mention of this invalid horse leads on to the story of Bill, the inventor, who was responsible for the patched-up animal.

The horste stepped in an open post-hole one day and broke its leg. Bill's father was ready to pursue the usual course and shoot the horse when Bill, of inventive mind, pleaded to be allowed to practice his mechanical skill. The father consented and Bill soon had Dobbin walking around quite successfully on the wooden pin. A horse 90 per cent efficient had been saved from the wreck and Bill was very proud, until one day there came a rain and the water stood 18 inches deep in the barnyard.

The wooden leg insisted on floating, with the result that the horse was overturned and drowned in water less than knee-deep. Bill confessed his technical shortsightedness with the explanation that he should have put an iron shoe on the wooden foot for an anchor.

If I seem to wander away from my subject now and then I will ask the readers of the Farmer to pardon me because the intense interest which has been awakened by this new contest among residents of all the northwest states has seemed to rattle me. With orders pouring in at the rate of several score every day for our Contestant's Helpful Outfit, and a flood of answers from those who obtained this outfit soon after the contest announcement was first made, I am simply doing nothing now but breathing farm information during the day and dreaming about "Mary and her little lamb" at night.

Maybe that I am like the story that is told of Dr. Granville Lowther, who is one of the best known contributors to the Farmer. Doubtless, no other man in the northwest writes with the same understanding as Dr. Lowther on subjects which relate to fruit culture. His ability to take what some would regard as a dry subject and inject real genuine entertainment into his treatment of it has given him a position seldom occupied by scientists. In other words, he is a horticultural specialist who also possesses literary ability.

A Palouse farmer tells the story of a friend who invited him to come to some meeting of fruit growers down in the Yakima valley and listen to a lecture by Dr. Lowther. The friend was a devoted admirer of Dr. Lowther's and in making the invitation urgent said, very seriously, "I guarantee that you will hear one of the best talks that you have ever listened to, because Dr. Lowther is a charming speaker and full of his subject."

The day came and the college professor was on hand to hear the talk. As that was all that had taken him there he began to scan the program for Dr. Lowther's subject, of which he was described as being full, and there it was. What do you think?

"Prunes."

With this issue of the Farmer the last chance to win a $300 prize in the Farm Information Contest by registering in the first period vanishes. Those who register after today and for the next three weeks can only compete for a $225 prize, but don't let this opportunity get away. In three weeks more the prize drops to $200. Our Contestant's Helpful Outfit is included with every subscription to this paper of one year for $1 or three years for $1.50, except those subscriptions paid in connection with the Figure contest. See announcement on page 8.

New Bell for Doors.

All the World's a Stage, and All the Men and Women Merely Players

He Represents Germany.

Dr. Paul Ritter, the Swiss minister, who has taken over the interests of Germany in the United States.

Want Americans to Paint Ships Like This

The above picture shows what the American liner St. Louis would look like if painted as it is demanded that American vessels be painted in the German note. The St. Louis has been detained in New York several days since her original sailing date on account of the German submarine menace.

In the German note it is stated that only one steamship a week in each direction will be permitted to sail under the American flag between England and the United States.

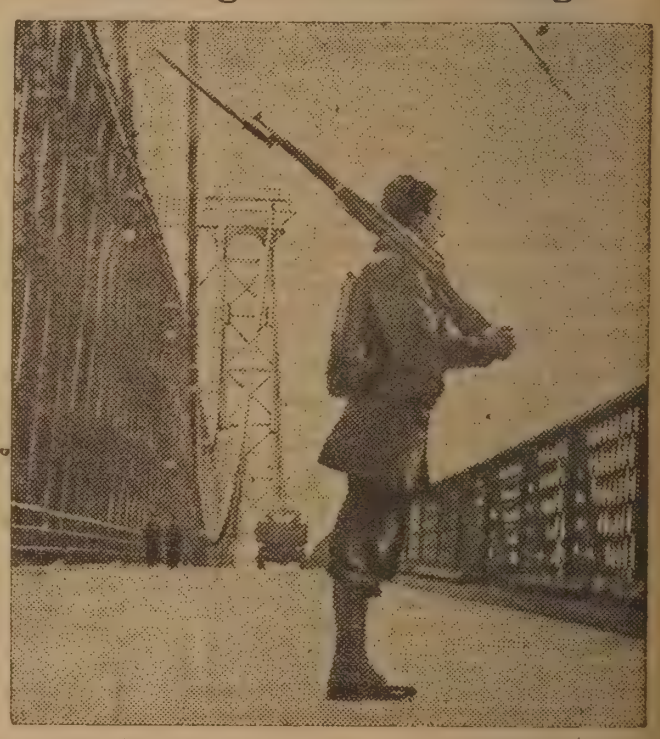
These vessels must follow a specified route and be painted as directed, with vertical stripes about 10 feet wide; they must carry large flags at each masthead of red and white checks and fly the American flag from the rear.

Now, however, all periods of grace for neutral ships entering the zone announced as prohibited by Germany have expired. The statement from Berlin says that immunity ceased in respect to the Atlantic and English channel zones on the night of February 12, for the North sea zone on February 6 and for the Mediterranean zone on February 10.

Stops Hospital Work.

The workshop which Mrs. Frederic C. Penfield, wife of the American ambassador at Vienna, equipped and maintained with her own funds to furnish bandages and dressings for the Austrian wounded has been closed. Mrs. Penfield will return to the United States with her husband. The capital keenly regrets her departure.

Types of Hungary's Many Peoples



In the pictures here printed are shown at group of Hungary's aristocracy and a group of peasant types of Hungary's many peoples, photographed at the coronation of Charles, emperor of Austria-Hungary, as king of Hungary at Budapest on December 10 of last year.

This unusual photograph shows some of the aristocracy of the ancient kingdom garbed in their national costumes and the peasantry are shown in national costume.

WHEN KNIGHTHOOD WAS IN FLOWER

or, the Love Story of Charles Brandon and Mary Tudor, the King's Sister, and Happening in the Reign of His August Majesty, King Henry the Eighth.

By EDWIN CASKODEN (Charles Major).

Copyright, 1898, The Bobbs-Merril Co.

SYNOPSIS.

Charles Brandon, who has neither wealth nor title, wins distinction for having defeated the heretofore unconquerable duelist, Judson. Brandon is installed as one of the captains of the guard of King Henry VIII. Edwin Caskoden (who tells the story) is Master of the Dance at London Court. The two young men become fast friends. Edwin tells Brandon of the willful, but adorable Mary Tudor, who had coaxed her royal brother Henry out of many proposed marriages which had been arranged for Henry's advantage. Edwin confesses that he, like scores of other men, had fallen in love with Mary, but upon Mary's refusal to marry him, he immediately became attracted to the good and beautiful Lady Jane Bolingbroke.

At their first meeting, Mary and Brandon have a tilt, in which Mary comes off second best and acknowledges it. Wondering as to Brandon's social accomplishments, and to settle a wager with Sir Edwin that he could not dance, Mary invites Brandon, Edwin and Jane to her drawing room. To her surprise and Edwin's delight Brandon is perfectly at ease and proves that he knows more about dancing than the Master of the Dance, himself. He teaches the Princess Mary one of the new French dances. At a ball, given by Mary, Brandon makes an enemy of the Duke of Buckingham, the most powerful nobleman in the realm. The evening is spent with the new dance, which greatly pleases the king. Brandon begins to realize that he loves the unattainable Mary, and, what is worse, Mary knows she loves Brandon. A party, including Brandon, spends a few days at Windsor, during which time the king makes several knights. Brandon would have been one of these had not Buckingham poisoned the king's mind against him. In the meantime, the old French king, Louis XII., whose wife, Anne of Brittany, had just died, has asked Mary's hand in marriage.

Brandon avoids Mary for some time, but when next they meet, they declare their love, but agree that they can never belong to each other. Brandon resolves to leave as soon as possible for New Spain.

CHAPTER VIII.

About a week after Brandon's memorable interview with Mary an incident occurred which changed everything and came very near terminating his career in the flower of youth. It also brought about a situation of affairs that showed the difference in the quality of these two persons thrown so marvelously together from their far distant stations at each end of the ladder of fortune, in a way that reflected very little credit upon the one from the upper end. But before I tell you of that I will relate briefly one or two other matters that had a bearing upon what was done, and the motives prompting it.

To begin with, Brandon had kept himself entirely away from the princess ever since the afternoon at the king's ante-chamber. The first day of so she sighed, but thought little of his absence; then she wept, and as usual began to grow piqued and irritable.

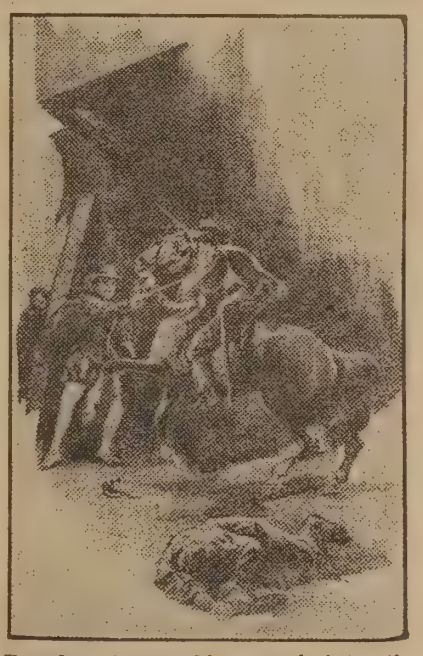
What was left of her judgment told her it was beter for them to remain apart, but her longing to see Brandon grew stronger as the prospect of it grew less, and she became angry that it could not be gratified. Jane was right; an unsatisfied desire with Mary was torture. Even her sense of the great distance between them had begun to fade, and when she so wished for him and he did not come, their positions seemed to be reversed. At the end of the third day she sent for him to come to her rooms, but he, by a mighty effort, sent back a brief note saying that he could not and ought not to go. This, of course, threw Mary into a great passion, for she judged him by herself—a very common, but dangerous method of judgment — and thought that if he felt at all as she did, he would throw prudence to the winds and come to her, as she knew she would go to him if she could. It did not occur to her that Brandon knew himself well enough to be sure he would never go to New Spain if he allowed another grain of temptation to fall into the balance against him, but would remain in London to love hopelessly, to try to win a hopeless cause, and end it all by placing his head upon the block.

It required all his strength, even now, to hold in line his determination to go to New Spain. He had reached his limit. He had a fund of that most useful of all wisdom, knowledge of self, and knew his limitations; a little matter concerning which nine men out of 10 go all their lives in blissless ignorance.

Mary, who was no more given to self-analysis than her pet linnet, did not appreciate Brandon's potent reasons, and was in a flaming passion when she received his answer. Rage and humiliation completely smothered, for the time, her affection, and she said to herself, over and over again: "I hate the low-born wretch. Oh! to think what I have permitted!" And tears of shame and repentance came in a flood, as they have come from yielding woman's eyes since the world was born. Then she began to doubt his motives. As long as she thought she had given her gift to one who offered a responsive passion, she was glad and proud of what she had done, but she had heard of man's pretense in order to cozen woman out of her favors, and she began to think she had been deceived. To her the logic semed irresistible; that if the same motive lived in his heart, and prompted him, that burned in her breast, and induced her, who was virgin to her very heart-core, and whose hand had hardly before been touched by the hand of man, to give so much, no power of prudence could keep him away from her. So she concluded she had given her gold for his dross. This conclusion was more easily arrived at owing to the fact that she had never been entirely sure of the state of his heart. There had always been a love-exciting grain of doubt; and when the thought came to her that she had been obliged to ask him to tell her of his affection, and that the advances had really all been made by her, that confirmed her suspicion. It seemed only too clear that she had been too quick to give—no very comforting thought to a proud girl, even though a mistaken one.

As the days went by and Brandon did not come, her anger cooled, as usual, and again her heart began to ache; but her sense of injury grew stronger day by day, and she thought she was, beyond a doubt, the most ill-used of women.

The other matter I wish to tell you is that the negotiations for Mary's marriage with old Louis XII of France were beginning to be an open secret about the court. The Duc de Longueville, who had been held by Henry for some time as a sort of a hostage from the French king, had opened negotiations by inflaming the flickering passions of old Louis with descriptions of Mary's beauty. As there was a prospect for a new emperor soon, and as the imperial bee had of late been making a most vehmement buzzing in Henry's bonnet, he encouraged De Longueville, and thought it would be a good time to purchase the help of France at the cost of his beautiful sister and a handsome dower. Mary, of course, had not been consulted, and, although she had coaxed her brother out of other marriage projects, Henry had gone about this as if he were in earnest, and it was thought throughout the court that Mary's coaxings would be all in vain—a fear which she, herself, had begun to share, notwithstanding her usual self-confidence.



She hated the thought of the marriage, and dreaded it as she would death itself, though she said nothing to anyone but Jane, and was holding her forces in reserve for the grand attack. She was preparing the way by being very sweet and kind to Henry.

Now all of this, coming upon the heels of her trouble with Brandon, made her most wretched indeed. For the first time in her life she began to feel suffering; that great broadener, in fact, maker, of human character.

Above all, there was an alarming sense of uncertainty in everything. She could hardly bring herself to believe that Brandon would really go to New Spain, and that she would actually lose him, although she did not want him, as yet; that is, as a prospective husband. Flashes of all sorts of wild schemes had begun to shoot through her anger and grief when she stared in the face the prospect of her double separation from him—her marriage to another, and the countless miles of fathomless sea that would be between them. She could endure anything better than uncertainty. A menacing future is the keenest of all tortures for any of us to bear, but especially for a girl like Mary. Death itself is not so terrible as the fear of it.

Now about this time there lived over in Billingsgate Ward—the worst part of London—a Jewish soothsayer named Grouche. He was also an astrologer, and had of late grown into great fame as prophet of the future—a fortune teller.

His fame rested on several remarkable predictions which had been fulfilled to the letter, and I really think the man had some wonderful powers. They said the was half Jew, half gypsy, and, if there is alchemy in the mixing of blood, that combination should surely produce something peculiar. The city folk were said to have visited him in great numbers, and, notwithstanding the priests and bishops all condemned him as an imp of satan and a follower of witchcraft, many fine people, including some court ladies, continued to go there by stealth in order to take a dangerous, inquisitive peep into the future. I say by stealth; because his ostensible occupation of soothsaying and fortune telling was not his only

Brandon thrust his sword into the horse's throat.

business. His house was really a place of illicit meeting, and the soothsaying was often but an excuse for going there. Lacking this ostensible occupation, he would not have been allowed to keep his house within the wall, but would have been relegated to his proper place—Bridge Ward Without.

Mary had long wanted to see this Grouche, at first out of mere curiosity; but Henry, who was very moral—with other people's consciences—would not think of permitting it. Two ladies, Lady Chesterfield and Lady Ormond, both good and virtuous women, had been disgraced and expelled from court in the most cruel manner by order of the king himself.

Now, added to Mary's old-time desire to see Grouche, came a longing to know the outcome of the present momentous complication of affairs that touched her so closely.

She could not wait for Time to unfold himself, and drop his budget of events as he traveled, but she must plunge ahead of him, and know, beforehand, the stores of the fates—an intrusion they usually resent. I need not tell you that was Mary's only object in going, nor that her heart was as pure as a babe's—quite as chaste, and almost as innocent. It is equally true that the large proportion of persons who visited Grouche made his soothsaying an excuse. The thought of how wretched life would be with Louis had put into Mary's mind the thought of how sweet it would be with Brandon. Then came the wish that Brandon had been a prince, or even a great English nobleman; and then leaped up, all rainbow-hued, the hope that he might yet, by reason of his own great virtues, rise to all of these, and she become his wife. But at the threshold of this fair castle came knocking the thought that perhaps he did not care for her, and had deceived her to gain her favors. Then she flushed with anger and swore to herself she hated him, and hoped never to see his face again. And the castle faded and was wafted away to the realms of airy nothingness.

Ah! how people will sometimes lie to themselves; and sensible people at that.

So Mary wanted to see Grouche; first, through curiosity, in itself a stronger motive than we give it credit for; second, to learn if she would be able to dissuade Henry from the French marriage and perhaps catch a hint how to do it; and last, but by no means least, to discover the state of Brandon't heart toward her.

By this time the last-named motive was strong enough to draw her any whither, although she would not acknowledge it, even to herself, and in truth hardly knew it; so full are we of things we know not of.

So she determined to go to see Grouche secretly, and was confident she could arrange the visit in such a way that it would never be discovered.

One morning I met Jane, who told me, with troubled face, that she and Mary were going to London to make some purchases, would lodge at Bridewell House, and go over to Billingsgate that evening to consult Grouche. Mary had taken the whim into her willful head, and Jane could not dissuade her.

The court was all at Greenwich and nobody at Bridewell, so Mary thought they could disguise themselves as orange girls and easily make the trip without any one being the wiser.

It was then, as now, no safe matter for even a man to go unattended through the best parts of London after dark, to say nothing of Billingsgate, that nest of water-rats and cut-throats. But Mary did not realize the full danger of the trip, and would, as usual, allow nobody to tell her.

She had threatened Jane with all sorts of vengeance if she divulged her secret, and Jane was miserable enough between her fears on either hand; for Mary, though the younger, held her in complete subjection. Despite her fear of Mary, Jane asked me to go to London and follow them at a distance, unknown to the princess. I was to be on duty that night at a dance given in honor of the French envoys who had just arrived, bringing with them commission of special ambassador to De Longueville to negotiate the treaty of marriage, and it was impossible for me to go. Mary was going partly to avoid this ball, and her willful persistency made Henry very angry. I regretted that I could not go, but I promised Jane I would send Brandon in my place, and he would answer the purpose of protection far better than I. I suggested that Brandon take with him a man, but Jane, who was in mortal fear of Mary, would not listen to it. So it was agreed that Brandon should meet Jane at a given place and learn the particulars, and this plan was carried out.

Brandon went up to London and Saw Jane, and before the appointed time hid himself behind a hedge near the private gate through which the girls intended to take their departure from Bridewell.

They would leave about dusk and return, so Mary said, before it grew dark.

The citizens of London at that time paid very little attention to the law requiring them to hang out their lights, and when it was dark it was dark.

Scarcely was Brandon safely ensconced behind a clump of arbor vitae when whom should he see coming down the path toward the gate but his grace, the Duke of Buckingham. He was met by one of the Bridewell servants who was in attendance upon the princess.

"Yes, your grace, this is the gate," said the girl. "You can hide yourself and watch them as they go. They will pass out on this path. As I said, I do not know where they are going; I only overheard them say they would go out at this gate just before dark. I am sure they go on some errand of gallantry, which your grace will soon learn, I make no doubt."

He replied that he "would take care of that."

Brandon did not see where Buckingham hid himself, but soon the two innocent adventurers came down the path, attired in the short skirts and bonnets of orange girls, and let themselves out at the gate. Buckingham followed them and Brandon quickly followed him. The girls passed through a little postern in the wall opposite Bridewell House and walked rapidly up Fleet Ditch; climbed Ludgate Hill; passed Paul's church; turned toward the river down Bennett Hill; to the left on Thames street;

(Continued on following page.)

When Knighthood Was in Flower

BY EDWIN CASKODEN

(Continued from preceding page.)

then on past the bridge, following Lower Thames street to the neighborhood of Fish-street Hill, where they took an alley leading up toward East Cheap to Grouche's house.

It was a brave thing for the girl to do, and showed the determined spirit that dwelt in her soft white breast. Aside from the real dangers, there was enough to deter any woman, I should think.

Jane wept all the way over, but Mary never flinched.

There were great mud-holes where one sank ankle-deep, for no one paved their streets at that time, strangely enough preferring to pay the sixpence fine per square yard for leaving it undone. At one place, Brandon told me, a load of hay blocked the streets, compelling them to squeeze between the houses and the hay. He could hardly believe the girls had passed that way, as he had not always been able to keep them in view, but had sometimes to follow them by watching Buckingham. He, however, kept as close as possible, and presently saw them turn down Grouche's alley and enter his house.

Upon learning where they had stopped, Buckingham hurriedly took himself off, and Brandon waited for the girls to come out. It seemed a very long time that they were in the wretched place, and darkness had well descended upon London when they emerged.

Mary soon noticed that a man was following them, and as she did not know who he was, became greatly alarmed. The object of her journey had been accomplished now, so the spur of a strong motive to keep her courage up was lacking.

"Jane, some one is following us," she whispered.

"Yes," answered Jane with an unconcern that surprised Mary, for she knew Jane was a coward from the top of her brown head to the tip of her little pink heels.

"Oh, if I had only taken your advice, Jane, and had never come to this wretched place; and to think, too, that I came here only to learn the worst. Shall we ever get home alive, do you think?"

They hurried on, the man behind them taking less care to remain unseen than he did when coming. Mary's fears grew upon her as she heard his step and saw his form persistently following them, and she clutched Jane by the arm.

"It is all up with us, I know. I would give everything I have or ever expect to have on earth for—for Master Brandon at this moment." She thought of him as the one person best able to defend her.

This was only too welcome an opportunity, and Jane said: "That is Master Brandon following us. If we wait a few seconds he will be here," and she called to him before Mary could interpose.

Now this disclosure operated in two ways. Brandon's presence was, it is true, just what Mary had so ardently wished, but the danger, and, therefore, the need, was gone when she found that the man who was following them had no evil intent. Two thoughts quickly flashed through the girl's mind. She was angry with Brandon for having cheated her out of so many favors and for having slighted her love, as she had succeeded in convincing herself was the case, all of which Grouche had confirmed by telling her he was false. Then she had been discovered in doing what she knew she should have left undone, and what she was anxious to conceal from every one; and worst of all, had been discovered by the very person from whom she was most anxious to hide it.

So she turned upon Jane angrily, "Jane Bolingbroke, you shall leave me as soon as we get back to Greenwich for this betrayal of my confidence."

She was not afraid now that the danger was over, and feared no new danger with Brandon at hand to protest her, for in her heart she felt that to overcome a few fiery dragons and a company or so of giants would be a mere pastime to him; yet see how she treated him. The girls had stopped when Jane called Brandon, and he was at once by their side with uncovered head, hoping for, and, of course, expecting a warm welcome. But even Brandon, with his fund of worldly philosophy, had not learned not to put his trust in princesses, and his surprise was benumbing when Mary turned angrily upon him.

"Master Brandon, your impudence in following us shall cost you dearly. We do not desire your company, and will thank you to leave us to our own affairs, as we wish you to attend exclusively to yours."

This from the girl who had given him so much within less than a week! Poor Brandon!

Jane, who had called him up, and was the cause of his following them, began to weep.

"Sir," said she, "forgive me; it was not my fault; she had just said——" Slap! came Mary's hand on Jane's mouth; and Jane was marched off, weeping bitterly.

The girls had started up toward East Cheap when they left Grouche's, intending to go home by an upper route, and now they walked rapidly in that direction. Brandon continued to follow them, notwithstanding what Mary had said, and she thanked him and her God ever after that he did.

They had been walking not more than five minutes, when, just as the girls turned a corner into a secluded little street, winding its way among the fish warehouses, four horsemen passed Brandon in evident pursuit of them. Brandon hurried forward, but before he reached the corner heard screams of fright, and as he turned into the street distinctly saw that two of the men had dismounted and were trying to overtake the fleeing girls. Fright lent wings to their feet, and their short skirts affording freedom to their limbs, they were giving the pursures a warm little race, screaming at every step to the full limit of their voices. How they did run and scream! It was but a moment till Brandon came up with the pursuers, who, all unconscious that they in turn were pursued, did not expect an attack from the rear. The men remaining on horseback shouted an alarm to their comrades, but so intent were the latter in their pursuit that they did not hear. One of the men on foot fell dead, pierced through the back of the neck by Brandon's sword, before either was aware of his presence. The other turned, but was a corpse before he could cry out. The girls had stopped a short distance ahead, exhausted by their flight. Mary had stumbled and fallen, but had risen again, and both were now leaning against a wall, clinging to each other, a picture of abject terror. Brandon ran to the girls, but by the time he reached them the two men on horseback were there also, hacking away at him from their saddles. Brandon did his best to save himself from being cut to pieces and the girls from being trampled under foot by the prancing horses. A narrow jutting of the wall, a foot or two in width, a sort of flying buttress, gave him a little advantage, and up into the slight shelter of the corner thus formed he thust the girls, and, with his back to them, faced his unequal foe wiht drawn sword. Fortunately the position allowed only one horse to attack them. Two men on foot would have been less in each other's way and much more effective. The men, however, stuck to their horses, and one of them pressed the attack, striking at Brandon most viciously. It being dark, and the distance deceptive, the horseman's sword at last struck the wall, a flash of sparks flying in its train, and lucky it was, or this story would have ended here. Thereupon Brandon thrust his sword into the horse's throat, causing it to rear backward, plunging and lunging into the street, where it fell, holding its rider by the leg against the cobblestones of a little gutter.

A cry from the fallen horseman brought his companion to his side and gave Brandon an opportunity to escape with the girls. Of this he took advantage, you may be sure, for one of his mottoes was that the greatest fool in the world is he who does not early in life learn how and when to run.

In the light of the sparks from the sword-stroke upon the wall, brief as it was, Brandon recognized the face of Buckingham, from which the mask had fallen. Of this he did not speak to any one till long afterward, and his silence was almost his undoing.

How often a word spoken or unspoken may have the very deuce in it either way.

The girls were nearly dead from fright, and in order to make any sort of progress Brandon had to carry the princess and help Jane until he thought they were out of danger. Jane soon recovered, but Mary did not seem anxious to walk, and lay with her head upon Brandon's shoulder, apparently contented enough.

In a few minutes Jane said, "If you can walk now, my lady, I think you had better. We shall soon be near Fishmonger's hall, where some one is sure to be standing at this hour."

Mary said nothing in reply to Jane, but, as Brandon fell a step or two behind at a narrow crossing, whispered:

"Forgive me, forgive me; I will do any penance you ask; I am unworthy to speak your name. I owe you my life and more—and more a thousand times." At this she lifted her arm and placed her hand upon his cheek and neck. She then learned for the first time that he was wounded, and the tears came softly as she slipped from his arms to the ground. She walked beside him quietly for a little time, then, taking his hand in both of hers, gently lifted it to her lips and laid it upon her breast. Half an hour afterward Brandon left the girls at Bridewell house, went over to the bridge where he had left his horse at a hostelry, and rode down to Greenwich.

So Mary had made her trip to Grouche's, but it was labor worse than lost. Grouche had told her nothing she wanted to know, though much that he supposed she would like to learn. He had told her she had many lovers, a fact which her face and form would make easy enough to discover. He informed her also that she had a low-born lover, and in order to put a little evil in with the good fotrune and give what he said an air of truth, he added to Mary's state of unrest more than he thought by telling her that her low-born lover was false. He thought to flatter her by predicting that she would soon marry a very great prince or nobleman, the indications being in favor of the former, and, in place of this making her happy, she wished the wretched soothsayer in the bottomless pit—he and all his prophecies; herself, too, for going to him. His guesses were pretty shrewd; that is, admitting he did not know who Mary was, which she at least supposed was the case. So Mary wept that night and moaned and moaned because she had gone to Grouche's. It had added infinitely to the pain of which her heart was already too full, and made her thoroughly wretched and unhappy. As usual, though, with the blunders of stubborn, self-willed people, some one else had to pay the cost of her folly. Brandon was paymaster in this case, and when you see how dearly he paid, and how poorly she requited the debt, I fear you will despise her. Wait, though! Be not hasty. The right of judgment belongs to—you know whom. No man knows another man's heart, much less a woman's, so how can he judge? We shall all have more than enough of judging by and by. So let us put off for as many tomorrows as possible the thing that should be left undone today.

(To be continued in the next issue.)

Sidelights

Here First.

Willie was boasting about his family. "Our folks came over in the Mayflower," he declared proudly.

"Huh! That's nothing," said Bobbie. "I guess they stayed with our folks the first night after they landed."—Boston Transcript.

Not This Time.

"Quick, hand me that satchel!" yelled the physician, "a man just telephoned me in a dying voice that he couldn't live without me."

"Wait," declared his wife, who had taken up the receiver, "that call is for Edith."—Punch Bowl.

Forbidden Fruit.

London Saturday Journal: The sailor had been showing the lady visitor over the ship. In thanking him she said:

"I see that by the rules of your ship tips are forbidden."

"Lor' bless yer 'eart, ma'am," replied Jack, "so were the apples in the Garden of Eden.'

The Lowest Office.

"Boss," said Ras Lightfoot the other day, "I gotta git off termorrah."

"Get off tomorrow?"

"Yessah."

"But I can't spare you very well."

"I gotta go. Its lodge business."

"That new lodge you joined?"

"Yessah."

"Why are you so badly needed at the meeting?"

"Ah am de sumblime king."

"Sumbline king?"

"Yessah."

"You have been a member of that lodge only two weeks and you tell me you are the sublime king already?"

"Yessah."

"How does that come?"

"You see, sah, in ouagh lodge de sumblime king am de lowes' office what dey is."

Review Building, Spokane, Wash.

Both Ways

Plan to Work 'Coming and Going'

What is the most helpful thing you have learned during the last year in your experience with housekeeping? Let us pass it along to other housekeepers.

To the Editor of the Farmer: I find the old saying, "Make your head have your heels," works as well now as ever.

I try to plan my work so I can work "coming and going," and, sister housekeepers, you can so arrange your kitchens, however large or small, to have hundreds of steps. I speak as the mother of five (now grown) children, one pair of twins, and I live on a farm.

The greatest helper in the last year has been my washer, run by a small gasoline engine.

MRS. ALICE FARR.

Albion, Wash.

When I Read

Finding Time in the Farm Home

By Mariella Ladd.

The core of my method of finding time for reading is the fact that I never for a moment allow myself to forget that reading is one of my most important duties.

Hundreds of men, trained for the purpose, are employed by the United States government to collect information about various phases of farm life. Thousands more are engaged in putting this information into readable form. Libraries of various kinds abound. If I read ever so industriously, I can not read more than a small fraction of what is written. If I do not read, and if I do not take advantage of a library selected for me with care by experts, I lose, and deserve to lose, all the chances of improved conditions that extended knowledge might bring me.

Then, I need to keep in touch with women outside my own class.

Last, but not least, I read to keep my mind supple and growing.

I arrange my daily work carefully, so as to get some reading time each day. If anything happens that I can not get it, I let it go and take double allowance at the first convenient time.

I find it a great economy of time in reading to make a plan and follow it closely. For instance, I do not take up a book and read it through, lay it down, and forget it. I ask myself what I want to know, and look for that in all the books I read until I have found it.

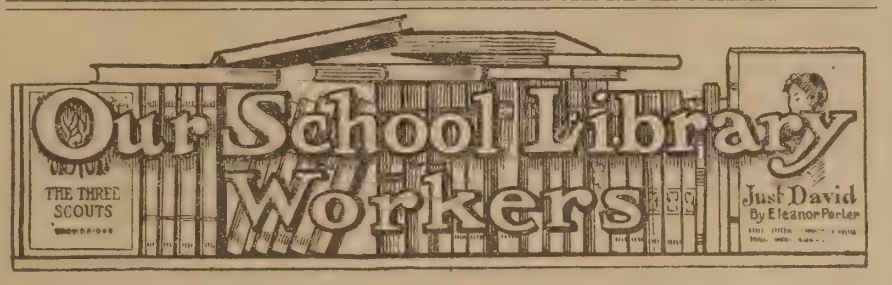
The subjects about which I am most curious just now are religion, cooperation, salesmanship, marriage, social service, politics and child study.

When I am using my hands for mechanical work I often use my mind for memorizing passages from books that seem to me worth memorizing. I think this habit is a great help to one. It not only overcomes the tendency to worry that is so common; it also keeps the mind balanced and cool under irritations. Memorizing of this kind I always do from a slip of paper, never from a book. I have a great objection to seeing books mixed up with the paraphernalia of a kitchen or a sewing room.

I always welcome any offer of any one to read aloud to me, whether I can fully enjoy the reading or not. Sometimes I learn quite a number of things in this way, and sometimes ideas come to me that I can afterward follow up. In any case, I am encouraging reading in some one and fostering a kind of cooperation that I like very much.

Next week Mrs. Ladd will talk about "What I Like to Read." This will be the fourth and last of her articles in this series.

Closet Room



Where There Was None Before

By MRS. E. J. CANNADY.

Many houses are scantily provided with closets and when there are several children in the family, the housewife must exercise considerable ingenuity to find a place for their numerous garments.

A corner closet is easily made and the amount one will hold is astonishing to those who have never had one. Fit a three-cornered shelf in one corner of the room, using two or three brackets which may be purchased at any hardware store. The shelf should be seven or more feet from the floor. Two curtains may be hung in front, or a carpenter called upon to hang a door and fill out the space with lumber. If the ceiling of the room is high the closet may be extended to the ceiling, and the space above the shelf will be an excellent place to keep the hat boxes. A curtain or small door in front will protect them from the dust.

An ingenious woman who had no place for bed clothes and table linen had a box made, six feet long, three feet wide and 18 inches deep, just the right size to fit into the square bay window of the dining room. The top was fastened on with hinges, and the interior divided into two parts by a partition. A cushion was made like a narrow mattress and covered with art denim. With the addition of a few pillows this was a cozy window seat. The box was stained and varnished to match the wood of the room. If one wishes to do the work herself, a packing box of the proper size and shap may be obtained at a dry goods store and covered with denim, put on plain or laid in pleats and the top may be padded and covered with denim. An article similar to this is a home-made wardrobe couch. Fit a castor under each corner. Secure the lid to the box with hinges.

After a spirited contest between the Reds and Blues of White Swan school, White Swan, Wash., the valiant Blues went down to defeat before the great drive of the Reds. However, the "spoils of war" were equally divided; and as fine a lot of books as the heart of boy and girl could desire were sent the school for the enjoyment of Reds and Blues alike. Just the same the Blues feel that when another library contest is put on they will leave the Reds so far in the rear that all the present glory of the Reds will be transferred with great pomp and circumstance to the Blues. On the other hand, the Reds are strongly inclined to make light of the chance of the Blues ever beating them. And there you are. We look for the Blues to call for another contest.

Lower Naches school has just secured a fine list of books. G. A. Martin, superintendent, selected them from our "435 book special," which certainly gives a wide and varied selection of the best books in the English language.

Ever since Miss Mildred Glasgow of Bossburg school made such a splendid showing for individual work as a subscription getter there has been keen rivalry from individual workers in other schools to beat her record. So far Miss Mildred has not been bested, although Bessie Webb of Ford school, Stevens county, Wash., now has her tied. Miss Bessie is a lieutenant of the Reds of Ford school and as the contest is in full swing it looks as though the championship of the state may soon have to be transferred from Mildred to Bessie.

Miss Clara E. Gollehon, teacher of Ford school, says in her letter of February 7: "I am sending you 15 subscriptions for your paper. They have been taken since February 1. Below are the officers of our Red and Blue teams:

Reds—Captain, Florence Tigges; lieutenant, Bessie Webb; lieutenant, Florence Crooker.

Blues—Captain, Glenn Hays; lieutenant, William Morgan; lieutenant, Roy Knox.

With 13 of the 15 subscriptions taken by the Red team it looks like the Blues were getting ready for one final, glorious burst of speed that will even the race up and make it a neck and neck finish after all.

Yakima county, as mentioned in our notes in the issue of February 8, has the idea that the real champion individual workers live down that way. We must admit that there are some mighty capable workers in the schools of Yakima county, and we are just going to drop the hint for what it may be worth to the boys and girls of Stevens caunty to the hotbed of competition now exists in Yakima county and Stevens will have to do some real hustling if she wants to prevent Yakima getting in the lead.

Books sent this week to the following schools:

Wiley City school, Yakima county, J. K. Busch, teacher; Artesian school, Yakima county, R. L. Dailey, principal.

New schools to start library contests this week:

Deer Creek school, Stevens county, Wash., Miss Alta Cooney, teacher.

Deer Lake school, Island county, Wash., Miss Hanna Jacobsen, teacher.

Prescott school, Walla Walla, Wash., L. E. Mark, teacher.

HONOR ROLL.

Union Flat school—Ruby Sanford.

Artesian school—Lois Turnley.

Chewelah school—Dorothy Rauch, Algene Spedden, Edwin Monroe, Claude Strobe.

Ford school—Florence Tiggs, Bessie Webb, Florence Croker, Willie Morgan, Glenn Hays, Mamie Hunter.

Wiley City school—Marion Hughes, Madeline Wiley, Constance Wiley, Gladys Langworthy, Madge Carpenter, Lila Draper, La Verne Hackett.

White Swan school—Clarence Morin.

Ha! What's this? A prize of yellow gold? Why, Yes, so it is! And it's for school library workers in Washington.

NOTICE.

As a reward for good, hustling work by individual school library workers in Washington, our book man will pay $5 in gold to the boy or girl who has to his or her credit the greatest number of Washington Farmer subscriptions up to May 1, 1917.

All library workers who have made good records up to this time are eligible. To such workers we say: "Don't stop—make your present start a stepping stone and win the gold prize of $5.

Free Library

Is Maintained by Community

The Bellevue Improvement club of Bellevue, King county, Wash., has initiated a movement which might profitably be followed by other organizations. At a central location in the community a library of books pertaining to agriculture has been gathered. This includes government bulletins and authoritative works published by private firms. The library is available without charge to all local citizens, so that it is an easy matter for a puzzled gardener or poultryman to settle any doubtful point without waiting for the slow and often expensive solution of experience.

LINEN YARN

Government to Take Possession.

A further notice has been issued by the British army council under the defense of the realm regulations in which dealings in any yarns suitable for aeroplane linens are prohibited. Notice is also given of an intention of the government to take possession of all stocks of Courtrai flax or yarns, and an order has been made requiring all persons holding any stocks of Courtrai flax to make a return of the same with full particulars from December 30, 1916. A further order has been issued providing that flax that can be used for the manufacture of aeroplane cloth must not be used for any other purpose without permission.

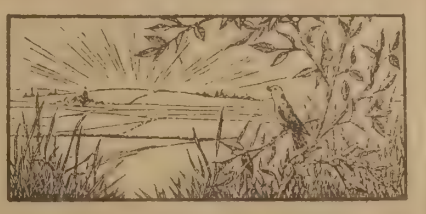
Negro Normal Schools.

North Carolina has three negro normal schools.

The Chinese Woolflower

introduced by us three years ago is now acknowledged to be the greatest new garden annual. It is a success everywhere, plants growing 2 to 3 feet, a pyramid of color, its many branches bearing great balls of wool-like substance and most intense crimson scarlet. Flowers develop in June and none fade before frost, ever brilliant and showy beyond belief. Seed per pkt. 10 cts., 3 for 25 cts.

New Mastodon Pansies. For immense size, wonderful colors and vigor they are marvels. Seed 10 cts. per pkt., 3 for 25 cts.



Everblooming Sweet William, a startling novelty, blooming in 60 days from seed, continuing all the season, and every season being hardy. Flowers large, colors exquisite—pkt. 10 cts.

These 3 great Novelties, with two more (5) for only 20 cts. See Catalog for colored plates, culture, etc.

Our Big Catalog of Flower and Veg. Seeds, Bulbs, Plants and rare new fruits free. We are the largest growers in the world of Gladiolus, Cannas, Dahlias, Lilies, Iris, etc.

JOHN LEWIS CHILDS, Inc., Floral Park, N. Y

Whither shall I go from thy Spirit? or wither shall I flee from thy presence?

If I ascend up into heaven, thou art there; if I make my bed in hell, behold, thou art there.

If I take the wings of the morning, and dwell in the uttermost parts of the sea;

Even there shall thy hand lead me, and thy right hand shall hold me.

Patterns

1948—Girls overblouse dress with guimps. Cut in 5 sizes, 4, 6, 8, 10 and 12 years. It requires 1 3-4 yards of 27-inch material for the guimpe and 3 3-8 yards for the dress, for an 8-year size. Price, 10 cents.

1944—Girl's one-piece dress. Cut in 4 sizes: 2, 4, 6 and 8 years. Size 8 will require 2 3-4 yards of 44-inch material. Price, 10 cents.

Sleeplessness

Little Helps to Overcome It

By Alice W. Barland.

Sleeplessness, it seems to me, is one of the worst trials that flesh is heir to. One is nervous and tired, and every nerve, bone and muscle cries out for the rest that comes only with natural sleep, yet he can not "let go" of himself long enough to fully relax. Have you ever been in that condition? If you have, you know how you tossed and turned, listened to the clock strike the hours, remembered all the work you must do the next day, no matter how you should feel.

I have been told all sorts of things to do to induce sleep. One was to count, and if just counting did not bring results, then count sheep jumping over a fence. Perhaps this system might work with some, but I am sure I have counted 10,000 sheep jumping over a fence, and the more I counted the more wide-awake I became.

All that is necessary to do to get to sleep is to relax every muscle. Watch yourself go to sleep, or try to go to sleep. If you are of a nervous temperament you will notice that you are not relaxed; that your body, instead of being limp and sinking into your bed, is tense with nerve-strain, and your head drawn back in an unnatural and uncomfortable position.

Try turning on your right side, leaving your heart full power to do its work. Curve your neck by holding your chin down, and just try to believe your body is sinking into the softest place and you are content that it should. If this fails to bring sleep, try deep breathing in addition. Breathe just as deeply as you are able, filling your lungs to the utmost. You will find it so hard to do that you will have to concentrate your mind on the job, and if your poor brain has been working away on something that is a worry or trouble, it will rest off those brain cells, and, before you know it is going to happen, you will be asleep. This is well worth trying and has saved me from many a sleepless night. If your brain refuses to stop working, try eating a piece of dry bread, a cracker or a cookie. It will seem a bother to get up and get it, but it has helped me to get a good sleep.

Just Like George Washington.

When I'm a man I'm going to be
A soldier brave and true,
And do the things that Washington
Has been supposed to do.

George Washington, he crossed the Alps
In seventeen-eighty six;
He got the southern negroes
Out of a frightful fix.

He fought with Alexander,
He crossed the ocean blue,
And landed in America
In fourteen-ninety-two.

He led the Greeks against the foe,
And won the Trojan war;
He conquered land in Africa,
And chased the heathen Moor.

He won the fight at Hastings
He made old Caesar run;
He drove away the savage Turk
And Attila, the Hun.

He did—he did so many things—
Oh, how I'd love to be
A hero like George Washington,
And be as brave as he!

—Cecelia G. Gerson.

To Protect Birds.

United States and Great Britain have signed a treaty for the mutual border protection of migratory birds. One of these days Uncle Sam wil have a like treaty with Mexico.

Cuttlefish of Greek Coast.

The sun-dried cuttlefish or devil fish of the Greek coast with suckers intact, looks like a football. The shredded part is more tempting than the tentacles.

Be Brief

Is a Good Motto for Dreamers

What is the quotation or what are the words which have helped you in the journey of life?

Is it a phrase from some famous author or was it the words from some neighborly soul who helped you over a hard place and left you the invaluable legacy of a life motto?

What are your favorite motto, your favorite quotation, your favorite words?

Send them to the editor of the Farmer and let those words help another which have helped you.

To the Editor of the Farmer: The following is a motto which I have used for nine years and I think it is worthy of attention and request it to be printed in the Farmer. It is a very good stimulant for a dreamer: "Be brief; time is life." W. H. WINN.

Albany, Ore.

Size of Cuttlefish.

Some cuttlefish are so large that the suckers, when stretched to their full length, can encompass the girth of a half dozen human beings.

Go-to-School-Monday

Why waste the next three months? Plenty of time to get our short course in Bookkeeping, Business, Arithmetic, Commercial Law, etc.

Take care of your farm accounts more accurately by taking our Farm Set.

ELIZABETH HAD A LONG AUTO TRIP WITH GRANDPA

Dear Aunt Nellie: I want to tell my cousins about my automobile trip with Grandpa. We started about 8 o'clock. We had dinner at Conconully, a little town up in the mountains. There is a beautiful blue lake at the town. The cemetery is right by the lake. Grandpa went there to set a monument and we went with him. There was lots of pretty flowers there. We ran around and looked at the flowers while he was at work. Then we went to Okanogan to stay all night. We went to church with the lady and her little granddaughter from the hotel. The next day we went to Chelan, a distance af about 75 miles. There we had dinner. Chelan is a very pretty town located on a beautiful lake almost surrounded by snow capped mountains. We then started for Wenatchee, which is about 65 miles. Grandma was surely surprised to see us. Grandpa said that we were such good girls that he would take us another time this summer. We can hardly wait.—Elizabeth Bowen, Oroville, Wash.

DAYS ARE WORST WHEN THAW SPOILS COASTING

Dear Aunt Nellie: I have not written to the Childrens' Corner for a long time. Ever since school started I have neglected to write altogether. I was 12 years old October 3. Although we live just outside of the city limits of North Yakima, my father takes the Farmer, for he subscribed for it before we moved close to town. I think the subject on which I will write will be "The Worst Day." In the winter time after a big snow has come and all the children are out playing on their sleds having a good time and a thaw comes seems to me a shame. I love to play in the snow and I hate to see it go away. This winter after a big snow a thaw came and the days were nice and warm, but I couldn't enjoy them for I had just gotten a sled that same day it started to thaw. I enjoy the spring best, but when the days are cloudy I don't enjoy them at all. When I was smaller and afraid of thunder I didn't like that, but now I enjoy thunder showers.—Thela Bowen, R. 7, North Yakima, Wash.

HAVE TWO PIGS; BLANCHE IS MOST AFRAID OF THEM.

Dear Aunt Nellie: My father takes the Farmer. I like the Corner very much. I will be 12 the 15th of March. I live on a 160-acre ranch. There are six head of horses and 21 cows, and four little calves. One of the calves' names is Blacky, one King J. R., and the other ones' names are Pet and Spot. We have two pigs which I am most afraid of. I live five miles east of Winlock. I have two brothers and two sisters. Their names are Ralph, Kenneth, Ruby and Kathy. Our school started in September. My brother Ralph is in the third grade, and so is Ruby. I am the oldest one. In the winter time the Lacamas creek gets up in one of our pastures. I have blue eyes and nearly red hair. I have an aunt in the ninth grade. She has great big brown eyes. I can crochet, but I can't tat. My teacher's name is Miss Mabel Perry, and I like her very much. —Blanch Cantrell, Lacamas Stock Farm, Winlock, Wash., R. F. D. No. 1, box 115.

AGNES LIKES HISTORY, READING AND GRAMMAR

Dear Aunt Nellie: I would like to join the Children's Corner. I am 12 years old, and my birthday comes in July. I live on a 480-acre wheat farm. I have two brothers and two sisters. One brother is a farmer and the other is still going to high school. One of my sisters is a nurse and the other is a teacher. I am in the fifth grade. I like history and reading and grammar. We have about 21 pupils in our school. Our teacher's name is Miss Lucinda Dunagan.—Agnes Lauer, R. 1, Pomeroy, Wash.

CLARA IS A WIDE-AWAKE BOOSTER FOR THE CORNER

Dear Aunt Nellie: This is the fourth time I have written to the Corner. I got Mabel Nicholson, Alma Lunn and Bertha Gamble to write to the Corner. My subject will be "Fun on the Farm." I like farm life very much and would not exchange with any city girl. I live one-half mile from Bothell. I go to the Bothell school. There are 12 nice big rooms in our school. We have a nice big gym. There the girls and boys play basket ball and games. We children after school go skating on the Sammish river which is frozen. There are many, many reasons why I like the country better than the city. The tall stately firs stand bowing as the winds blow and give us nature's sweetest odors. The beautiful pussy willows soon will be out and give the world some beautiful branches of them. The spring is coming with all its glory and flowers and birds.—Clara Olson, Box 108, Bothell, Wash.

MYRTLE LOVES MUSIC; SHE IS TAKING LESSONS

Dear Aunt Nellie: Father takes the Farmer and I enjoy reading the Children's Corner. I think our corner is growing every day. I was very proud of my prize and many thanks. I was 11 years old October 22. I live on a 160-acre farm. I am in the fifth grade at school. We have four cows and one calf. We have eight horses and three colts. One colt will eat tobacco leaves. We have a piano and I have taken 12 music lessons. I can play quite a few songs. I love music. I like to go to school. My teacher's name is Miss Ice. I have four brothers and two sisters. One of my sisters is dead. We have an Overland car. When the roads are good we have many pleasure trips. My youngest brother, Ira, is 14 years old and he can run the machine anywhere.—Myrtle Goldie Ledbetter, St. John, Wash.

WISHES SOME OF THE GIRLS TO WRITE TO HER

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I thought I would write, too. I live on the farm and I have lots of fun. We have 24 horses and three cows. Their names are Reddy and Spot and Jersey. We have one dog and his name is Benny. My weight is 151 pounds. I am 13 years old and my birthday was the 17th of September. I have two sisters and one brother. Their names are Edward and Emily and Agnes. I go to school and I am in the fifth grade. My teacher's name is Miss Frans. We have a big house. Have I a twin? I wish some of the girls would write to me.—Irene M. M. Glissler, Lock Box 357, Odessa, Wash.

ORCHARD AND FLOWERS ARE LOVELY IN SUMMER

Dear Aunt Nellie: I have thought so many times that I would write a letter. We have had nice days for a while. I am in the eighth grade and 14 years old. A letter from any girl about my age is welcome. I live three miles from school. I have four brothers and a sister. They are all younger than I. We live on a 40-acre farm. We have cattle. If I graduate this year I will go to high school next year. I like summer best because we go swimming in a lake. The lake is only a mile and a half away from our farm and everything looks so nice in summer especially the fruit orchard and the flower garden. Well the winter is fun, too; you can skate or coast.—Senia Hulk, Kent, Wash.

SNOW WAS A FOOT DEEP WHERE EDITH CRABB LIVES

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. We are having revival meetings now. I am 9 years old, my birthday is the 19th of December. I am in the third grade. We have three cows. Their names are Rose, Dottie and Blossie. We have 20 horses. We have one dog; his name is Don. We are having lots of snow now. It is about a foot deep. I have two sisters and three brothers. Ruth is in the fourth grade and Ina and Dewey are in the eighth grade. My youngest brother's name is Burl and my oldest brother's name is Wade. My youngest sister's name is Ruth.—Edith Crabb, Marengo, Wash.

RUTH TELLS US OF THEIR BEAUTIFUL SCHOOLHOUSE

Dear Aunt Nellie: I am going to tell you about our beautiful new schoolhouse. It is made of bricks and tile with white trimmings. We have four rooms and a library and a teacher's office. My teacher's name is Miss Spencer. I like her very much. I am 11 years old and in the sixth grade. My birthday is in November. I have a brother 6 years old and two sisters, one 9 and one 4.—Ruth Friday, R. F. D. No. 1, Box 229, Puyallup, Wash.

WHEN THERE IS SNOW PAPA TAKES THEM TO SCHOOL

Dear Aunt Nellie: I like to read the letters from the Children's Corner. My papa takes the Farmer. I have one sister and one brother. My brother's name is Thomas, and my sister's name is Dorothea. My sister is 7 years old, and my brother is 3 years old. We have four cats, one big one and three little ones. Santa was too good to me. I got lots of presents this year. We have a man working for us. I couldn't go to school last week. I am in the third grade. I am 9 years old I have a mile and a half to go to school. My sister is in the second grade. We have about 75 chickens and two geese. We have 19 pupils in our school. My sister likes school, too. My teacher's name is Miss Codd. The snow is about three or four inches where it isn't drifted.—Myrtle Godch, Box 116, Uniontown, Wash.

VONDA'S BROTHER LIKES TO PLAY WITH THE DOG

Dear Aunt Nellie: I have two sisters and two brothers. My sisters' names are Dora and Orphia, and my brothers' names are Bruce and Dades. I am 11 and my birthday is June 30. We have four little kittens and one old cat. We have a dog. Bruce likes to play with the dog. Ruby is one of our nearest neighbors, and she writes to the Children's Corner. I go to school and I am in the sixth grade. There are 31 children in my room. I have to walk two miles to school. I live on a 120-acre farm.—Vonda Boulden, R. F. D. No. 1, box 2, Elma, Wash.

FLORA WOULD LIKE TO TAKE THE TRIP INEZ HAD

Dear Aunt Nellie: It has been a long time since I wrote to the Children's Corner, but thought I would write again. I am 11 years old and my birthday is on the first day of February. We are having vacation now and I am spending the day with my friend. We are having a good time together. We went coasting today, but it didn't go very good. I would have liked to take the trip Inez Gagen did. I bet she had a good time.—Flora Lamurs, Box 41, Johnson, Wash.

DURING VACATION, FRANK HELPS FATHER HAUL BARK.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner but I hope it won't be the last. My father takes the Washington Farmer. I enjoy reading the other children's letters. I live on a 240-acre farm. We have 15 head of cows and seven head of horses. I am 14

Rhymes and Jingles for the Tittle Folks.

years old. I am in the eighth grade and have to walk a mile and a half to school. My teacher's name is Miss Larsen. There are seven pupils in our school. I would like very much to correspond with Harry Burke. During the Christmas vacation, I help my father haul bark. There is almost five inches of snow here. Your nephew, Frank Clinton Saeger, Box 231, Shelton, Wash.

DONALD TELLS ABOUT THE COYOTE HIS PAPA KILLED

Dear Aunt Nellie: I am going to tell you about the coyote that papa killed. I was standing at the window and saw turkeys flying up in trees so I went out to see what was the matter. The coyote came around chasing the chickens and so I told papa to get the gun quick and shoot him. So he did. Now we got a nice hide. I don't know what we will do with it.—Donald Ancil Fox, Cunningham, Wash.

FUN TO FEED ALL THE CHICKENS AND RABBITS

Dear Aunt Nellie: I have never written to the Children's Corner before. I like to read the letters very much. I am 8 years old. I go to school every day. I am in the third grade. I have three sisters and one brother. We have three cows and 60 chickens, four geese and 27 rabbits. I have lots of fun feeding them. I hope to read my letter in the Farmer.—Jennie Peterson, Box 67, Thomas, Wash.

BUSTER AND SNOWBALL ARE CECIL'S TWO PETS

Dear Aunt Nellie: I have read the letters in the Children's Corner and enjoy them very much. I am a boy 9 years old and my birthday is January 6. I am in the fifth grade. My teacher's name is Miss Ora Bullock. There are seven pupils in our school. I have three sisters and one brother. Their names are: Velma, age 14; Genevieve, 13; Doris, 2, and Wesley, 5. I have one mile to walk to school. I live on a 400-acre farm. We have 18 horses and three cows. I have two pets, a dog and a cat. The dog's name is Buster and the cat's Snowball. We had a play on Christmas and it was called "Kris Kringle's Minstrels." Kris Kringle brought me a watch, a fairy-tale book, a picture, card and handkerchiefs. I wanted him to bring me a bank, but I did not get it. —Cecil Wayne Bramhall, Dayton, Wash.

SHE IS OLDER THAN HER BROTHERS AND SISTERS

Dear Aunt Nellie: I like to read the letters in the Corner very much. I was 14 years old December 3, and I am in the eighth grade. I live on a 40-acre farm a mile from Rochester. We have five cows, three calves, three horses and about 80 chickens. We have a dog named Fox and a cat named Tommy. I have two brothers and two sisters. Their names are Edwin, Albert, Ruth and Florence. My oldest brother is 11 years old and the younger is seven. I am the oldest in the family. My teacher's name is Mr. Hunter and I like him fine. I walk a mile to school every day. I would like to correspond with Mildred Little or any other girl of my own age.—Alvina Forsman, Rochester, Wash.

LIVES ON A FARM WITH HER UNCLE AND AUNT

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 11 years old. My birthday is on May 19. I am in the fifth grade. My teacher's name is Miss Bergersen. I live with my uncle and aunt on a farm of 135 acres. I have lived here since I was 11 days old. My father, brothers and sister live in San de Fuca, Wash., about 12 miles from here. In summer, during vacation, I stay with them. On my uncle's farm there are about 15 cows, eight calves, three horses, one pony, pigs and a few chickens. We have two dogs and two cats. The dogs' names are Dixie and Sport. I would like to have some of the girls write to me.—Annie Van Dam, Oak Harbor, Wash.

THIS COUSIN WALKS A MILE TO HER SCHOOL

Dear Aunt Nellie: I have been reading the Children's Corner. I like it very much. I go to school. I am in the seventh and eighth grades. I am 13 years old, or will be 14 on May 15. I go to school one mile. My teacher's name is Mr. Stevens. I have two sisters. Their names are Lyda and Alice. I live on a farm. One of my friends, Ella Love, wrote to the Corner also. I have a married sister who has a little boy baby that will be 4 months old the 26th of January.—Viola Augst, Box No. 30, Beebe, Wash.

WRITE AGAIN, LYDA; TELL US MORE ABOUT YOURSELF

Dear Aunt Nellie: I have been reading the Children's Corner. I like it very much. I thought I would write to the Corner. I am 11 years old and will be 12 the 7th of April. We have many chickens. I like to feed them; and then we have four cows and two calves. We have 11 mules and four horses and one little colt. I have four sisters and five brothers. We go to the Enterprise schoolhouse. We live one mile from school. We walk in summer and ride in winter.—Lyda Augst, box No. 30, Beebe, Wash.

COUSIN MARGARET WANTS A CORNER CORRESPONDENT

Dear Aunt Nellie: This is the first time I have written to the children's corner. I am a little girl, 11 years old. I am in the fourth grade. Our teacher's name is Miss Hamilton. We have 13 pupils in our school. We have one cow, one calf and three dogs. Their names are Jimmy, Happy, Prince. We have 13 horses, three pigs and 20 chickens. I have three-quarters of a mile to go to school. I would like to have some of the girls write to me.—Margaret Cox, Leahy, Wash.

FOR BOYS AND GIRLS.

Send for a copy of "Pep," the new boys' and girls' paper. You are entitled to a sample copy free and you will receive it regularly, without charge, if you join our Money-Making club. When you ask for your copy of "Pep," inquire about the Money-Making club. A postcard will do. Premium Dept., Washington Farmer, room 87 Review building, Spokane, Wash.; —Adv.

Grain and Produce Markets

Chicago Grain.

CHICAGO, Feb. 17.—Many complaints that abnormally dry weather in the southwest and west was causing serious crop damages gave an upward slant to wheat today. The market closed unsettled at the same as yesterday's finish to 1 1-2c higher, with May $1.73 1-2 to $1.73 5-8, and July $1.48@1.48 3-4 to $1.49. Corn wound up unchanged to 1-8@1-4c higher, oats gained 1-8c to 1-4c, and provisions showed a rise of 10c to 20c.

Disappointment over the absence of any new export buying led to some reaction in wheat prices as the day approached an end. New crop months, however, maintained a relatively firm tone.

Some inquiry from the seaboard made the corn market harden a trifle. Oats reflected the changes in corn values. Trade was so light that the market was easily influenced.

Higher quotations on hogs brought about firmness in provisions. The bulges, though, led to considerable realizing on the part of holders.

Cash Quotations.

CHICAGO, Feb. 17.—Wheat—No. 2 and No. 3 red and No. 2 and No. 3 hard, nominal.

Corn—No. 2 yellow, nominal: No. 4 yellow, 99c@$1; No. 4 white, $1.00¼.

Oats—No. 3 white, 58½@58¾c; standard, 59@59½c.

Rye—No. 2, nominal.

Barley, $1@1.30.

Timothy, $3.50@5.50; clover, $12@18.

Pacific Northwest Grain.

PORTLAND, Ore., Feb. 17.—Wheat strong. No trading. Spot bids unchanged to ½c up. Bluestem, $1.57½; fortyfold, $1.53; club, $1.52; red Russian, $1.49.

Barley lower. No. 1 feed, $39.

TACOMA, Feb. 17.—Wheat, bluestem, $1.57; fortyfold, $1.53; club and red fife, $1.52; red russian, $1.49.

SEATTLE, Feb. 17.—Wheat, bluestem, $1.57; Turkey red, $1.53; fortyfold, $1.52; club, $1.54; fife, $1.54; red Russian, $1.52.

Barley, 39 per ton.

WILBUR, Wash., Feb. 17.—Bluestem, $1.40; club, $1.35. Oats, $37. Barley, $39. Oats and barley are being shipped here to supply the demand for feed.

Portland Wheat.

PORTLAND, Ore., Feb. 17.—The grain market is almost tied up by the bad railroad situation. There is a constant demand from the east for wheat and large premiums are offered for quick delivery, but when shipments are made there is no certainty the grain will get beyond the Missouri river. A number of sales are being made to the east, but they are for deferred shipment. A moderate amount of business is being done with California in the best milling grades and in chicken wheat.

Closing bids for February wheat were: Bluestem $1.57 1-2, forty-fold $1.53, club $1.52, red Russian $1.49.

Oats is held steady around $36 by the belief that the government will soon be in the market for a fresh supply for use on the border. The barley market continues inactive.

The market for 1917 grain bags is nominal at 11 1-2 cents. A smaller quantity is certain to be used this year and it is also likely there will be more difficulty in getting the needed supply from Calcutta than was the case last year.

Seattle Wheat.

SEATTLE, Feb. 17.—Buyers and sellers have been apathetic on the wheat market this week. Bids of $1.40 for bluestem and turkey red and 5c under for red wheats in the country have not been sufficiently attractive to draw out any of the small farm holdings. The car shortage, which is regarded as more pronounced on Puget sound than at any point in the west, is back of the apparent indifference of buyers who point out that even though they would be willing to bid up strong for the grain they could secure no cars in which to ship it. The present problem of exporters is not in getting more grain, but in moving what they have been holding on account of lack of railway equipment for several weeks.

Butter and Eggs.

PORTLAND, Ore., Feb. 17.—Butter—Weak; buying price butter fat down 4c; No. 1, 39c; No. 2, 37c; cube extras, 37c.

Candles Raised in Paris.

Candles have increased in price in Paris as a result of the restrictions placed on the use of electricity, gas and petroleum for illuminating purposes.

Portland Market.

PORTLAND, Ore., Feb. 17.—The butter market took a sharp drop of 4 cents in the latter part of the week. Weakness of outside markets was announced by creamery men as the cause of the decline. Since the lower price went into effect, however, there has been much quiet buying of cubes, which leads some to believe that the market was put down to enable shippers to fill a large order for the eastern market. It has been known for some time that there have been eastern inquiries for butter on the market.

Cheese is firmer again as stocks are being reduced by shipments to the eastern states.

Continued buying of eggs for Montana account is holding the market firm at the 32 cent basis, case count. Flocks of hens in this state are lighter than a year ago and it is probable egg prices will not fall below the 25 cent mark in the storing season. Last year eggs were stored at 20 to 22 cents and in previous years about 17 cents was considered a safe level by speculators.

Poultry and dressed meat receipts were small all the week and prices were firm with a brisk demand.

Onion growers at the close of the week advanced their selling price to $3.50 a sack. The unsold stock in the state now amounts to but 24 cars. The onions are keeping well.

Potatoes are firm at $3 to $3.25 bid at country points for shipping stock.

Apples are cleaning up well and the market is firm, but no higher.

Live Stock Quotations.

At Chicago.

CHICAGO, Feb. 17.—Hogs, receipts 18,000; strong 5c to 10c above yesterday's average; bulk, $12.20@12.40; light, $11.65@12.35; mixed, $12.05@12.50; heavy, $12@12.50; rough, $12@12.15; pigs, $9.40@10.70.

Cattle, receipts 800; steady. Native beef cattle, $7.85@12; stockers and feeders, $8.25@9.20; cows and heifers, $5.20@10.40; calves, $9.75@14.

Sheep, receipts 7,000; weak. Wethers, $11@12; lambs, $12.40@14.75.

At Omaha.

AHA, Feb. 17.—Hogs, receipts higher. Heavy, $12.10@12.30; light, $11.80@12.15; pigs, $10@11.75; bulk of sales, $11.90@12.15.

Cattle, receipts 1,200. Steady. Native steers, $8.25@11.25; cows and heifers, $7.25@9.25; western steers, $7.50@10.50; Texas steers, $7@8.25; stockers and feeders, $6.50@10.

Sheep, receipts 200; steady. Yearlings, $11.50@13.50; wethers, $10.50@11.50; lambs, $13.65@14.50.

At Portland.

PORTLAND, Ore., Feb. 17.—Hogs steady; receipts, 264. Bulk of packing grades, $12.20@12.25; heavy packing, $12.25@12.35; light packing, $12.20@12.25; rough heavies, $10.50@11; pigs and skips, $11@11.25; stock hogs, $9.75@10.25.

Cattle steady; receipts, 21. Steers, prime light, $9@9.25; prime heavy, $9@9.25; prime heavy, $9@9.25; good, $8.40@8.50; cows, choice, $7.50@7.75; medium to good, $7@7.25; ordinary to fair, $6@6.75; heifers, $4@8; bulls, $3.50@6; calves, $6@9.

Sheep steady; receipts, 35. Lambs east of mountains, $12.50@13; lambs, valley, $12.25@12.50; lambs, good, $11.25@11.75; choice wethers, $10.50@10.75; choice ewes, $9.25@9.75; heavy ewes, $8.75@9.25.

At Seattle.

SEATTLE, Feb. 17.—Receipts, 49 hogs; 22 cattle.

Hogs—Prime light, $12.35@12.50; medium to choice, $11@11.30; smooth heavy, $10.50@11.50; rough heavy, $9.55@10.25; hogs under 150 pounds, $9.20@9.65.

Cattle—Prime light steers, $9.25; medium to choice, $8.50@8.75; common to good, $6.75@8; medium to choice, $7.25@7.50; common to good, $5@6.50; best bulls, $5@5.75; common bulls, $3.50@4.50; calves, $7@9.

Sheep—Prime lambs, $10@10.50; good lambs, $9.75@10; wethers, $8.50@9; ewes, $6.50@8.

Spokane Stock Yards, Saturday.

Hogs—Receipts, 316 head; market strong. Prime heavy, $12.10@12.25; prime light, $12@12.10; prime mixed, $10.75@11.25; rough heavy, $11@11.25; stockers, $7.50@9; bulk of sales, $12@12.10.

Cattle—Receipts, 45; market strong. Prime heavy steers, $9@9.25; prime light steers, $8.65@8.85; good steers, $8@8.50; stockers and feeders, $5.50@6.50; prime cows, $7.50@8; good cows, $6.75@7; best heifers, $7.50@8; bulls, $3.50@6; calves, $6.50@9.

Sheep—Receipts none; market strong. Prime lambs, $11.75@12.25; common lambs, $10.75@11.25; choice yearlings, $9.75@10.50; good yearlings, $8@9; best mutton ewes, $8@8.50; common ewes, $7@7.50.

Seattle Market.

SEATTLE, Feb. 18.—Accentuated speculative feeling is the dominant note in the potato market for the weekend, with No. 1 Gems as the pivot at $70@75, an advance since Monday of $5 per ton. Holdings in this state have been located with acute exactness. There are less than 60 carloads of potatoes of all kinds in storage in Seattle, and not more than 100 carloads in eastern Washington that are not sold. These are the figures on which speculators base their chances for fliers on a still higher market.

Fresh ranch eggs are firm, but jobbers have no settled conviction that prices will remain strong for any length of time. Light receipts and a vigorous demand are responsible for the present strength in the market. Wholesalers are practically marking time until the opening of the storage egg season next month.

Butter is steady to firm on the decline of the week. Creamerymen report that there was a brisk movement for a day or two after the market fell, but that this business has slowly decreased to normal. That the peak of the high prices for this season has been struck and passed is universally conceded on Western avenue.

Stocks of old cheese are light and jobbers are trying to clean up with shading of prices.

Onions and potatoes occupy exactly the same position in future influences. Oregon holders, according to most reliable reports obtainable from here, have less than 25 cars. Australian imported onions may not get on this market for 30 days, and dealers are claiming that the Pacific coast will be cleaned up before that time.

Buoyant prices of oranges as a competitor have lifted the apple market 25c and increased the movement. Winesaps are quoted today at $2@2.25, although jobbers would not care to make the fact public until they had been able to replenish their light stocks from eastern Washington.

BUYING PRICES.

Unless otherwise stated the following prices are fixed upon a jobing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 31c per dozen.

Poultry—Live hens, fat, over 4 lbs., 20c per lb., do, 3 lbs. and under, 18c; old roosters, 11c per lb.; springs, 20@22c per lb.; ducks, 20c per lb.; squabs, large, $3.50 per dozen; geese, fat, 12@14c per lb.; turkeys, live, 23@24c.

Butterfat—43c lb.; dairy butter, 27c per lb.

Beef—Buying price: Prime beef steers, 7@8c per lb.; cows, fat, 7@8c per lb.

Hogs—Light, 13c per lb.; do, heavy, 11c per lb.

Veal—Fancy light, 14c per lb.; do, heavy, 12@13c per lb.

Hides—Salted, 19c per lb.; salt kip, 22c per lb.; salted calf, 32@35c per lb.; green hides, 16c per lb.; salted bulls, 15c per lb.; dry hides (short trim), 32@33c per lb.; dry calf (under six lbs.), 36c per lb.; bull and dry salts, 4c per lb. less; green bulls, 18c per lb.; dry butcher full wool sheep pelts, 20@23c per lb.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer:

Potatoes—Potatoes, $2.50@2.75 cwt; sweet potatoes, $6.

Apples—Washington apples, cooking, 65@85c; eating, $1@1.25; Wageners, 85c@$1.35 box; Jonathans, $1.25@1.35 box; Delicious, large, $1.75@2.25 box; Rome Beauties, $1.25 box; Winesaps, $1.75@2 box; Y. N. Pippins, $1.75@2 box.

Butter—Blanchard cartons, 43c lb; Medo-Maid, 43c lb; Cascade, 43c lb; Gold Coin, 36c lb; Gold Leaf, 43c lb; Better Butter, 43c lb; Hazelwood, 43c lb; Peerless, 39c lb; Jersey Belle, 42c lb; Attalia, 43c lb; Diadem, 43c lb; Jersey, 39c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 28½c; Hazelwood full cream triplets, 23c lb; Hazelwood Young America, 24c lb; Wisconsin limburger, 29c lb; brick cheese, 28c lb; domestic Swiss, 33c lb; Young Americas, 26c lb.

Eggs—Fresh local ranch eggs, $40.50; fresh eastern eggs, $10.50 case; eastern storage eggs, $9.50@10.50.

Live Poultry—Springs, 15@16c lb; hens, 15@16c lb; old roosters, 7@9c lb; ducks, 11@13c lb; turkeys, 20@27c.

Dressed Poultry—Hens, 19c lb; springers, 19c; old roosters, 12c; ducks, 16c; geese, 14c; turkeys, 28c.

Hide Quotations.

Remove Billboards.

Massachusetts proposes to remove offensive billboards from scenic highways.

Wool.

BOSTON, Feb. 16.—The Commercial Bulletin will say tomorrow:

"The wool market has been fairly active during the last week, especially in view of the limited stocks available. Manufacturers have shown a disposition to buy more or less steadily and in fair quantities. Prices show no material change compared with the end of last week, although everything is exceedingly firm. Rather more contracting is reported from the west and the mills report little change in the actual market."

Scoured basis: Texas fine, 12 months, $1.12@1.15; fine eight months, 95@97c.

California: Northern, $1.10@1.12; middle county, 95c@$1; southern, 75@80c.

Oregon: Eastern No. 1 staples, $1.05@1.17; eastern clothing, $1@1.03; valley No. 1, 95c@$1.

Territory: Fine staple, $1.20@1.25; half blood combing, $1.10@1.12; ¾ blood combing, 95c@$1; common and braid, 74@75c; fine clothing, $1.03@1.05; fine medium clothing, 98c@$1.

Pulled: Extra, $1.10@1.12; fine A, $1@1.03; AA, 95c@$1; A supers, 90@95c.

Hides, Fur, Wool, Horse Hair, Metal and Rubber. We are the largest dealers in the Inland Empire. Highest markets paid. Prompt returns. Deal with a home firm.

ACRE TRACTS—FOR SALE 669

WE OWN 3000 ACRES OF BENCH AND meadow land which we will close out on easy terms in 40-acre tracts or more at bargain prices, ranging from $10 per acre up. FIRST STATE BANK. MAHONEY & BAXTER, BONNERS FERRY, IDAHO.

FOR SALE OR EXCHANGE 702

FOR SALE OR EXCHANGE.

A first-class dairy farm of 760 acres, located at Washougal, Wash.; 1 block from depot, 3 blocks to school; fronting 2200 on a main highway, and fronting on the Columbia river a distance of two miles; only 25 miles from Portland. This place is fully stocked and equipped. Can raise plenty hay, alfalfa, corn, oats, etc., and pasture enough for a large quantity of live stock. At present we have 178 head of stock. Price $125,000. Mortgage $25,000, at 7 per cent, due in four years. This place must be seen to be appreciated. It has fine barns, two good houses, city electric lights and water. In fact, 40 acres are suitable for subdivision into acre lots, which would sell from $400 to $500 per acre. Owner is city resident, and is not a farmer, and has other business to take his attention. He would, on that account, exchange it for income property or straight stock ranch in eastern Washington or Oregon. L. GERLINGER, 506 GERLINGER BLDG PORTLAND, Ore.

NEWS FOR BREEDERS

During the Denver stock show Mr. Mayer, the well-known shire breeder of Uniontown, Wash., purchased the shire colt, Logan Hingiest, by Lock Hingiest, that was a grand champion at the Chicago International a few years ago.

D. O. Lively, late chief of the live stock division of the Panama-Pacific exposition, attended the Denver stock show. While greatly interested in the Hereford sales he did not buy anything at Denver. Mr. Lively recently purchased the Whitehall herd of registered Herefords—80 head—at Tracy, Cal., and has moved them to his place near Mayfield, Cal.

J. O. Watts, a Barred Rock breeder of Eugene, Ore., won first on a pullet bred cockerel at the National Western Poultry show at Denver in January. Oregon birds thus won a long way from home.

William Cox, who has been with the George Chandler & Son Hereford herd at Baker, Ore., for the last 18 months and made the show circuit in both 1915 and 1916, has accepted a position with the Hereford corporation of Wyoming at Cheyenne, a corporation that has one of the largest and best herds in the United States. The corporation is planning a show next fall.

J. H. Field of Lander, Wyo., who breeds Barred Rocks with egg production at all times the first consideration and who has a heavy laying strain, contends that show quality is not incompatible with utility. His birds are heavy as well as great layers. He exhibited at the National Western Poultry show in connection with the Denver stock show in January and won first on cockerel bred hen; first, pullet mating pen; second, third and fourth, cockerel bred pen; third and fourth, exhibition pen, and fifth, exhibition cock.

At the Shorthorn sale during the Western National Stotk show at Denver in January Frank Reno of Idaho Falls, Idaho, purchased the fine yearling Shorthorn bull Bold Victor, paying $310 for him. This bull was consigned by Elmendale farm of Fairbury, Neb. He is by Royal Victor, a grandson of the great Choice Goods. His dam, Royal Violet, is by Bold Scot, a grandson of Gallant Knight, and Cruickshank breeding appears several times on both sides of his pedigree. Mr. Reno will place the young bull at once in service in his Shorthorn herd near Dubois, Idaho.

Winterton brothers of Charleston, Utah, during the Denver stock show purchased from George Chandler & Son of Baker, Ore., the March bull calf, Debonair 61st, paying $1000 for him. Debonair 61st is by Debonair 26th, a son of the great breeding bull Debonair; dam, Seminda, by Beau Donald 33d, another bull with a great reputation as a breeder. The dam's dam is Miss Mona, a show cow and half sister to Debonair 26th. The Messrs. Winterton are to be congratulated on the purchase of so richly bred an animal that a number of good judges called one of the best Hereford calves at the show.

The Idaho Falls Land and Live Stock company of Idaho Falls, Idaho, during the Denver stock show purchased 58 head of registered Hereford cows, a herd bull and 24 registered bull calves. This company was recently organized with W. S. Shattuck, president; S. C. Lemon, secretary, and T. H. Smelson, manager. They have large irrigated holdings not far from Idaho Falls. The herd bull purchased is Carlos 78th, by Beau Carlos 2d, son of Beau Carlos, and he is a grandson of Beau Donald. On the dam's side are Lamplighter, Beau Brummel and other great bulls. The bull was consigned by L. G. Davis and the price paid was $950.

Professor H. T. French, who for a long time was connected with the Idaho experiment station and later was state leader of county agriculturists in Oregon, is doing very effective work as head of the extension department of the Colorado Agricultural college. Professor French informed me while I was at Denver that he was much gratified at the fact that he is going to have W. H. Kerr, son of President Kerr of the Oregon Agricultural college, with the college soon, at the head of the office of markets and marketing, which has only lately been established. By furnishing reliable information as to the production and demand for cantaloups and potatoes alone, two crops of which Colorado produces immense quantities, it is believed the farmers can be saved thousands of dollars and the market stableized. Growers of other crops can also be assisted and while there are problems that will not be settled at once great good is expected from the office

When George Chandler & Son of Baker, Ore., won first prize on carload of Hereford bulls and sweepstakes over all classes at the National Live Stock show at Denver, January 20-27, they won a signal victory for the northwest and for their own line of breeding. It may be fairly easy to select one bull from a large herd and make a great show animal of him, but this was a carload of 15 all from the same sire except one, and he by a son of the same sire. They were pronounced by experts who saw them to be all of very similar type and of extra good bone, showing vitality and true Hereford conformation. The buyer, E. L. Dana of Parkman, Wyo., is the well-known breeder who paid $10,000 for the great breeding bull, Superior Fairfax, at the Warren G. McCray sale at Kentland, Ind., last year. Mr. Dana is using seven other Fairfax bulls. He has purchased many choice animals and a few years ago bought the entire choice herd of registered Herefords of Monte Blevins of North Park, Col. In buying these yearling sons of Mr. Chandler's great sire, Debonair, he has shown the wisdom that usually characterizes his purchases and has put one more feather in the Chandler Hereford cap.

The United States office of Western Dairy Investigations at Salt Lake, Utah, is accomplishing much for the dairy industry of the west. Western dairy extension work by the U. S. government was begun in a small way in 1910 and in 1913 J. E. Dorman was put in charge of the office at Salt Lake. At that time there were four men, now there are 16, connected with the offices and a cheese specialist will probably soon be put in Oregon, Washington, Idaho, Montana and Wyoming. The work of the division has been mainly devoted to practical demonstrations in feeding, in management of the dairy herd and in the manufacture of dairy products. In the nine states covered by the activities of this office, where five years ago there were practically no silos, there are now over 3000, largely as a result of the campaign carried on by the field agents in cooperation with the extension division of the agricultural colleges. Five years ago all the states in the division were importing large quantities of dairy products. Now both butter and cheese are being exported and Mr. Dorman says prospects are very bright for the dairy industry in the west.

H. A.

Buys Challenge Plate 3d.

G. W. De Lay, proprietor of the Rushes farm at Hot Lake, Ore., has bought the Shorthorn bull, Challenge Plat 3d. Joseph Turner made the selection at the Toronto sale February 2. This bull was dropped in October, 1913, and is reported by his former Canadian owners as a very sure breeder. He is also said to be a bull similar in appearance to Ringmaster.

Add to Shorthorn Herd.

Mulhall Bros. of Fenn, Idaho, have added some fine Shorthorn blood to their herd. Among them a new sire, "Type's Model," which won the championship at Portland in 1915, and also the junior championship at Chicago.

LOAD OF MILCH COWS.

W. A. Goodman, who recently purchased 100 acres of alfalfa land near Weiser, has been picking up a load of milch cows from the high class herds of Washington county, Oregon, his old home, which he will ake to Idaho.

OREGON SHORTHORNS

Early Breeders of the State.

By George Gammie.

The early history of the Shorthorn cattle in the Pacific northwest dates away back along about 1860 or 1862. The Hudson Bay company imported some Shorthorn cattle from England, red in color, and a few years later Arthur Quigley purchased a farm at Ridgefield, Wash., purchased a few cows and heifers from the Hudson Bay company and laid the foundation of a dairy of milking Shorthorns. I well remember the first time I saw these cattle. When I took charge of the Bachelor's Island farm in July, 1877, Mr. Quigley's farm had a pasture on Lake river and he swam his cows across Lake river to pasture every day. Every day all summer I saw these cows, about 26 in number, all dark red, low-down, blocky cows, with well developed udders, a grand lot of dairy cows. I don't mean to say they were registered—merely grades. At that date there were few registered cows.

Also there was another lot of Shorthorns brought into Oregon by a man named King into what is known as King's valley, in Polk country. S. G. Reed and W. S. Ladd purchased a bunch of these cows. Also Mr. Tyszkiewisz purchased a few of them and they were all put on Bachelor's island. These cattle were not registered, but many an inferior animal to them was registered in after years. They were entirely different in conformation from the Hudson Bay company cattle, large, roan deep-bodied animals resembling very much the Boot breeding of Shorthorns. Before putting the Ladd and Reed Shorthorns on Bachelor island I selected 20 steers and six cows kept on the farm and shipped 60 cows

THE BEST LINIMENT

OR PAIN KILLER FOR THE HUMAN BODY

Gombault's

Caustic Balsam

IT HAS NO EQUAL

For the Human Body —It is penetrating, soothing and healing, and for all Old Sores, Bruises, or Wounds, Felons, Exterior Cancers, Boils Corns and Bunions, CAUSTIC BALSAM has no equal as a Liniment.

We would say to all who buy it that it does not contain a particle of poisonous substance and therefore no harm can result from its external use. Persistent, thorough use will cure many old or chronic ailments and it can be used on any case that requires an outward application with perfect safety.

A Perfectly Safe and Reliable Remedy for Sore Throat, Chest Cold, Backache, Neuralgia, Sprains, Strains, Lumbago, Diphtheria, Sore Lungs, Rheumatism and all Stiff Joints

REMOVES THE SORENESS—STRENGTHENS MUSCLES

Cornhill, Tex.—"One bottle Caustic Balsam did my rheumatism more good than $120.00 paid in doctor's bills." OTTO A. BEYER.

Price $1.50 per bottle. Sold by druggists, or sent by us express prepaid. Write for Booklet R.

P&O

LIGHT DRAFT PLOWS

Built for the Field Test.

Three-Quarters of a Century of "Knowing How" Hammered Into Every One of Them.

The product of the Parlin & Orendorff Co. has always been noted for simplicity of construction, great strength and ease of operation. It was upon such a basis that the founders of this business made their implements, established their reputation, and built their factory. It is upon the same foundation that the business has been carried on to this day, and in 1917 we celebrate our Diamond Jubilee; 75 years of practical experience gained through constantly striving to provide for the exacting requirements of three generations of American farmers.

For an even three-quarters of a century we have met the demand, and today we operate the largest and oldest permanently established plow factory in the whole world. "It's the way we build them."

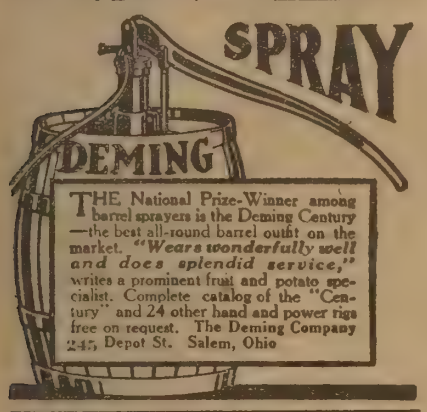
P&O

Light Draft Plows, Harrows, Planters and Cultivators are made in all types and sizes, to meet the conditions in all sections, and are Backed by an Unqualified Guarantee.

We also make the most complete line of Traction Engine Plows produced, and we have a special catalog devoted to these famous plows.

The P&O Little Genius Engine Gang Plow

was the most popular plow shown at all points on the 1916 National Tractor Demonstration.



We will send P & O Catalogs to any address. While P & O Implements are sold only through established implement dealers, we welcome correspondence from farmers in all sections.

In answering advertisements don't fail to mention this paper.

and heifers to Billy Grant of The Dalles to make room for the registered Shorthorns.

I believe the best steer I have seen on this coast was from one of the Tyszkiewisz cows of the King's valley Shorthorns, named Clark, purchased from Tyszkiewisz and fed by W. G. Brown, weight 3000 pounds, shown at the Portland Fat Stock show, 1889, held in what is now the Multnomah club grounds.

The first importation of registered Shorthorns was purchased by Ladd and Reed in the spring of 1873. A grand lot of cattle, highly bred and grand individuals, about 13 cows and heifers and the bull, Governor General; four Ayrshire cows and bull, four Clydesdale mares and stallion, Young Marquis; four Berkshire sows and two boars and some Cotswold and Leister sheep.

Hillhurst Rose, a grand roan cow, cost $1800; Honeysuckle, a great breeder and heavy milker, cost $1300; Fanny 29th, very profitable and the best milker, cost $1200; Weeping Willow, very prolific and a good milker, cost $750; Pet Gwynne, a grand roan cow and a fair milker, $900; Pet Gwynne II., a very prolific breeder and fair milker, $600. These animals were all selected by the late William Watson, Killor, Scotland, a grand judge of animals and a man of wonderful experience. His father, Watson of Killor, Scotland, was the first and early improver of the Polled Angus cattle, formed the model in his head and bred until he got it. At the same time the Booths of Killerby and Warleyby were molding the Bates breed of Shorthorns, and Billy Watson here in Oregon had the great privilege of being along with all these great breeders while they were quietly going along and molding these animals by selections until they arrived at world-wide fame as breeders of the Shorthorn and Polled Angus cattle. The Ladd and Reed cattle were all closely connected with these famous bred animals and were a grand lot.

SHORTHORN CALF

How Large Should Year-Old Bull Be

By E. L. POTTER.

H. E. T. writes: "How large should a good Shorthorn bull calf be at 12 months of age? Is it possible to make them weigh 1000 pounds at that age?"

With the aid of a nurse cow or with an extraordinarly good mother it is possible to make Shorthorn bull calves weigh 1000 pounds at 12 months; that is, to make them average that much. They will, of course, have to have all the grain they could eat in addition to the milk. Without an unusual quantity of milk on making calves average this big although some of them may weigh even more. It is one thing to make one or two out of a lot weigh a 1000 and another to make the whole lot weigh it.

With good nurse cows giving an unlimited supply of milk it is a different story and we would expect any bull calf raised in this manner for the show ring to weigh more than 1000 pounds at 12 months.

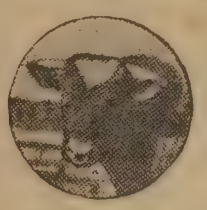
BLOODED HOLSTEINS.

Three young cows are under test at the A. E. Smith Milkyway farm, four miles east of Sumas, Wash. They are: Korndyke Mechthilde Key, a 3-year-old, with a record of 20½ pounds of butter and 72 pounds of milk; Princess Jouge Buckeye, 24½ pounds butter and 86 pounds of milk; Canary Spofford Empress II., a 2-year-old, 23¼ pounds of butter and 68 pounds of milk. There are other cows that have a milk record as high as 90 pounds. The herd consists of 125 head of blooded Holsteins.

PROFIT IN SHEEP.

W. B. Teeters finds profit in raising good sheep on his farm near Meridian, Idaho. A year ago Mr. Teeters purchased 105 head of young sheep at Sweet, paying $18 per head. He retains 44 head of the lambs he has raised from the sheep purchased. His ewes were sold at $30 each, and the same day he sold the sheep 60 head of them were resold at $45 a head. He figures up a total of $3000 profit for the year.

TO MEET IN BILLINGS.



Billings has been chosen as the 1917 meeting place of the Montana Shorthorn Breeders' association. The date will be fixed by the executive committee.

The Slaughter Percentage.

It is worthy of record that the slaughter percentage of live stock on hand each year in Britain is 18.6 per cent in cattle, 37.9 per cent in sheep and in pigs 121.3 per cent.

If You Have a Stallion That You Can Not Use Longer, I Might Change.

J. R. Justice, Importer

PENDLETON, ORE.

Thirty Days' FREE Trial

In order to convince you quickly that the Imported Belgian Melotte is the best separator, far superior to any separator on the market, we will send one to you on a 30 Day Free Trial. An absolute and unconditional free trial for 30 days. Use the separator on your farm for 30 days just as though you owned it. Put it to every possible test. Try it out in every way. Compare it with others. Take your skim milk to a creamery and test it. See how easily the Melotte is kept clean and sanitary. See how easily it is operated. Try out the wonderful, self-balancing bowl. Give it a good fair thorough test entirely at our expense.

No Money in Advance—

We don't want your money until we have proven to you that the Melotte *is* the best separator on the market. We don't want you to sign any papers. No money down, no deposit, no guarantee, no formalities. Simply ask us to send the separator on our 30 Day Free Trial Offer. Please understand that you are under no obligation. We make this liberal offer because we know a test will convince you. We know you will decide to keep the Melotte. But if you don't, send it back at our expense. This 30 Day Free Trial does not cost you a single penny.

$7.50 Down—After Trial

If you are satisfied, after 30 days' free trial, that the Melotte will give you more cream and bigger profits; that it is easiest to operate; that it will stand more wear; that it is *the* separator for you—when you have proved this to your own satisfaction—pay only $7.50 after the 30 days' free trial on your own farm and then the balance in small monthly payments of $7.50. You are to be the sole judge. All that we ask is a thorough trial.

Small Monthly Payments

We want you to have the best separator on the market—the prize winner of all Europe—the separator that is now taking the U. S. by storm. We don't want anything to stand in the way of your having and using, and experiencing the satisfaction of owning the best separator on the market. We have, therefore, arranged so you can have the Melotte on small monthly payments. This is an arrangement which is entirely satisfactory to us, and you can pay for the machine in small payments each month which you will scarcely feel. In fact, you will really make this payment out of your increased profits—out of the returns from the increased amount of cream. We want you to feel that you have the best. We want to make it as easy as possible for you to have the best. And we arranged this plan so you can have the wonderful Melotte.

The Rock-Bottom Price

The same price that Mr. Melotte charges direct from his factory to European farmers plus only $1.75 for water freight. The American farmer is indeed fortunate in having these separators transported by water, costing only $1.75 to land the separators in America. And because of this water transportation, and because the duty has been removed from separators, you can get the Melotte Separator at only $1.75 more than the price charged to European farmers. Even the war does not affect this price. Mr. Melotte cabled us, "Sell these separators at the rock-bottom price, the same as before the war."

Our 15-Year Guarantee

Every Melotte Separator sold on a binding, 15-year guarantee. A guarantee that can be relied upon. A guarantee that you can easily understand and hold us accountable for. A guarantee that is 100 percent stronger than any other separator guarantee. It is given on each Melotte Separator as an absolute protection to the purchaser. We guarantee every Melotte Cream Separator to be exactly as represented. We guarantee that the material used is the best obtainable for the purpose. At any time within 15 years, should any part prove defective on account of poor workmanship or poor material, it will be replaced. We keep on hand in Chicago a complete stock of all repair parts although there is a surprisingly small demand for these parts, due to the sturdy construction of Melotte.

Send Coupon for Catalog

Fill out and mail the coupon below at once for a new Melotte catalog containing full description of this great Belgian Separator. Fill it out now—don't wait a day. Get the full details of our great cream separator offer. Post yourself on the separator situation and read what the European farmers for years have been doing with this wonderful separator. Sending the coupon will place you under no obligations whatever, but will put into your hands immediately a catalog with full description of this wonderful separator and the details of our 30-day, unconditional free trial.

What More Can We Offer?

What can we offer that we haven't offered? What do you want that we haven't mentioned? We will go the limit. We will do anything you say within reason. We will put our separator in competition with any separator in the world. We have the best so why should we be afraid to put it in competition. And if the other manufacturers haven't confidence enough in their separators to give you a free trial without deposit or bank guarantee, ask them what they are afraid of. You are entitled to this offer. Insist upon it. For our part, if the Melotte doesn't stand every test, we certainly don't ask or want you to buy it, as we want the Melotte to be sold on its merits alone. That is why we are so anxious to place this separator on your farm. Whether you buy the Melotte or some other separator, you owe it to yourself to know the facts before buying. So don't hesitate a minute. Fill out the coupon and send it to us today. Tell us if there is anything that we have not mentioned in this advertisement that we can do to satisfy you that the Melotte *is* the best separator.

Extra!

No Duty Now!
Save $15.25

The high tariff and patent arrangements have kept the Melotte out of reach of the American farmer. Now this handicap is off. The Melotte comes in *free of duty*. The world's greatest cream separator, the winner of 264 international grand prizes, now at an *extra reduction of $15.25.*

Valuable Book FREE

"Profitable Dairying"

The book is the work of B. H. Benkendorff, Wisconsin Dairy School Agricultural College, Madison, Wis., and K. L. Hatch, Winnebago County Agricultural School, Winneconne, Wis. 88 pages. Contains no advertising. A real, practical, commonsense treatise, telling everything about cows and dairying—how to feed and care for cattle—how to make more money out of your cows. Every farmer should have this book in his library. It is worth while getting now, even if you are not considering a cream separator at present. Sent free upon receipt of the coupon.

Send Coupon Now

We'll send also our New Melotte catalog and details of our rock-bottom 30-day free trial, easy payment offer. Send the coupon now—while this offer lasts.

The Melotte Separator H. B. BABSON, U. S. Mgr. Dept. 4342 19th Street and California Avenue **Chicago, Ill.**

One Point

of superiority in the Melotte is this: The bowl is *self-balancing*—it hangs down from a single bearing and spins like a top. Can't get out of balance. The Melotte turns so easily that the bowl spins for 30 minutes after you stop cranking unless you apply brake. No other separator requires a brake to stop the spinning. *The Melotte is guaranteed for 15 years.*

THE WASHINGTON FARMER

SUCCESSOR TO
THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

VOL. XL. MARCH 1, 1917. NO. 9.

The Humble Spud Is Putting On Airs

Topping Prices for 50 Years, Potatoes Have Jumped Into the Seats of the Mighty

Potato prices have been going up in leaps and bounds. Such prices have not been known before in the memory of the oldest inhabitants. In New York City potatoes have been bringing wholesale $9 for a sack of 165 pounds, and pedlers have been retailing them as high as seven cents a pound. These prices have precipitated food riots among women in the tenement districts.

Several hundred desperate women stormed the city hall in an effort to reach the mayor and in another riot demonstration 1000 women expressed their indignation. Food riots have occurred in other cities.

T. P. Miller, president of the newly organized Fruit and Vegetable Shippers' association, said at Chicago: "There are only 250 cars of potatoes in the whole state of Colorado now. There should be at this season 3000 cars. Idaho has only 1200 cars, Oregon 250 and Washington 100, which is about one-third to one-fifth their normal supply. And this supply is being rapidly shipped out. We had 60 cars yesterday, mostly from the west, and we relayed most of the 60 cars as far east as Boston and as far south as Texas. Potatoes are retailing at 80 cents a peck in Chicago, and are said to be likely to go higher. The reason lies not only in the very short crop last year, but in the added freight charges involved in bringing them from the far west."

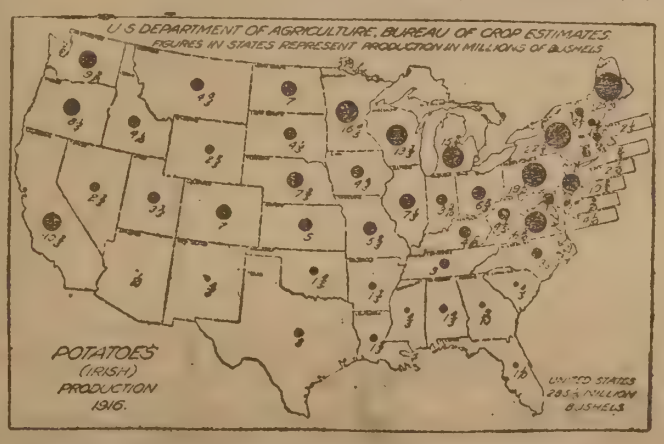
Potatoes have been jobbing in the market of Portland, Ore., at $3.75 to $4 a sack. Farmers have been receiving $3.25 to $3.50 and in other instances $3.75 was paid for a car. Farmers' holdings in Oregon are estimated at 250 to 350 cars and the estimate of Portland dealers is that Washington has a supply of 200 cars and that 1000 cars remain in Idaho.

Advices to the Farmer from Boise is to the effect that potatoes have been rolling from the potato districts in southeastern Idaho at prices to Idaho growers as high as $3.60 per hundred f. o. b. shipping station. The 1916 crop in southern Idaho was about 6000 carloads, which is slightly below the previous year, but the quality is rated as better. At present there is less than half the quantity of potatoes in storage in southern Idaho than there was a year ago.

Eastern buyers announced opening prices last fall at 75 cents a hundred, but within three days the farm markets department forced the price up to $1.25 and shortly thereafter the price went to $1.50, followed in short order to $2.25.

The bulk of the Idaho potato crop moved this past season at $1.50 and better. Idaho white potatoes in sacks sold at $3.05 on track in Chicago Saturday.

Outlook for 1917 planting of potatoes is quite problematical at this time. On account of extreme high prices now prevailing and shortage of seed carried over, it seems doubtful if there will be as large an acreage as in 1916.



The accompanying diagram, with footnote, tells of the potato production of the United States for the past year.

As given by the U. S. department of agriculture the average farm price per hundred on December 1 of potatoes for the 50 years, 1867 to 1916 inclusive, was 55.7 cents per bushel or 93 cents a hundred, the lowest price was a little over 26 1-2 cents in 1895, or 44 cents a hundred and only a cent higher in 1896. The highest price was in 1916, $1.46 or $2.43 a hundred.

For the ten years, 1867-1876 inclusive, the average price was 56.3 cents per bushel or 94 cents a hundred, the lowest price being nearly 34 1-2 cents per bushel in 1875, or 57 cents a hundred, with a total production for that year 166,877,000 bushels; and the highest price 65 cents per bushel in 1870, or $1.08 a hundred, with the total production for that year 114,775,000 bushels.

(Continued on Page Thirty-six.)

Potato Production of United States

MAINE LEADS, NEW YORK IS SECOND AND PENNSYLVANIA IS THIRD. CALIFORNIA, WASHINGTON AND OREGON LEAD STATES WEST OF THE MISSISSIPPI RIVER.

It is a curious fact that to Maine, the jumping off place of the Atlantic coast, one would have to go for the largest potato producing state. Not only does one have to go to Maine, but go through Maine clear to the very northeast portion of the state to find the high producing potato section. Taking the 25,500,000 bushels of potatoes raised in Maine in 1916 as the lead, one finds that New York comes next with 22,400,000 bushels, Pennsylvania third with 19,040,000 bushels. Minnesota, Virginia and Michigan produced respectively 16,800,000; 16,250,000 and 15,360,000 bushels. The three state of the Pacific coast. Washington, Oregon and California each produced more than any other state west of Minnesota, California producing 10,575,000; Washington, 9,900,000, and Oregon, 8,250,000 bushels; while Montana's production is given as 4,875,000 bushels and that of Idaho at 4,050,000 bushels.

Oakland Sensible Six

"Sturdy as the Oak"

Satisfaction

There's a lot of **solid satisfaction** waiting for you in the purchase of an **Oakland "Sensible Six."**

From the first time you ride in it, you'll find the **Oakland** really "sensible" in power, comfort, ease of handling, and operating cost.

Its valve-in-head motor delivers full 41 h. p. at 2500 r. p. m.—one h. p. for every 53 pounds of car weight.

Its big oversize tires, 32x4; long supple springs, 51 inches in rear; wide seats and ample leg room,—mean **comfort** over any roads.

Its **sensible** weight, 2150 pounds, assures fuel and tire economy.

Its excellent finish, real leather upholstery, beauty and high class equipment stamp it a quality car at a **sensible** price—$875.

Oakland Eight—$1585—is a big luxurious 73 h. p., 7-passenger touring car for those who demand the utmost in power, speed and luxury.

Vol. 40. No. 9 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF March 1, 1917

Prices Out of Reach of Dairymen

Can the Pacific Northwest Build Up a Great Live Stock Industry on $21,500 Calf Sales?

What does the sale of the $21,500 Holstein bull calf at Portland last December mean for the dairy industry of the Pacific northwest?

A few figures just received by The Farmer from Jefferson county, Washington, may help to answer this question. C. T. McWhorter, county agriculturist, sends a report of the Jefferson County Cow Testing association for the six months ending January 1, 1917, C. B. Dean, tester. The average butterfat from 224 cows for the six months is 144.5 pounds; average cost of feed, $22.09; average profit over feed, $28.44.

The 25 highest cows in the association for the six months average 213 pounds of butterfat; average cost of feed, $36.62; average profit over feed, $37.73. The 25 lowest producing cows in the association gave an average of 81.4 pounds of butterfat; average cost of feed, $14.15; average profit over feed, $15.78.

The most profitable cow was a grade Holstein owned by Bert McConnaghy, which produced 245 pounds of butterfat, making a profit over feed of $55.88.

The buyers as well as the breeders of pure-bred live stock are looking for an explanation of the following contradictory statements:

October 2, 1916, B. Meyer, the breeder, offered the Holstein bull calf, Finderne Mutual Fayne Valdessa, to E. A. Stuart for $5000.

November 17, 1916, Mr. Meyer told Mr. Stuart that the animal had been sold. He failed to give the price, but Mr. Meyer's herdsman told Mr. Stuart that a Mr. Von Herberg was the purchaser and the price was $2500.

In his transmitting letter to Mr. Gue, the auctioneer at the Pacific International Stock show sale, at Portland, last December, Mr. Meyer said: "I consign this bull to your sale without any restriction whatsoever." But in his answer to The Farmer's telegram of inquiry of February 4, Mr. Meyer says: "Bull was sent by me to the sale under the recommendation of Von Herberg, guaranteeing me $5000 at least, and all he would bring above it. What my herdsman said was not true."

When The Farmer sent another telegram, asking Mr. Meyer to be more explicit, he telegraphed this reply: "The bull was sold at auction for $21,500 to Mr. Von Herberg. After deducting commission, freight and expense, I received the balance of my money in full. Exact amount that I got is my business."

The least profitable cow was a grade Guernsey, producing 60 pounds of butterfat at a profit of $3.14.

The greatest producing problem for the dairyman of the Pacific northwest today is to get his herd out of the class of 25 cows averaging $15 and into the class of 25 cows averaging $37. By the Babcock test he can weed out the $3 cow, the $6 cow and the $11 cow. By better feeding and by a better sire he can further improve the production of his herd. But when he tries to get into the class of the 25 best producing cows he must pay the closest attention to scientific feeding, balanced rations, to the economic value of the different kinds of feed and to make a greater requirtment on the blood lines of the sire.

How much can the vast plurality of stockmen pay for a sire that will enable them to get into the average of the better half of the cows?

Let N. C. Maris, whose wide observations and experience of many years in the Pacific northwest give him a hearing among stockmen, answer this question in his communication given below. Mr. Maris declares that extreme prices at public or private sales of pure bred

(Continued on page twenty-four.)

GRANGE WAREHOUSE Shows Successful Operation.

The Grangers' Warehouse company of Kent, Wash., reports a total volume of business for 1916 of $113,702.86. There are now 196 members, with no losses during the past year.

New Grain Standards

Will Govern 1917 Crop in United States

Grain growers, shippers and dealers will this year be required to handle grain under a new set of standards. Within the next few weeks the U. S. department of agriculture will announce the standards as determined under the provisions of the recently enacted federal grain standardization act, and 90 days after this announcement the new standards will become effective to govern the inspection and grading of all grain shipped from one state into another and all grain exported.

These standards, however, will not change vitally the inspection and grading regulation in the northwest, especially in Washington. This is indicated by the assertion of State Grain Inspector R. D. Jarboe of Washington that "the proposed table of standards of the federal department is practically the same as that now in use in Washington except in a few minor details." Chief Charles J. Brand of the office of markets and rural organization in the U. S. department of agriculture indicates the probability of the proposed standards being finally adopted by saying that objections are being voiced only on minor points.

Public Hearings Held.

The department of agriculture is just now completing a long series of public hearings in the grain producing sections securing the views of the grain growers, shippers, buyers and millers. Three of these hearings have been held in the northwest—Portland, Seattle and Spokane. Interest has been indicated by the attendance of a large number of farmers, shippers and millers at all these hearings, and while many points of interest have been brought up and discussions entered into, the outline of the government's proposed standards appeared generally acceptable.

"We are anxious to establish standards that will be satisfactory to grower, miller, shipper and dealer," said Chief Brand while in Spokane conducting the hearing, "and we know that such standards are possible."

Will Be Five Grades.

As will be seen by reference to the table of proposed standards on this page, the department plans to make five grades of grain, with anything not good enough to be placed in No. 5 going into what is called "sample grade."

Five elements are considered at arriving at these grades: (1) The weight, (2) the moisture content, (3) the presence of other varieties of grain not of the same class, (4) the presence of inseparable foreign material and (5) damaged kernels such as cracked, heated or frosted berries.

"It is contemplated," says the department of agriculture, "that the standards for wheat shall be on the basis of the grain remaining after the determination of 'dockage.'"

What Is Dockage?

Defining what is meant by dockage, the department explains:

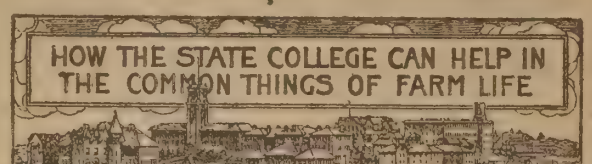
"Dockage includes foreign material such as sand, dirt, small weed seed, weed stems, chaff, straw, grains other than wheat and undeveloped, shriveled and small, broken pieces of wheat kernels, which readily can be removed from the wheat by the use of proper sieves, screens or other practical means best suited to the character of foreign material present. The quantity of the dockage shall be calculatted in terms of percentage based on the total weight of the grain including the dockage. The percentage of dockage so calculated shall be stated in terms of whole per cent and half per cent. A fraction of a per cent when equal to or greater than a half shall be treated as a half, and when less than a half it shall be disregarded. The percentage of dockage so determined and stated shall be added to the grade designation."

Smut Problem Troublesome.

At the hearings in the northwest marked objection was heard to the department's proposal to establish a grade to be known as "sample grade, smutty." This objection was raised on the ground that it would place an undue and unnecessary stigma on grain so designated.

Regarding the grading of smutty wheat, which the northwest produces in greater quantity and greater degree of smut than any other district, the proposed rulings of the department of agriculture read:

"Smutty wheat shall be graded 'sample grade, smutty,' unless the quantity of smut in the wheat is ascertained by scoring, washing or otherwise, in which case the loss in weight caused by the removal of the smut shall be known as 'smut dockage.' The quantity of smut dockage shall be calculated on the same basis and in the same manner as dockage, and the percentage of smut dockage, so determined and stated, shall be added to the grade designation. After the determination of dockage and smut dockage the grain shall be graded according to the grade requirements of the class to which it belongs."



Proposed Standards for Wheat Grades, United States Department of Agriculture

Grade	Hard Red Spring	Durum, Hard Red Winter and Soft Red Winter.	Common White and White Club	Moisture.		Wheats of other Classes	Inseparable Foreign Material	Damaged Kernels.	
				Hard Red Spring	Durum, Hard Red Winter Soft Red Winter, Common White and White Club.			Total	May Include Heat Damaged
	Lbs.	Lbs.	Lbs.	Per Cent	Per Cent	Per Cent	Per Cent	Per Cent	Per Cent
1	59	61	60	14	13	2	0.5	1	0
2	57	59	58	14	13	4	1	5	0
3	55	57	56	14	13	6	2	5	0.5
4	53	55	54	15	14	10	4	10	1
5	51	53	52	16	15	10	6	15	3

Sample Grade—Not good enough for grades 1 to 5. Grades 1-4 must be sweet. Grade 5 may be musty or slightly sour, but must be cool.

Farm, Plant to Save Steps and Labor

Keep in View the Two Uses—Storing and Housing—In Barn Designs

III.

In my last number I discussed that part of "the plant" which is the center—the farm house. The circumference of the plant includes the barn and other adjuncts. The barn has two functions—storing and housing. It is not the only storage place nor the only housing place. The structure for these functions (storing and housing) must be close together in the interests of fewer steps and greater economy. Three movements to do something costs fifty per cent more energy than two. Labor raising is not the lazy man's recourse, but the wise man's, the recourse of him who would accomplish larger results with a given expenditure of effort. Therefore the design of the entire plant is the utmost importance. And to make the design one must know the conditions. Perhaps there is a barn already, too good to be replaced, but which can be adapted. Is it horses or cattle or both that are to be provided for? Is it beef cattle on feed, or dairy cattle or stock cattle? How many head in your system? What will be your feed supply? Does it include ensilage? What concentrated feed do you produce or buy? How is the manure to be disposed of and saved? Where is the litter for bedding to be kept? The design, you see, is all important, and while you have ideas and have had experience, in all probability, the college man has had a wider opportunity of observation, may be of experience, and may help you. At least he won't hurt you, for like the doctor's medicine, you need not take it unless you want to.

It has been customary to house stock and store feed under the same roof and for obvious reasons of economy in building and in feeding. But sometimes the saving of fire risk admonishes separation of housing and storage of roughage and the use of modern feed conveyors. This is particularly true in dairy barns. It has been customary to house horses and cattle under the same roof. But where there are either large numbers of cattle or horses, barns separate and apart make for economy, efficiency and safety. The size and position of silos, haymows, feed carriers, manure carriers, manure sheds, stanchions, stalls, feed bins, harness rooms, milk rooms and the provision for drainage, ventilation, light, all are questions of scientific arrangement for the greatest sanitation, and for comfort, the least risk and the greatest efficiency in every farm plant. Farmers may build the barns close and tight to save waste of heat energy. But they must not over look the demands for fresh air and light. There must be the proper proportion of storage to the stock to be supplied. All conditions of climate, and specialization must be met. On these points the college specialist will help you.

About the barn center are other structures. Machinery, implements and tools, both on account of risk and for other reasons, should be in sheds separate from the barns. Hogs should be housed separately; also sheep. The blacksmith shop should be removed from the other buildings. The water supply and the drainage of yards are of great importance. The paddocks or corrals can not be overlooked. The point is, that overlooked as it usually is, the design and construction of this essential part of the farm plant, requires breadth of view, the consideration of a great range of problems, much accurate knowledge and on all of these points, the farmer can get both general and special help from the college in the solution of his problem. This is not a question of the big farm and lots of money to put into the plant, though the array of things mentioned might suggest it. The principles here laid down and the possibility of help from the college which I have suggested are as applicable to the smal lfarm as to the big.

E. A. Bryan

WHEN YOU WANT INFORMATION IT IS OFTEN QUITE IMPORTANT TO KNOW HOW TO ASK FOR IT, WHERE TO ASK FOR IT, AND EVEN WHEN TO ASK FOR IT. DR. BRYAN IN HIS ARTICLE WILL GIVE SOME HINTS AS TO HOW YOU CAN OBTAIN THE MOST INFORMATION POSSIBLE FROM THE STATE COLLEGE REGARDING SOIL AND CROPS.

Washington Portraits—No. 4.

J. E. Buckingham.

J. E. Buckingham of South Bend is one of the younger farmers of Pacific county. He engaged in the dairy business three and a half years ago, and sells his productions direct to the consumer. His ultimate aim is to build up a good herd of Holsteins, and gradually replace his cows with registered stock.

"There are many opportunities," says Mr. Buckingham, "for the young farmers in Pacific county. There is a need of small fruit farms, truck or garden patches, chicken ranches, and dairies that will make a good grade of butter. But in all these lines the farmers must cooperate in order to receive a fair price for their produce."

The next in the series of Washington portraits will be that of Alvin Anderson of Oneida, and will be given in next week's issue of The Washington Farmer.

Milk Condenseries

May Undergo New Regulation

The question of defining the quality of milk prepared and placed on the market by condenseries is one of the prominent issues in the legislature at Olympia this session as it has been at others in the past. Producers and condensery operators, as well as the general milk using public are watching the developments, or should be.

There is now before the legislature a measure, substitute Senate Bill No. 90, on this subject which, while supposedly designed to do much toward settling the differences that exist between the producers and the manufacturers, apparently may not do so. As an index to the uncertainty as to the measure's real import, two prominent men recognized as among the leaders on dairy problems were asked if this measure would affect the production of condensed milk in which part of the butterfat was replaced by a vegetable oil. One replied unequivocally: "There is nothing in this bill which touches that matter." The other replied: "If this bill becomes a law it will make it impossible to tamper with milk. It will put synthetic milk out of business."

To what extent manufacturers replace actual butter fat by cheaper vegetable oils is problematical, or to what extent such manipulation may be carried on under the provisions of the federal pure foods acts. It seems apparent, however, that the present legislature at Olympia will not enact definite legislation covering this issue.

Regulations Desired.

Dairymen are reported to be strongly favorable to a law that will define the exact butterfat content of condensed milk. It is argued that if a diluted milk or one containing vegetable oils is placed on the market it not only partially destroys the market for actual milk and cream from the dairies, but tends to reduce the standing of the district as a producer of high grade products.

Dairy Combine

Charged in Federal Indictments

For alleged violation of the Sherman anti-trust law, eight corporations and 11 individuals were indicted by a grand jury in Boise, Idaho, last Saturday. The indicted concerns and persons include some of the largest dairy interests in the northwest.

The indictment alleges that these concerns combined to control the dairy and dairy products business to such extent as to work serious injury to 172 independent concerns in Oregon, Washington, Idaho, Montana, Utah, Wyoming, Nevada and California.

The prosecution of the charges in further court procedure has not been announced.

The following defendants were named in the indictment:

The Jensen Creamery company, a Utah corporation with its principal place of business in Salt Lake City.

The Mutual Creamery company, a Utah corporation with its principal place of business in Salt Lake City.

Henningsen Produce company, a Montana corporation, Butte.

The Schallinger Produce company, a Washington corporation, Spokane.

The Commercial Creamery company, a Washington corporation, Spokane.

The Hazelwood company, an Oregon corporation, Portland.

The Hazelwood company, limited, a Washington corporation, Spokane.

The Klock Produce company, a Washington corporation, Seattle.

Individuals indicted were:

W. F. Jensen, president, director and stockholder of the Jensen Creamery company and its successor, the Mutual Creamery company.

D. E. Newman, connected with the Mutual Creamery company.

H. A. Shellenberger, manager of the Mutual Creamery company, at Boise.

A. P. Henningsen, an officer and director of the Henningsen Produce company, of the Schallinger Produce company, of the Klock Produce company, of the Hazelwood company and of the Commercial Creamery company, and who has been a stockholder in the Jensen Creamery and Mutual Creamery companies.

W. F. Henningsen, an officer and director of the Henningsen Produce company.

Carl Schallinger, a stockholder and officer of the Schallinger Produce company.

E. W. Ellis, a stockholder in and superintendent of the Jensen Creamery company, and of its successor, the Mutual Creamery company.

Carlyle Hall, a stockholder in and manager of the Jensen Creamery company at Pocatello, Idaho, and at Salt Lake City.

B. B. Corless, a stockholder in and manager of the Jensen Creamery company at Salt Lake City and at Portland, Ore.

R. A. Goodhue, a stockholder in and manager of the Hazelwood company at Portland, Ore.

W. W. Hamilton, who has been a stockholder in and manager of the Jensen Creamery company at its place of business in Boise and Lewiston, Idaho.

This case, which appears to be one of vital interest to the dairying industry of the northwest as well as to the users of dairy products, will be watched closely by The Farmer and kept before its readers as developments occur.

Naval Militia

To Be Ready Under Freeman

Orders have been received at Seattle by Miller Freeman to report for active duty and assume the command of the naval militia of the state of Washington. Commander Freeman, who was the founder of the organization, has been on the retired list since 1910.

The naval militia of Washington now comprises a membership of approximately 400, with divisions at Seattle, Tacoma, Everett and Aberdeen. The navy department has urged that the enrolment be increased to the maximum of 700 and that the organization be prepared to respond to a call for active service at sea.

In event of trouble with Germany it is not unlikely that the entire command will be transferred to the Atlantic coast.

The airplane squad, consisting of 12 officers and men, will leave for Pensacola, Fla., February 24.

Commander Freeman is a pioneer of this state, having been reared in the Yakima valley. He founded and published The Ranch for many years, which journal was later changed by him to The Washington Farmer. He also founded The Oregon Farmer of Portland and The Idaho Farmer of Boise, these three journals now being owned by the Cowles Publishing company.

Miller Freeman.

In addition he established Pacific Motor Boat, devoted to motor boating and yachting on the Pacific coast, and the Town Crier, a critical weekly review. He founded and still publishes Pacific Fisherman, a monthly devoted to the commercial fisheries of the Pacific coast, and Motorship, a journal of international circulation in the interest of the commercial motor vessel.

Vegetables on the Table the Year Round

There is no farm in the northwest where there is a family to feed that should not have string beans, pickled beets, asparagus, turnips, green peas, cauliflower, onions, Brussels sprouts, celery, sweet corn, succotash, sauerkraut, fried parsnips, eggplant, head lettuce, lettuce salad, radishes, rhubarb pie, spinach, tomato soup, sliced tomatoes, carrots, cucumbers, mustard greens, spinach, pumpkin pie, baked squash, cold slaw, cabbage and corned beef on the table every day of the year. No, no, not all at once—and corned beef is not a vegetable.

But every farm should have one or more of these "good things to eat" every day of the year. The garden should produce them—except the beef.

On another page in this issue is the first of a series of articles that will run in The Farmer throughout the spring and summer, designed to stimulate interest in garden possibilities and give specific information on "how to grow things."

Stock Men Organize Conference

Special Live Stock Train to Eastern Shows Meets With General Favor

One hundred and fifty men, the majority of whom were actual producers of live stock, attended the two-day session of the Northwest Live Stock convention at Spokane last week in the assembly room of the Spokane Chamber of Commerce, listened to addresses by several of the most prominent live stock authorities of the west, discussed dozens of the problems that confront the live stock industry and closed the gathering at a banquet given by the chamber of commerce at the Davenport hotel Friday evening. By resolution the organization was made permanent and its next annual meeting left in the hands of the Spokane Chamber of Commerce.

Formal action looking toward the running of a special train east next fall loaded with the prize winning live stock of the northwest was taken when a motion was carried authorizing the appointment of a committee of five delegates to work with the agricultural committee of the Spokane Chamber of Commerce in planning and providing for such train. The committee as appointed consists of Thomas F. Wren, president of the Northwest Live Stock Show, at Lewiston, Idaho; J. H. T. Smith of Pullman, Wash.; H. C. Davis of Granger, Wash.; Alex Morrison of Valley, Wash., and M. M. Talmadge of Newport, Wash.

The proposal to make such demonstration of the northwestern live stock possibilities met with enthusiastic favor among those present. E. E. Flood of Spokane, outlined the plan, stating that it was not intended to allow such train to interfere with northwestern fairs; that it would be run after the state and county fairs and return in time for the winter shows.

Resolutions Adopted.

One of the most important and far-reaching resolutions adopted by the convention was that looking toward securing a reduction in freight rates by the railroads on purebred live stock. The resolution asks joint endeavor by the Spokane Chomber of Commerce and the live stock convention.

Another resolution asks joint state and federal action against rabies. Others are as follows:

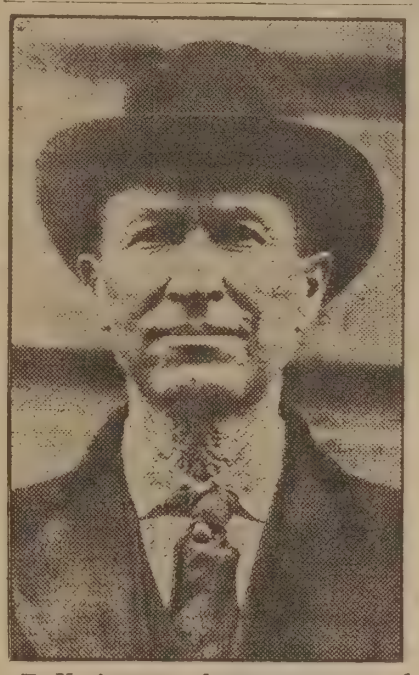
Asking the Spokane Interstate fair not to change its base date as to hog entries without first giving a year's notice to the swine men of the northwest.

Approving the certification of live stock shipments by the state department of agriculture for interstate shipment, especially as regards purebreds.

Endorsing the work of the educational institutions of the northwest in regard to agricultural and live stock education, and urging adequate appropriations for their maintenance and development.

Thanking the Spokane Chamber of Commerce and those who assisted in making the convention successful.

Ammons Inspires Stockmen.



The most picturesque and inspirational single figure at the convention was Former Governor E. M. Ammons of Colorado, one of the foremost stockmen of the United States. He delivered three addresses, each received with enthusiasm.

He declared that one of the most important questions in live stock production was early maturity; that the market demanded young stock. Beef cattle should be marketed at slightly under two years old, and should be made to weight at that age from 1000 to 1150 pounds, he said. He denounced cross-breeding, and said that every breeder should have an ideal and breed directly with that in view continually. He laid special emphasis on the necessity of the northwest producer feeding northwest feeds, and said that it was fallacy to think that corn is necessary to the production of either beef or hogs; that using the grains and grasses and hay of the northwest stock should be grown as rapidly as possible. "You can't grow a young steer too fast," he said. You can't put too much fat on him, but you can on an older animal."

"Stand By Your Shows."

Governor Ammons urged loyalty to the shows of the northwest. The rivalry between shows and between individual exhibitors is a healthy rivalry, he said. "If the other fellow beats you this year, find out how he did it and return and best him next year. Better your stock if for no other reason just to win over your rival, always remembering that every improvement that brings a victory is an improvement for the good of every man in the business."

Other speakers on the program included John D. Halliday of Chicago, president National Wool Warehouse company; William Hislop of the animal husbandry department of the state college at Pullman; E. J. Iddings of the same department of the University of Idaho at Moscow; E. E. Faville of Spokane; J. C. Graham of Palouse, Wash.;

E. M. Ammons, former governor of Colorado, who took a leading part in the live stock convention at Spokane last week.

J. H. McCroskey of Fishtrap, Wash.; C. M. McAllister, president of the Portland Union Stock Yards; Dr. J. Madsen of the United States biological department at Seattle; J. H. Roberts of the Spokane Union Stock Yards; O. M. Plummer of the Portland Union Stock Yards; E. E. Flood of Spokane; Dr. T. T. Baker of the University of Idaho; and others who entered into the discussions.

Interesting Declarations.

Among the facts and ideas finding expression in the addresses and discussions were the following:

The subject of establishing a purebred market in the northwest, preferably at Spokane, is a subject worthy the consideration of the breeders of the northwest.—G. M. Wilson of Wilbur, Wash.

The two big problems are: How increase the number of stock, and how to minimize the cost of production and marketing. The use of feeds grown on the farm should be practiced with as little use of mill feeds and special preparations as possible, though the judicious use of the latter classes is always worthy of consideration.—William Hislop.

So much talk of oil meal and cake and the like tends to make the beginner or the small grower fear to enter the business because it sounds complicated and expensive. It should be emphasized that the feed grown at home is adequate ordinarily for success.—F. M. Rothrock of Sprague, Wash.

The basis of the herd is not the sire or the dam. It is the man behind the herd. The live stock business is not for everybody, but for the man who likes it and stays with it year in and year out.—E. J. Iddings.

The five underlying principles in the combatting of infectious diseases among live stock are: Keeping the germs, or micro-organisms away from the animal; vaccination; segregation and isolation; discarding pastures for a few years where infectious diseases have been known; and competent veterinary service in every community.—Dr. J. H. Martin of Spokane, reading a paper by Dr. H. T. Graves of Olympia.

The United States produced in 1916 only 280,000,000 pounds of wool, and imported during 13 months including that year 400,000,000 pounds. Great Britain has under embargo, forbidding its exportation, 65 per cent of the wool of the world. The cure for the high cost of living is to add one pound more to each steer or sheep or hog.—John D. Halliday of Chicago.

Community shipments solve many problems for the farmer with only one or a very few stock. The Spokane Union stock yards have received cars of community stock, including animals owned by as high as 14 farmers.—J. H. Roberts.

It is almost as dangerous to the industry for hogs to be very high as very low. We must keep breeding stock on the farms, but we can not do it when they demand such tempting prices. Farmers as a rule do better when they ship to the stock yards and do business with commission buyers than when they sell privately at home.—O. M. Plummer of Portland.

There are 20 contagious sheep diseases, and 60 non-contagious, including forage poisoning. Sheep worth $5,000,000 are lost annually in the United States through forage poisoning.—Dr. E. T. Baker.

In 21 years of banking experience, he had yet to charge off his first stockman's account because of the stockman's failure.—E. T. Coman, bank president, Spokane.

The following are those who formally registered while attending the live stock convention:

Babcock, Frank, Ewan, Wash.
Baker, Dr., Moscow, Idaho.
Bailey, J. H., Palouse, Wash.
Baldwin, George E., Lincoln Stock Farms company, Coulee City, Wash.
Banta, J. R., Carstans, Alberta.
Boomer, H. H., Salmon, Idaho.
Buckner, Orval, Great Falls, Mont.,
Buchanan, Edgar M., Miles, Wash.
Burpee, J. W. Fairfield, Wash. R. F. D. No. 1.

(Continued on page twenty-six.)

State Association

Of Egg Producers Is Organized

A far-reaching poultry association to be known as the Washington Cooperative Egg and Poultry association, was formed at Seattle last week when a considerable number of poultrymen from various parts of the state met.

The purpose and scope of the association are cooperative handling not only of poultry products, but of dairy products, dairy and poultry feed, etc. W. H. Paulhamus, who presided, explained that the purpose in thus extending the range of activities was to provide for the future when it might be necessary to take up matters at present unconsidered. Two thousand shares of stock with a par value of one dollar each are to provide the working capital. Seattle was chosen as the location for the central office, with such branch offices to be selected later as circumstances require.

It is provided that all members must sell all of their eggs, except those for hatching purposes and those sold privately by direct consent of the board of directors, through the association.

A board of nine trustees, to act until the next annual meeting, was elected as follows:

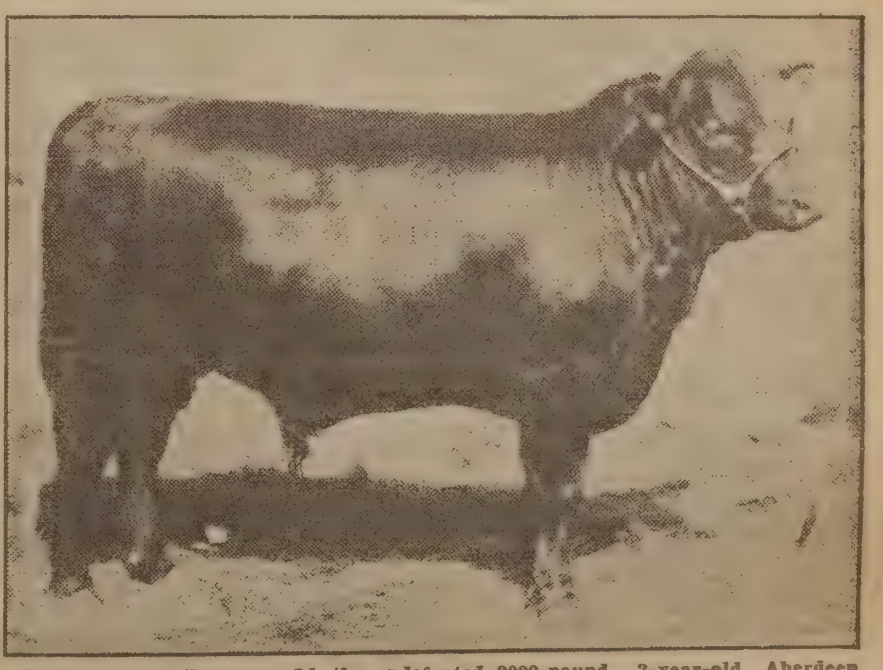
Professor Linklater, western Washington experiment station, at Puyallup; E. A. Palmeter, Silverdale; W. H. Paulhamus, Puyallup; J. H. Guffey, Island county; W. A. Bauman, Lynden; B. B. Holmes, Bellingham; W. A. Doyle, Vashon; George W. Holt, Auburn, and H. L. Willis, Mount Vernon.

DAIRY PRODUCERS.
Form Inland Empire Association.

Dairymen met in Spokane Saturday and organized the Inland Empire Dairy Producers' association and elected H. S. Findlay of Cheney, Wash., president; Arthur E. Hooper of Ferrel, Idaho, vice president, and D. E. Smead of Opportunity, Wash., secretary-treasurer; and adopted a constitution and by-laws. A full account of the meeting and its purposes will be given in next week's Farmer.

Triumphant Angus at Home

Northwestern Herd Bring Back Blue Ribbons



By D. G. SUTHERLAND

After touring the middle west, competing in many of the leading live stock shows and winning a large share of the honors at all of them, the Congdon & Battles herd of Aberdeen Angus are again at home, near North Yakima, Wash.

They made the Iowa, Minnesota, Wisconsin, Illinois and Missouri state fairs. The American Royal of Kansas City, the Chicago International and the Western at Denver. They returned with 74 first prizes to their credit, and many second, third and fourth prizes.

Their herd bull, Quality Lad of Rosemere 3d, stands undefeated. The herd furnished the junior champion female of all shows, being the junior heifer calf, Queen of Rosemere 5th. Their steer was grand champion of all shows, except the Chicago International, where they stood second, being defeated by a California bred animal. At the Chicago International, the herd won more first and second prizes than any of its competitors, including first prize aged herd and first prize calf herd.

The Congdon & Battles herd now numbers over 100. Two cars more will be shipped in soon. It is planned ultimately to increase the herd to 500 head.

Quality Lad of Rosemere 3d, the undefeated 2000-pound, 2-year-old Aberdeen Angus bull that lead the champion aged herd at the last Chicago International stock show, owned by Congdon & Battles of North Yakima, Wash.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unusued portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Farmer Organizations Need Trustworthy Leaders

Farmers of Dakota county, Nebraska, have formed a protective association to deal in an organized way with agents offering stock in speculative companies. Stock salesmen will be required to submit their propositions to all the members at a meeting, and individual members of the association are pledged not to buy into any scheme, however alluringly it may be presented by the agent, until it has been investigated by the protective organization.

Sensational disclosures in the recent trial in Spokane of Gale Smith and other officers of the Northwestern General Trading company show that the Nebraska plan has elements of danger as well as of protection. Once an agent got the endorsement of the Dakota county association he would use it to sell stock to individual farmers all over the country. "Our enterprise has been investigated by this protective association of farmers," he would say, "and they pronounce it sound and good;" just as the stock salesmen of the Northwestern General Trading company used the indorsement from C. B. Kegley, master of the state grange, and L. C. Crow, state president of the farmers' union, to sell stock in that swindling concern to farmers of the Pacific northwest.

The Nebraska farmers are groping for a remedy for a great and growing evil, but they are in danger of making worse a condition al ready bad.

What is needed is more rigid state supervision of stock-selling projects, particularly of concerns that are paying agents 25, 40 or 50 per cent in commissions on sales of stock.

Another urgent need is the selection of trustworthy leaders in such worthy organizations as the grange and the farmers' union—men who will refuse to lend their indorsement to concerns that are being exploited by incapable or dishonest managers.

Department of Agriculture.

On April 1 this year E. F. Benson of Tacoma, one of the most widely known men in agricultural and horticultural and live stock work in the northwest, becomes state commissioner of agriculture. The appointment was made recently by Governor Lister to fill a place that has been occupied by H. T. Graves, live stock deputy, as acting commissioner, since the resignation of J. H. Perkins, the first commissioner in the department, three years ago. Commissioner Benson is a man who has been successful in his private business, and who has shown a special adaptation for solving the big problems of agriculture in this state. He will have associated with him in the work, as members of the department's advisory board, E. E. Flood of Spokane, Granville Lowther of North Yakima, Ira D. Cardiff of the state college experiment station, and Governor Lister. The dairy and live stock, horticultural, food and drugs and seed testing branches of the department each has a deputy commissioner at its head.

The farming interests of the state have a right to expect much from the department of agriculture. The department of agriculture has a right to expect the united cooperation of the farming interests.

Lawless Blow at the Welfare of All the Farmers

The threat to sink American and other ships bearing farm produce and other merchandise is a blow at the rights and welfare of all the farmers of the United States.

So long as ships dare not sail, and so long as they lie idle at the wharfs, the railroads refuse to haul wheat to tide water, giving the reasonable explanation that further shipments from the interior to the seaboard would increase the prevailing congestion and tie up thousands of freight cars at a time when the country is already suffering from a shortage of rolling stock.

Fortunately for the farmer, the surplus from the last harvest is pretty well sold and moved across the Atlantic. But another crop is coming on and it is the part of wisdom to look to the future.

In round numbers, the United States had a billion-bushel wheat crop in 1915. The 1916 crop fell to 600,000,000 bushels. The average for the two years was large, but Europe was an eager bidder, and by distributing the marketing over the two years we sold the surplus at excellent prices. A large carry-over from 1915 was sold in 1916.

The 1917 wheat crop may be another billion-bushel wheat yield, but even if it should be only an average crop, the price will be governed by foreign buying. If lawless warfare upon the high seas should be allowed to prevent the shipment of the surplus, the whole crop would hang over the home market and the farmers would have to sell at ruinous prices.

A similar embargo would apply to other cereals, fruits, live stock, to the metals of the Inland Empire and the fisheries of Puget sound and the Columbia river.

If our people are clear-visioned, straight-thinking and courageous, they will insist that the government at Washington stand up for American rights and the prosperity of the American people.

Form a Chuck Hole Club

Recently a meeting of good roads advocates, comprising a large number of the residents on Fidalgo island, in Puget sound, met and formed what they termed a chuck hole club. What it really is is an anti-chuck hole club, for the purpose is the ultimate extinction of that particular species of bad roads features.

Every community should have its chuck hole club. Every man and boy and most of the women and girls in that community should be members. It is the most fallacious of falacies to believe that the road district or the county or the state should do all the road work. A few hours' work with a team or with only a spade or rake would put the road along side a quarter section in good shape. An occasional repetition of that amount of labor would keep it in good shape. Only extensive improvements or repairs should be required of the district or the county or the state. A club of local people could do wonders for themselves and their horses and automobiles.

Virtue in a Fight.

A state senator, at the close of a long, argumentative wrangle over a measure that was up in the legislature for discussion, remarked: "Well, while we are quarreling we are not passing laws, so I say, let's quarrel."

This particular senator was one of the few legislators who realize that the worth of a legislature is not to be determined on the large number of bills enacted, but rather on the quality of those laws. Not more laws, but fewer and better laws, was his doctrine, and if the law books of almost any state could be assembled and placed on a pair of scales one would see evidence that he was right.

In many states the laws are so numerous and conflicting that they are confusing to the ablest lawyers and judges. Many cases that go to the supreme court for decision are so taken because of technicalities or confusion. There are many laws on the books which are never enforced because they lack popular support or penalty provisions, but they remain there year after year, and each legislative session sees sometimes as high as several hundred additional measures added to the lists.

Washington Gleanings

Potato prices have reached an almost unprecedented level. In many locations they have been selling at wholesale at as high as $60 a ton.

It is being argued that the introduction of the sugar beet into potato growing districts will do much toward the eradication of potato diseases.

Apple prices are reported as improved in the Wenatchee and Yakima district, with the natural result that they are being sold in considerable quantities.

Yakima county is now to have an agriculturist, the commissioners of that county having agreed to the appointment, with the necessary appropriation to pay his salary, with the assistance of the government as provided in the Smith-Lever act of congress.

A series of farm institutes have been held in Grays Harbor county under the leadership of County Agriculturist C. F. Monroe. He secured the services of representatives of the state college experiment station. Agriculturists throughout the state have been carrying out such programs with great success.

The Whatcom county dairymen's association has been considering the problem of pooling their product with a view to economizing in market methods and receiving greater consideration at the hands of the buyers. A similar plan is being worked out in Snohomish county.

During the past several days Ray McKaig, secretary of the North Dakota Nonpartizan league and master of the grange of that state, has been delivering lectures in the northwest on the general subject of nonpartizanship. Considerable interest among the farmers, especially the grange, has been manifested in the subject.

The state board of control has apportioned the grain bags manufactured at the state penitentiary among the grain growing counties. The price fixed is 10 1-2 cents each. At the bulk grain convention at Spokane recently, it was predicted that the price of sacks on the open market would be not less than 11 cents.

Great interest is being manifested in the logged-off land special train that the Great Northern railroad company is going to run through northern Idaho and eastern Washington timbered regions in April or May. The train will carry all manner of land clearing equipment, with probably 25 persons on board to lecture and demonstrate.

The record of the Winlock Cooperative creamery shows that the output of 1916 was 60,000 pounds more that in 1915. During the year 262,419 pounds of butter were made and sold, which brought a gross return of $82,365.90. The total expenses of the plant for the year amounted to $5482.90. The average price paid for butter fat was 53.8 cents per pound, but $1320.85 was divided among the stockholders in dividends, bringing the average price up to 34.3 cents.

What Others Say

Hoard's Dairyman: We pledge our undivided and whole-hearted support to our common country.

National Stockman and Farmer: The farmer is the first, but not the sole, beneficiary of the county agricultural agent.

Breeders' Gazette: Those who learn from experience of others, rather than from their own, are increasing in numbers.

Dakota Farmer: Man is the most wantonly destructive animal on earth, and the most senseless. The snuffing out of millions of buffalo bears melancholy witness. The vast flocks of passenger pigeons disappeared under man's slaughter attack.

GIANT POWDERS Lift them out

It will pay you to test Giant Farm Powders in competition with any other stumping powder.

In the last year more than 2,000,000 pounds of these Giant Powders were used for stump blasting in Washington and Oregon alone. The users included farmers in every county in both states, the largest lumber and development companies, and the United States Government. They use the Giant brands because they have found that

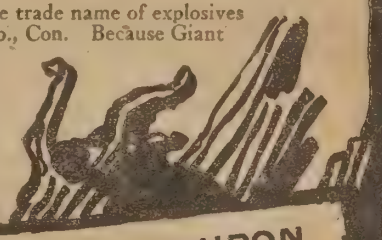
GIANT FARM POWDERS
STUMPING — AGRICULTURAL

always give satisfaction and do their work at the lowest possible cost and in the most thorough manner.

In the Pacific Coast states the farmers require explosives that will disrupt, crack, split and heave the stumps and at the same time lift and loosen the roots for easy handling. Giant Farm Powders do this because they are made especially to suit western conditions. Because of their wider-spread force, they remove the stumps more economically than powders or dynamites that merely shatter and pulverize.

Test one case. Compare it with any explosive that you have ever used for stump blasting. After you have blasted a dozen stumps you will understand why farmers who have once used them always continue to use the Giant Farm Powders. Fill out and mail the coupon at the right, and we shall arrange with our nearest distributor to supply you promptly at the lowest market price.

There are two Giant Farm Powders—Giant Stumping Powder, used for blasting in wet soil, and Eureka Stumping Powder (which costs a little less) for blasting in dry soil. Both resist cold to a remarkable extent, seven days' exposure to a temperature of 32 degrees failing to freeze them. Ask your dealer for these brands.



THE GIANT POWDER CO., CONSOLIDATED — HOME OFFICE: SAN FRANCISCO — ESTABLISHED 1866
"Everything for Blasting"

BRANCH OFFICES: Seattle, Spokane, Portland, Salt Lake City, Denver

Have You Our Stump Book?

It is the most helpful and interesting book ever issued on Stump Blasting. It tells and shows how to save money and make land-clearing easier. It is written by Western men, from the Western viewpoint, and is full of pictures showing latest methods of blasting. Mark and mail the coupon and get it free. Other books—on boulder blasting, tree planting, ditching and subsoiling with explosives—also free on request. Mail the coupon *now*, before you lay this aside.

Warning. Giant Powder is the trade name of explosives manufactured by the Giant Powder Co., Con. Because Giant Powders are best known everywhere, many have assumed that all high explosives are Giant Powders. Insist upon having the genuine, made only by the Giant Powder Co., Con. If your dealer has only ordinary dynamite, write us and we will see that you get the genuine.

How, When and With What to Spray

Directions for Preparing and Using Sprays for All Manner of Orchard Pests Fully Outlined

By A. L. MELANDER, Entomologist, State College, Pullman, Wash.

There is no single spraying that will kill everything. Select the ones that fit your case. Many plant diseases and pests can not be controlled by spraying and require special treatment. For information about insects, pests, plant diseases and spraying write to the experiment station, Pullman, Washington. The advice is free.

The following is a list of orchard spraying formulae, with directions for their preparation and use:

1—LIME-SULPHUR.

Ground sulphur .....110 pounds
Fresh calcium stone lime .. 50 pounds
Water, to make ..... 50 gallons

Slake the lime with 10 gallons hot water. Stir in the sulphur and add the remainder of the water. Boil briskly until the sulphur is dissolved (about 45 minutes) stirring continuously and keeping the cooker covered. As the liquid boils down add water to keep to the original level. When finished let any remaining sediment settle. Use only the clear liquid, which may be stored if kept from the air. Prepared in this way lime-sulphur should have a hydrometer reading of about 26 degrees, Beaume, somewhat weaker than the factory-made product.

For use any concentrated lime-sulphur may be diluted according to the table shown at the bottom of this page.

2—SODA-SULPHUR.

The dry powdered forms of soda-sulphur on the market may be dissolved in water at the rate of about 50 pounds to 100 gallons, when they give a spray comparing in polysulphid (the killing value) content with dormant strength lime-sulphur. A similar spray may be prepared in liquid form as follows:

Ground sulphur ..... 1 1-3 pounds
Potash or lye .....1 pound
Hot water ..... ¾ gallon

Add the ingredients to the hot water whereupon the chemical reaction takes place almost immediately. Stir a few minutes until dissolved.. The concentrate may be diluted according to hydrometer test but nearly twice as much should be used as in the case of lime-sulphur. E. g. if the concentrate tests 24 degrees use 20 gallons (instead of 10.2) to make 100 gallons of dormant spray.

Use: As dormant spray for same pests as lime-sulphur.. Unsafe during growing season.

3—FISH-OIL SOAP.

Water .....20 gallons
Lye or potash, 98 per cent ..7 pounds
Fish-oil .....5 gallons

Boil the water, dissolve the lye in it and stir in the oil. Boil for two hours. This should make about 130 pounds of gelatinous soap.

Use: (a) As an emulsifier for oil sprays; (b) to increase the effectiveness of nicotine spray; (c) dissolved 1 pound to about five gallons of water as a contanct spray for soft-bodied insects like aphids, young scales, thrips, on tender plants. The addition of quassia is unnecessary. Laundry soap may be substituted for fish-oil soap.

4—CRUDE OIL EMULSION.

Boiling water .....8 gallons
Lye or potash ..... 3 pounds
Fish-oil soap (see formula 3) 20 pounds

Dissolve in order named to form the emulsifier; then, with vigorous agitation, slowly add 20 gallons of crude (not fuel) oil. The resulting miscible oil may be poured in the spray tank and with the agitator running fill with water to 200 gallons.

It is much more dependable to use the ready-made miscible oils on the market, which should be diluted according to the directions furnished on the container.

Use: As a dormant spray recommended where lime-sulphur has proved unsatisfactory. Not an efficient fungicide.

5—KEROSENE EMULSION.

Kerosene .....2 gallons
Fish-oil soap (see formula 3) ....½ lb.
Boiling water .....1 gallon

Cut the soap in thin slices if hard, boil until dissolved and churn the hot suds into the kerosene, away from the fire. When emulsified stir into 35 gallons of water, for summer use. This spray has largely been replaced by nicotine.

Use: A contact spray for sucking insects, like woolly aphid, green aphis, plum aphis, etc.

6—NICOTINE, OR TOBACCO SPRAYS.

40 per cent nicotine .....1 pint
Fish-oil soap (see formula 3) 3 or 4 lbs
Water .....125 gallons

Dissolve soap in hot water, add the nicotine and dilute.

A similar decoction can be made by soaking 50 pounds of dried tobacco plants in 100 gallons of water for 24 hours, stirring frequently. Strain and dilute the solution obtained with an equal amount of water and add the required soap. Such home-made spray is variable in nicotine content and will not keep.

Use: The standard summer spray for aphids or plant lice, leaf hoppers, orchard mites, thrips and young worms.

7—PYRETHRUM: HELLEBORE.

Pyrethrum powder of white Hellebore powder ..... 1 pound
Warm water .....2 gallons

Make a paste of either powder by stirring in a little boiling water, add the remaining water and let stand for 24 hours. Then dilute to about 15 gallons. The efficiency of this spray is increased by adding a solution of one pound of soap. Either powder may be dusted dry.

Use: For soft-bodied insects like currant worms or slugs, especially on small fruits ready for picking.

8—ARSENATE OF LEAD.

Arsenate of lead, paste (poison) 1 lb.
Water .....40 to 50 gallons

For newly hatched insects it is not necessary to use it stronger. For old or large insects use double the quantity, or more. Smooth the paste thoroughly with a small amount of water before putting in the spray tank. Arsenate of lead powder is twice as strong as paste. Do not use arsenate that feels gritty or that settles rapidly.

Arsenate of zinc powder or paris green are about four times as strong as paste lead. They are especially valuable for resistant insects like tent caterpillars, tussock worms and bettles, but may scorch in a damp season. If paris green is used as a liquid spray, add five pounds of fresh-slaked lime to each pound of poison.

Use: The standard poison for coating foliage or fruit as a protection against chewing insects, caterpillars, codling worm, cherry slug, etc. Valueless for sap-sucking insects like aphids, scales, orchard mites or leaf hoppers.

9.—POISONED BAITS.

Bran, shorts or flour ..... 30 pounds
Paris green, zinc arsenite or white arsenite ..... 1 pound

Mix dry, season with either (a) four lemons ground through a meat chopper; or (b), one or two quarts of molasses; or (c) one pound salt. Then add enough water to form a mash and scatter where required. Fresh horse manure may be used instead of the bran, seasoning then with salt. Arsenite of soda (see formula 15), the quickest acting insect poison known, may be used as the poison in either formula at the rate of three pints of the stock solution to the 30 pounds of bran, etc.

Use: For cut worms, grasshoppers, or crickets. Do not apply directly to the young trees, but distribute on the ground, either by spoonfuls or broadcast.

10.—BORDEAUX.

	Double.	Standard.	Weak.
Blueston (copper sulphate)	10	5	2 pounds
Stone lime	8	5	2 pounds
Water to make	50	50	50 gallons

Dissolve the bluestone by suspending it in a sack in 25 gallons of water in a barrel, or by crushing it and adding to hot water. Slake the lime in another vessel, adding a little water slowly, and dilute to 25 gallons. Mix the two thoroughly, which is usually done by pouring the two simultaneously into a third vessel.

Use: (a) The standard formula is a repellant for leaf eating insects because of the metallic taste. Valuable for cut worms, grasshoppers, flea beetles. (b) As a fungicide. Double strength used in western Washington as a late fall or winter spray for anthracnose; the weak formula a summer spray on delicate foliage for cherry shot-hole or peach blight; the standard strength for scab.

11.—SULPHUR.

Sublimed flowers of sulphur or ground flour is sometimes used as a dust spray either alone or diluted with equal parts of hydrated lime. As a liquid spray, for every 20 gallons stir one pound of sulphur into flour paste made of one pound of flour and one gallon boiling water, before diluting.

Sulphur paste, milled sulphur, atomic sulphur and diatomic sulphur are commercial preparations containing about 50 per cent of finely divided sulphur. They are used at 2 to six pounds to 50 gallons.

Use: For orchard mites and mildew. A stronger spray than iron sulphide, liable to burn very young fruit in hot weather.

12.—IRON SULPHIDE MIXTURE.

Lime-sulphide, 32 degrees ..5 gallons
Ferrous sulphate (green vitriol or copperas).. ...20 pounds
Water to make .....200 gallons

Add the lime-sulphur to the spray tank nearly full of water and with agitator running stir in the iron sulphate previously dissolved in about 10 gallons of water. The mixture consists principally of black iron sulphide and finely divided sulphur. It is the latter that gives value to the spray.

13.—SOIL FUMIGANTS.

A. Carbon Disulphide—Allow two-thirds ounce to each square yard of surface and cover immediately with oil-cloth. Extremely volatile and inflammable.

Use: For borers, cutworms, root weevils, wireworms in strawberry fields, gardens, etc.

B. Cyanide—Pour 1 per cent solution of sodium cyanide (deadly poison) into spots requiring treatment. Do not inhale fumes. Destructive to plans as well as insects, but soil treated becomes safe in a few days.

Use: For exterminating ant nests, for woolly aphid and other subterranean insects.

14—FUMIGATION FOR NURSERY STOCK.

Sodium cyanide 130 per cent..1 ounce
Water .....2 ounces
Sulphuric acid.....1½ ounces

This amount is sufficient to fumigate 150 cubic feet. Place the nursery stock in a box made gas-tight by sealing with building paper if necessary. Pour the acid into the water in an earthenware bowl and set it on the plants. Wrap cyanide in a paper and drop into the bowl of acid, immediately putting down the cover. Fumigate for 30 to 45 minutes. Do not in-

(Continued on page fourteen.)

Hydrometer test of concentrate. Degrees Beaume	Specific gravity	To make 100 gallons of spray, use: For dormant spray: 1 lb. sulphur in 5 gal. 3 deg. Beaume; sp. gr. 1.02	For summer spray: 1 lb. sulphur in 10 gal. 1.5 deg. Beaume; sp. gr. 1.01
34	1.3015	6.7 gal.	3.3 gal.
32	1.2788	7.2 gal.	3.6 gal.
30	1.2569	7.8 gal.	3.9 gal.
28	1.2357	8.5 gal.	4.2 gal.
26	1.2153	9.4 gal.	4.7 gal.
24	1.1955	10.2 gal.	5.1 gal.
20	1.1578	12.3 gal.	6.2 gal.

Use: As dormant spray when buds are swelling, for San Jose scale, oyster-shell scale, insect and mite eggs, bud-worm and twig borer. Concentrated lime-sulphur mixed with lime whitewash useful to coat tree trunks for rabbits and borers. In summer strength for orchard mites. Also a valuable fungicide for mildews, apple anthracnose, apple scab, peach leaf-curl and lichens.

Program for Usual Orchard Spraying.

1. When buds begin to swell:
Oil spray or 3 degrees lime-sulphur. (W. C. E.)*
A general cleanup for scales, insect eggs and fungi, particularly important for San Jose scale. With nicotine added, the most valuable treatment for aphis when buds first show green (W. C. E.)

2. When new foliage is first appearing.
Nicotine (W. C. E.) Usually unnecessary if given in preceding.
For aphids, orchard mites, thrips, leaf-hoppers. With arsenical added (W.) For bud worm (W.), twig borer (C.)

3. When blossoms are ready to open (apple, pear.)
Lime-sulphur, 1.5 degrees.
For scab (W. E.) and mildew (W. C. E.) With nicotine added, for orchard mites, aphids, thrips.

4. When last petals are falling (apple).
Arsenate of lead.
For codling moth, caterpillars (C. E.) With lime-sulphur, 1.5 degrees added. For scab (W. E.) and mildew (W. C. E.)

5. Additional summer sprayings may be needed, as arsenate of lead for codling moth and caterpillars; nicotine for aphids, oyster shell scale, mites; Bordeaux for grasshoppers.

6. In November.
Lime-sulphur, 3 degrees; or Bordeaux, double or standard strength.
For apple anthracnose (W.) Nicotine (W. C. E.) For returning aphids.

*W, western Washington; C, central Washington; E, eastern Washington.

Hints on Spraying.

It takes a definite quantity of material to spray a tree thoroughly, whether applied at high or low pressure or whether applied as a mist or a driving spray. Low pressure does not save material, but wastes time. The labor cost in spraying often exceeds the cost of the materials used.

High pressure is mainly valuable in lessening the time it takes to spray, but high pressure increases the range of a nozzle and adds to the penetrative force of the spray, thus bettering the chance of doing effective work.

The bodies of insects are greasy and hard to wet, yet many sprays depend on coming in actual contact with the insect in order to kill. Many insects and many eggs are located in the lowermost crevices of rough bark, out of reach of any but a penetration system of spraying.

Therefore, spray thoroughly. Direct attention to the hardest places to reach. Cover every surface. Wet behind the buds and into the bottom of every crack. Fill the lower calyx cup. Do not try to economize on spray by doing superficial work or by missing the ends of the branches. For all orchard spraying use a high-pressure pump, 250 pounds if possible. Use only nozzles of the Clipper or Bordeaux type, as they alone combine speed, range and penetration. Use an eight-foot spray rod. Have a crook joint to set the nozzles at an angle of 45 degrees. Spray from a tower if the trees are beyond reach from the ground. For dormant and calyx spraying throw most of the liquid downward, stroking the branches from the tips toward the trunk, but some spraying must be done in every other direction as well. Do not try to improve on the formulas by adding other ingredients or by using the spray stronger than recommended. There's a reason.

Watch your spray pump. Have it overhauled and in readiness before it is time to spray. Wash out the spray liquid at the end of each day's work. In freezing weather drain off the liquids when through.

$225 SOMEBODY WILL WIN — SIXTY QUESTIONS — SOMEBODY WILL WIN $225

With the opening of the second period for those using our Contestant's Helpful Outfit, February 22, the first prize dropped from $300 to $225. On March 14 this prize reduces again to $200. Better start now by getting our Contestant's Helpful Outfit.

Read the Plan and Rules of This Big Free-for-All

FARM INFORMATION CONTEST

There are 60 questions which everybody should try to answer. They are interesting, they are entertaining, and the prizes make it worth your time to try to answer them. Look into the contest plan and fix your aim on the big cash awards.

READ THE RULES

Answer These Questions

21. What farm fowl has the same name as one of the warring nations of Europe?

22. Where is the key of the Bastile? (See almost any public school history or consult our CONTESTANT'S HELPFUL OUTFIT.)

23. If young swine are called pigs, what are young rats called?

24. What common bird has a name pronounced the same as a letter of the alphabet?

25. What will be the cost of running a 6-line "want" ad for three times in the Washington Farmer, The Oregon Farmer and The Idaho Farmer? For example: What will be the cost of running the following ad for three insertions in each of these state papers?

Coolidge Hatchery—S. C. White Leghorn baby chicks, standard bred, excellent type, vigorous, healthy, leaders in egg production. $12 per 100, $110 per 1000. Send for descriptive circular. C. C. Coolidge, La Grande, Ore.

(Five more questions will appear next week.)

Answers to the sixty questions from those who have secured our Contestant's Helpful Outfit have started to roll in, with the result that a very large number of persons will be registered in the First Period of the contest for the $300 prize. Read the Enlarged List and familiarize yourself with the advantage of using our Contestant's Helpful Outfit.

$800—IN CASH to Be Paid—$800

We will positively give EIGHT HUNDRED DOLLARS in cash awards (and more in event of ties) to the winners. As explained in the rules which follow, there will be five questions run in every issue of the Farmer for 12 weeks. The last five questions will appear in the issue of April 19.

You Can Enter Without Cost

You do not even have to be a subscriber of the Farmer to enter. As has already been stated, any resident of Washington, Oregon, Idaho or Montana is eligible to compete in this contest.

Five Questions Each Issue

The contest will be composed of 60 questions. Five will be run in each issue of the Farmer for 12 issues.

Answers to each question except No. 45 can be given correctly in from one to 10 words and will be given a score of 100 if correct. Answers to question No. 45 will be limited to 100 words each, and will be graded as to the common sense and general knowledge of farm conditions shown by the contestant without regard to spelling, grammar or penmanship. As with the other 59 questions, a perfect answer to No. 45 will be scored 100.

Perfect Score Is 6,000

The contestant who comes nearest to a score of 6000 and complies with all the conditions of the contest will receive the first prize; the next nearest, second prize, and so on. In case of a tie each tying contestant will receive the full amount of the prize.

There are 35 prizes as follows:

$150 is amount of First Prize. **$100** is amount of Second Prize. **$50** is amount of Third Prize. **$20** is amount of Fourth Prize. **$10** is amount of Fifth Prize. **$5** each, Sixth to Tenth Prizes. **$2** each Eleventh to Fifteenth Prizes. **$1** each, Sixteenth to Thirty-fifth Prizes.

OTHER RULES

The answers will be passed upon and graded by a fair-minded, thoroughly competent judge.

Two weeks will be allowed for sending in answers after April 19, 1917, date of the issue containing the last five questions.

Remember, your failure to answer all the questions will not necessarily exclude you from the contest. There are 60 questions to be answered and it is not reasonable to suppose that all our prize winners will attain a perfect score. Your answers must all be sent in at the same time. Do not send any answers until you have completed the full list or as many as you can answer.

Those who use our CONTESTANT'S HELPFUL OUTFIT will be able to send in their complete set of answers without delay, there being no need of their waiting for the questions as they appear in The Farmer from week to week down to the final issue of April 19. In order to get as prompt returns as possible from those contestants who use our CONTESTANT'S HELPFUL OUTFIT, extra inducement is made in the prize awards. SEE ENLARGED PRIZE LIST.

Announcement of prize winners will be made and prize checks mailed as soon after close of contest as possible.

If any point is not clear, do not hesitate to write the Farm Information Editor.

All answers must be mailed on or before midnight, May 3, 1917, as shown by post-office dating stamp on your envelope.

ORDER COUPON—If your subscription is paid ahead, the time paid for herewith will begin at the date to which you are now paid.

FARM INFORMATION EDITOR.
Review Building, Spokane, Wash.

Enclosed find $1 for one year, or $1.50 for three years' subscription to

THE WASHINGTON FARMER.

and enter me as a contestant in the Farm Information Contest. I am also to receive at once the complete CONTESTANT'S HELPFUL OUTFIT, consisting of guide against wrong answers, reply blanks, rules and all information to aid me to win a reward.

Name .....

R. F. D. ..... Town .....

State .....

Notice—Amount of remittance to be either $1 for one year's subscription to the Farmer or $1.50 for three years' subscription.

Answer this question: Are you now a subscriber?.....
If you wish paper sent elsewhere, fill in name and address.

A Valuable Aid to Contestants

One complete CONTESTANT'S HELPFUL OUTFIT, including all of the 60 questions and instructions and helpful warnings as to answers which would be wrong, and the correct answers to some of the most difficult questions, will be sent to any public library, free of charge, upon request.

To each contestant who sends in a new renewal or an extension of his subscription at the time of registering for the contest, this complete CONTESTANT'S HELPFUL OUTFIT will be sent in combination.

We feel that those beginning on the contest will find these suggestions as to what to avoid distinctly useful. This equipment supplies in convenient form everything needed to enable you to apply your ability to the best advantage, and will contain information enabling you to answer the most difficult questions correctly.

Puts Questions in Reach of Children

This CONTESTANT'S HELPFUL OUTFIT puts the solution of the questions in the reach even of the children, it being the purpose to make it possible for everybody in Washington, Oregon, Idaho and Montana to compete. This outfit includes, besides general information about the plan of the contest, the following:

Guide against wrong answers, which includes either correct answers of more difficult questions or easy references as to where to find the correct answers; and blank forms on which to write your answers in such a way that there can be no confusion when your answers are taken up by the judge for scoring.

It will be worth considerable to you to be assured that your answers are reaching the Farm Information Editor in such form that he will know in every instance exactly what question you intended to answer. This CONTESTANT'S HELPFUL OUTFIT will make it possible for you to

Begin Work at Once

On account of the large number certain to send for our CONTESTANT'S HELPFUL OUTFIT, thus making it possible for them to answer the entire 60 questions without delay, it is deemed advisable to offer some special inducements to secure prompt returns from this particular class of contestants. By securing the early replies of those who are thus supplied with the entire 60 questions, we will be able to have their papers carefully scored before the final rush of answers toward the end of the contest.

Understand, it is not absolutely required that those who use our CONTESTANT'S HELPFUL OUTFIT send in their replies at once, but, in order to induce them to get in early, the following plan for enlarging the awards to those prize winners whose answers come in early is offered:

ENLARGED PRIZE LIST—$300 CAN BE WON—ENLARGED PRIZE LIST

For those who use our CONTESTANT'S HELPFUL OUTFIT.

Thirty-Five Prizes	Amt. of prize if winner sends in answers during 1st period, Feb. 1- Feb. 21	Amt. of prize if winner sends in answers during 2d period, Feb. 21 Mch. 14	Amt. of prize if winner sends in answers during 3d period, Mch. 14 April 5	Amt. of prize if winner sends in answers during 4th period, April 5 April 19	Amt. of Prize for winner who does not send in answers before April 19
First Prize	$300.00	$225.00	$200.00	$175.00	$150.00
Second Prize	200.00	175.00	125.00	110.00	100.00
Third Prize	100.00	87.50	62.50	55.00	50.00
Fourth Prize	40.00	35.00	30.00	22.00	20.00
Fifth Prize	20.00	17.50	15.00	11.00	10.00
6th to 10th 5 prizes each	10.00	8.75	7.50	5.50	5.00
11th to 15th 5 prizes each	4.00	3.75	3.00	2.20	2.00
16th to 35th 20 prizes each	3.00	2.50	2.00	1.50	1.00

To secure our CONTESTANT'S HELPFUL OUTFIT, fill out order coupon on this page and send it in to Farm Information Editor, with your personal check, money order or 2-cent stamps, for $1.00 for one year or $1.50 for three years.

What Is Conspiracy to Defraud?

Answered by Judge Van Fleet Instructing Jury in Trial of Northwest Trading Company

The trial and conviction of the four officers of the Northwest General Trading company in the federal court at Spokane brought out a clear exposition by Judge Van Fleet in his instructions to the jury as to what constituted a conspiracy to defraud. Among other things, Judge Van Fleet said:

"The defendants are charged in an indictment with conspiracy. It charges the defendants on trial, and Lawrence Jack and Frederick B. Sears, now deceased, and divers other persons to the grand jurors unknown, with having on or about June 1, 1909, in violation of the criminal code of the United States, wilfully, unlawfully and feloniously entered into a conspiracy to commit an offense against the United States, and in furtherance of such conspiracy used the postoffice establishment of the United States to effectuate a scheme to defraud; that the scheme was, in substance, that the conspirators would operate certain mercantile corporations—the Northwestern General Trading company, the Olympic Trading and Supply company and the Iowa Mercantile company and divers other corporations to the grand jurors unknown—and induce the public to purchase shares of stock therein, asserted to be of great value, by representing that said corporations were cooperative mercantile establishments in successful operation whose objects were to sell merchandise at wholesale prices, plus the cost of handling, to their stockholders; whereas, in truth and in fact, the said corporations were not then being conducted successfully, but the principal object of the said conspirators in operating said corporations was, by false and fraudulent representations, to obtain money from persons named in the indictment and from the public in payment for of stock and to appropriate it to their own use.

Overt Acts Alleged.

"Certain overt acts, that is, open and manifest acts, are then charged to have been committed by the defendants on trial and said Lawrence Jack and said Frederick B. Sears in pursuance of such conspiracy, and for the purpose of carrying it into effect. In that regard it is alleged that in furtherance of the conspiracy the defendants on trial and said Lawrence Jack and Frederick B. Sears deposited certain letters, which have been read to you, in the postoffice of the United States at Spokane for mailing and delivery.

The alleged coconspirator named in the indictment as Lawrence Jack, and the alleged coconspirator Frederick B. Sears, and the alleged unknown persons, are not on trial here, and with them, therefore, your verdict is not concerned; nor does their absence in anywise affect the question of the guilt or innocence of the five on trial —Gale Smith, Cylde L. Davies, Stephen T. Knudson, John C. Lawrence and Olin C. Fowler."

Three Points for Decision.

Judge Van Fleet defined the three points for the jury to determine to be: First, if a conspiracy existed; second, was an overt act committed by one or the other of the parties to the case; third, was such overt act committed by one or more of said defendants in furtherance of said conspiracy?

"Of course, if you find that there was no conspiracy formed," continued the court, "or if found, that the defendants on trial were not parties to it; that no overt act was committed by any party thereto in furtherance thereof, then your inquiry is at an end and the defendants on trial must be acquitted.

"As I have indicated during the trial, it is necessary to warrant a verdict of conviction that the government establish an intent on the part of the defendants to defraud. To show this you should be satisfied that the defendants did not in good faith intend to conduct the corporations mentioned in a manner calculated to develop their operations into a successful and paying business in the interest of the stockholders, but that, either in the beginning or during the course of their operations, regardless of whether such business would be successful or beneficial to stockholders, the defendants agreed to continue or carry on such operations with the intent and for the purpose of selling the stock and obtaining money or property from others, therefore by means of false or fraudulent pretenses, representations or promises alleged in the indictment."

Continuing, the court instructed the jury that if it should find that the business was honestly conceived and conducted and that no conspiracy existed at any period of its operation, then the defendants should be acquitted.

"If the business is found to have been honestly conceived and conducted in the beginning and in its earlier stages and later became part of a conspiracy under which fraudulent act were committed, then a verdict of guilty is to be returned, notwithstanding the good intentions at the outset," the court instructed.

Mere failure in business, the court said, would not alone justify an imputation of an intent to defraud. This is merely a circumstance to be considered with the other evidence in the case and is not alone conclusive.

Intent to defraud must be shown in connection with the overt acts to be established by the prosecution, the court ruled. The intent may be determined by the jury from the circumstances surrounding the commission of the act.

"Men committing a wrongful act do not ordinarily proclaim in an open, definite manner the real purpose or intent with which the act is done, and therefore unless it could be inferred from the circumstances surrounding it the real intent could in most instances not be established," said the court.

Intent to Defraud.

"If the jury finds that any of the corporations named were not used in the general scheme to defraud it is asked to disregard such testimony unless it tends to explain the connection of the defendants with other persons or corporations.

"You will understand from this that it is not necessary that it be shown by the government that all of the corporations named in the indictment were in fact used or operated in furtherance of the alleged scheme to defraud," said the court. "It is sufficient if you find that some one or more of them was so used."

The mere receipt of compensation for the sale of stock in one or more of the companies, the court held, would not of itself be sufficient to establish an intent to defraud. This would merely be a circumstance to be considered in connection with other testimony. It was further held that where a defendant has consulted a lawyer in good faith and is given an inaccurate construction of the law; under which in good faith he does things which he thinks are legal this may be considered in connection with other evidence as to whether such person had an intent to defraud.

Evidence Touching Fraud.

The court further instructed the jury that the commission of a wrongful act by one of the defendants individually in the management of one of the several corporations involved would not warrant a finding of guilty unless it were shown that such dishonest act was in the furtherance of a scheme to defraud in which the mails were used.

"Where two or more persons act together understandingly in such a manner there is a conspiracy, although there may not have been a word spoken between them regarding it," continued the court. "Every scheme to defraud in which two or more persons understandingly carry it out is a scheme to defraud.

"Therefore, in the present case if you find from the evidence that there was an understanding among these defendants that the stock of these various corporations was to be and was sold to the public by means of false pretenses and representations—that is, if the defendants understood that the purchasers of stock were to be and were deceived as to the true conditions respecting these companies—then you may find that they conspired to devise a scheme to defraud as charged in the indictment.

Circumstances to Be Considered.

"Although the defendants may not have entered into any agreement as to the formation of a conspiracy, if the manner and circumstances of such illegal combination are such as to give the jury room to believe that one was formed, then it is justified in finding that a conspiracy existed in the absence of a written or oral agreement to this effect.

"It is not necessary that parties to a conspiracy shall all meet at one time and formally agree, for a conspiracy may be carried out without any formal declaration of its purpose by any of those concerned. Neither is it necessary that all of the parties to a conspiracy were members of it when originally formed, for if it is shown that a new or additional party came into a conspiracy after it had been formed for the purpose of aiding in its operation he is from that moment a fellow conspirator and responsible alike with the rest.

Acts Are Binding.

"It is required, however, that such new member of a conspiracy must know that the parties whom he is assisting are engaged in a common and unlawful design. Such knowledge may, however, be inferred from his conduct, and if his acts lead the jury to believe that he had knowledge of the intention of his associates to defraud this is sufficient. The act of one conspirator will bind all of his coconspirators, and likewise the declaration of one conspirator can be used against the others.

"If one is party to an unlawful scheme or plan or is a member of a combination, which he does not, in becoming a party thereto, know to be criminal, but later becomes aware of the criminal design, and does not withdraw or repudiate it, he may be found guilty of conspiracy The fact that a conspirator is a servant of or in the employ of another party to the combination does not preclude there being a conspiracy between them; and until there is an affirmative withdrawal from the conspiracy by the servant or employe his acts bind his employer and coconspirator."

Explains Overt Act.

Discussing what constitutes an overt act the court said: "The particular act need not be in itself criminal. It may be a perfectly innocent act. In this case the overt acts mentioned in the indictment were the use of the postal service by mailing to persons either printed or written matter containing statements tending to further the unlawful conspiracy charged in the indictment.

"It is sufficient under the law if it appears that the conspiracy was in existence at the time that an overt act in furtherance of it was committed, and that such overt act was committed within three years prior to the finding of the indictment".

The court said that previous evidence of good character could be taken as a circumstances along with the other evidence in the case. Evidence of previous good character should not deter the jury from finding the defendants guilty if the evidence, beyond a reasonable doubt, warrants it, he held further.

The court requested the jurors to disregar any impressions they may have formed following his questioning of witnesses, that might give rise to a belief that he held an opinion as to the guilt or innocence of the accused.

Burden of Proof.

Discussing the credibility of the defendants as witnesses, the court told the jury that they should be accorded the same degree of credibility as other witnesses, not overlooking, of course, the personal interest they may have in the outcome of the case.

The burden of proof, in the present case, as in all similar prosecutions, the court held, rests with the government, which, however, is not called upon to make a case free from all possible doubt. Such doubt should not consist of a mere fanciful hesitation, growing out of sympathy, and other than a fair and impartial consideration of the evidence, said the court.

"In arriving at your verdict, you should give no consideration to the fact that a defendant has been indicted as tending in any way to establish guilt," said the court.

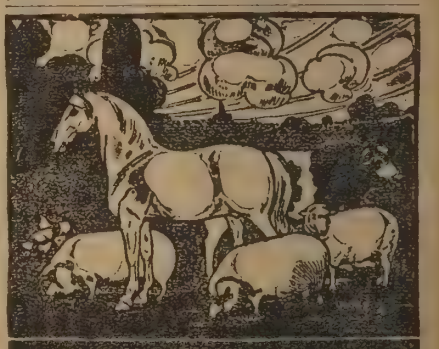
Convict One or All.

The court held that the jury might convict one or more or all of the defendants as the facts may warrant. "It is not incumbent on the government, notwithstanding the offenses charged, to necessarily show that all of the parties alleged to have been concerned in the conspiracy, were in fact participants in it, in order to convict any of them.

Speed of Fly.

In proportion to its size a fly walks 13 times as fast as a man can run.

Rabbits and rattlesnakes, cougars and bald-faced bears, outlaw ponies, squirrel-catching cats and many odd characters of pioneer days in Washington—



All woven into a vivid narrative which the author calls

THE UPS AND DOWNS OF A BUNCH GRASS BOY

The first instalment of which will appear in next week's issue.

In this series of articles Mr. Joe Ashlock has turned back the pages of his life to the halcyon days of his boyhood, spent among the early settlers of the Big Bend section of Washington. He takes us back to the old Big Bend that was—wild, sparsely settled—an immense range of virgin bunch grass country over which there brooded at time a spirit of great loneliness for a little boy.

We haven't had anything to offer you for a long time that we believe will give you so much real enjoyment. Watch for the opening article of the series in next week's issue.

Made by Bean Spray Pump Co., manufacturers of Bean Power Sprayers, known wherever good fruit grows the world over.

BEAN TRACKPULL TRACTOR

The Little King *of* Orchard Tractors

Goes under the boughs of trees only 4 feet off the ground. Gets into corners where a horse could never go. Works close to the trees without injuring them.

The Beam TrackPULL six-horse Tractor, combines giant strength with light weight and long traction. Just think of a tractor so small that it will go under boughs only 4 feet off the ground and will work right up close to the trees and between vines or anything that grows in rows only 7 feet apart.

That's what the Bean TrackPULL does. It will do your plowing, your cultivating and your discing, and then run stationary machinery when it is not working in the field.

It actually does the work of six horses on what it would cost you to feed one team, and you can work it 24 hours a day if you want to.

This Little Tractor Is Better Than Horses

It will do your heavy work when you want it done. It will save you money by saving you the cost of man labor and by doing more work and better work in less time than it takes horses to do it. It will not be affected by heat or insects. It will cultivate deep in hot weather. It will cost nothing to maintain when it is idle. It will mean that you will have a large unit of power at your command day or night.

Read what this orchardist wrote us a few days ago:

"By accident I was permitted to witness a few minutes' demonstration of the Bean TrackPULL Tractor last Saturday. For some time I have been looking for a practical orchard tractor and have examined not a few with the orchard work exclusively in mind. From what I saw at your demonstration, for wieldiness and flexibility you have thus far outclassed the whole bunch. Indeed, it would seem the time has come for 'that good span of bays' to hunt another job! The demonstrator, as if by magic, made his 'critter' do anything and everything among crowded trees that any orchardist could reasonably demand. The impossible had to about face, gracefully make his bow and depart."

IDEAL *for* SOFT SOIL *and* CULTIVATING

This tractor weighing only 2800 pound **pulls instead of pushes itself over the ground.** This is a big advantage over the tractor which has a rear drive. The Bean TrackPULL **does not get stuck in soft places.** You simply **swing the whole front end to right or left,** just as you would a team, and **keep on going.**

The Bean lays its own track on which it pulls. This wide track offers much less resistance than the rear drive tractor that sinks in and packs the soil. The Bean TrackPULL **packs the soil less than a man's shoe when he walks,** and the TrackPULL has **full power on the turns, as well as on the straight-away.**

The Bean TrackPULL **plows closer to vines and trees than a team. Makes little difference how far off center you hitch. It gets under the branches of trees no team can get under. Turns inside of a 10-foot circle.** A boy can operate it easily. It is equipped with a pulley for stationary work.

BEST CONSTRUCTION—Lasts Longest

The Bean TrackPULL six-horse Tractor is built in one size only, 6-h. p. at drawbar and 10-h. p. at belt.

The motor is a Le Roi 4-cylinder vertical type 4-cycle, equipped with Donaldson air clarifier. Bosch ignition, water cooled, with centrifugal pump, also fan, combination pump and splash lubricating system.

We use Hyatt bearings in track wheel and sprocket and in track rollers. There are six New Departure ball bearings in the transmission, running in grease and all dust proof. Gears are steel.

PROMPT DELIVERIES IN APRIL.

We are behind on orders and are working night and day. We have started work on an addition to our plant to increase our capacity and will be able to make prompt shipments in April.

DON'T WAIT—MAIL THE COUPON TODAY.

Deeds in Wive's Name

As to Federal Farm Loan Association Members

By N. W. DURHAM

Chairman of Spokane Committe on Federal Land Bank Board

An interesting and close question is raised in the following communication from R. Fairbank Newberg, Ore.:

"We organized the first federal farm loan association in Yamhill county, and others will follow. We got into trouble when we got organized over who were entitled to membership. There were two elected directors and one of them was elected president, though the deeds to their lands were in their wives' names. They were objected to and so we elected others, but would much rather have retained them, but we wanted everything just right. Now we want to know if the ones we objected to were eligible to be members and hold the positions we elected them to?

"In one case the land came to the wife as part of an estate. In the other the land was deeded to the wife by request of her husband in order to save probate expenses in case of death of her husband."

The law says: "Ten or more natural persons who are the owners, or about to become the owners, of farm land qualified as security for a mortgage loan under section 12 of this act, may unite to form a national farm loan association."

Section 12 provides that "no such loan shall be made to any person who is not at the time, or shortly to become, engaged in the cultivation of the farm mortgaged."

While the writer of these articles is not authorized to speak officially for the federal farm loan board, we are confident that the board will adopt a broad and liberal course in chartering local farm loan associations, and that they will not withhold a charter because of slight technical irregularities.

In one of the cases cited, the land in question seems to be community property, and we think no objection would be raised against the husband serving as director or officer of the associatiton. The other case is less clear, for the land seems to be the separate property of the wife. If she is desirous of making a loan on it, and her husband is cultivating it for their mutual benefit, we think the board would also recognize his election as director and his right to serve."

George W. Smith writes from Springston, Idaho: "I would like to know if I could borrow money from the bank to pay for a farm, and give the bank first mortgage on the land. Please give me full particulars in regard to this."

Yes, provided you are in a position to finance the deal. If, for illustration, the price of the farm was $3000, you could borrow from the federal farm loan bank 50 per cent of that sum, assuming that the bank's appraiser found that the land was worth the $3000. If you had the remaining $1500 yourself, you could add to it the $1500 borrowed from the government and thus complete the deal. Or, lacking the $1500, if the present owner was willing to take your second mortgage for $1500, it could be worked out in that way.

The federal farm loan board has expressed its readiness to help landless men of small means acquire farms in this manner. It has been criticized for this policy by the Farm Mortgage Bankers' Association of the United States, but the Wall Street Journal, a daily newspaper of wide circulation among the big interests, but pretty broad and independent in its utterances, well says in defense of the board:

"There is still no reason to change the opinion expressed here in the former article that the original owner in this case, well-satisfied with the character of his former tenant, may be satisfied to receive $2500 in cash and a second mortgage on the property, under the conditions outlined in the Wilson article. It is by no means to be inferred that the owner would become hopelessly involved and default. We admit it would not be as easy a matter for the tenant as would have been the case had he accumulated something of a nestegg.

"But the Farm Mortgage Bankers' association and other mortgage concerns which are not in sympathy with the farm loan act, approach the matter from a wrong standpoint. They view the problem in the light of conditions under which they have been doing business. They fail to appreciate the fact that the federal farm loan act is setting out to accomplish something which independent concerns have been unable, or unwilling to do heretofore.

"No one doubts that the farmer with some means has little difficulty in securing all the credit he wants. It is to help those that formerly have not had the means of commanding credit that the farm loan act is designted. It is not surprising if the means to that end must upset traditions and establish precedents. The Form Mortgage Bankers' association does not have to be told that various successful real estate operations have been carried out when unusual credit has been judiciously extended. The mortgage concerns have secured pretty well the cream of the business, but there may be excellent results to be obtaind in the lower strata of farm mortgages heretofore ignored."

Next week's article will discuss the amortization feature of the law—the plan whereby the borrower keeps whittling down the principal of his debt over a long period of time—not less than five years and not more than 40, as the borrower may elect.

STUMP LAND PROBLEM

Proves an Expensive Investment.

To the Editor of The Washington Farmer: I have 40 acres of land that is cleared, except for the stumps, at a cost of $40 an acre. By careful measurement I am losing the use of one square rod for every three stumps, or the equivalent. Three expert stump dentists concluded it was worth $1 a stump, or $3 per rod to shoot and burn them and fill the cavities.

Results: First clearing of one acre, $40; stump dentistry, 160 rods at $3 per rod, $480; total cost per acre gained, $520; interest at 6 per cent, $31.20.

Will some one tell me how to farm that acre and make it pay interest?

N. S. A.

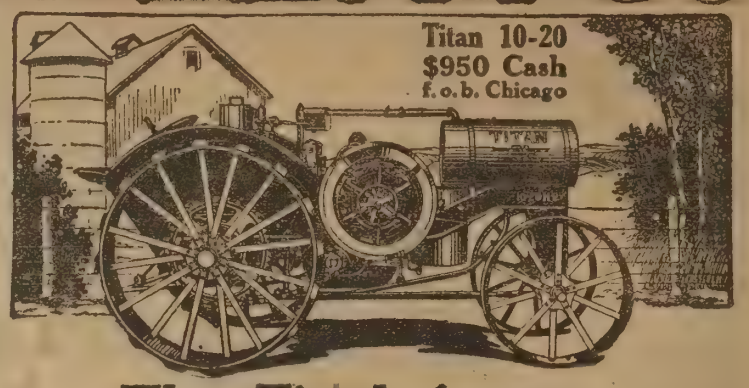
Lynden, Wash.

Answer by Leonard Hegnauer, state college extension specialist.

It would be difficult, even under the present high prices of farm products, to find a crop that would pay good interest and for labor on such an expensive investment. I am free to confess that I am at a loss to suggest a crop that would be profitable, all costs considered. If one had an intensive crop which was very high priced, and which could be grown only on a very limited area, then it might be possible to make the interest on such an investment. However, I know of no crop that would in all ways and at all times be dependable as a profit-producing proposition under such conditions as you have outlined in your letter.

SIDEWALK STALLS

For Farmers at North Yakima.



In order that farmers with produce of one sort and another to sell may have opportunity of doing so, an agreement has been reached between the owners of the public market at First and A streets and the city commissioners which looks to the establishment of sidewalk stalls as soon as the growing season opens. The market people will stretch an awning over the sidewalk about their building and provide benches against the building. The farmers may drive up to the curb with their produce and display it on the sidewalk stalls. The commissioners will permit the use of the sidewalk for the purpose.

Whatcom County Fair.

The Whatcom County Fair association finds itself $1200 better off than at the corresponding time last year, $500 having been invested in permanent investments, $500 of the association's notes paid off and $200 worth of old bills liquidated. W. H. Waples was named again as president and David W. Bender succeeds H. E. Stewart as secretary.

Pomeroy Farmers' Union.

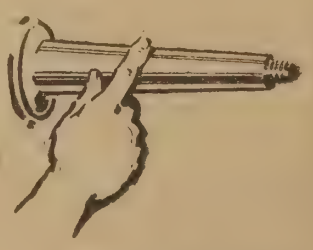
Pomeroy Farmers' union in Garfield county has elected James Oliver president and W. J. Schmidt secretary-treasurer. A sack committee was appointed consisting of James Oliver, W. A. DeDow and D. B. Williams.

The Final Answer

To the Tractor Fuel Question

WE believe that a farmer who buys a kerosene tractor costing hundreds of dollars is entitled to get what he pays for.

We **know** that **Titan** tractors are real kerosene tractors. When you buy a **Titan** tractor you are safe. You have the **written guarantee of a responsible Company** that your tractor will do good serviceable work, **using common coal oil as fuel** at all loads. That is the final answer to the tractor fuel question.



Titan tractors are now built in three sizes, 10-20-H. P., the 3-plow outfit; 15-30-H. P., for 4 and 5 plows; and 30-60-H. P. for the heaviest work of the largest farms. All operate on kerosene.

The 10-20-H. P. size is a two-speed tractor, 1.85 and 2.50 miles per hour, with a smooth running twin-cylinder engine, slow speed, mechanically oiled, starting and running on magneto. It can be used for any field work you would expect nine or ten horses to do, and it will run any machine that takes up to 20-H. P. at the belt.

If you place your order soon you can have a **guaranteed Titan tractor** for the heavy spring work. Drop us a line so we can send you full information at once. Don't wait. Write now.

Then Your Opportunity to Grasp This Big Prize Will Fade Away

Only Two Weeks to Win

Besides the Possibility of Your Winning One of the Thirty-Two Cash Prizes You Get This Paper at the Very Low Special Rate of 3 Years for $1.50

NOTICE—The Contest Editor is always pleased to answer any questions and wishes contestants to feel free to make any inquiries when they are in doubt. Letters of inquiry must be signed, however, in order to secure answers. It is not found desirable to try to answer inquiries through the Farmer, as the greater number of the questions asked have already been answered several times on this page. Sign your names, because your letters will not be used, in any event, without your consent and no contestant's name will be attached to any published letter without first securing the special permission of the writer. It is a genuine pleasure to answer your inquiries.

Read the Conditions

Simply add up the figures in the puzzle chart as if they were in one long column. Your success depends on the accuracy of your total thus obtained.

Figures run from two to nine, and there are no double figures or characters which are not figures. The tail of the "6" has a decided curve, while the tail of the "9" is straight. All other figures have the usual characteristics, allowing no question as to the identity of any figure.

In event that no one submits the correct total, prizes will be awarded for the next nearest solutions.

This contest is restricted to persons residing in Washington, Idaho, Oregon and Montana.

A payment of $1 to $1.50 on subscription to The Farmer entitles the subscriber to enter the contest.

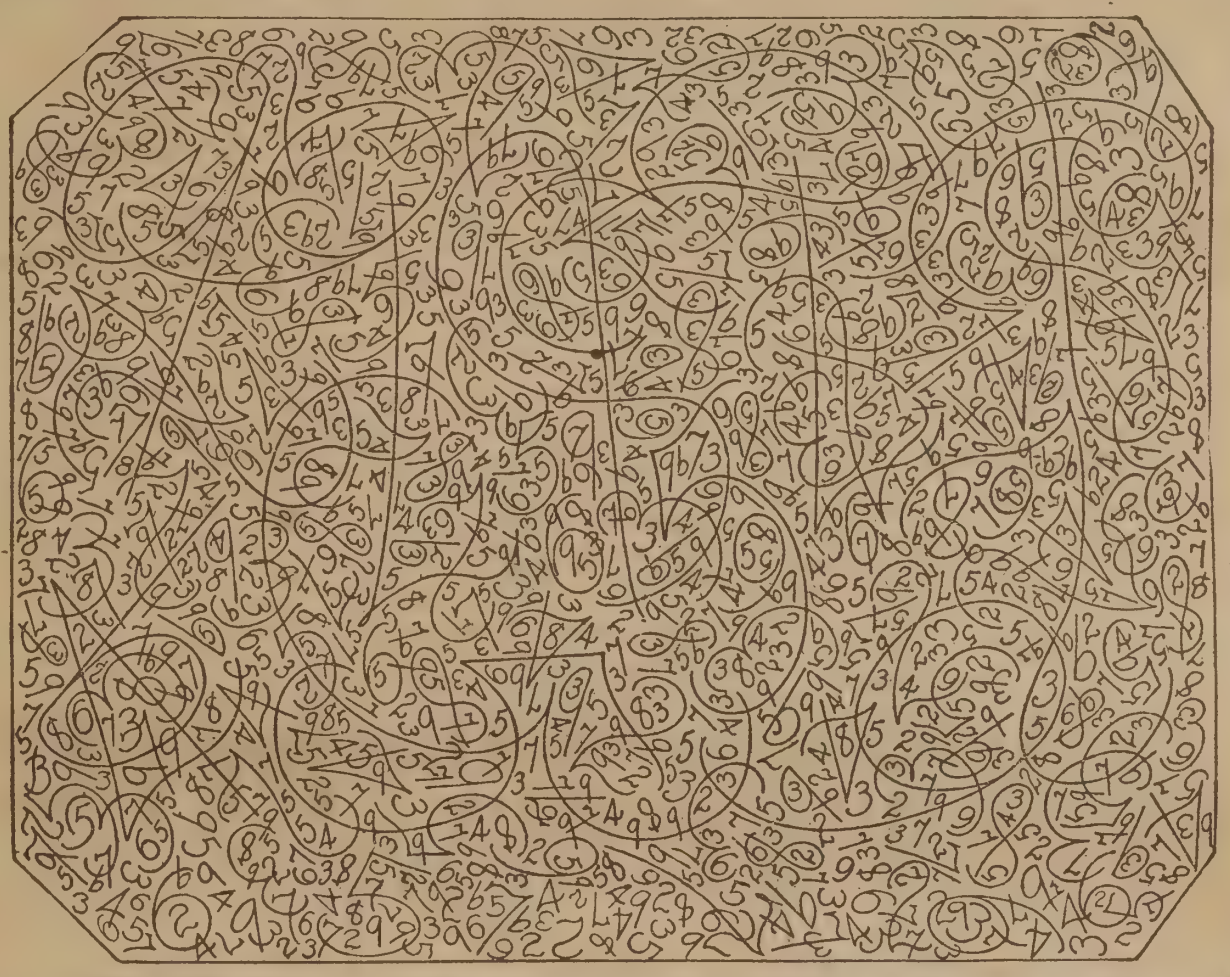
If your subscription is already paid in advance, your expiration date will be set ahead beyond this date to which you are now paid the full period for which you pay at this time. The advantage of paying $1.50 instead of $1 is that the winner of any of the first four prizes receives additional prize dividends apportioned on the amount paid in on subscription, besides the fact that $1.50 during this contest pays for a three-year subscription to the paper, while $1 pays for only one year.

More than one solution may be submitted by any contestant, by an additional subscription payment of not less than $1 nor more than $1.50. It is not necessary to pay the same amount with each solution if more than one is submitted.

You can send in a subscription for some one other than yourself and have the solution registered in your own name. Remember that by paying $1.50 instead of $1 on subscription, the larger will be your dividends if you win one of the four leading prizes; but not more than $1.50 will be received with one solution.

$750-Prizes-$750

FIRST PRIZE, $200,



to which will be added 50 times the amount paid by the subscriber with the winning solution. For example, if you pay $1.50 on subscription, this prize will be worth $275.

SECOND PRIZE, $100,

to which will be added 30 times the amount paid by the subscriber with the winning solution. This prize may be worth $145.

THIRD PRIZE, $60,

to which will be added 20 times the amount paid by the subscriber with the winning solution. This prize may be worth $90.

FOURTH PRIZE, $50,

to which will be added 10 times the amount paid by the subscriber with the winning solution. This prize may be worth $65.

FIFTH PRIZE, $40.

SIXTH AND SEVENTH PRIZES, Each $20.

EIGHTH TO SIXTEENTH PRIZES, Each $7.

SEVENTEENTH TO THIRTY-SCOND PRIZES, Each $2.

CASH MUST ACCOMPANY.

Don't send in your charts and working papers unless called for by the Contest Editor. Simply write your solution in blank space provided in "Registration Blank."

Something to Know

If your subscription is paid in advance, farther payment will be credited on an extension of your subscription from the time to which it is now paid.

Any solution unaccompanied by payment on subscription will not be entered.

Review Building Spokane, Washington

Boys and Girls Leading Crop

Wheat Takes Second Place to Boys and Girls in One of Big Wheat Growing Districts; Cows Are Placed in Third Rank.

OTHELLO, Adams County, Wash., Feb. 19.—We consider the leading crop to be our boys and girls. We are striving to make them good American citizens. The next is wheat and is practically "it" in the way of cereals in this county. Some farmers plant a few potatoes but our merchants ship them in by carloads in November and the farmers got their supply then. It is a well-known fact that we may grow very good potatoes, but the wheat idea has the average farmer under control and he prefers to raise wheat and buy his spuds. Dairying is the next in importance. Many are increasing their herds of the dairy type. Hog raising and horse raising is commanding the attention of nearly all farmers. Sheep are grown quite extensively in the isolated portions of the county. Poultry cuts no small figure in keeping down expenses on the farm. Fruit growing receives very little attention although many varieties may be grown successfully. There has been some trial on new forage plants but the very best for the dry parts is rye. Peas have been tried and Sudan grass, but it has not proved very successful. Corn ranks next to wheat and rye for forage. The promise for a good crop this year does not look so very bright because of lack of moisture. Dry dirt may be turned up by the plows in places and the average depth of moisture on stubble is about eight to 10 inches. The writer has lived here 16 years and can not recall similar conditions in that time. Farmers are beginning field work on a limited scale. Some frost is in the ground. A. O. LEE.

Pears Are in Lead.

FAIRFIELD, Spokane County, Wash., Feb. 19.—The 10 leading products of this portion of Spokane county are peas, wheat, oats, timothy, alfalfa, hogs, dairy products, poultry, fruit and potatoes. Aside from the first three crops, the other seven are only of minor importance. Wheat and oats are both giving way to the peas, but will not be entirely abandoned. However, some of the larger farmers have abandoned both wheat and oats. Timothy hay and alfalfa are grown to some etxent on the waste places by many farmers. Hogs are a profitable side line to glean the fields and take care of the cracked peas where peas are grown. The dairy, poultry, fruit and potatoes are of some importance, but in the main only supply the home demand. Live stock such as horses and cattle just about keep up the local demand. In fact, cattle are losing out on account of the farmers getting away from summer fallowing by growing peas, and this does away with the summer pasture. The coming season promises to be one of the most profitable this section ever had. Every acre that is not in peas will be in oats and a good price for all is assured.

ROY G. ADAMS.

Peas Increasing.

SPOKANE, Spokane County, Wash., Feb. 21.—Spokane county is preeminently a wheat growing county, and will always remain as such. Other leading productions of this county include oats, peas, barley, potatoes, apples, clover, sweet clover, alfalfa and truck crops. I think that these are named according to their importance in this county. The acreage planted to the pea crop is very much on the increase this season. In all probability we will have three times as many peas in the county as grown here previously. Likewise, the seeding of clover is increasing very much here and in some sections the acreage is becoming sufficiently large that we contemplate the introducing of a clover huller in at least two sections of Spokane county the coming season. Several different men have planted approximately 75 acres of red clover on their farms.

With the coming of the growing of peas, there is a consequent falling off in the amount of acreage devoted to the corn crop. Corn has never been a very successful crop for farmers in the non-irrigated sections, and where it has been used as a silage crop it is now being replaced by combinations of wheat and vetch and also by oats and peas, which are grown together. In live stock and dairying, interest centers in the production of pork, milk, butter and eggs. For this line of production very effective stimulas has been given such work by the introduction of the growing of peas and cheap silage crops, such as wheat and vetch, oats and peas, wheat and sweet clover, and have materially stimulated these industries. Sweet clover as a pasture crop is also coming to the front more and more each season. J. R. SHINN.

Need Home Cannery.

MALAGA, Chelan County, Wash., Feb. 7.—This community has increased in the production of dairy stock, fruit and grain wonderfully in the last four years. At one time this was a great hay country, but when fruit was on the boom in the Wenatchee valley nearly every one here put in orchards instead of hay and for a few years they did not even take advantage of growing hay between young trees. When the fall in the price of fruit came, farmers turned to growing hay again, but not as much as before. The dairy business has come to the front here now, in spite of the market 20 miles away. If there was a creamery or a market of some kind here nearer home the dairymen would then have a better chance and they could then afford to build better barns and silos, take better care of their dairy cows and, in fact, make it pay and pay well.

MRS. O. ALLENBAUGH.

How, When and With What to Spray

Expert Tells How to Eradicate Northwest Orchard Pests

(Continued from page eight.)

hale any of the gas, for it is fatally poisonous. Do not fumigate evergreens. Do not fumigate stock after the buds are open. For grafts or scions use two-thirds the formula. For greenhouses use one-third the formula.

15—WEED KILLERS.

A. Iron Sulphide.

Iron sulphide (green vitriol or copperas) .....20 to 80 pounds
Water ..... 50 gallons

B. Arsenite of Soda (Poison).

White arsenite (arsenious acid)..1 lb.
Potash or lye .....2 pounds

Boil ingredients of B together in two gallons of water. For use dilute this stock solution to 50 gallons of water.

Use: Either A or B sprayed over young weeds will kill them. Used for mustards and other broad-leaved plants. Old weeds become very resistant.

16—COMBINATION SPRAYS.

Some sprays are not injured if mixed together. Other sprays have their properties changed when combined and should not be mixed. A combination spray for apple scab, codling moth and aphids could consist of.
40 per cent nicotine.....1 pint
Lime-sulphur, 32 degrees...5 gallons
Arsenate of lead, paste.....5 pounds
Water .....125 gallons

To this spray soap should not be added.

The following table shows what sprays can be mixed together and what ones are incompatible. "X" indicates that there is but slight or no chemical reaction and the sprays can be safely mixed; "O" indicates that there is a reaction which harms or destroys the value of the individual sprays; "R" indicates that the mixture is more or less repellant to the taste of chewing insects and hence the combination is not apt to be so effective as if the arsenical were used alone; "S" indicates that the combination might scorch foliage; "U" indicates that the mixing is unnecessary.

Trying Artichokes.

NEPPEL, Grant County, Wash., Feb. 16.—The main crop here is alfalfa. Others are apples, pears, apricats, cattle, hogs, sheep, melons, cantaloupes and vegetables. This season we are trying sugar beets and artichokes. A new cheese factory is being installed here. The following plants have not proved profitable on account of the marketing conditions or heat: Oats, barley, potatoes, parsnips, cabbage, rutabagas and turnips. The coming season is very promising, as the federal loan act promises to put the homesteader on a sound working basis, which has never been accomplished before.

MARTIN PENHALLICK.

Delinquent Taxes.

Philadelphia has $1,055,000 in delinquent 1915 taxes on its roll, which called for $16,000,000 in that year.

P&O

LIGHT DRAFT PLOWS

Built for the Field Test.

Three-Quarters of a Century of "Knowing How" Hammered Into Every One of Them.

The product of the Parlin & Orendorff Co. has always been noted for simplicity of construction, great strength and ease of operation. It was upon such a basis that the founders of this business made their implements, established their reputation, and built their factory. It is upon the same foundation that the business has been carried on to this day, and in 1917 we celebrate our Diamond Jubilee; 75 years of practical experience gained through constantly striving to provide for the exacting requirements of three generations of American farmers.

For an even three-quarters of a century we have met the demand, and today we operate the largest and oldest permanently established plow factory in the whole world. "It's the way we build them."

P&O

Light Draft Plows, Harrows, Planters and Cultivators are made in all types and sizes, to meet the conditions in all sections, and are Backed by an Unqualified Guarantee.

We also make the most complete line of Traction Engine Plows produced, and we have a special catalog devoted to these famous plows.

The P&O Little Genius Engine Gang Plow

was the most popular plow shown at all points on the 1916 National Tractor Demonstration.

We will send P & O Catalogs to any address. While P & O Implements are sold only through established implement dealers, we welcome correspondence from farmers in all sections.

WESTERN LAND ROLLER CO., Hastings, Nebr. Box 200

America Beats Time

Government's Position a Trying One

At the time of this writing the United States still lingers on the verge of actual hostilities toward Germany. The German submarine warfare is being carried on relentlessly against ships of both belligerents and neutrals. Reliable statistics are unobtainable, but it is known that enough vessels have been sent down and enough intimidated and kept off the seas to affect seriously the supplies reaching England and her allies. How seriously, none but those at the seat of government in London can actually know. In an address, parts of which became public last week, the British premier admitted that the submarine menace must be checked or overcome if Britain did not wish to suffer the pangs of hunger and possibly lose thereby the war it is now waging.

America's Position.

The position of this country is one difficult to understand. Comparatively few of its citizens, it would appear, desire actual hostilities toward Germany or any country, yet many feel that the limit of national patience has been reached. Many others believe that this country should refuse to enter the war until some specific injustice against American citizens be committed, such as the destruction of American lives by submarine activities. This is apparently still President Wilson's point of view.

Germany Satisfied?

Up to this time no "overt act" has been committed against the United States. Reports of the loss of American life have been heard, but under conditions and surrounded by such doubts in certain instances as to make it appear to the authorities at Washington that none of them has been the "overt act" which President Wilson at the outset admitted he feared would be committed.

That Germany is bending every effort to prevent conflict with this country without actually giving up her policy of submarine warfare is evident. Not only does she wish the United States to take no part in the armed conflict against her, but she is believed by many to be satisfied with the result of her threats against shipping without actually sinking American ships. For it is apparent that American ships, like those of many other neutrals, are in large part avoiding the war zone. Either they are not sailing, or they are trading in other ports. To what extent American shipping is tied up by this intimidation is difficult to learn.

Holland Suffers Loss.

One of the most startling acts of the German submarines so far reported was that of the destruction of seven ships belonging to Holland. It is claimed that these vessels were given promise of safety if they sailed from Falmouth, England, in one fleet, which they did. Three of them were outward bound from Holland and three homeward bound. It is also reported that their crews were rescued.

Congress on Prohibition.

Congress has passed a prohibition measure which makes states that have partial prohibition absolutely dry. The measure prohibits the interstate shipment of intoxicating liquor into a state where its manufacture and sale is prohibited except under a permit system. This new law, which becomes effective immediately unless vetoed by President Wilson, supplants the permit system in Washington and makes Washington "bone dry" at once. As a result, county auditors report an enormous demand for permits during the last week, thousands of people hurrying to secure one last shipment of liquor before the federal act goes into effect.

The effect of the new law in the northwest is especially interesting. Idaho and Oregon were already under absolute prohibition, but the permit system was in effect in Washington. The Washington legislature has recently passed and Governor Lister has signed a bone dry law that would become effective regularly 90 days after the adjournment of the legislature. But a referendum movement looking toward holding the bill up until the election of 1918 has already been started. The result of the federal act will be to make the state dry without the approval of the legislature's law, and therefore the attempted referendum movement must come to naught.

Byproducts Plant

Planned for Spokane District

W. H. Paulhamus of Puyallup and Sumner, where he has been successful in the cooperative development of the fruit and vegetable cannery business, is taking steps looking toward the establishment of a similar industry in Spokane. Negotiations are under way for one of the Spokane brewery plants to be converted into a byproducts plant.

Mr. Paulhamus and officials of the Spokane Chamber of Commerce are enthusiastic over the possibilities, stating that the only question at stake now is the tonnage of vegetables and fruits made available for the plant by growers in the Spokane district.

Details of the financial arrangement for establishing and operating the proposed plant have not been made public, but it is understood that Spokane capital will be available.

Producers in the district responded enthusiastically at the meeting held in the territory affected last week, since which time representatives of the chamber of commerce have been circulating papers for pledges of raw materials for the cannery the coming season.

High Ideals.

"You should think of higher things.'

"I do. I am entirely unable to keep my mind off the price of meat and gasoline."

E. Foss, Tolt, Wash.: "I certainly would be lost if not for your magazine to help me on my farm. We all watch very eagerly for it to come. It contains such an amount of things for our cattle, farms, poultry and so forth."

Eureka Potato Planter

Raise Potatoes This Year

Increase your profits by using our potato planter. Opens furrow, drops seed any distance or depth, covers, marks for next row—all automatically. Puts on fertilizer if desired. One man operates and sees seed drop. Made of steel and malleable iron, assuring long service and few repairs.

LET THE SEEDS TALK

Questions
Are Answered by A. B. Nystrom

Kindly inform me whether or not Alber's molasses feed, fed with beet pulp and alfalfa hay, would make a balanced ration for dairy cows?

W. V. S., Maple Valley, Wash.

We have never used Alber's molasses feed and do not know the composition nor the amount of digestible nutrients in this feed. But we have heard many dairymen praise it as a good dairy feed. Its value will depend on how well it fits in with other feeds that are being used.

Small Paying Cheese Factory.

I would like to have you tell me the minimum size o fa paying cheese factory and creamery, stating how many cows they use milk or cream from, and the distance to haul. What is the cost of building and fixtures? There are 100 to 150 cows in a radius of seven miles. Would like to know if it would pay to erect a cheese factory or creamery and hire a capable man to make cheese or butter. Milch cows are increasing and probably would increase faster if the farmers could dispose of their milk or cream.

J. G., Ocosta, Wash.

We usually consider that a successful cheese factory can be run with from 150 to 200 cows, and such a plant will pay just as well or possibly better than a creamery with 300 or 400 cows at the present prices of cheese. The cost of constructing the factory will depend somewhat upon the location, but in western Washington a very substantial building suitable for making cheese could be built for about $1500, and a complete outfit of the very best cheese factory machinery can be placed in this factory for from $750 to $800. This includes the cost of installation, and thus you see that a factory can be built and equipped for from $2200 to $2500.

Carrots for Dairy Cows.

Will carrots dry up cows in milk? I have been told by several farmers that they know from experience that carrots will dry up a cow, but if I understand correctly what I have read, they are as good as other roots. Am I right? E. W., Forest Grove, Ore.

Carrots will dry up cows if fed exclusively. The carrot is very watery, as is any of the root crops. When cows are fed root crops only they do not get enough nutrients to supply the wants of the body. If a 1100-pound cow, giving 25 pounds of 4 per cent milk daily, were to live and produce milk on carrots alone, she would need daily 160 pounds to furnish enough carbohydrates, 200 pounds to furnish enough dry matter, and 235 pounds to furnish enough protein. These watery concentrates are fed for the succulence as much as for the nutrients they contain. When carrots are fed in connection with a good quality hay and a well-balanced grain mixture, they are very valuable as cow feed. In the absence of other succulence they are worth upward of $10 per ton, but should be fed sparingly at price. When they can be secured at $5 per ton or less from 30 to 50 pounds per day can be fed with profit.

Comparing carrots with other root crops, we find that there is very little difference in their feeding value. The crop that will give the highest yield of palatable roots at the lowest cost is the crop to use.

Lime in Watering Trough.

Is it advisable to put a little lime in the watering trough for cows? I have seen this done with seemingly good results.

H. McD., Arlington, Wash.

Lime my be added to the ration by feeding it through the water, or by adding a tablespoonful each day to the grain ration. Adding lime to the water not only helps the cow in furnishing lime for her needs, but also keeps the water tank cleaner.

Warming the Drinking Water.

I am milking 30 head of Holsteins (grade), and practicing individual feeding. I have some cows giving 40 pounds. These we feed 40 pounds of corn silage and about 12 pounds of good ground alfalfa. The silage was put up October 15, after maturity and frost. The silage was put up with the ear, and is about one-sixth corn in weight. We feed and milk regular. We warm our water to 80 degrees Fahr. Our barn during coldest weather is 45 degrees. The cows stay in fine shape. Is it possible to get a maximum flow from this feed? I would like to have you help me out.

J. L. A., Bryon, Wash.

Your combination of corn silage and alfalfa meal is a splendid one and you should get practically maximum returns from this. I might state that some of your highest producing cows could use some grain to advantage, and I would suggest a mixture of two parts of oats, two parts of bran, and one part of oil meal or soy bean meal. Only a small amount need be fed. Our practice is to feed all the hay the cows will eat up clean. The fact that your cows are in good shape indicates that you are feeding pretty well. No doubt the warming of the water has a lot to do with this, but I will state that it is not necessary to heat the water above 50 or 60 degrees Fahrenheit. In fact we have found it better to use the water at this temperature rather than that of a higher temperature.

Cream for Churning.

Can you tell me of anything that can be used to sour cream quickly in cold weather? I find it almost impossible to sour the cream before it becomes bitter, but do not like to keep it in the kitchen where it will absorb the odors from cooking. How long should cream be kept before churning?

MRS. G. A. G., Usk, Wash.

The best way to prepare cream for churning in cold weather is to keep it at a temperature of 50 to 60 degrees for a day or two, or until you have gathered enough for your churning, then warm it to 70 degrees, or even as high as 75 degrees Fahrenheit, allowing it to stand at this temperature for from six to 12 hours. If it is possible I would suggest that you get some clean sour skim milk, or clean sour buttermilk, and add to the cream before you set it away for the ripening process. This tends to act as a starter and you will have no difficulty in souring the cream. You must be careful, however, to see that the starter used is clean in flavor, not bitter or rancid in any way. If you wish to use a commercial starter, you can get one from any of the creameries or dairy supply houses, and if you will follow directions given you will have no difficulty in securing a clean starter made of skim milk or whole milk.

Feeding Frozen Beets.

Will you kindly inform me whether or not the freezing or frosting of sugar beets or any other kind of beets will kill stock or will in any way be injurious to milk cows?

G. T. ROSE, Loomis, Wash.

If beets or any other root crop freezes it should be used for stock feeding purposes immediately upon its being thawed out. After freezing and thawing the root crop deteriorates quickly and begins to rot. No partially decayed roots should be used for feeding cows. I would, therefore, say that as a general thing it is not safe to feed frozen roots to dairy cows.

Largest Olive Grove.

Los Angeles county has the largest olive grove in the world.

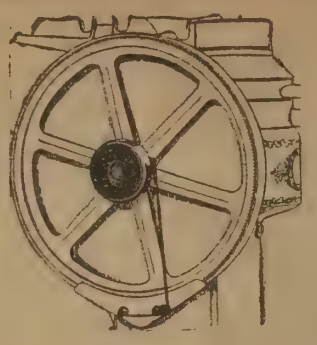
MUCH IN FEEDING
Should Go Along With Selection.

Of the 10 highest cows in butter fat production in the first six months' work in the Jefferson county, Washington, Cow Testing association, five belong to the Glendale Creamery company and of these five one is a purebred Jersey and four are grade Jerseys. The purebred Jersey gave 284 pounds of butter fat during the six months and made a profit over feed of $45.49; while one of the grades gave 272.7 pounds of butter fat and made a profit over feed of $49.29, and another one of the grade Jerseys producing even less butter fat, 262.7 pounds, made a profit over feeding of $50.87.

Burt McConnaghy had three of the 10 cows, one a grade Holstein producing 245.2 pounds of butter fat and giving a profit over feeding of $55.88, the highest profit of any cow in the bunch. Dr. E. E. Hegg had a purebred Holstein 13 years old that produced 227.6 pounds of butter fat and gave a profit over feed of $43.44.

One of the results of this cow testing association is that 21 cows have been butchered and two herds dispersed since the tester commenced work. Commenting on the work of the association, O. T. McWhorter says:

"The records thus far indicate that the line which divided the profitable from the unprofitable cows is also the line which divides the cows which receive a good ration, containing roots or silage, from those receiving small amounts of feed containing no succulents. Undoubtedly many of the cows showing low profits have done so because they were not supplied with the proper feed. Already the owners are planning on building silos and raising roots to offset this difficulty next year."



High Cow at Buhl.

The high cow for the month of January in the Buhl, Idaho, Pioneer Cow Testing association is a purebred Jersey, owned by C. E. Long of Buhl, producing 79.8 pounds of butter fat. The high herd average was maintained by the herd of S. H. Kaylor of Twin Falls, all purebred Jerseys with an average of 51.43 pounds of butter fat per cow. Two cows in the herd of H. H. Stiyer were on the A. R. O. test during the month. Their records were 10.45 and 14.63 pounds of butter fat as junior 2-year olds.

With 371 cows on test the association average for the month was 31.91 pounds of butter fat per cow. This we believe is a northwest average, this is also the highest average of any month for the association, it being the fourth time the 30-pound mark has been surpassed in the history of the association. Fifty-five cows produced more than 45 pounds butter fat for the month and 11 herds averaged 30 or more pounds butter fat for the month.

California Industries.

Five tuna canners at Long Beach, on account of the short tuna season, have turned their attention to canning sardines. This adds another and important industry to those already existing in southern California.

This "Warning Signal"

Insures proper speed on every NEW De Laval Cream Separator

NINE people out of ten turn the separator handle too slowly.

Thousands of tests with experienced separator operators show this to be the case.

Other tests made by the highest authorities have shown conclusively that there is a big cream loss when the cream separator is not turned fast enough.

You will avoid such a possible cream loss if you buy the New De Laval. The Bell Speed indicator on the New De Lavel is a "warning signal" that insures proper speed at all times. No matter who runs your De Laval, this "warning signal" will tell you when the speed is not right. You hear it and do not need to see it. This one feature alone may easily save you the cost of a cream separator in the next few months.

But that is only one of the big advantages of the New De Laval. Other advantages are greater capacity, closer skimming and easier turning, simpler bowl construction, and easier washing.

Why not see the nearest De Laval agent at once? If you do not know him, write to the nearest office for any desired information.

TESTING THE COWS

Guess Work Poor at Walla Walla.

The report of the Walla Walla Valley Cow Testing association for the month of January, 1917, indicates that the average production per cow per month has been raised better than 100 pounds of milk for the 454 cows tested over the average of the association last year. This is largely due to the fact that over 100 of the lowest producers have been eliminated and that the best cows are receiving better care and feed. The figures have demonstrated that it is decidedly profitable to feed concentrates to the highest producers, says O. P. Patton, county agricultural agent.

Before the association started work in November, 1915, 14 members made estimates as to which were their five best cows in their relative order. Upon the completion of the year, when the production of each cow was known, is was found that not one of the 14 had even placed his two best cows correctly, and only four had guessed which was the highest producer. In many cases a cow which had been slated for slaughter turned out to be one of the five best.

By ascertaining which are the best cows and saving their heifer calves, the association records have proven very valuable to the dairyman desiring to remain in the business and increase his average production per cow.

In making out the 40-pound list of cows for the month of January, 1917, there are 67 honor cows as compared with 39 a year ago. Of the 67 this month 27 produced over 50 pounds.

This month the third cow in the association to make better than 91 pounds of butter fat in a month appears at the head of the list. The animal is owned by Charles Baker, and is a 4-year-old daughter of the purebred Holstein sire, Sir Vale Segis, belonging to Mr. Homer Brown. She produced 91.3 pounds of butter fat for the month, or nearly three pounds a day.

Of the 67 cows on the honor list, 26 belong to the state penitentiary, five to the Walla Walla college, four to Swegle Brothers and four to E. C. Burlingame.

The average production per cow for the entire herd of six purebred Holsteins belonging to the Walla Walla college was 1934 pounds of milk and 60.9 pounds of butter fat for the month.

Sunnyside Cow Testing.

The Sunnyside Cow Testing association in the Yakima valley of Washington gives a list of 16 cows that produced more than 50 pounds of butter fat during January. The two highest producers were a Holstein, owned by H. C. Davis, and a grade Jersey, owned by Peabody & Son, each having a record of 62.9 pounds of butter fat for the month.

Five of the cows produced over 60 pounds of butter fat and 11 between 50 and 60 pounds. In addition to this list there were 49 cows producing more than 40 pounds of butter fat per month and over 30 per cent of the cows tested produced over 30 pounds of butter fat for the month. H. C. Davis led the herd average with 40.8 pounds of fat per cow. Other herds with better than 30-pound averages were Moorehead and Hobson, G. W. Huston, Charles Hammer, W. O. Cox, Axel Anderson, S. S. Sorenson, R. E. Deets, E. L. Shader, E. C. Putterbaugh and Fred Allen. N. R. Weldin was the official tester.

Boise Valley Cow Testing.

The January honor roll of the Boise Valley Cow Testing association in Idaho includes 43 cows that gave 40 pounds or more of butter fat. Of these three are registered Holsteins, 20 grade Holsteins, 11 grade Jerseys, six grade Guernseys, two grade Brown Swiss and one grade Red Poll. The high record herd average for nine months is still held by the Jerseys of Lee & Son. Thirteen cows in this herd averaging seven months in milk have produced an average of 258.8 pounds of butter fat. The highest producing cow for the month is a grade Guernsey, owned by H. A. Wines, with a record of 62.9 pounds of butter fat. The nine months' record for individual cow is still held by Dorie, 5-year-old grade Guernsey, belonging to H. A. Wines, with a record of 437.9 pounds of butter fat.

SHARPLES

Over a Million Users!

P. M. Sharples made the first separator in America (38 years ago). Sharples has been the foremost and highest-class American separator ever since. The Sharples Separator factories are the largest and longest-established in America. Sharples machines are found in every dairying country of the world. The *reason* for this popularity is that Sharples separators have invaluable patented advantages found on no other make.

SHARPLES
SUCTION-FEED
CREAM SEPARATOR

—the *only* separator that will skim clean at widely-varying speeds
—the *only* separator that gives cream of unchanging thickness—all speeds
—the *only* separator that will skim your milk quicker when you turn faster
—the *only* separator with just *one* piece in the bowl—no discs, easy to clean
—the *only* separator with knee-low supply tank and a once-a-month oiling system

The Sharples has entered a *new field of cream-saving which no other separator has yet touched.* This is owing to the wonderful Suction-feed, which enables clean skimming at widely-varying speeds—which saves $100 yearly (sometimes more) on the average farm, *over every other separator.*

The Sharples is not only *capable* of doing good work, but *will always* automatically do good work under the most unfavorable conditions. We have spent years of experiment in perfecting a separator that is an Insurance Policy against Carelessness. That ideal has been realized in the Sharples Suction-feed. "Throughbred"

Old Question Is Again Answered

To the Editor: In a recent issue of The Idaho Farmer I saw again a correction in the use of the word "thoroughbred" and I am writing for more information on the subject. I have not been able to find out where or by whom the word thoroughbred has been applied exclusively to any certain breed of horses. Webster's dictionary admits no such monopoly of the word. The word is defined as meaning bred from the best stock or blood of any animal. The expression "thoroughbred women" is even admitted. Now I would like to know if the dictionary is wrong or if some horseman has misapplied the word.

Hamer, Idaho. E. P. J.

Referring to the letter of your correspondent, E. P. Jensen of Hamer, Idaho, I will say that Mr. Jensen is entirely correct in his statement that the word "thoroughbred" is not recognized by Webster's dictionary as belonging to any particular breed of live stock. No doubt this fact is responsible for the use of the word "thoroughbred" as a prefix to the names of various breeds to indicate purity of breeding. In other words, the word "thoroughbred" as used by many writers and often in advertisements in agricultural papers, preceding the name of a breed of live stock, such as Shorthorn cattle, means that these Shorthorns are purebred, or, in other words, have been bred for many years without the admixture of alien blood. That is, they are registered and are guaranteed by these registration papers to have been bred for a long series of years without the admixture of alien blood.

In live stock work, as in many other industries, there is a peculiar vocabulary that belongs especially to this business. Live stock men are privileged to set aside certain terms to designate various features of their work, and the constant use of such terms with a special meaning for many years is sufficient authority to indicate correct usage. By common consent of live stock men, the word "thoroughbred" is used as the breed name for the English running horse. Thoroughbred is used to apply to this horse in the same way that Percheron designates a certain horse of draft type that we secure from the district of La Perche in France. This term "thoroughbred" was first applied to this English horse by the breeders of England until it has been commonly accepted as the correct name for the breed. If we, therefore, care to use live stock terms correctly, the word "thoroughbred" in its strict interpretation belongs to the running horse of England and nowhere else. Even though Webster does admit the use of "thoroughbred" as a prefix for all breed names, live stock men feel that the word "purebred" indicates the proper meaning a little more clearly, and if used instead of "thoroughbred" admits no confusion of terms. We feel, therefore, that the only correct usage for "thoroughbred" in connection with live stock work is as the breed name for the horse mentioned above.

E. J. I.

Hog Cholera

Being Successfully Stamped Out

By HORACE ADDIS.

That the work of the U. S. government in combatting hog cholera is highly successful is indicated by the figures given concerning the work on the Twin Falls tract in southern Idaho. Dr. Sullivan instituted work there July 1, 1914, and the government has gradually enlarged the territory covered until it now takes in a large part of southern Idaho.

In 1912 on the Twin Falls tract 47,637 hogs were raised and that year 3163, or 6.6 per cent, were lost. This was the first year that district was ravaged by cholera to any extent. The following year, 1913, saw 82,563 hogs raised and 12,978 lost, or 15.7 per cent. In 1914 the hogs raised totaled 100,000 and the loss 1269, or 1.2 per cent. Of this number 955 died before the government work was begun. In 1915, 150,000 hogs were raised and 1482 were lost. This included Bonneville, Bingham, Jefferson and Madison counties in addition to the original tract. In this district 103 farms were inspected in 1916 and 63 of them found to be infected. There were 17 outbreaks of cholera in the Twin Falls district, which now includes Twin Falls, Gooding, Lincoln, Cassia and Minidoka counties. This shows a reduction in the herds affected from 103 to 17. The number of hogs raised in the Twin Falls district in 1916 was about 125,000 and in the other counties named 121,000. These other counties are now listed as the Idaho Falls district and heavy losses, almost equal to those of the Twin Falls district, caused the government work to be extended to include those counties. Dr. Sullivan hopes for complete eradication of the disease or at least to keep the losses negligible, if the farmers will continue their cooperation.

Blaine county has recently had several outbreaks of cholera and a meeting at Carey, which was attended by 175 farmers, is typical of the way the work is organized. Seven school districts were organized. A committeeman leader and survey man was put in each district. They watch closely and in case of an outbreak report promptly to the government bureau at Twin Falls and an immediate investigation is made, free of charge. If cholera exists the state live stock sanitary board is notified and the herd vaccinated with hog cholera serum at the cost of the serum to the board, with state deputy veterinary service free. Each vaccinated herd is placed under quarantine to keep the owners of neighboring herds away. Owners are instructed to keep hogs off the highways and dogs on their own premises. After three weeks the premises are thoroughly cleaned and disinfected by the owner under supervision of a deputy state veterinarian. All possibly infected material is then burned and a large power spray used with a reliable creso compound. Finally the pens are whitewashed and lime sprinkled about them. In places a barrel of disinfectant has been purchased by several farmers clubbing together.

Dr. Sullivan asserts that where places have been cleaned up and disinfected there have been only four recurrences of the disease and these have been traced to imperfect disinfection. He says farmers could clean up and disinfect and get rid of hog cholera themselves by systematically taking all the necessary precautions. But it is because they will not do this that some one with authority must take the lead. Even then the utmost cooperation is needed to stamp out the disease.

Veterinary

Dr. S. B. Nelson

I have a 10-year-old mare that raised a colt fine years ago. Since then I have never been able to get her in foal. She is in heat constantly. J. L. W.
Cambridge, Idaho.

The fact that your mare is in heat constantly would indicate that there is some irrtaton of the ovaries. I would recommend the administration of one-fourth ounce of sodium bromide on the feed or in the drinking water morning and evening for a short period of time. Then when the proper times comes to breed her I am going to recommend to you that you have her bred by use of the impregnator. You may get results this way that you will not get otherwise.

Some of my cattle are lame from a festered sore in the cleft of the hoof that does not yield readily to any treatment I have tried so far. G. V.
Forest, Idaho.

Dope your cattle's sore feet with a 5 per cent solution of hot creolin, then, if you can, throw the cattle down, using the three half-hitch method and examine the cleft carefully, then apply a strong astringent solution of one ounce of lead acitate and one ounce of zinc sulphate in one pint of water. Later apply pine tar to the cleft.

I have a disease among my cattle which breaks out on them in various places. It seems very irritating and the hair come off. That seems to be the first symptoms I notice. C. G. B.
Boise, Idaho.

Try painting the irritated places with a 1 per cent solution of picric acid in water. Apply this once daily for a couple or three days, and then every other day.

What shall I feed little pigs without milk. They are dying. I feed slop from the kitchen with shorts, bran and ground barley, also alfalfa? H. C. W.
Ephrata, Wash.

Cut out the giving of ground barley and shorts, then scald the alfalfa and feed in a mash with a little of the scraps from the kitchen. You can also feed them ground oats. Do not feed them too much.

I would like to know a cure for warts on horses and cattle. One, on a colt coming two years old, was not visible when I turned him out last spring. It came during the summer or fall. Some call this a cancer wart, although it does not bleed much and is at the base and in front of the ear. C. M. B.
Colville, Wash.

The wart can be cut off if it has a narrow neck attachment, and then near the stump use a hot iron at almost white heat, not quite, and when the scar from the cautery comes off apply tannic acid daily. If there is no neck to the wart and it is a broad one, then you may have to burn it out completely and do this seveal times, being careful not to disturb the ingrowing edge of the wound.

SELDOM SEE

"PERFECT" IDENTIFICATION

There can never be any question about ownership, when an animal shows a **"Perfect" Ear Tag**, with number of animal and name and address of owner stamped thereon. And any owner who neglects to so identify his stock, has no one to blame for losses except himself. The return of one good steer will pay for "Perfect" tagging 2000 head.

The **"Perfect" Tag** should be used because it is the lightest tag manufactured; made of aluminum; non-corrosive and non-poisonous. It can be attached to an animal's ear instantaneously, in one operation. No danger of squeezing the ear or causing inflammation. This ear tag is endorsed by stockmen all over the United States.

SOME call these face-stuffers hogs, some call them gophers. But they are getting scarcer and scarcer since gentlemen found out about W-B CUT Chewing. There is no excuse for a man making a monkey of himself today. The fine *rich tobacco flavor* was put into W-B by nature, the touch of salt brings it out nice and tranquil like, without your worrying your jaw around continually. W-B is getting to be pretty nearly as popular as sunshine these happy days.

Made by WEYMAN-BRUTON COMPANY, 50 Union Square, New York City

More Wheat

Dry Farming in Grant County

O. G. Trester and M. F. Stockwell are planning to put in 1200 acres of wheat this year west of Canyon City, Grant county, Ore., which is said to be the largest wheat growing experiment yet entered in that county. They will do their plowing with 16 head of horses and a gas tractor. Mr. Trester is the owner of a mill in Prairie City and is getting the mill at John Day in shape to run by the first of March. In addition to raising wheat for the mills these men will be able to raise quite a number of hogs per year on the mill feed. The land to be farmed is all dry land and the experiment is in the nature of a demonstration as to the grain that can be raised on thousands of acres of bench land in that county. As a matter of fact there will be more wheat raised in Grant county this year than ever before.

RANGE BULLS.

Need of Legislative Control.

The constructive breeding of animals by man goes back to prehistoric times. Centuries passed before an attempt was made to formulate any principles leading to success in animal procreation. Three hundred and eighty years ago, during the reign of Henry VIII., an important bill controlling animal breeding was passed in England. Doubtless that law laid the foundation of Britain's greatness as a live stock producing country.

At the present time an important issue with range beef producers in Washington is the control of range bulls. William Ilislop of the experiment station at Pullman, Wash., states that the men who are earnestly endeavoring to improve the grade of their cattle are constantly worried with scrub bulls belonging to other men.

The majority of states have stallion laws, but singularly few have bull laws, although the number is increasing steadily. The passage of a law which would prohibit anything except a purebred (registered) bull of one of the recognized beef breeds from running loose upon the public domain would be particularly beneficial to the industry.

The comparative breeding values of the purebred and the scrub sire may be justly tabulated as follows:

The calves of the purebred sire will have:

1. Thick, low-set type.
2. Easy-feeding qualities.
3. Heavy fleshing tendencies.
4. Uniformity of conformation.
5. Uniformity of color.
6. Early maturity qualities.
7. A weight of 1000 to 1100 or more pounds per head at 2 years old.
8. A value of $45 to $50 per head at 2 years old.

The calves of the scrub sire will have:

1. Upstanding, slab-sided type.
2. Hard keeping qualities.
3. Thin fleshing tendencies.
4. Nondescript conformation.
5. Mixed colors.
6. Late maturity.
7. A weight of 1000 to 1100 pounds per head at 3 or more years old.
8. A value of $30 to $35 per head at 3 or more years old.

In addition, the best heifer calves by the purebred sire can be retained in the breeding herd, while practically none of the heifers by the scrub sire would be worth retaining at any cost.

JAMES CHESNEY'S START IN SHEEP.

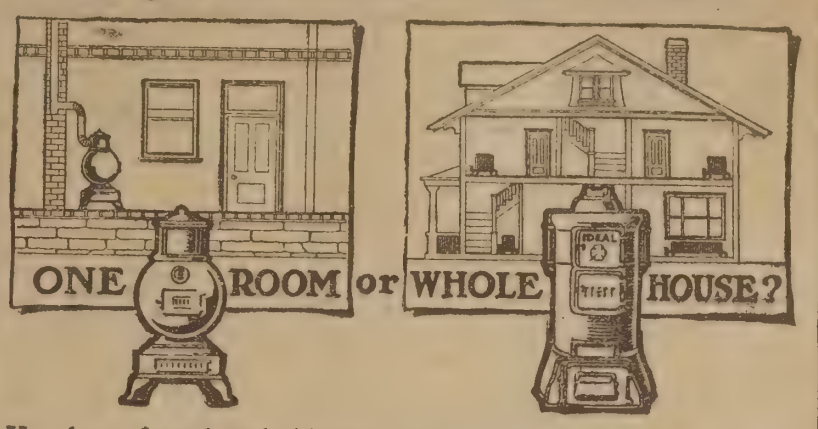
The west is full of human interest stories, connected with the vicissitudes of live stock breeders. James Chesney, a wealthy sheep and cattle breeder of Evanston, Wyo., whom I met on the train while on my way to the National Live Stock association meeting at Cheyenne, told of his first wool sale in 1869. Mr. Chesney was born in Salt Lake. His mother came across the plains in 1848, with other immigrants in a prairie schooner drawn by oxen. She brought about 25 sheep and through good and bad times always kept a small flock. In the year of 1869, when Mr. Chesney was about 18 years old, an eastern wool buyer was in Salt Lake, anxious to buy wool. James went home from up town, gathered up all the wool there was about the house, including the contents of two mattresses on which they slept—about 300 pounds in all. His mother was away when he got the wool and when she returned he handed her the money, about $125, mostly in twenty-dollar gold pieces. It was the first "real money" they had seen for so long that his mother cried for joy. A neighbor woman had about 200 pounds of wool and Mr. Chesney showed his financial ability right then by going over and buying her wool at 20 cents, reselling it for 43. When the lady learned what the price was she relieved her feelings by giving her oldest son, of about the same age, a hard whipping, because he had not learned the buyer was in town and secured the full price.

Mr. Chesney says he saw wool selling from 3 to 8 cents in 1894 and has seen many ups and downs in the sheep business. At present he has 10,000 sheep, a fine herd of registered Hereford cattle, including the bull, Bonnie Lad 38th, for which he has refused $10,000 and also a fine band of registered Percheron horses.

DROVE EIGHT YOKE OF BULLS.

J. A. Moore of Buffalo, Wyo., better known as "Jack" Moore, who made the speech presenting a mounted moose head to retiring President Heard, at the National Live Stock association convention at Cheyenne, Wyo., is one of the unique and interesting characters of Wyoming. Mr. Moore usually wears a woolen shirt with attached soft collar and looks the prosperous cattle man. His speech on the occasion referred to, was a gem of humor and oratory and he has a high reputation as an orator and a shrewd politician. He managed Governor Kendrick's successful campaign for the United States senate. Mr. Moore told me during the Denver Stock show that the most important occasion in all his life, to himself and probably to a good many who saw him, was when, 49 years ago, as a 7-year-old boy, he drove eight yoke of bulls through the streets of Denver. His father was running a sawmill, one of the hands got drunk and the big load of lumber had to finish its journey and be delivered in the city. Young Jack was given the task and proudly and successfully he accomplished it, attracting considerable attention even in that region where strange sights were common.

Mr. Moore says the region of his own town and all of Wyoming for that matter, is prosperous and that 90 per cent of the farms in his neighborhood are owned by ex-hired men, most of them cowpunchers, of which Governor Kendrick is a conspicuous example.



Brown Cotton.

Agriculturists have succeeded in raising a brown cotton in Egypt that is stronger than any heretofore produced there.

Clean Windows.

Windows may be kept clear and polished if they are frequently wiped with a piece of chamois. This prevents the dust from caking.

Do you want to heat—

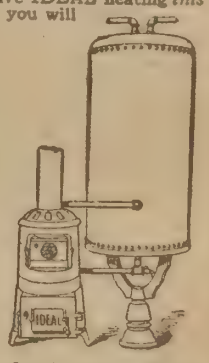
You have fussed and shivered long enough—trying to heat your house with old fashioned methods which yield little comfort with great labor and many disappointments. Why not make your whole house just like June, even in below-zero weather? An IDEAL heating outfit will do this for you and will last as long as the building stands and never need repair or overhauling.

AMERICAN RADIATORS & IDEAL BOILERS

The smallest cottage or largest building can be equipped at present attractive prices to suit anyone's pocketbook. These IDEAL outfits heat the whole house with one fire and require no more care-taking than to run a stove for one room.

IDEAL Boilers burn fuels of *any locality*, hard coal, soft coal, screenings, pea coal, slack, wood, slabs, etc., and give heating results that open up the whole house with good, healthful heat throughout chilly days or bitter cold nights—*not necessary to have a cellar or water pressure.*

The lasting heat that costs the least



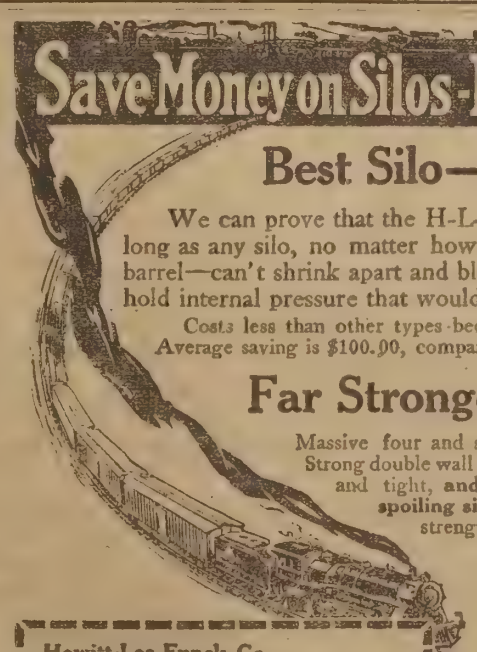
It is wise even to increase your borrowing at the bank in order to have IDEAL heating *this winter* for the comfort and savings that IDEAL heating will give you will make you more money than the bank interest you may pay.

AMERICAN Radiators and IDEAL Boilers change any house into a *home.*

A No. A30 IDEAL Boiler and 262 ft. of 38-in. AMERICAN Radiators, costing the owner $210, were used to heat this farm house, at which price the goods can be bought of any reputable, competent Fitter. This did not include cost of labor, pipe, valves, freight, etc., which vary according to climatic and other conditions. The IDEAL outfit is the *only* feature of the house which is never worth *less* than you paid for it.

Our IDEAL Hot Water Supply Boilers will supply plenty of warm water for home and stock at small cost of few dollars for fuel for season.

Get this book about Ideal Heating



Don't put it off another day. Read up and get all the information as to comfort, cost, and fuel economy that an IDEAL Boiler and AMERICAN Radiators will give you. Write today and get a copy of "Ideal Heating." Puts you under no obligation to buy.

Sold by all dealers. No exclusive agents.

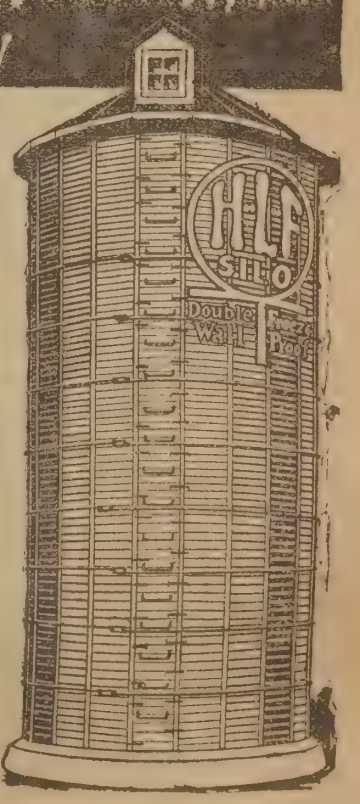
Save Money on Silos - Buy Direct from the Factory



Best Silo—Costs the Least, Too!

We can prove that the H-L-F Silo is the best silo made. It will last as long as any silo, no matter how expensive. It is a building rather than a barrel—can't shrink apart and blow over like a stave silo. And it will easily hold internal pressure that would crack cement or tile.

Costs less than other types because we sell direct from our big factory to you. Average saving is $100.00, compared with stave silos—and often twice as much.

Far Stronger and Air-Tight

Massive four and six yellow fir studs extend from top to bottom. Strong double wall of matched lumber makes silo everlastingly strong and tight, **and absolutely prevents air from entering and spoiling silage.** Eight strong hoops give extra guarantee of strength, and need never be tightened or loosened.

Last call for Free Roofs

You have just time to answer this advertisement, get the big folders and place your order before withdrawal of free roof offer.

Mail the Coupon

Don't wait another day to get the facts and figures on H-L-F Silo—find out why we claim it is **best** as well as **cheapest** for you. Mail the Coupon today.

Bridge Grafting

Saves Trees That Are Injured

Numerous inquiries are received at the department of agriculture every spring in regard to the treatment of fruit trees, especially apple trees, that have been girdled or otherwise injured during the winter by mice and rabbits. While there are varous ways in which slight injuries of this character may be treated, if any attention seems advisable, wounds that girdle or nearly girdle the trunk require the most specific measures if the tree is to be saved. In such cases bridge grafting is the method of treatment commonly employed; in fact, it is about the only remedy that can be recommended.

Bridge graft three years old, made to save a pear tree that had been girdled by blight.

A bridge graft is made by using scions or small limbs to connect the two portions of the back of a stock which have been separated by an injury; in other words, the injured area is "bridged" by a scion or scions, the ends of which unite with the uninjured parts above and below the wound in such a manner that a connection between the tissues is established.

Bridge grafting may be used successfully on almost any kind of fruit tree that admits of being readily propagated by grafting. In practice there is occasion to resort to it very much more frequently with the apple than with any other fruit, but pear trees are often treated, at least in some sections. No reason is apparent why the method should not be successful on plums and cherries. Peaches graft less readily than the other trees mentioned, and there may be some question as to the usefulness of the method in the case of this fruit. The injuries which can be overcome or lessened by bridge grafting are always local in character and do not of themselves at the time they occur seriously affect the health and vigor of the tree either above or below the injured area.

Mechanical injuries which may be remedied by bridge grafting are usually inflicted in one of three ways: By animals that feed upon the bark and tender wood, by insects that burrow through the growing layer of bark and wood, or by implements used in the tillage of the orchard, usually the result of carelessness of workmen. Local injuries may be caused by various diseases, of which pear-blight is the most common. The trunks of pear trees are not infrequently completely girdled and killed by this disease. If taken in time, however, it may be possible to cut away the diseased bark, bridge the wound area with grafts, and thus save the tree. Relatively large areas of bark may also be killed by what is commonly called sun scald, as well as by other troubles.

The number of scions required for a bridge will depend largely upon the size of the trunk. No fixed rule can be given. The larger the number, the more nearly complete will be the restoration of the connection between the parts above and below the wound; but if placed too close together, the bark at the margins of the wound between the scions will be raised. The starting of the bark except at the immediate points of insertion of the scions must be avoided. The operation is completed by thoroughly covering the area occupied by the ends of the scions and the margins of the wound with grafting wax, strips of waxed cloth, or by some other means that will adequately prevent these parts from drying out. The use of wax for this purpose is the most advisable. Some operators cover the entire wound, scions and all, with melted wax. To be effective, bridge grafting should be done in the spring, before growth starts.

While the bridging of a wound by grafting is comparatively easy, the use of preventive measures, so far as they are effective, is much easier. Weeds and rubbish about the trunk of a tree are likely to attract mice, as they furnish both a desirable nesting place and a food supply. By clearing away upon the approach of cold weather the grass and aftergrowth that has accumulated near the trees, the danger of injury from mice is greatly reduced. Adequate protection against rabbits that are likely to gnaw the bark from young trees may be afforded by placing wire netting or wooden-veneer protectors about the trunks, or even by wrapping them with several thicknesses of newspaper. A more convenient way, however, and one reported to be effective, is to keep the trunks well covered during the winter with a lime-sulphur mixture.

On another page of this issue of the Farmer will be found comprehensive information and directions concerning the mixing, uses and application of orchard sprays. This information is necessarily condensed, but is designed to give full information on the subject in such way that the farmer or orchardist may know exactly what spray to use, when to use it, how to use it and how to make it himself if desired. The directions are as applicable to the farm orchard of fifty trees as to the commercial orchard of a thousand trees.

When additional details are desired concerning any problem of caring for the orchard it may be obtained by addressing the state college experiment station at Pullman, Wash.

Our Monthly Income Policy for Farmers, Fruit Growers and Stockmen

is a plan of life insurance containing all the benefits embodied in the regular old line policies, yet it is unlike any other, in that it is **distinctly a trusteeship.** It guarantees support—the necessities. It protects the family against loss. It is adapted to the farmer of either large or moderate means. **It insures an income.** It is rightly termed "double insurance."
Full particulars will be sent to any address on receipt of name, age and occupation.

The Farm Garden

Article 1

The Hot Bed

Nature may be assisted in growing early vegetables by the use of a simple, inexpensive hot bed.

It is doubtful if there is any other side feature of farming that offers such possibilities as does the farm garden. And yet the farm garden is frequently given little attention. Too frequently some little area somewhere is used for the planting of a few vegetable seeds of indiscriminate varieties with little thought as to the fitness of the soil or location, little thought as to the suitableness of the climatic conditions to the vegetables planted and little thought as to proper methods of planting or proper methods of care after the plants show above the ground.

There are, to be sure, many first class farm gardens. There should be one on every farm where there is a family to feed. There should not be a day in the year—spring, summer, autumn or winter—that some vegetable grown on the farm is not available for table use. There is no such day on the farm, where gardening is done systematically.

Throughout the spring and summer the Farmer will publish articles designed to give specific information upon which may be based the development of the garden. Such subjects as the selection of location, the cultivation of the soil, the use of fertilizer, the use of the hot bet, the planting of the garden with the idea of fresh vegetables during the entire year, the methods of planting and cultivating the various vegetables, the climatic and soil conditions necessary for the production of these vegetables and kindred matters will be treated.

In the preparation of these articles such sources as personal experiences, various garden authorities and experiment station bulletins and reports will be drawn upon. Special credit is given to the experiment stations of the state college of Washington, the Oregon Agricultural college and the University of Idaho.

The first of these articles appears herewith, and deals with the hot bed and some of the common vegetables that may profitably be started in it.

HOT BED CONSTRUCTION.

The hot bed is simple, both as to principle and construction.

Select a spot where the sun shines and which is, if possible, sheltered from winds and storms to some extent. The south side of a building is a favorable location.

Dig a pit 20 to 30 inches deep, from seven to nine feet wide and as long as desired to make a hot bed of adequate size. Fill the pit with unrotted manure from the stable, being sure to include in it straw or corn stalks so that it will not pack too firmly. Tramp down well. Cover with an inch or more of something like leaf mold or rotting straw.

Construct a frame about 18 inches high at the north side and 12 inches at the south, having "rafters" to support the glass sash that will be used later as the hot bed cover.

Place the frame over the manure-filled pit. Fasten, if necessary. Put in a layer of good soil about six inches deep.

Don't Be in a Hurry.

Mechanically, the bed is now ready for use, but it should be allowed to settle for a very few days, during which the manure in the pit will pass through its most active stage of fermentation, creating an excessive amount of heat.

Before using the hotbed put the glass sash in place in such way that they may be raised and lowered on hinges or slipped in grooves so that plenty of ventilation may be had. Ventilation is an absolute necessity, and on days when the sun shines warmly the seed or the plants, if they have appeared, should be given the benefit of the open air and natural warmth.

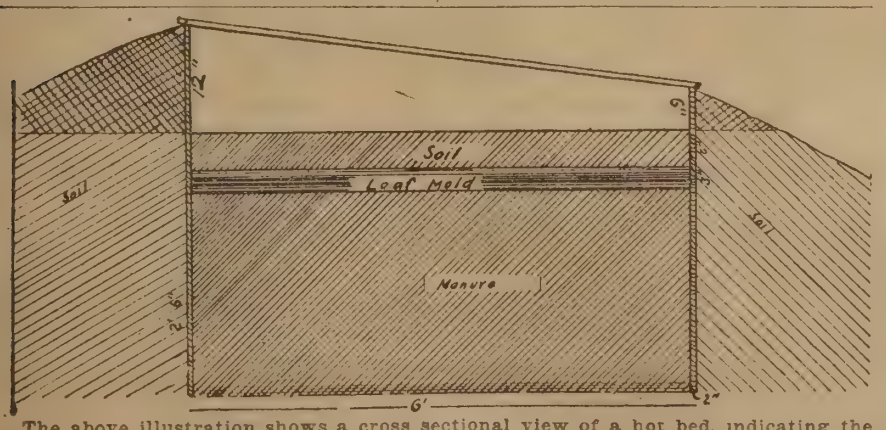
The only purpose of the hotbed is to start plants earlier than they could be started in the open, and it is therefore useful only in localities where cold weather with possible frost accompanies early spring.

Here are a few vegetables that should be in every farm garden, where climatic conditions are justifiable and which, in nearly all localities of the northwest, should be started in a hotbed to secure the best results:

Cabbage, Brussels sprouts, cauliflower, kohlrabi, tomatoes, egg plant, peppers and celery or celeriac.

The Growing Season.

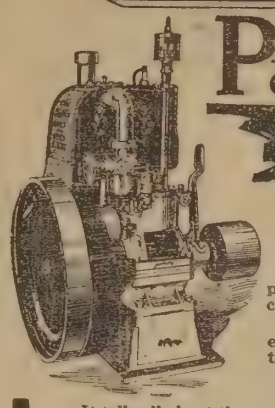
There are a number of questions to be considered in selecting vegetables suitable for a given locality, such as soil, length of summer season and variation in temperature. The two latter are so closely connected that the following figures indicating the length of time required for the above plants to reach maturity afford reasonable basis for judging whether they will succeed in the locality in question: Cabbage and Brussels sprouts, 90 to 130 days cauliflower, eggplant, tomatoes, peppers, 100 to 140 days; kohl-rabi, 60 to 80 days; celery or celeriac, 100 to 150 days.



Hardening of Plants.

Much of the failure experienced with hotbeds is due to the failure of the gardener to harden the plants before setting out in the open. During a period of several days, at least, immediately prior to transplanting, the plants in the hotbed should be gradually accustomed to the open. At first the ventilation should be increased and the water supply reduced slightly.

Transplanting Method.



The soil where the plants are to be set should be thoroughly prepared before they are removed from the hotbed, not afterward. Plants can live without food or water for a long time in some cases, but they are better off if the transplanting is done so quickly and gently that not even a shock results from the change.

Soften the soil in the hotbed by giving it an abundance of water. Lift the plants with as much soil clinging to them as possible. Set them so that the roots keep their natural positions as much as possible. If the day is either warm or cold, protect the plant by shelter of some kind. Give them plenty of water, but don't drown them. See that the soil is in contact with the roots, not hard packed, but sufficiently firm to keep out the drying air.

The above illustration shows a cross sectional view of a hot bed, indicating the pit of warmth giving manure, the leaf mold or other layer, the soil in which the seed is to be sown, and the angle at which the glass sash are set facing the south to receive more effectively the rays of sunlight.

THE "New-Way" ENGINE

Pays for Itself

Guaranteed For Life

Add a NEW-WAY Engine to your farm equipment. It will pay—it will pay for itself in a short time, not alone in dollars and cents but in added comfort and enjoyment.

The NEW-WAY Engine is a thoroughbred, sturdy, reliable, easy and economical to run and free from the troubles so common to the ordinary farm engine.

SEND FOR CATALOGUE 29

It tells all about the many uses for a New-Way Engine on the farm. It tells how the New-Way will make money for you every day—how the engine when not engaged in sawing wood, cutting ensilage, pumping water, etc., can, by means of a patented bracket, be attached to the binder, potato digger, or manure spreader.

It describes the New-Way system of direct cooling which requires no water. Water adds extra weight and is always a source of trouble in cold weather. The catalogue explains the many points of New-Way superiority, points which put this engine in a class by itself.

Eggs that hatch well come from hens that have good vitality.

The reproductive organs of the hen are apparently very sensitive. A hen may produce well, but not reproduce well.

The fact that a hen lays well does not necessarily imply that her eggs will hatch well and her chicks grow well.

The hen that rustles for a living, lays a nestful of eggs in the fence corner, hatches every egg and rears every chick, if cooped up in a house and fed and cared for well does not always, if ever, produce good hatchable eggs. The hen that has the liberty to range over the fields will produce eggs that will hatch well and chicks that will grow well. J. D.

New Breed Not Yet Available.

So many orders and letters of inquiry have been received by Professor Dryden at the O. A. C. poultry department, asking for settings or fowls of the new Oregon breed, that he has issued a form letter which states in substance that the department wishes to develop the type further before disposing of any of them. Possibly some will be available next fall or next year under certain breeding restrictions. Professor Dryden says that there are some other breeds available usually, but for the present none of the new breed can be sold for any price, although some people have offered very high prices for cockerels in particular.

To Get Rid of Ants.

To the Editor: To get rid of ants of any kind in a very short time, sprinkle concentrated lye in the dry form all around wherever the ants are troublesome, and they will positively leave.

Hatching Methods

Hen Compared to the Incubator

By JAMES DRYDEN.

There is a method in everything that brings money, even in setting a hen. Keeping chickens wont pay, unless there is a method in the keeping. It is the method that pays. Setting a hen will not make money, but the method of seting her will. Thousands, probably millions of hens are set every year with very little method, and the result is loss of millions of dollars.

The setting hen has her place in the poultry business, just as the incubator has its place, and I want to call attention in this article to some methods of hatching with hens. If any considerable numbers of chickens are to be hatched with hens it is necessary that there be some method. We don't expect to raise chickens by the artificial way without a method and without some expense in providing the equipment. Then why do we expect the hen to do all the hatching and raising of the chicks without some equipment and without some expense?

The photograph shown herewith illustrates the equipment necessary for hatching and brooding chickens by one method. This method has been tried at the Oregon station for a number of years. The illustration is of the Oregon station's combination hen hatching and brooding coop. This coop or house is an incubator as well as a brooder, though a natural one. The chicks are hatched in it, and then they are brooded in it. More than that, it is a growing house for the chickens. It is large enough to rear them in after the brooding stage is past. By the artificial way we have to have an incubator, then a brooder, then after that a house to rear them in. Here in this combination house it is all in one.

This coop is five feet long and three feet wide, three feet high at front and two feet at back. It is divided into four separate compartments for four hens. Movable partitions of burlap or canvas are fastened to a four or six inch board at the bottom and to a cross-piece at the top. The four hens should be all set at one time and when the hatch comes off the chicks are given to two hens. Two hens will take care of all the chicks four hens will hatch. Two partitions are taken out, leaving the middle one, so that the hen and chicks have more room.

To give the hen more room for feeding and dusting, covered runs are provided, a separate one for each hen. The hen can get off the nest when she wants to and go out into the run to drink and eat and go back to her own nest again. She can not go to another nest and start a quarrel with another hen, with the result broken eggs, and another hen can not visit her and sit down in the same nest, while the eggs in the other nest are chilled. The outside runs are made of 12-inch boards and a frame of one-inch mesh poultry netting is laid over the runs. At the far end of the runs feed and water is kept all the time. This is covered with a six-inch board, which is hinged to the upright board. This keeps the rain out of the feed and makes it convenient for feeding and watering. One can put in enough feed and water and go off on a picnic for a week and the hens will attend to business. Where there is danger from rats or other vermin of that kind a floor may be put in the coop, but we have followed the plan of tacking one-inch mesh netting on to the bottom of the coop and then covering it with earth. This makes a better nest for the hen and at the same time affords protection from rats.

The covered runs are left in place for a few days after the chicks are hatched; then they are taken away and the hens are confined in the house and the chicks allowed to run out on the

(Continued on page twenty-six.)

HOW ABOUT SEED?

Better Buy Early This Season.

Have you made arrangements for your seed yet? Inquiry at the seed stores reveals the fact that some seed is going to be scarce this season. At all events the first seed is usually the best. The late orders are apt to be filled with seconds, particularly if seed is scarce. Another advantage in buying early, is that, should something go wrong with it, and should testing prove that it is not very good, another lot may be ordered. It pays to be forehanded in seed buying, as well as in other things.

Place for Medicine Bottles.

If you have no place to put the medicine bottles, get a few brackets and put up two or three shelves in the pantry or the bathroom, so high that the little folks can not reach them. If your household is not different from the majority, they will always be full. There should be remedies for simple ailments, rolls of old linen or muslin for bandages, flannel for hot compresses, the hot water bag, liniment, salve, etc. Put a curtain in front of the shelves, to keep them from dust and to hide them from view. Positively expels worms. A valuable tonic and conditioner for cattle, horses, hogs and sheep. Improves appetite, tones system, helps digestion. 25-lb. pail, $2.25; 100-lb. sack, $7.00; smaller packages as low as 65c.

Dr. Hess Instant Louse Killer

Kills lice on poultry and farm stock. Destroys bugs on cucumber vines, slugs on roses, etc. Use by dusting or sprinkling. Comes in handy sifting-top cans, 1 lb. 25c; 3 lbs. 60c.

Pay for Yucatan Reforms

Binder Twine Prices for Northwest Farmer

Recent developments would indicate that the grain growers of the Palouse, the Big Bend region, Walla Walla and Umatilla valleys, as well as other regions of the Pacific northwest, are paying for certain social reforms affecting the farming interests of Yucatan.

How the government of a Mexican state has organized the monopoly and put up the price of binder twine is seen from further inquiry into the sisal industry.

In Yucatan the chief product is sisal hemp, used extensively in the manufacture of binding twine. When the government took hold of that industry two years ago and organized the growers into the "Comision Reguladora" the producers were receiving less than 5 cents a pound for sisal. Now they are paid about 16 cents, and the American grain growers must foot the bill.

The United States department of justice has begun a prosecution in the federal courts of this country of the "Comision Reguladora" and a company of American bankers who are financing the Yucatan monopoly, charging that they constitute a trust that is violating the laws of the United States. It is very doubtful whether American law can reach the Yucatan people, but it may take into its toils the American bankers back of them.

EDENIC PICTURE OF LIFE IN YUCATAN.

To defend their monopoly the officials of the "Comision Reguladora" are publishing full-page advertisements in some of the New York papers, and in their statement they present an almost Edenic picture of life in Yucatan. We are told that—

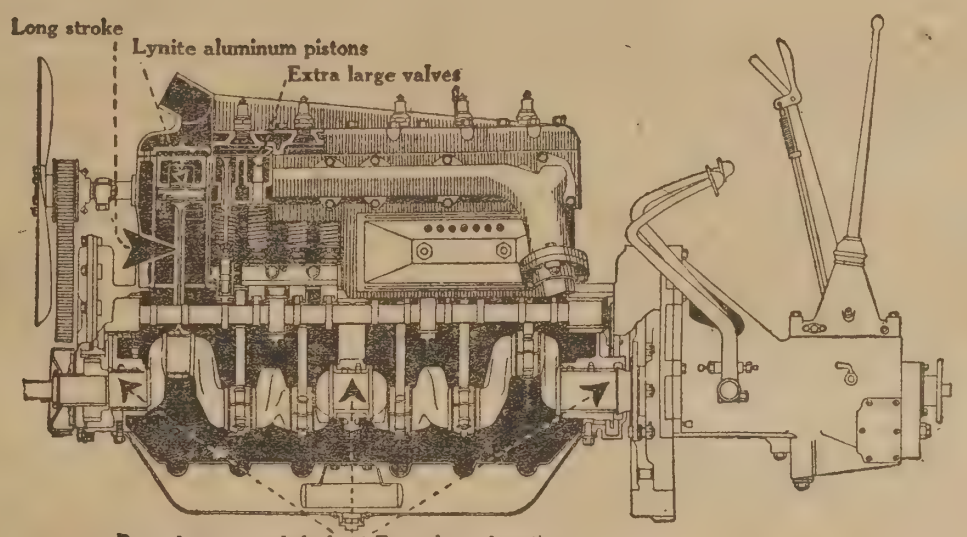
"In consequence of the admirable social reforms inaugurated by Governor Alvarado's administration, peonage has been abolished and the field laborer is now a free man and must be paid living wages. Instead of working for a pittance, as they did prior to the present revolutionary reforms, the laborers now receive from $1.50 to $3 (American gold) per day. The day's labor is limited by law to eight hours and the working week to five days. Child labor is prohibited, female labor is strictly regulated, working conditions have been improved at considerable cost to the planters, public schools have been established on each sisal plantation at the expense of the farmers, and the labor law provides compensation to laborers for accident and sickness, besides compelling the farmers to provide old age pensions and otherwise safeguard and protect the health of the laborers. Hundreds of Americans are going to Yucatan now because of the improved labor conditions, good wages, equitable laws and just treatment."

HE SHOULD BE PRESIDENT OF MEXICO.

If that roseate description is half true Governor Alvarado should be president of Mexico. There is, however, no question that he has done a great work for the Yucatan sisal growers. The "Comision Reguladora," we are further informed by its agents in this country, is a cooperative marketing organization composed entirely of sisal farmers, under the control of the government of the state of Yucatan. The board of directors—10 in number—is composed entirely of sisal planters of Yucatan. None but the farmers derive profit from its operation. All the sisal growers of Yucatan and the adjoining state of Campeche are members of the organization and participate in its benefits in proportion to the number of pounds of fiber each delivers to the association for marketing.

After deducting the expenses of operation, federal and state taxes, cost of transportation and warehouse charges the remainder of the proceeds of sale is divided among the farmers at the end of each commercial year.

OUR GRAIN GROWERS HELP TO FOOT THE BILL.



Governor Alvarado seems to be an organizing genius, but even genius could not get these results if the product were not of limited output. Binder twine is made from sisal and Manila hemp, and the crop of each product is about 1,100,000 bales a year. Apparently sisal can be grown more cheaply in Yucatan than hemp in the Philippines. Before the "comision" was organized speculators took advantage of that fact and bought and sold sisal at enormous profits. The "Comision Reguladora" was formed to oust the speculative middlemen, and has done its work with thoroughness and dispatch.

Mexico presents in general so forbidding an aspect that it is pleasing to turn the eye to one happy and radiant spot in the stricken republic. It is the state of Yucatan, in the south. Yucatan, it seems, has an enlightened and progressive government, and in some inexplicable manner has contrived to keep out of the disorders and ruin brought on the rest of the country.

THE STANDARD OIL COMPANY'S

It's all power because it's all refined gasoline—not a mixture.

A SOUND ENGINE IN A SOUND CAR

The engine of the Chalmers 6-30 is very rugged. Yet simple. Modern in everything, but not extreme in any. A good, safe engine. Reliable. Well lubricated. Of good bearings. Accessible. And one that "stays put." Has plenty of power. Though it is not a big engine. The power is well proportioned to the weight of the car. Thus making hills easy going. The power is smooth, too.

Specifications

Engine—6 cylinders, bore 3¼ ins., stroke 4½ ins., piston displacement 224 cu. ins. Power—45 h.p. (on the brake test.) Starter—Westinghouse 2 unit. Carburetor—Stromberg, horizontal, hot air heated. Clutch—Dry disc, asbestos on steel. Fuel feed—Stewart-Warner vacuum system. Ignition—Remy distributor, Willard 80 ampere hour battery. Tires—32 x 4, chain tread on rear.

Prices

Five-passenger	Touring,	$1250	f.o.b.	Detroit	Seven-passenger	Sedan,	$1850	f.o.b.	Detroit

Chalmers Auto Company

1228-1230 First Ave., Spokane, Wash. Distributors for Eastern Wash., Northern Idaho and Western Mont.

Prices Out of Reach

Of Common Northwest Dairy Business

(Continued from page three.)

live stock keep the average man from buying or even bidding. "I consider," he adds, "a healthy, moderate range of prices at a level within the reach of the average farmer far better for any useful breed of live stock than sensational high prices. Tremenduous prices do more harm than good."

With regard to the sale of the $21,500 Holstein bull calf, H. R. Boomer, one of the bidders at that sale, is led to ask the question in his communication given below which has properly occurred to more than one other stockman: "I could never see why bulls should bring $20,000 before being tried out, when three or four dams of such bulls could be bought for that amount and the purchaser raise his own bull and have some other calves beside the cow."

The Farmer also gives an interesting letter from George A. Gue, the auctioneer, regarding this sensational sale:

George A. Gue's Statement.

North Yakima, Wash., Feb. 16, 1917.

To the Editor: Replying to yours, that I heard from in regards to the publication, "Was the $21,500 Bull Calf Sale Bona Fide?"

My affidavit, as manager and auctioneer has been published and it would seem to me that further comment on my part was unnecessary. However, to clear myself and the Portland sale of any possible question, a few words may not be amiss.

To begin with, I wish it distinctly understood, that it is not my desire, nor am I going to be lead into taking a personal part in the controversy between Mr. Von Herberg and Mr. Stuart. It is to be deplored that such feelings had to be aroused, for personal conflict can't be waged without harm to all concerned.

When sales are attacked, as this particular sale has been, an inestimable damage has been done as confidence in the auctioneer and sale is apt to be lost. I have been very successful in my auction work, and I credit this success entirely to the confidence the buying public have in me. I have always played fair and never willingly allowed myself to be connected in any way with anything that was not honest and above board, or in any way take advantage of my bidders.

An auctioneer of experience and ability gets to be an adept in reading faces. He can almost tell when a man's last bid is in (although they try to fool him sometimes). He can almost to a turn tell when by-bidders are present. I have always worked on the theory that to be successful in my work I would of necessity have to deal with my customers more than once. My affidavit shows that this sale was straight and no animal was bid on in collusion with anyone, to the best of my knowledge. I challenge anyone to show where I have ever allowed a by-bid on or protection of any kind on stock at my sales. (I might say, however, the auctioneer does not live that has not had the proposition made him in regards to the protection of stock up to a certain amount.) And surely at this particular sale there were no signs of anything like this.

Every bidder was alert, intent, leaning forward, every nerve on edge. I can see them now: Mr. Smith counseling with an advisor; each bide sure and determined; Mr. Holmes, standing in the driveway, face colorless, bidding determinedly, but with each bid seeming to say, "Shall I go on?" Dr. Richards bid up to $5000 on the bull for Mr. Von Herberg, but, as he stated at the Northwest Breeders' banquet, given at the Multnomah hotel the evening of the first day of the sale, he was willing to bid that much on the bull himself, but when he got above that he would rather Mr. Von Herberg would speak for himself. William Bishop stood at my right, face white and eyes snapping. He gave me his bids in his usual direct and decisive way, by the simple word "Yes."

Mr. Von Herberg sat next to Dr. Richards, white, nervous, yet determined, telling the auctioneer in so many words, "I'll go the limit, but I'll have him." Those present at the ringside could not help but see the effect of the unusually high and spirited bidding, and several remarked on the serious looks of the contending bidders.

When the bidding reached $15,000, those present will remember I stopped the sale long enough to say I was satisfied, as the bull then had reached the price that his noted grandsire had been sold for, but that this animal was so greatly superior that if his grandsire brought $15,000 this youngster, being from a dam absolutely in a class by herself, should never stop at that figure. After that the bids ran on until he was finally sold to Mr. Von Herberg for $21,500, and that ended it.

A. E. Smith of Sumas, Wash., replying to my request for his affidavit (when told that the honor of the sale had been attacked), said: "It is strange that a transaction as open and clear and fair as this sale should be questioned; certainly those who knew the bidders can not question the truth of the whole thing."

I have held two sales for the Carnation Stock Farm, one at the home farm (here in the west) and the other at San Francisco. At the Frisco sale I sold a grade Holstein cow for more than $500 and when she had reached the $300 mark I frankly told the bidders the cow had reached her value, yet if any were financially able to pay more the animal would be a great credit to their herds. They started bidding again and we soon had her above $500. (Mr. Stuart will verify this statement.)

In the Yakima Herald, H. C. Davis of Granger, Wash., one of our most prominent western breeders, is quoted as saying, "Had I possessed Mr. Stuart's bank account I would have taken that bull home if he had cost me $50,000."

In closing I wish to say, the bull in question is worth $25,000 if he is worth anything. He sold for $21,500.

Trusting this will satisfy the public as to my position in this matter and in a measure repair the damage to me and the Portland sale, I remain,

GEORGE A. GUE.

Statement by H. R. Boomer.

New Plymouth, Ida., Feb. 16, 1917.

To the Editor: Answering your letter of the 14th, I would like to know the truth regarding the sale of the $21,500 calf, but am not in position to give any information of value regarding the dispute. As far as I was concerned I bid for nobody but myself, but soon saw the bull was going beyond what he was worth to me at the present time, with a comparatively small number of cows. I could never see why bulls should bring $20,000 before being tried out when three or four dams of such bulls could be bought for that amount and the purchaser raise his own bull and have some other calves besides the cows. On the other hand, with a herd large in numbers and bred on a par with the bull, I can see where a few thousand dollars might be a small item to the purchaser and he might think paying a high price at a public auction the quickest way to get advertised. If two such buyers got to competing you can see what the result would be. Except as above stated, I know nothing of the facts of this case.

H. R. BOOMER.

As N. C. Maris Views It.

"I was not present at the sale, though I was on the grounds, and I have no knowledge or information about it," said N. C. Maris to a representative of The Farmer. "However, I do feel at liberty to say emphatically that it is a mistake to have extreme prices at public or private sales of purebred live stock. Such prices keep the average man from buying or even bidding. When he sees animals bringing enormous prices he looks on the whole thing as a game which he can not play. It is for the speculator and the millionaire but not for him. So he pays no attention to purebred stock. It tends toward illegitimate boosting and it has had just such an effect in the past. Extreme high prices have had a damaging effect in several cases which I can call to mind. I consider a healthy, moderate range of prices, at a level within the reach of the average farmer far better for any useful breed of livestock than sensational high prices. Tremendous prices do more harm than good.' '

ENDURANCE

THE hinges on the barn of the old homestead were hand-hammered by the blacksmith. The iron was slowly and carefully made and was free from most of the chemical impurities that cause rust. That is why those old iron hinges lasted to see many doors come and go.

"ARMCO" IRON CORRUGATED CULVERTS

like grandfather's barn door hinges, are made of iron so pure that they resist rust. They will outlast many ordinary metal culverts and, like the old hinges, will endure after the men who place them have passed away.

"Armco" Iron Culverts mean true economy in road building and upkeep; they represent prudence in the use of public funds. The trade-mark on every section is a pledge of "value received".

For full information on "Armco" Iron Culverts, Flumes, Sheets, Roofing, and Formed Products, write the manufacturer in your vicinity, or

Address .....

Coffee sent whole or ground, as ordered. If you want it ground, state whether course, medium, fine, for percolator, or pulverized.

When you write to advertisers be sure to say that you saw their advertisement in this paper.

The Motor Car
On the Farm

The good driver does not do a number of things which are seen done repeatedly. The good driver does not insist on all his rights, nor tries to pass with a curve just ahead or fails to give plenty of warning. The good driver never tries to pass between two cars.

For 1916 total receipts from auto and motorcycle registrations of various kinds in Oregon amounted to $146,232. The cost of license plates, badges, printing, clerk hire and postage was $26,244.55. This left $119,987.45 to be returned in proportion to the various counties for road purposes.

During the 12 months ending June 30, 1916, the tire manufacturers of the United States exported tires to the value of $80,000,000. This is four times the amount exported during the preceding year, and shows that the business in American tires abroad has been placed upon a very satisfactory basis. A substantial increase is noted in South American business.

During 1915, according to statement issued by the national automobile chamber of commerce, motor car users discarded 9,000,000 tires, representing an expenditure of more than $290,000,000.

What would be the result if half of this sum, approixmately $150,000,000, could be saved annually? It would pay for the construction of five concrete highways across the continent each year; it would build another Panama canal in three years; pay off the national debt in seven years; or build a fleet of 10 first-class battleships every year.

Relative to Gasoline.

In a statement recently given out by the United States bureau of standards, effort is made to correct two erroneous opinions generally held by the public regarding motor fuel. According to the report, specific gravity is practically worthless as a check on gasoline when it is desired to gage its value for use in motor cars. Just what is the proper test is still a matter of some doubt, and in this regard the report states:

"It seems most probable that the definition of gasoline will have to be based on the percentage that distils over between specified temperatures, when the distillation is carried out under specified conditions. This distillation test, speaking in nontechnical terms, is a measure of the freedom with which the gasoline will vaporize. The gasoline must not vaporize too freely for two reasons—one that it would not be safe, and, secondly, its loss in storage by evaporation would be too great. Hence, the specification may have to contain limitations of the percentage distilling over below a certain temperature, coupled, perhaps, with a proviso that certain percentages shall distil over below other fixed temperatures, in order that requisite amounts of low-boiling constituents shall be present to insure easy starting of an engine. Likewise, the specification must contain a provision that all must distil over below a certain maximum temperature, in order to exclude from the gasoline the heavier petroleum distillates, such as kerosene."

The report also informs the public that it must not expect the bureau of standards to take hasty action in formulating a gasoline test.

British Forbid Hide Trading.

War office forbids purchase, delivery or negotiations relating to wet salted hides of 45 pounds and upward, dry salted hides of 25 pounds and upward, and dry hides of 18 pounds and upward at prices exceeding by more than 1 per cent prices at which said hides were sold by or on behalf of the importer thereof into united kingdom; unlicensed hide brokers are refused permission to engage in negotiations for purchase or sale of such hides, and no tanner may purchase hides without giving guaranty to put the hides purchased into process of manufacture of leather suitable for military requirements. All persons engaged in the hide business must furnish the director of army contracts particulars as to their business.

We offer you liberal credit. You can take a year to pay for your purchase.

$3.00 Down and $1.25 a Month Buys This Beautiful Bed Outfit

THE BED ALONE, if you were to purchase it at a regular retail furniture store, would cost you almost the price of the outfit. When you have this bed made up in your home you will find that it will add refinement and a neat, cheerful effect in the room in which it is placed.

DIMENSIONS—Bed can be furnished in 4½-foot width, the full size only. The posts are 2 inches in diameter. Fillers ¼ of an inch. The head piece stands 52 inches high and the foot piece 35 inches high. Can be furnished in gold Vernis Martin, giving the bed a most delightful appearance.

THE MATTRESS will be furnished in the full size, 4½ feet only. It is a great deal better mattress than you ordinarily find in the outfits. It is a 40-pound mattress and we do not hesitate to recommend it in every way. A good quality elastic sanitary cotton felt is used in making this mattress and it is covered with a splendid grade of fancy art ticking, securely tufted and finished with a heavy roll edge. The scientific construction assures a wonderfully comfortable and durable mattress.

THE SPRINGS are something new and a most extraordinary value. They are noiseless and durable. The double rust proof wire fabric is attached to the heavy angle iron frame by oil-tempered helical springs. The weight is well equalized and distributed all over the entire spring.

No. 1133. Outfit complete as pictured. Weight about 160 lbs. Price **$19.85**

$2.25 Down and $1.00 Monthly Buys This Fine Solid Oak Arts and Crafts Dining Table

THIS BEAUTIFUL TABLE, though simple, is so nicely proportioned and handsomely finished that it makes a wonderful table for any family to have. A nice dining table that will be serviceable and neat, and not be a big item of expense. You will notice that the pedestal is truly mission in shape and 6 inches in diameter. The legs are very massive. Every part of the table, both base and top, is carefully sandpapered and smoothed before the finish is applied. Top measures 42 inches when closed, extending to 6 feet. Furnished in fumed or golden oak.

No. 1418. Weight about 117 lbs., furnished complete with leaves. Price..... **$13.95**

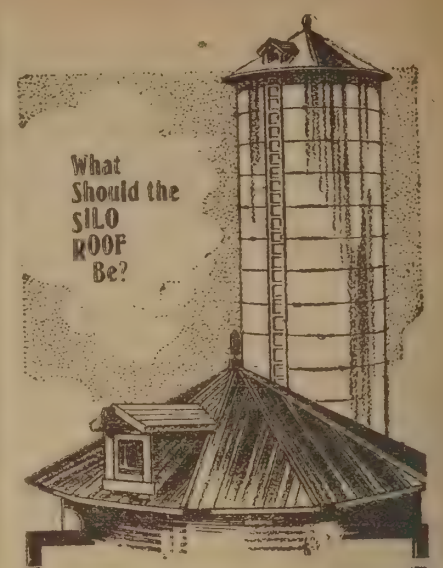
Hatching Methods
Hen Compared to the Incubator

(Continued from page twenty-two.)

clean grass. In a couple of weeks the hens may also be given their liberty.

Hen Hatching and Brooding Coop



Used at the Oregon Experiment station.

When the brooding stage is past and the hen leaves the chicks roost perches are put in the house for them. The house is moved occasionally on to clean ground. It is very important to raise the chickens on clean ground and especially important not to throw the feed on ground covered with droppings; this to prevent the spread of disease.

When the cockerels are old enough they may be sold for broilers and this leaves room for the pullets.

It will be noticed that both the front door and the roof are hinged. It is better to keep the front door down when the hens are sitting to darken the nests. Afterwards when the chicks are hatched it may be kept open to allow more fresh air in the coop. With the roof on hinges it makes it more convenient to get at the nests or hens. There is also a 12-inch door at the rear for getting at the nests. This is a board hinged at the bottom and cut in two sections so that only two nests are exposed at one time.

There are other methods of hen hatching ad brooding, but this is one method that we have worked out at the station that has been successful. Try it.

SOME POINTS
For the Farmer Who Insists on Knowing WHY!

This roof comes in sections, complete and READY TO PUT ON. No cutting nor fitting. Rafters bolted to castings, and thus to silo itself. AUTOMATICALLY adjusts itself. The material the very finest. Water tight, strong, durable. Dormer window and Gin pole. Ventilation perfect: YEARS EXPERIENCE BACK of this ROOF.

YOU KNOW what a good roof means. The hard knocks of time have no mercy on a poor roof. GET YOUR SILO ROOF RIGHT. Don't put up with warping, leaking, or any petty or serious roof troubles. GET the ROOF RIGHT—NOW.

YEARS OF PRACTICAL EXPERIENCE are back of the

WEYERHAEUSER SILO

Roof, and moreover, PRACTICAL understanding men, who KNOW WHAT the FARMER MUST HAVE.

WE BELIEVE THAT THE DAY is at hand WHEN NO FARMER WILL FEED STOCK at any time of the year WITHOUT AT LEAST A PORTION of SILAGE IN THE RATION.

FREE LITERATURE: (1) **Feeding Manual,** containing the most modern scientific data on feeding. (2) **Essay on Planting and Raising Silage Corn,** replete with valuable, practical information. (3) **Weyerhaeuser Silos,** giving complete information, showing the practical, scientific details. SEND FOR ANY or ALL OF THESE—we will be glad to mail them to you FREE.

The Toll Gate and Grain Pit

Pointed Story Helps Bring Peace in Divided Convention

At the grain convention held at Pullman, Wash., a few weeks ago a friendly but spirited controversy took place between John G. McHugh, representing the Minneapolis Chamber of Commerce, and certain representatives of the farmers of the northwest.

It must be understood that the Minneapolis Chamber of Commerce is nothing more or less than the Minneapolis grain exchange, through which the great bulk of the grain of the famous Dakotas must pass. Mr. McHugh was defending the exchange from vigorous attack by those who declared it to be a monopoly.

When the fight was at its warmest Former President E. A. Bryan of the state college entered the ring with a smile on his face and told the following story:

"I made an automobile trip from Pullman to Portland last sumer by way of Pendleton and The Dalles. Near The Dalles, on the main thoroughfare, we came to the Des Chutes river, a broad, shallow, swift stream, filled with rocks and boulders, with mountainous walls rising on either side. As we drove up the public highway to the river, right athwart the highway was a modern gate, with a comely woman as gatekeeper—in fact, almost too good-looking to be in charge of so strategic a point on the public highway. Beyond the gate was a rickety, cheap-looking bridge; just wide enough for one vehicle at a time, built on a series of home-made wooden buttresses.

"A dollar was the charge to open the gate and permit one to cross the bridge. To a mild inquiry if this wasn't a rather high price to charge, we were informed that if we didn't wish to pay the price we could go some other way. Inquiry elicited the information that there was a crossing about 90 miles above, and that below was the Columbia river. On each side of this toll-bridge was the main highway from eastern Oregon, eastern Washington, Idaho and the far east, to Portland. Of course, we paid the dollar, at the same time thinking how mediaeval is Oregon that she should permit this private tollgate to continue to exact such an amount from the great tide of travel (50 to 100 autos a day) along a state and national highway. There were a hundred other places along the thoroughfare where the state might have licensed a private individual to erect a gate and exact a dollar from all travelers, where it wouldn't have made any difference, for the public would have easily and quickly gone around. But this was an awfully strategic place to have a tollgate. Wouldn't you like to have a tollgate on such a line of commerce at such a strategic point?

"The people who kept the gate seemd awfully nice people. They made the change correctly. I doubt not that they or their predecessors had put some labor and money into that rickety old bridge and were entitled to some compensation. I doubt not that the state of Oregon had given to them the legal right to take tolls. I fancy they were honest folk who were acting strictly within the law. But the system seemed very mediaeval, to say the least. Perhaps there was a day in the remote past when it was even wise to let somebody build a bridge and put a gate across the highway and charge for passing through it; but that day is surely past."

Applying this story to the situation in the middle western grain market, Dr. Bryan said:

"We need many thoroughly organized markets where buyers and sellers may meet. The bigger the movement along the highway of commerce, the greater is the strategic importance of a perfect market organization. What an ideal place it is to have a tollgate! The talented men who created this and other similar exchanges doubtless put some time and money into creating and perfecting the organization. Many of the members are doubtless excellent gentlemen. They dress well, are good providers for their families and doubtless give something to charity. They believe in conducting a strictly legal business, and feel badly when 'incompetent' store clerks and others dabble in futures to their own hurt. Still, they see the enormous value of such a market and take pride in what they contribute to its success. They class as 'agitators' all who question the wisdom of continuing the tollgate system.

"Here at the Minneapolis exchange is a narrow place in the great highway of commerce. The location is strategic. it is on the highway over which the staff of life is transported. The one who would like to pass without paying the toll is told that he is free to go some other way. The great, ruthless public, however, thinks this barrier is mediaeval. 'Why this obstruction?' they say. 'The highways of commerce should be as free as the nation's highways. Private interest must give way to public good.'

"It is thus that the problem of the public versus private grain exchanges comes up for discussion. It is fortunate that this wheat convention has the opportunity to listen to so distinguished a representative of the 'private exchange' system explaining its merits and answering the criticisms against it. It is also fortunate that the rising tide of a newer conception of the management of the highways of commerce should also have their exponents."

COMMUNITY SERVICE

To Be Recognized by Bankers.

One of the banks of Bend, Crook county, Ore., is offering a service medal to the student who, in the opinion of the teachers and pnpils, has done the greatest service during the year in the community, home and school. The students will ballot on this nomination and the nominees will be considered by the faculty.

Baby Silo for His Hens

Three Feet by Nine, Holding Six or Eight Tons

By D. G. SUTHERLAND

Part of the flock of 400 Ancona chickens, and the chicken silo owned by J. D. McKnight of Sunnyside, Wash.

J. D. McKnight of Sunnyside, Wash., has 400 Ancona laying hens and pullets. In order to supply them with green, winter feed, last fall he built a silo three feet in diameter and nine feet high. It was built of wood and on the same plan of the large silos. It was filled with unmarketable cabbage, turnip and rutabaga tops, and lawn clippings from a bluegrass and white clover lawn, the cabbage and tops were chopped up, similar to making other silage. A small amount of salt was used and it was covered with water.

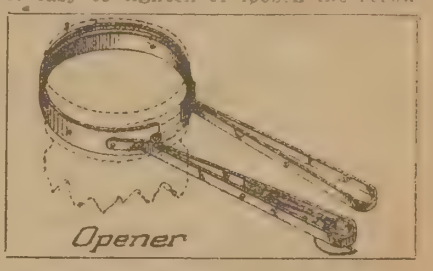
The silo held between six and eight tons. All material used would have otherwise gone to waste. The silage kept fine, the chickens are very fond of it, the egg production has been good.

Mr. McKnight says his silo has reduced the cost of his winter feed one-third. He says if he were going to build another he would use a pit silo. With a silo of his diameter, in extremely cold weather, it would freeze too much, unless in some way protected.

TOMMY GETS LETTER

From His Uncle in Scotland.

The following letter was received by a 10-year-old lad living on an Oregon farm from his bachelor uncle, living in Edinburgh, Scotland. Accompanying the letter is the following comment by our contributor: "As an example of the right kind of a letter to write to a real boy, we think this is well worth passing on to other real boys who read The Farmer."

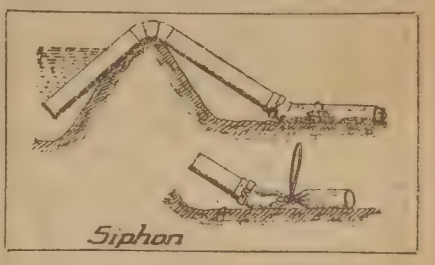


"Dear Tommy: How are you? Do you feel merry and bright, and have you still got that donkey of which I have a kodak picture? And how is the dog? Did I tell you my Scotch terrier dog chum had pups? There were six of them, two boys and four girls; like the Chinese, we don't think much of girls, so we drowned them. The other two grew up together side by side. They were called 'the big yin' and 'the wee yin,' not that there was much between them in size, but you have to distinguish them somehow. They are both dark brindle in color; you should see them fight for an old shoe—but the wee yin is master; whenever he loses his temper, the fight stops. For a long time I did not know which one to keep. Sometimes I liked one, sometimes the other, but as I could not keep the mother and both of them, I at last decided to keep the wee yin, so I gave the other to a good friend who will look after him well. It was great to see how considerate they were for each other; when you put down their food they gulped it down in case the other would eat too much and hurt himself. The big yin generally got most; he just ate straight ahead while the little one was doing some fancy touches licking around the edges of the plate. I don't know whether he was biggest because he ate most, or ate most because he was biggest. Which do you think? The 'wee yin' now goes by the name of 'Toddle Ben,' Ben for short, and he knows it all right. Now I will wish you a Merry Xmas, and I hope you will write me soon and tell me about your dog and other pets. With love, from Uncle Harry."

Inventions

By C. J. LYNDE, Macdonald College, Quebec.

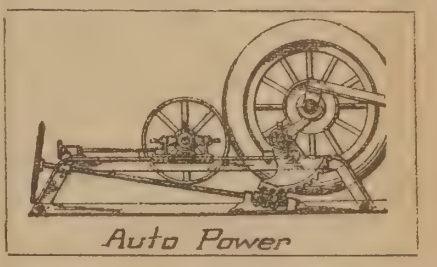
Cap Opening Tool.



The women folk will be interested in this tool, which, it is claimed, makes it easy to tighten or loosen the screw

caps of preserve jars. The device attached to one handle is used to open tin cans.

Irrigating Siphon.



This siphon is used to take water from an irrigation ditch at any point without the use of bulkheads and gates.

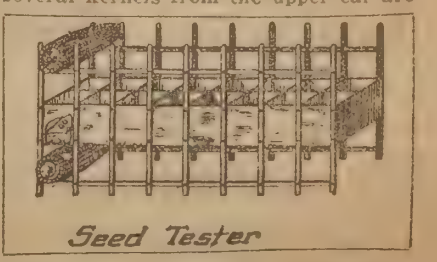
It has a flexible tube, on the lond end, which is used to regulate or stop the flow of water.

Power Transmission.

The new feature here is the hand-operated worm, by means of which the rear wheels of the automobile are

elevated and held against a pair of grooved wheels. The power is taken from the axle of the grooved wheels.

Hanger for Ears of Corn.



It will be noticed that each link of this hanger is shaped like the letter W, except that it has, in place of the

middle point, a U-shaped piece at right angles to the letter. Any desired number of links can be hung one to the other.

Seed Tester.

The object here is to provide a seed corn tester in which the seed can be accurately identified. In each section, several kernels from the upper ear are

placed on moist earth in the forward box, and several from the lower ear, in the rear box; thus error of identification are practically impossible.

All Carry Fans.

In China and Japan men and women of all classes, callings and professions, carry fans,

Must Not Put on Airs

No Highfalutin Language in This Contest

By Farm Information Editor.

"Silas, after you have extracted the lacteal fluid from the bovine ruminants, you will eradicate the cycloloma platyphylum from the brassica oleracea."

Just imagine my father giving my day's orders in such terms at about 5 a. m. one fine morning on the farm where 5 a. m. is rather late to be getting started on the day's work.

He never would have said it. He would have said, "Silas, after you have done the milking, you may hoe the pigweed from the cabbage."

There is a beastly lot of farming being done by highbrows in the city these days—farming which is mostly language like that quoted above, farming by folks who know nothing about farming and never will learn.

Now, the point is that highfalutin language counts for nothing in the Farm Information contest which is now running in the farmer. There are 60 questions to be answered and the answers will be scored on common sense and general knowledge of farming conditions rather than on spelling, grammar and penmanship.

It is the desire of the Farm Information Editor that every reader of The Farmer make himself at home in this contest. Use the language that you use around home. If you say "ain't" and "hain't" around home, don't try to put on airs in your answers. Just be natural and your papers will not be rated one fraction of a per cent less because of the way in which you express yourself.

The Farm Information Editor can not boast of an ancestry that come over in the Mayflower or of a great-great-grandfather who was the last man to fall dead on the works at Thermopylae, but he does find particular pride in having grown up on a farm.

He stands ready at any time to fight for the language of the rural districts, because it is the language of least words, a language without frills and furbelows. It is the common tongue of the plain people, many of them just as well educated as those who indulge in $20.000 bulls and other luxuries of the impractical city farmer.

I can recall that in my days on the farm I never became "indignant," but was sometimes "mad" or "sore." Our picket fences were mostly "palings" and our hogs were never "swine." In those days cows did not have "udders" and dogs never had "rabies." We had our own terms for those physical protrusions and mental outbreaks, and when we said 'em everybody knew exactly what we were talking about.

This contest is open to every one. It does not require a technical farm education to answer the 60 questions, because the most of them could be answered without a single day of textbook training. Farm knowledge, not four-syllable words or 30-volume encyclopedias, is what you need.

If you do not care to follow the 60 questions as they appear, five each week, in The Farmer, just remember that our Contestant's Helpful Outfit is included with every new, renewal or extension subscription for The Farmer. See announcement of prize list on page 9.

Cut Out Patches, Put Them Together and Tell Whose Likeness It Represents.

Picture is that of a celebrated South American explorer.

Any person sending the correct identification to the above likeness before March 8, together with $2 in the form of money order, 2c stamps or personal check, will receive the Washington Farmer for three years and any one of the following standard high class magazines for one year: American Magazine, Metropolitan Magazine, Woman's Home Companion or Every Week.

Just see what these publications would cost you at the regular rates:

Washington Farmer,
3 years $3.00
American Magazine, 1 year $1.50
$4.50

Washington Farmer,
3 years $3.00
Metropolitan magazine, 1 year $1.50
$4.50

Washington Farmer,
3 years $3.00
Woman's Home Companion,
1 year $1.50
$4.50

If you send the correct answer, any one of the above club combinations will cost you only $2.

If your answer is incorrect your money will be returned promptly. This offer is limited to replies mailed before February 21, as shown by the postoffice dating stamp on your envelope. Address

Potatoes

Has Grown Them for 40 Years

By CHARLES H. DAVIDSON,
Thorp, Wash.

I have been raising the humble spud off and on for the last 40 years, and in this state I find that where there is natural fall of moisture to grow good grain crops there the spud does well, and the way I grow them is like this: I plow deep, harrow and drag the furrow off four feet apart, plant the spuds 10 to 12 inches apart, cover two and a half to three inches. When they are up four inches high, hill up and cover everything but the three top leaves. As fast as they get five to six inches high cover up again all but the top leaves. The spud vine will put out shoots and spuds grow bigger and nicer than what grows from the bottom roots. Every time they are covered up they set an extra layer of spuds. I have hilled up three times and digging time got the returns in spuds the same as four distinct crops. I raised a crop one year on the Sound that went better than 14 tons to the acre.

But I have the best up my sleeve for the man who likes to grow spuds and who is unable to give all of his time to them. Following is the way I grow them now: I wait until the ground begins to warm up and then I use a 12-inch plow and plow 9 to 10 inches deep. I pick out uniform spuds that are true to the shape and the kind I want to plant, which are of a size 1 1-2 to 2 inches long, and plant them whole, 10 to 12 inches apart, in the furrow and plant every third furrow as I plow, then I give the ground a good harrowing and clod smashing; then, when the spuds are about all up I harrow again; then pulling out a few weeds is about all there is to be done to them. Then digging time comes and I have more and nicer spuds than the average person and do not half kill myself cultivating, the last being the way I like best, as the work is only at digging time.

New Auto Light.

A new rear light for automobiles is equipped with an alarm that sounds a signal if it be extinguished accidentally.

FREE

Hatching Eggs

A Poultry Club for Thrifty Boys and Girls

The Farmer, in line with other cooperative work with its readers, has a plan which enables thrifty boys and girls to obtain foundation stock in purebred poultry. A little of your time outside of school hours is all that is required. We offer nothing but eggs from prize winners. Each setting contains 15 eggs, and you can make your selection from the following breeds:

S. C. Reds, R. C. Reds, Barred Plymouth Rocks, White Rocks, White Wyandottes, Buff Orpingtons, Blue Orpingtons, Black Orpingtons, White Orpingtons, Light Brahmas, Anconas, S. C. Andalusians, R. C. Andalusians, R. C. Brown Leghorns, S. C. Leghorns, R. C. White Leghorns, S. C. White Leghorns, S. C. Buff Leghorns, Black Minorcas, Bantams, Buttercups, Campines, Houdans.

Any boy or girl who sends one new or renewal subscription to The Farmer will be sent a certificate of membership to our club, with complete instructions about what to do to get the eggs. Act now. Address

Dogs of carious breeds have proven invaluable in trench warfare of the present great conflict. In order to protect them against gas attacks, gas masks have been devised. This picture shows one of the dogs used by the French army in the west wearing his gas mask.

WHEN KNIGHTHOOD WAS IN FLOWER

or, the Love Story of Charles Brandon and Mary Tudor, the King's Sister, and Happening in the Reign of His August Majesty, King Henry the Eighth.

By EDWIN CASKODEN (Charles Major).

Copyright, 1898, The Bobbs-Merril Co.

SYNOPSIS.

Charles Brandon, who has neither wealth nor title, wins distinction for having defeated the heretofore unconquerable duelist, Judson. Brandon is installed as one of the captains of the guard of King Henry VIII. Edwin Caskoden (who tells the story) is Master of the Dance at London Court. The two young men become fast friends. Edwin tells Brandon of the willful, but adorable Mary Tudor, who had coaxed her royal brother Henry out of many proposed marriages which had been arranged for Henry's advantage. Edwin confesses that he, like scores of other men, had fallen in love with Mary, but upon Mary's refusal to marry him, he immediately became attracted to the good and beautiful Lady Jane Bolingbroke.

At their first meeting, Mary and Brandon have a tilt, in which Mary comes off second best and acknowledges it. Wondering as to Brandon's social accomplishments, and to settle a wager with Sir Edwin that he could not dance, Mary invites Brandon, Edwin and Jane to her drawing room. To her surprise and Edwin's delight Brandon is perfectly at ease and proves that he knows more about dancing than the Master of the Dance, himself. He teaches the Princess Mary one of the new French dances. At a ball, given by Mary, Brandon makes an enemy of the Duke of Buckingham, the most powerful nobleman in the realm. The evening is spent with the new dance, which greatly pleases the king. Brandon begins to realize that he loves the unattainable Mary, and, what is worse, Mary knows she loves Brandon. A party, including Brandon, spends a few days at Windsor, during which time the king makes several knights. Brandon would have been one of these had not Buckingham poisoned the king's mind against him. In the meantime, the old French king, Louis XII., whose wife, Anne of Brittany, had just died, has asked Mary's hand in marriage.

Brandon avoids Mary for some time, but when next they meet, they declare their love, but agree that they can never belong to each other. Brandon resolves to leave as soon as possible for New Spain.

In the meantime negotiations for Mary's marriage with Louis XIII. became an open secret about the court. Mary, longing to know the outcome of her complicated affairs, persuades Jane to go with her secretly to Grouch, a Jewish fortune teller, who lived in Billingsgate Ward, in the worst part of London. They disguise as orange girls and make the trip, after the more prudent Jane, unbeknown to Mary, asks Edwin to follow them at a distance. This being impossible for Edwin to do, Brandon goes. Shortly after the girls had emerged from Grouch's, they are pursued by four horsemen. Brandon overtakes them and kills two. The other two horsemen attack Brandon from their saddles. Brandon thrusts his sword into the throat of one of the horses and it falls, pinning its rider underneath. His cry brings his companion to his side, which gives Brandon a chance to escape with the girls. During the fray the mask from the face of one of the men falls and Brandon recognizes Buckingham, but does not speak of it to anyone.

CHAPTER IX.

I thought the king's dance that night would never end, so fond were the Frenchmen of our fair ladies, and I was more than anxious to see Brandon and learn the issue of the girls' escapade, as I well knew the danger attending it.

All things, however, must end, so early in the morning I hastened to our rooms, where I found Brandon lying in his clothes, everything saturated with blood from a dozen sword cuts. He was very weak, and I at once had in a barber, who took off his shirt of mail and dressed his wounds. He then dropped into a deep sleep, while I watched the night out. Upon awakening Brandon told me all that had happened, but asked me to say nothing of his illness, as he wished to keep the fact of his wounds secret in order that he might better conceal the cause of them. But, as I told you, he did not speak of Buckingham's part in the affray.

I saw the princess that afternoon, and expected, of course, she would inquire for her defender. One who had given such timely help and who was suffering so much on her account was surely worth a little solicitude; but not a word did she ask. She did not come near me, but made a point of avoidance, as I could plainly see. The next morning she, with Jane, went over to Scotland Palace without so much as a breath of inquiry from either of them. This heartless conduct enraged me; but I was glad to learn afterward that Jane's silence was at Mary's command—that bundle of selfishness fearing that any solicitude, however carefully shown upon her part, might reveal her secret.

It seems that Mary had recent intelligence of the forward state of affairs in the marriage negotiations, and felt that a discovery by her brother of what she had done, especially in view of the disastrous results, would send her to France despite all the coaxing she could do from then till doomsday.

It was a terrible fate hanging over her, doubly so in view of the fact that she loved another man; and looking back at it all from the vantage point of time, I can not wonder that it drove other things out of her head and made her seem selfish in her frightened desire to save herself.

About 12 o'clock of the following night I was awakened by a knock at my door, and, upon opening, in walked a sergeant of the sheriff of London with four yeomen at his heels.

The sergeant asked if one Charles Brandon was present, and upon my affirmative answer demanded that he be forthcoming. I told the sergeant that Brandon was confined to his bed with illness, whereupon he asked to be shown to his room.

It was useless to resist or to evade, so I awakened Brandon and took the sergeant in. Here he read his warrant to arrest Charles Brandon, Esquire, for the murder of two citizens of London, perpetrated, done and committed upon the night of such and such a day, of this year of our Lord, 1514. Brandon's hat had been found by the side of the dead men, and the authorities had received information from a high source that Brandon was the guilty person. That high source was evidently Buckingham.

When the sergeant found Brandon covered with wounds there was no

Princess Mary writes to Brandon.

longer any doubt, and although hardly able to lift his hand he was forced to dress and go with them. A horse litter was procured and we all started to London.

While Brandon was dressing I said I would at once go and awaken the king, who I knew would pardon the offense when he heard my story, but Brandon asked the sergeant to leave us to ourselves for a short time and closed the door.

"Please do nothing of the sort, Caskoden," said he; "if you tell the king I will declare there is not one word of truth in your story. There is only one person in the world who may tell of that night's happenings, and if she does not they shall remain untold. She will make it all right at once, I know. I would not do her the foul wrong to think for one instant that she will fail. You do not know her; she sometimes seems selfish, but it is thoughtlessness fostered by flattery, and her heart is right. I would trust her with my life. If you breathe a word of what I have told you, you may do more harm than you can ever remedy, and I ask you to say nothing to any one. If the princess would not liberate me . . . . but that is not to be thought of. Never doubt that she can and will do it better than you think. She is all gold."

This, of course, silenced me, as I did not know what new danger I might create, nor I might mar the matter I so much wished to mend. I did not tell Brandon that the girls had left Greenwich, nor of my undefined, and, perhaps, unfounded fear that Mary might not act as he thought she would in a great emergency, but silently helped him to dress and went to London along with him and the sheriff's sergeant.

Brandon was taken to Newgate, the most loathsome prison in London at that time, it being used for felons, while Ludgate was for debtors. Here he was thrown into an underground dungeon foul with water that seeped through the old masonry from the moat, and alive with every noisome thing that creeps. There was no bed, no stool, no floor, not even a wisp of a straw; simply the reeking stone walls, covered with fungus, and the windowless arch overhead. One could hardly conceive a more horrible place in which to spend even a moment. I had a glimpse of it by the light of the keeper's lantern as they put him in, and it seemed to me a single night in that awful place would have killed me or driven me mad. I protested and begged and tried to bribe, but it was all of no avail, the keeper had been bribed before I arrived. Although it could do no possible good, I was glad to stand outside the prison walls in the drenching rain, all the rest of that wretched night, that I might be as near as possible to my friend and suffer a little with him.

Was not I, too, greatly indebted to him? Had he not imperiled his life and given his blood to save the honor of Jane as well as of Mary—Jane, dearer to me a thousand-fold than the breath of my nostrils? And was he not suffering at that moment because of this great service, performed at my request and in my place? If my whole soul had not gone out to him I should have been the most ungrateful wretch on earth; worse even than a pair of selfish, careless girls. But it did go out to him, and I believe I would have bartered my life to have freed him from another hour in that dungeon.

As soon as the prison gates were opened next morning, I again importuned the keeper to give Brandon a more comfortable cell, but his reply was that such crimes had of late become so frequent in London that no favor could be shown those who committed them, and that men like Brandon, who ought to know and act better, deserved the maximum punishment.

I told him he was wrong in this case; that I knew the facts, and everything would be clearly explained that very day and Brandon released.

"That's all very well," responded the stubborn creature; "nobody is guilty who comes here; they can every one prove innocence clearly and at once. Notwithstanding, they nearly all hang, and frequently, for variety's sake, are drawn and quartered."

I waited about Newgate until 9 o'clock, and as I passed out met Buckingham and his man Johnson, a sort of lawyer-knight, going in. I went down to the palace at Greenwich, and finding that the girls were still at Scotland, rode over at once to see them.

Upon getting Mary and Jane to myself, I told them of Brandon's arrest on the charge of murder, and of his condition, lying half dead from wounds and loss of blood, in that frightful dungeon. The tale moved them greatly, and they both gave way to tears. I think Mary had heard of the arrest before, as she did not seem surprised.

"Do you think he will tell the cause of the killing?" she asked.

"I know he will not," I answered; "but I also know that he knows you will," and I looked straight into her face.

"Certainly we will," said Jane; "we will go to the king at once," and she was on the qui vive to start immediately.

Mary did not at once consent to Jane's proposition, but sat in a reverie, looking with tearful eyes into vacancy, apparently absorbed in thought. After a little pressing from us she said: "I suppose it will have to be done; I can see no other way; but blessed Mother Mary! * * * help me!"

The girls made hasty preparations, and we all started back to Greenwich, that Mary might tell the king. On the road over I stopped at Newgate to tell Brandon that the princess would soon have him out, knowing how welcome liberty would be at her hands; but I was not permitted to see him.

I swallowed my disappointment and thought it would be only a matter of a few hours' delay—the time spent in riding down to Greenwich and sending back a messenger. So, light hearted enough at the prospect, I soon joined the girls, and we cantered briskly home.

After waiting a reasonable time for Mary to see the king, I sought her again to learn where and from whom I should receive the order for Brandon's release, and when I should go to London to bring him.

What was my surprise and disgust when Mary told me she had not yet seen the king—that she had waited to "eat, and bathe, and dress," and that "a few moments more or less could make no difference."

"My God! your highness, did I not tell you that the man who saved your life and honor—who is covered with wounds received in your defense, and almost dead from loss of blood, spilled that you might be saved from worse than death—is now lying in a rayless dungeon; a place of frightful filth, such as you would not walk across for all the wealth of London Bridge; is surrounded by loathsome, creeping things that would sicken you but to think of; is resting under a charge whose penalty is that he be hanged, drawn and quartered? and yet you stop to eat and bathe and dress. In God's name, Mary Tudor! of what stuff are you made? If he had waited but one little minute; had stopped for the drawing of a breath; had held back for but one faltering thought from the terrible odds of four swords to one, what would you now be? Think, princess, think!"

I was a little frightened at the length to which my feeling had driven me, but Mary took it all very well, and said slowly and absent-mindedly:

"You are right; I will go at once; I despise my selfish neglect. There is no other way; I have racked my brain—there is no other way. It must be done, and I will go at once and do it."

"And I will go with you," said I.

"I do not blame you," she said, "for doubting me, since I have failed once; but you need not doubt me now. It shall be done, and without delay, regardless of the cost to me. I have thought and thought to find some other way to liberate him, but there is none; I will go this instant."

"And I will go with you, Lady Mary," said I, doggedly.

She smiled at my persistency, and took me by the hand, saying, "Come!"

We at once went off to find the king, but the smile had faded from Mary's face, and she looked as if she were going to execution. Every shade of color had fled, and her lips were the hue of ashes.

We found the king in the midst of his council, with the French ambassadors, discussing the all-absorbing topic of the marriage treaty; and Henry, fearing an outbreak, refused to see the princess. As usual, opposition but spurred her determination, so she sat down in the anteroom and said she would not stir until she had seen the king.

After we had waited a few minutes, one of the king's pages came up and said he had been looking all over the palace for me, and that the king desired my presence immediately. I went in with the page to the king, leaving Mary alone and very melancholy in the ante-chamber.

Upon entering the king's presence he asked, "Where have you been, Sir Edwin? I have almost killed a good half-dozen pages hunting you. I want you to prepare immediately to go to Paris with an embassy to his majesty, King Louis. You will be the interpreter. The ambassador you need not know. Make ready at once. The embassy will

leave London from the Tabard Inn one hour hence."

Could a command to duty have come at a more inopportune time? I was distracted, and upon leaving the king went at once to seek the Lady Mary where I had left her in the ante-room. She had gone, so I went to her apartments, but could not find her. I went to the queen's salon, but she was not there, and I traversed that old rambling palace from one end to the other without finding her or Lady Jane.

The king had told me the embassy would be a secret one, and that I was to speak of it to nobody, least of all to Lady Mary. No one was to know that I was leaving England, and I was to communicate with no one at home while in France.

The king's command was not to be disobeyed; to do so would be as much as my life was worth, but besides that, the command of the king I served was my highest duty, and no Caskoden ever failed in that. I may not be as tall as some men, but my fidelity and honor—but you will say I boast.

I was to make ready my bundle and ride six miles to London in one hour, and almost half that time was spent already. I was sure to be late, so I could not waste another minute.

I went to my room and got together a few things necessary for my journey, but did not take much in the way of clothing, preferring to buy that new in Paris, where I could find the latest styles in pattern and fabric.

I tried to assure myself that Mary would see the king at once and tell him all, and not allow my dear friend Brandon to lie in that terrible place another night; yet a persistent fear gnawed at my heart, and a sort of intuition, that seemed to have the very breath of certainty in its foreboding, made me doubt her.

As I could find neither Mary nor Jane, I did the next best thing: I wrote a letter to each of them, urging immediate action, and left them to be delivered by my man Thomas, who was one of those trusty souls that never fail. I did not tell the girls I was about to start for France, but intimated that I was compelled to leave London for a time, and said: "I leave the fate of this man, to whom we all owe so much, in your hands, knowing full well how tender you will be of him."

I was away from home nearly a month, and as I dared not write, and even Jane did not know where I was, I did not receive, or expect, any letters. The king had ordered secrecy, and if I have mingled with all my faults a single virtue it is that of faithfulness to my trust. So I had no news from England and sent none home.

During all that time the same old fear lived in my heart that Mary might fail to liberate Brandon. She knew of the negotiations concerning the French marriage, as we all did, although only by an indefinite sort of hearsay, and I was sure the half-founded rumors that had reached her ears had long since become certainties, and that her heart was full of trouble and fear of her violent brother. She would certainly be at her coaxing and wheedling again and on her best behavior, and I feared she might refrain from telling Henry of her trip to Grouche's, knowing how severe he was in such matters and how furious he was sure to become at the discovery. I was certain it was this fear which had prevented Mary from going directly to the king on our return to Greenwich from Scotland, and knew that her eating, bathing and dressing were but an excuse for a breathing spell before the dreaded interview.

This fear remained with me all the time I was away, but when I reasoned with myself I would smother it as well as I could with argumentative attempts at self-assurance. I would say over and over to myself that Mary could not fail, and that even if she did, there was Jane, dear, sweet, thoughtful, unselfish Jane, who would not allow her to do so. But as far as they go, our intuitions—our "feelings," as we call them—are worth all the logic in the world, and you can say what you will, but my presentiments—I speak for no one else—are well to be minded. There is another sense hidden about us that will develop as the race grows older. I speak to posterity.

In proof of this stament, I now tell you that when I returned to London I found Brandon still in the terrible dungeon; and worse still, he had been tried for murder, and had been condemned to be hanged, drawn and quartered on the second Friday following. Hanged! Drawn! Quartered! It is time we were doing away with such barbariety.

We will now go back a month for the purpose of looking up the doings of a friend of ours, his grace, the Duke of Buckingham.

One the morning of the fatal battle of Billingsgate, the barber who had treated Brandon's wounds had been called to London to dress a bruised knee for his grace, the duke. In the course of the operation, an immense deal of information oozed out of the barber, one item of which was that he had the night before dressed nine wounds, great and small, for Master Brandon, the king's friend. This established the identity of the man who had rescued the girls, a fact of which Buckingham had had his suspicions all along. So Brandon's arrest followed, as I have already related to you.

I afterward learned from various sources how this nobleman began to avenge his mishap with Brandon at Mary's ball when the latter broke his sword point. First, he went to Newgate and gave orders to the keeper, who was his tool, to allow no communication with the prisoner, and it was by his instructions that Brandon had been confined in the worst dungeon in London. Then he went down to Greenwich to take care of matters there, knowing that the king would learn of Brandon's arrest, and probably take steps for his liberation at once.

The king had just heard of the arrest when Buckingham arrived, and the latter found he was right in his surmise that his majesty would at once demand Brandon's release.

When the duke entered the king's room Henry called to him: "My Lord, you are opportunely arrived. So good a friend of the people of London can help us greatly this morning. Our friend Brandon has been arrested for the killing of two men night before last in Billingsgate ward. I am sure there is some mistake, and that the good sheriff has the wrong man, but right or wrong, we want him out and ask your good offices."

"I shall be most happy to serve your majesty, and will go to London at once to see the lord mayor."

In the afternoon the duke returned and had a private audience with the king.

"I did as your majesty requested in regard to Brandon's release," he said, "but on investigation, thought it best to consult you again before proceeding further. I fear there is no doubt that Brandon is the right man. It seems he was out with a couple of wenches concerning whom he got into trouble and stabbed two men in the back. It is a very aggravated case and the citizens are much incensed about it, owing partly to the fact that such occurrences have been so frequent of late. I thought, under the circumstances, and in view of the fact that your majesty will soon call upon the city for a loan to make up Lady Mary's dower, it would be wise not to antagonize them in this matter, but to allow Master Brandon to remain quietly in confinement until the loan is completed and then e can snap our fingers at them."

"We will snap our fingers at the scurvy burghers now and have the loan, too," returned Henry angrily. "I want Brandon liberated at once, and shall expect another report from you immediately, my lord."

Buckingham felt that his revenge had slipped through his fingers this time, but he was patient where evil was to be accomplished and could wait. Then it was that the council was called during the progress of which Mary and I had tried to obtain an audience with the king.

(To be continued in the next issue.)

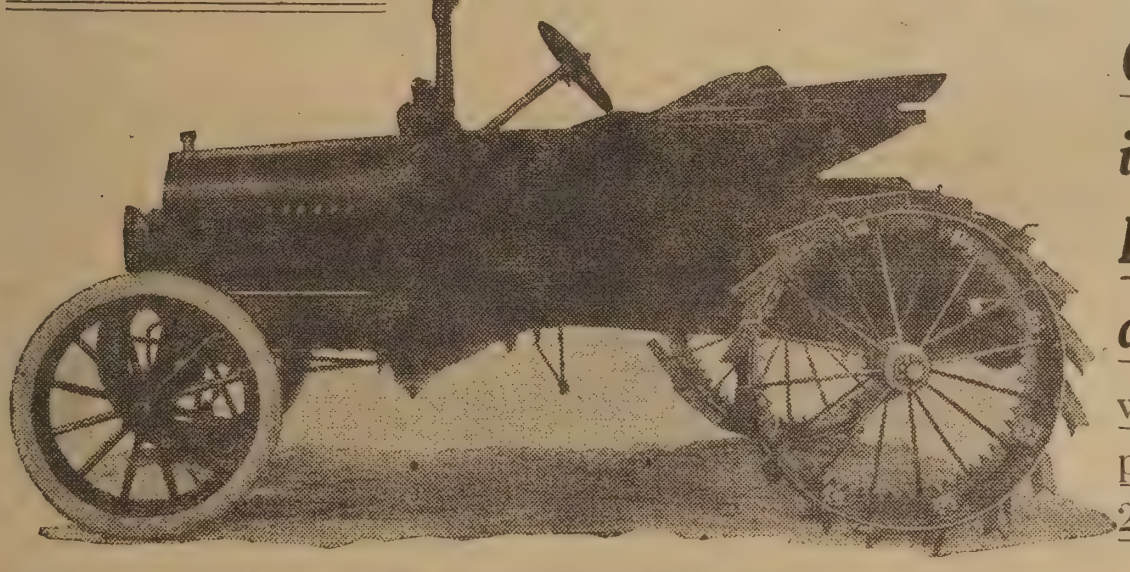
LARGER PANS

Are a Great Saving on Baking Day.

"One day, when baking cookies," says a housewife in the March Woman's Home Companion, 'I expressed a wish for larger pans. My husband said, 'Why not have some made to fit the oven?' He then measured the grate and went down to the hardware store. In a few days I had two Russia iron pans 19½ by 18½ inches, and one inch deep. As these pans hold three dozens of cookies, I can do my baking very much more quickly than I could with the old pans, which held only 12 cookies."

Egg Beater Butter.

People who like fresh butter and can not always get it may be interested in knowing that it may be made with an eggbeater in an enameled jug. A pint of cream will not only make a respectable pat of butter, but furnish butter milk for those who like it, and, all things considered, it is as economical as any other way of buttering one's bread—and more delicious than most of the usual ways.



Small Electric Lamp.

A small electric lamp, which is carried on the back of the head, has been designed for use at night by automobile drivers.

Folding Table.

A library table that unfolds and forms a full-sized double bed is a furniture novelty of recent invention.

$150 Standard Detroit Tracford $150

Converts Any Ford Car into a GUARANTEED LIGHT TRACTOR in a Couple of Hours

with a draw bar pull of 1000 pounds on high gear and 2000 pounds on low gear.

WHAT WILL THE TRACFORD DO? *Anything 3 to 4 Good Horses Can!*

Pulls two-bottom 12-inch plows, manure spreader, drags, harrows, disc drills, binders or everything horses will, only a lot easier, faster and more economically.

You Cannot Afford to Be Without One on Your Farm or Orchard

What to Read

Different Classes Necessary

By MARIELLA LADD.

The following is the fourth and last of this series of articles on reading, by Mrs. Ladd.

First of all, I like to read books about ideal children. "Polyanna," "Rebecca of Sunnyside Farm," "Mrs. Wiggs and the Cabbage Patch," for instance. They somehow hearten one up and make one laugh at odd moments, when, without them, one might be tempted to do anything but laugh!

Next, I like to read stories that the children read, because then I can talk to them about the characters in them and help them to read more thoroughly than they might do alone.

Then I like to read books that help me to save time in my household work. It is a pity that books of this kind are usually written to suit city housewives. I get over this difficulty by reading only the interesting and useful parts from my own point of view. For instance: When a friend lent me a copy of Mrs. Christine Frederick's "New Housekeeping," I thought at first that it was of no use to me at all. When I had turned down several chapters, I came to the chapter on the kitchen. Then I found some ideas that I could put into effect, and I did so, with simply wonderful results. Again, with regard to the food question, I have found great help from the "Home Economics Series," but am always on the lookout for new ideas that make for health. A friend lent me "Starving America," by Alfred McCann. Here, again, the greater part of the book had to be passed over as suitable only for city dwellers. I found, however, lots of useful information in it, and my husband was very glad to share much of it with me.

The "Personal Hygiene" book of the Home Economic series has been very useful to me in matters concerning the health of the home. Personally, I have found great help from reading Annie Payson Call's books, "Power Through Repose," "As a Matter of Course" and others.

For purely recreative reading, I like a book that gives me a hearty laugh or else enlarges one's human sympathies.

As a rule, I avoid stories with a tragic ending or mysteries of any kind. They worry me somehow, and make me wonder why the writers take so much trouble to drag their characters along such weary ways, when they could have just as easily and more pleasantly traveled direct. The great exception to this rule is "A Story of an African Farm," by Olive Schriener. This book always fascinates me by its sadness and by its author's wonderful power of expression. It is a sort of introduction to the great questions of the day that cluster around woman's emancipation.

Since the enfranchisement of women in the west, I have tried to read the newspapers and some books about the history of the woman's movement. I have not made much progress in this direction. It startles one to read that the number of women who work for a living in the states has more than doubled since the beginning of the century. It also makes one feel glad that one's lot is on the farm, where one can still control one's own working conditions to a great extent.

I keep a book list, and buy or borrow as I can. I also keep a notebook, into which I write sentences from the books I read which appear worth remembering in a special sense. We have no library near us at present. The Washington Farmer library will be a most precious acquisition when we can secure it.

No Penny.

The habit of calling the one-cent piece of our American coinage a "penny" is utterly without foundation or excuse. We have no penny in our coinage. At one time half-cent pieces were coined, but now the unit is one cent, the hundredth part of a dollar.

Frozen Potatoes

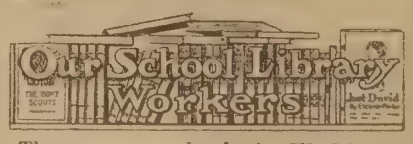
As Palatable as if Never Nipped

What is the quotation or what are the words which have helped you in the journey of life?

Is it a phrase from some famous author or was it the words from some neighborly soul who helped you over a hard place and left you the invaluable legacy of a life motto?

What are your favorite motto, your favorite quotation, your favorite words?

Send them to the editor of The Farmer and let those words help another which have helped you.



To the Editor of The Farmer: Here is a method of cooking potatoes that have been frozen, which I heard of last winter from a lady from Alaska:

Place a kettle of boiling water on the stove and when water is boiling hard, throw in the potatoes without any previous treatment. They must not be washed or touched with cold water. After they have boiled for a few minutes, water may be drained off and more (boiling) water put on, and when they are done you will find that the "spuds in jackets" are just as palatable as if never nipped by frost.

MRS. J. A. PLASTER.

Ferndale, Wash.

Miss Leila W. Hunt, assistant professor of foods and cookery of the state college home economics department, states she has also tried the above method for both potatoes and cabbage, and secured the same results noted by Mrs. Plaster. Just why this is, she says, can not be stated without further study of the problems involved, but it is likely that the deterioration in frozen potatoes takes place when they "thaw," rather than when they freeze. Applying the hot water before the potatoes or cabbage have had a chance to thaw out in the usual way apparently saves the potatoes from the damage of thawing out gradually.

Three new schools in Washington registered for library contests this week: Thornton school, Whitman county, H. M. Redwin, teacher; South Basin school, Stevens county, John N. Hoffer, teacher; Deer Lake school, Stevens county, Eva J. Rigg, teacher. All these are live schools and will be heard of shortly among the library winners.

"Enclosed find check" is the opening phrase of a good, big lot of letters received from teachers in various parts of Washington, and our bookman has been the busiest man about the place for several days.

Miss Georgia Mooney, teacher of Wolf Lodge school, Kootenai county, Idaho, tells us that her Blue and Red teams have been hard at work and have already won a nice lot of books. Also there comes a letter accompanied by subscriptions from the boys and girls of East Greenacres school of Kootenai county, Idaho, through Teacher Charles Milliron. Library contest interest is spreading in Idaho and we shall not be surprised if some of our workers who are after that $5 gold prize for the best individual record may find some real competition from the girls and boys of Idaho.

Next week we shall tell you about Loyal C. R. Snyder of White Swan school, Yakima county, who is a great hustler and who begins to look like a leader for that prize to be awarded May 1, which we told you about in last week's papers.

HONOR ROLL.

Albert Bunce, Marjorie, Ryan, Alice Margaret Sutton, Marie Coday, Audrey Brownlow, Mary Weaver, Lawrence Lynch, Opal Davis, Louise Bachmir, Mildred Marks, Parker Bottom school. Herbert Mitchell, John Hartmeyer, Lynn Henyan, Glenora school. Warren McNeeley, East Greenacres school. Laura Larsen, Calkum school. Dorothy Rauch, Chewelah school. Bessie Webb, Ford school. Loyal C. R. Snyder, White Swan school.

Fruit Gelatins

Different Ways to Prepare

By RUTH GIPSON PLOWHEAD.

If your family happens to be fond of gelatin, you may serve it with the assurance that one great food expert at least considers it one of the very best desserts. Especially where there are children, it may be used often, and varied so as to seem different.

A fruit gelatin is like the famous French "stock pot," for almost every kind of fruit or fruit juices may be added to it, and improve the flavor—partly used glasses of jelly, or those which have turned to grape sugar may be melted and used as the flavoring base.

Where one wants a gelatin heavy with fruit, chopped apples make a delicious and inexpensive foundation, to which may be added fruits to taste.

Here is a plain, inexpensive recipe, which is always enjoyed at our home. The recipe makes about three quarts—enough for several meals for a small family. It may be varied by serving with whipped cream, chopped nuts, sugar and cream, or plain fruit juices.

Recipes.

Make gelatin according to directions on package from:

Two packages of gelatin, one and a half quarts of water, half quart of raspberry juice, one and a half cups of sugar, juice of two lemons.

When starting to thicken, add six medium-size chopped apples, three diced bananas, the raspberries from which the juice has been poured, and several drops each of lemon and vanilla.

A more expensive but very delicious dessert is made by adding to a quart of lemon gelatin a package of marshmallows cut in quarters, one cup of diced pineapple, one cup of nut meats and three bananas. Large, sweet cherries, canned, are also delicious pitted, and the juice gives a fine flavor.

Scissors

Are Most Useful in the Kitchen

"Have you a pair of sharp steel scissors in your kitchen?" asks a writer in Farm and Fireside. "If not, think of the things they will help you do and you will procure a pair at once.

"When cutting meat, celery, marshmallows, pimento for salads; or carrots, cabbage, onions, parsley for soups, nothing could be more useful than a pair of scissors. This is also true when cutting citron, lemon or orange peel or taffy candy.

"Rhubarb sauce will have a better color and flavor if the stalks are cut with scissors instead of a knife, as the scissors do not remove the skin.

"A fowl is more easily disjointed with scissors than a knife. The work done more quickly, and there is no splintering of the bones.

"These are only a few of the uses for scissors in the kitchen, besides the ordinary use of cutting strings and shelf papers. However, to be useful, the scissors must be sharp, and to be sharp they require care. The scissors should be washed and dried thoroughly after using, and hung up so they will be open."

For the Meat Eater.

Irish potatoes and most other vegetables and fruits tend to make the body tissues and fluids alkaline, so correcting the tendency of meat, eggs, fish and similar foods to create acid conditions. Since the body performs its work best when it is neutral, or slightly alkaline, this function of fruits and vegetables is important, especially to the hearty meat eater.

Behold, a King shall reign in righteousness and princes shall rule in judgment.

And a man shall be as a hiding place from the wind, and a cover from the tempest; as rivers of water in a dry place, as the shadow of a great rock in a weary land.

And the eyes of them that see shall not be dim, and the ears of them that hear shall hearken.

The heart also of the rash shall understand knowledge, and the tongue of the stammerers shall be ready to speak plainly.

Pork

Various Ways to Prepare the Meat

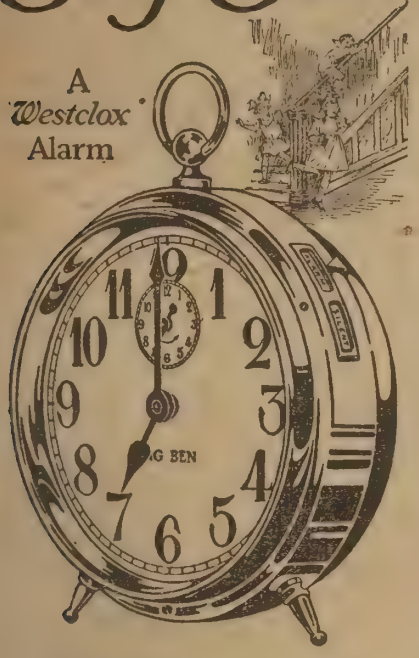
During the next few months a great deal of butchering will be done on the farm, and the housewife will be tempted to serve meat at all meals in order to "save it," says Amy Kelley of the department of home economics at the University of Idaho.

If meat is preserved by freezing only, the loss is often great if a thaw comes, but if the meat is preserved by canning in sterilized jars, and by curing, it may be kept indefinitely. The ribs and loin of pork and sausage may be canned by sterilization. Many women have asked why it is not as well to put sausage down in crocks covered with lard as to can it. Pork contains a large amount of fat, and, because of this, many people find it difficult to digest. If more fat is added, the indigestibility is increased. Bacons and hams are preserved by curing. After they are put down in brine, they should be smoked. This process should especially be applied to the bacons. Bacon is the one form of pork that school children should eat frequently, as it is easily digested. The smoking helps to make it more digestible, and, hence, it should be carried beyond the pickling stage.

Many people like baked hams, but feel that they can not afford to make a whole one. In such a case, a slice two or three inches thick may be baked and good results obtained. Sausage and bacon are good if baked or "oven broiled." They are prepared the same as for frying and are placed on a rack or pan and cooked in a hot oven.

Pork Loaf.

Half pound of round steak and one one pound of sausage, or one pound of round steak and half pound of sausage, one egg, three slices of bread moistened with water, one onion, quarter pound salt pork. Pepper and salt.



Chop the meat. Chop the onion and cook (but do not brown) it in the fat fried out of a small portion of the pork. Add the bread and cook a few minutes. When this is cool, mix all the ingredients and form into a long, round roll. The surface can easily be made smooth if the hand is wet with cold water. Laying the remaining pork cut in thin slices on top, and bake 40 minutes in a hot oven. The sausage may be omitted of desired, and other seasoning used.

Baked Sliced Ham.

Place in a baking pan a slice of ham cut one inch thick. If the ham is not sugar-cured, it should be soaked in cold water an hour. Sprinkle on top a little powdered mustard, brown sugar, and two tablespoons of vinegar. Add a little water and bake about 40 minutes, basting often. Boiling water may be added to the gravy, but do not thicken.

Big Ben

A *Westclox* Alarm

SEVEN A. M.—BIG BEN at his best—opening little folks' eyes—there's a race to hush him—a pillow battle—merry laughter—and mother to tidy the kiddies for school.

For the rising generation there's no better get-up. Big Ben's little men bubble health and cheer, and they feel as big as Daddy with a clock all their own.

He gets 'em to school long before the last gong and this habit lingers when the children grow up.

You'll like Big Ben face to face. He's seven inches tall, spunky, neighborly—downright good.

At your jeweler's, $2.50 in the United States, $3.50 in Canada. Sent prepaid on receipt of price if your jeweler doesn't stock him.

Swiss Cheese

General Directions for Making

To the Editor: I would like to know how to prepare Swiss cheese—not Dutch cheese. MRS. F. S.
Lake Bay, Wash.

To prepare the "rennet" for fourth stomach of the calf for the making of rennet for cheese-making, carefully remove the fourth stomach when the calf is slaughtered, empty it by turning it inside out, and carefully pick or brush off all particles of foreign matter; do not wash with water, says James N. Price, specialist in dairy division at the Washington State college. Then sprinkle with salt and dry thoroughly.

Swiss Cheese.

To give detailed directions for the making of Swiss cheese would require more space than is available for this answer. General directions are stated as follows:

Warm the milk to 86 degrees Fahrenheit, and add enough rennet to coagulate the milk in 20 to 30 minutes. When the curd is in the proper condition (that is, when it will make a clean break over the finger when the latter is inserted, the whey appearing clear in the break) it is ready to cut.

The cutting may be done with a wire bread-toaster. Do this carefully so that the pieces may be uniform in size and the curd not broken with fine particles. The curd knives used in cheddar cheese-making may be used for this purpose.

The temperature is now raised gradually to 130 degrees or 135 degrees Fahrenheit. Stir the curd gently, but constantly, to prevent matting, and to insure even cooking. Hold the temperature at 130 to 135, stirring constantly until the curd is firm enough to squeak between the teeth; then allow the curd to settle.

The curd is then removed from the whey to a cloth and immediately put to press in circular or brick molds. The pressure is light at first, being gradually increased for the first half hour; then full pressure is put on. The cheese should be turned several times a day, readjusting the cloth each time to insure a smooth cheese. It is best to put on dry cloths several times during the day. After 24 hours, remove the cheese from the press and put in brine or salt it dry.

In the brine salting, make a brine strong enough to float an egg. Place the cheese in the brine three or four days, turning them over occasionally to insure even salting.

In dry salting, the cheese are placed on the curing shelves and dry salt is spread over the surface of the cheese. The salt, being dissolved by the moisture in the cheese, penetrates to the interior. No more salt should be applied than will be dissolved over night. Turn and apply salt each day for three to five days. The brine salting is said to give the best results.

George Washington.

It matters very little what immediate spot may have been the birthplace of such a man as Washington. No people can claim, no country can appropriate him. The boon of Providence to the human race, his fame is eternity and his dwelling place is creation.—Charles Philips.

Washington did the two greatest things which, in politics, men can have the privilege of attempting, he maintained, by peace, that independence of his country which he had acquired by war. He founded a free government in the name of the principles of order, and by reestablishing their sway.—Guizot.

How sleep the brave who sank to rest
By all their country's wishes blest!
When spring, with dewy fingers cold,
Returns to deck their hallowed mold,
She there shall dress a sweeter sod
Than Fancy's feet have ever trod
—collins.

Kitchen Lore.

Stoneware and earthenware absorb fats and therefore retain their odors, and for this reason all fats should be kept in ti nor glass, which do not absorb them.

Hot water sets grease and grease spots should be washed with cold water, which hardens the grease and makes it easy to remove. Then the soiled spot can be washed with warm water.

When a cake recipe calls for melted butter the butter should be just melted, not cooked. If it is cooked the cake will be tough.—New York Evening Sun.

"Young man, the best tonic for you is the right kind of food. I suggest for Breakfast

Ghirardelli's Ground Chocolate

It's easily assimilated—it's extraordinarily nutritious—and it is supremely delicious."

It comes PROTECTED—as all chocolate should—in ½-lb., 1-lb. and 3-lb. hermetically sealed cans.

50,000 FARM HOMES

Are reached every week by The Washington Farmer, The Oregon Farmer and the Idaho Farmer, composing the Pacific Northwest Farm Trio. Among the thousands who read our papers every week are many who are in the market to buy live stock, poultry, hatching eggs and, in fact, anything and everything needed on the farm.

Use our papers to advertise whatever you have to sell. We help you write your ads.

Pacific Northwest Farm Trio 36 Review Building Spokane, Wash.

WE WILL PAY SALARY

to farmer with rig or saddle horse. The publisher of The Washington Farmer wants men to secure and renew subscriptions to this paper in various farming districts throughout the state. We are paying good salaries to those who can do the work and are offering these positions only to farm owners or renters.

We want to hear only from those who will be willing to give our proposition a fair trial for at least a month and who will put in good, hard licks for good pay. For men with these qualifications the opportunity is a splendid one. This work isn't easy; but you can do it and earn a good salary. We give you full instructions and the right kind of help.

You will be able to earn a salary of from $25 to $150 per month or even more, dependent upon the amount of time and effort you can give to the work. Salary check will be sent promptly at the end of each month.

We will not consider an applicant who does not live on a farm and who does not have a rig, saddle horse or automobile. In writing us tell whether married or single, whether you own or rent your place and give the names of two merchants with whom you trade. There isn't any red tape about our proposition, but we must know something about those workers we put on our payroll to receive a monthly salary check.

Give full details in your first letter to The Washington Farmer, Review building, Spokane, Wash.—Adv.

Sidelights

The Only Obstacle.

Billy—I would lay the world at your feet, but for one thing.

Milly—And that is?

Billy—Some other people are using it.—Judge.

Could Qualify.

Po—Your roommate says that he is a practical socialist.

Dunk—He must be. He wears my shirts, smokes my tobacco and writes to my girls.—Pitt Panther.

Two Spellings.

The reporter was interviewing a legislator at the statehouse. "This," said the solon, "is the age of steel, and——" "Pardon me, please," interrupted the reporter, "but in behalf of accuracy, would you kindly spell that word?"

Mistaken Identity.

Merchant—What we want is a nice, quiet boy who doesn't use bad language, smoke cigarettes, whistle around the office or get into mischief.

Applicant (disgustedly)—You don't want no boy; you want a girl.—Boston Transcript.

Shellfish Extraordinary.

The guest glanced up and down the bill-of-fare without enthusiasm.

"Oh, well," he decided finally, "you may bring me a dozen fried oysters."

The colored waiter became all apologies.

"Ah's verry sorry, sah, but we's out ob all shellfish, 'ceptin' aigs."—Ohio Farmer.

Too Many Saws.

"Now, John, did you ever see a saw?"

"Yes, sir, I saw a saw."

"What saw was it you saw, John?"

"It was a see-saw, sir."

'A sea saucer! Why, John, what do you mean?"

"I mean seesaw, sir."

"And when did you see the sea?"

"I didn't see the sea; I saw the saw."

"But how did you see the saucer?"

"Why, sir, I never saw the saucer. I saw the seesaw, sir."

"Well, my boy, if that's the way you see saw, the less saws you see the better. You may take your seat."—Ohio Farmer.

Timely Return.

The Royal Palm, a train running out of Palm Beach, Fla., was boarded by robbers, who ordered the passengers to line up on each side of the aisle of the coach with their hands held high above their heads. The robbers then passed down the aisles, taking the money, watches, jewelry, etc., from the passengers. There were two Jews lined up side by side, and when it came their turn to be searched, Ikey looked up in the robber's face and said: "Mister Robber, vill you do me von favor?"

"Yes," said the robber, "but be quick. What is it?"

"May I put my hand in my pocket?" asked Ikey.

"Yes," said the robber, "but no monkey-business; I've got my gun on you."

Ikey thereupon put his hand in his pocket and pulled out a roll of bills, and, taking off two 20s and a 10, turned to Jackey, who stood trembling at his side, with the remark: "Jakey, here iss dot $50 I borrowed from you yesterday."—Ohio Farmer.

BE SURE TO GIVE NUMBER AND SIZE.

IT TAKES 400,000 cars to carry American Fertilizers to Farmers and Planters every season. Forty per cent. of this is useless Filler requiring 160,000 cars! Insist on having less Filler and all high grades with Available Nitrogen, namely:

Nitrate of Soda

and thus cut freight bills.

Crop production from such Fertilizers means greater outbound tonnage for roads and bigger purchasing power for Farmers. Railroads and everybody would benefit.

Larger food crops thus grown would give increased prosperity to all. It is up to you, Mr. Farmer.

Dealers in high grade sea foods, direct to consumers.

DOLLIE MAKES HER OWN SCHOOL DRESSES ALONE

Dear Aunt Nellie: This is the first time I have written to the Corner. My father takes the Washington Farmer and I enjoy reading the cousins' letters and many other things. I have one sister and six brothers. My sister is older than I and my brothers are younger. Mr. sister's name is Jessie and my brothers' names are Johnny, Frankie, Daryll, Arnin, Ernest and Miles. Daryll has been an invalid since he was 1 years old and he will be 8 years old next July. There are four of us going to school, we have one mile and a half to go. We have to pass the places where our grandmothers live. Sometimes we stop at Grandma Wright's house and sometimes at Grandma Moss's to get warm. We like our teacher. His name is Mr. Tomblin. We have missed our school more than half the time on account of sickness. First we all had the measles and after that we have been sick off and on all the time. We have four horses, two cows and one calf. My brother has three rabbits. We have 50 chickens. In the summer time we help plant and weed the garden and pick berries. In the evening we go out and get the cows home and as papa is busy most of the time we girls and my eldest brother will do the milking. I am 12 years old and I have started to cut out and sew my own school dresses and also to darn and mend.—Dollie Moss, Box 36, Davenport, Wash.

CORA WORKED IN GARDEN ALL OF LAST SUMMER

Dear Aunt Nellie: I am 13 years old and my birthday is November 24. I live on a 20-acre farm. We have three cows, two heifers, two horses, two rabbits, a dog and two cats. The cows' names are Cherry, Jap, and Blue. The heifers' names are Judy and Lucy. The horses' names are Dan and Pete. We call the dog Tige and our cats Pussy and Tommy. I have a sister and a brother. My sister's name is Ida and my brother's name is Aaron. Ida is 10 years old and Aaron is 14 years old. I can tat, crochet, embroider and knit. I have to walk half a mile to school every day. I just missed two days this term. I haven't missed a word in spelling this term. Our teacher's name is Mr. Gwin and the primary teacher's name is Mrs. Gwin. I worked in the garden and hayfield last summer. We have lots of hay in the barn.—Cora Kanouse, Elma, Wash.

PAPA HAD MILDRED'S RING MADE BIG ENOUGH FOR HER

Dear Aunt Nellie: This is the second time I have written to the Corner. I had a little ring and it was too small and so this evening papa gave me a surprise of my little ring. He had it made larger. I am wearing it right now. This time I will talk about the school that I go to. It has only two rooms. There are four grades in each room. In my room there are first, second, third and fourth grades. In the other room there are the fifth, sixth, seventh and eighth grades. There are about 40 or 41 pupils in my room. I like to go to school. I am 7 years old and in the third grade. I am going to read with the fourth grade. My birthday is July 11. I have to go about three miles to school. Papa takes me every morning and gets me every night.—Mildred Elizabeth Marks, R. F. D. 1, Wapato, Wash.

ELLA GOES AFTER THE THREE COWS ON HER PONY

Dear Aunt Nellie: My father takes the Washington Farmer and I have been reading the Children's Corner and enjoy reading them very much. I am 13 years of age and am in the fifth grade. My birthday is the 11th of August. I live 3 1-4 miles from school. My teacher's name is Mr. Stevens. I live on a 320-acre farm. We have 30 horses and three cows. I have one sister and three brothers and I also have two half-brothers and one half-sister. I have pleasant times in summer. I go after the cows on my pony. His name is George. This is the first time I have written to the Corner. I have been wanting to write, but did not know where to write.—Ella Jane Love, R. F. D. 1, Box 26, Beebe, Wash.

HAVE FUN SLIDING ON THEIR SLED, FIREFLY

Dear Aunt Nellie: I think the Children's Corner is nice, I like to read the letters. We live on a 320-acre farm. Our schoolhouse is two miles from where we live. Our school is in a little town called Paha. In winter we drive one horse, but when there is no snow on the ground we walk. I am in the sixth grade. There are 41 children in our school. There are two rooms and two teachers. We have good times sleighriding this winter. There is a big hill at the side of our house. Our sleigh is called Firefly.—Edna Lehman, Paha, Wash.

SLED GOES DOWN HILL JUST LIKE LIGHTNING

Dear Aunt Nellie: This is the first time I have written to the Children's Coroner and would like to join. I live on a farm about one and a half miles from Johnson. I go to school and am in the eighth grade. My brother teaches me and so it makes it easier. It is only about three or four days until we have our mid-year exam. At school we have a basket ball team (a girls' basket ball team). We play every other day. I and another girl friend of mine get out there and play all the time. The snow is so hard now that it is very good coasting. I go out on some big hill and my sled just goes like lightning. I am 13 years old and my birthday is September 11.—Myrtle Sodorff, Box 62, Johnson, Wash.

MAYBELL FIRTH HAS TWO CUTE GOLDFISH FOR PETS

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I live on a 40-acre ranch. We have three cows. Their names are Spot, Bill and Blossom. I have one sister. Her name is Della. We have two dogs. Their names are Jack and Bollster. I am 10 years old. My birthday is in May. I have some pets. They are a rabbit and a cat. We have about 25 chickens. I have about a half mile to go to school. I am in the fifth grade. We have six in our class. I have eight studies. My teacher's name is Miss Parker. I have two goldfish. My sister is 13 years old. She is in the seventh grade.—Maybell Firth, Box 19, Friday Harbor, Wash.

INZA PICKED 12 CRATES OF BERRIES IN ONE DAY

Dear Aunt Nellie: This is the first time I have written to the Corner. I like to read the letters very much. I am 11 years old and my birthday is July 28. I am going to tell about our strawberry patch. It is quite a large one. I have to pick strawberries every summer and it is hot sometimes. I can pick quite a few crates a day. My brother, who is 13 years old, can not pick as many as I can. The most I ever picked in one day was 12 crates. I have two sisters and one brother that pick strawberries, too.—Inza Staiff, Freeland, Wash.

KNOWS THAT HER BEST FRIEND IS HER MOTHER

Dear Aunt Nellie: This is my third letter to the Corner. My last two letters were in print, so I thought I would try again. My subject this time is "My Best Friend." My best friend is my mother. She makes all my clothes. She gets me ready for school in the morning and does so many more things I can't mention at present and I think I should try and help her all I can. We had a very nice Christmas program and I spoke a piece. The title was the "Stocking's Christmas." I have not missed a day in school or I haven't been late for school once this term and I hope I never will miss any. I like all my studies except geography and arithmetic. I think school is real nice.—Iona Tuce, Stanwood, Wash.

GLADYS IS GLAD WHEN GRANDMA VISITS THEM

Dear Aunt Nellie: I live on a 40-acre farm. We have 13 cows, three calves and two horses. I am 8 years of age and go to school in the country. We have a very nice schoolhouse about a mile from our home. I am in the third grade. My teacher's name is Miss Churches and we all like her fine. My subject is "My Best Friend." She is my grandma. She makes my doll clothes and booties for the doll. She reads Sunday school stories to us children. Her home is in the city, but she comes to visit us every summer. We are all very glad when she comes, too. I have one sister, Claire, and one brother, Austin.—Gladys Carlson, Everett, Wash.

HELPS HER MOTHER SWEEP AND WASH THE DISHES

Dear Aunt Nellie: I have been reading the Children's Corner and enjoy it very much. I am 12 years old and I will be 13 the first of March. I am in the fifth grade. My teacher's name is Miss Sayer and I like her very much. The schoolhouse has two rooms. I drive to school and it is two miles and a half. I have dark hair and brown eyes. We have nine horses and over a hundred chickens. I have a pet rooster and two dogs and a yellow cat. The dogs' names are Bob and Curley. I live on a 60-acre farm. I can tat and crochet and help mamma sweep and wash the dishes.—Virginia Brockmiller, Wheeler, Wash.

Goosey, Goosey, Gander

TRAINED THE DOGS TO SIT UP, ROLL OVER AND SPEAK

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am in the sixth grade. I am 12 years old. My birthday was January 31. My teacher's name is Mr. Guitteau. There are 24 pupils in our room, 31 in Miss Kidd's and 27 in Miss MacDonald's room. Altogether there are 82 children. We have a small farm. My brother has three rabbits and he takes care of 59 chickens. We have two dogs named Jack and Patty. They can speak, roll over and sit up. I have two brothers and two sisters. Their names are Willie, Roy, Ruby, Reatha and Ruth. We all go to school except Ruby. She stays home with mama and her five dolls.—Ruth Marie Eaton, Box 74, Kent, Wash.

LIKES TO HAVE SISTER READ THE LETTERS TO HIM

Dear Aunt Nellie: I like to have my sister read the letters to me. I am 7 years old and in the second grade. We live at Bruce station. I have two sisters, Helen and Lucille. I have two horses, one is named Pearl and the other Buster. We have two pet cats. Their names are Gray and Tommy. We have one cow named Daisy. We have two dogs, Frisk and Don. I have a sled and like to coast. We have a nice coasting place. My mother teaches school.—Charles Lee, Othello, Wash.

HONOR LOVETTE GOES TO SCHOOL AT MANSFIELD

Dear Aunt Nellie: I have read the Children's Corner and like it very much. I am 10 years old and in the fourth grade. I like to go to school. I go to school at Mansfield. My teacher's name is Miss Carver. I like her fine. I have three brothers and no sister. My brother's names are Marion, Ronald and Gerard. We live five miles out of town. I would rather live in town than on the farm. We have three pigs, six horses, one cow and a heifer and calf.—Honor Bonita Lovette, Mansfield, Wash.

THEIR DOG WAS RUN OVER BY AN AUTOMOBILE

Dear Aunt Nellie: I am going to write to the Corner. This is the first time I have written. We have three cats and they have no names. We have eight cows and six calves and one fat pig. We live on a 40-acre farm. We also have one horse named Jim and our dog was run over by an automobile. I go to school and am in the fourth grade. I am 9 years old. —Agnes Helen Halle, East Stanwood, Wash.

WE'RE GLAD TO HEAR FROM YOU, GRACE; WRITE AGAIN.

Dear Aunt Nellie: I am 10 years old. I am in the fifth grade. My birthday is March 15. I have one sister and one brother. We have four beautiful horses, one of them we can ride. We have two dogs, Dandy and Bob. We have six cows and two calves. We have a lot of pigs. I can crochet, tat and embroider. I have to walk a mile and a half to school. I go to the Bell school. My teacher's name is Miss Ruth E. Kienholz. I like her very much. Grace Deharte, Latah, Wash.

LOVES TO GO TO SCHOOL: NEVER MISSES ONE DAY

Dear Aunt Nellie: I have been very interested for a long time in the Children's Corner and I decided I would write and see if I would see my letter in the list. I am in the eleventh grade and am 15 years old. I have 13 pet chickens and a pet cat. I love to go to school and go every day. My teacher's name is Mrs. Shay. I like her very much.—Margaret Stephens, Willapa, Wash.

EMMA HAS ALWAYS GONE TO MUD CREEK SCHOOL

Dear Aunt Nellie: I am 11 years old. My birthday is on February 24. I go to school and am in the sixth grade. The name of our school is Mud Creek. I have all the time gone to it. My school teacher's name is Lela McCoy. She has taught us for two years. We like her fine. I have four sisters and four brothers. My father owns a section. We live on it. My school chum's name is Josephine Fouste.—Emma Short, Lowden, Wash.

TELL US MORE ABOUT YOUR SCHOOL NEXT TIME

Dear Aunt Nellie: I am 10 years old and am in the fourth grade. I like to go to school. My teacher's name is Miss Meek. I like her very much. We have eight small pigs and one big hog, seven horses, three calves and two cows. I have two sisters and two brothers. Their names are Nellie, Georgia, Harry and Ollie.—Pearl Rubie, Johnson, Wash.

Grain and Produce Markets

Live Stock Quotations.

At Chicago.

Seattle Wheat.

SEATTLE, Feb. 24.—Farmers are growing more indifferent to the offers in the country from either Puget sound millers or buyers from the east, who appear loth to quit the field. Bids of $1.45@1.50 for bluestem and Turkey red and 5c under for fife and fortyfold were insufficient to jar them loose from their holdings.

Chicago Grain.

CHICAGO, Feb. 23.—Big purchases for Europe led to a decided advance in wheat values today. The outcome was a strong close, 1 1-2c to 2 1-2c net higher, with May at $1.78 1-2 to $1.78 3-4c and July at $1.51 5-8c to $1.51 3-4. Other commodities, too, scored gains—corn 3-8@1-2c to 5-8c, oats 1-4c, and provisions 20c to 30c.

Cash Quotations.

CHICAGO, Feb. 24.—Wheat No. 2 red, $1.80 3-4; No. 3 red, No. 3 and No. 3 hard nominal.

Corn—No. 2 yellow, $1.01 1-2; No. 3 yellow 99c@$1 3-4; No. 4 yellow 96c@99.

Oats—No. 3 white 57 1-4c@58 1-2; standard 58c@59 1-2.

Rye—No. 2 nominal.

Barley—$1@1.28.

Timothy—$3.50@5.50. Clover—$12@18.

Pork—$30.08; lard $17.65; ribs $16@16.50.

Pacific Northwest Grain.

PORTLAND, Ore., Feb. 24.—Wheat firm. No trading. Spot bids 2c higher. Bluestem, $1.60; fortyfold, $1.56; club, $1.54; red Russian, $1.52.

Barley unchanged.

SEATTLE, Feb. 24.—Wheat—Bluestem, $1.61; Turkey red, $1.63; fortyfold, $1.57; club, $1.57; red Russian, $1.54.

Barley, $38.50 per ton.

WILBUR, Wash., Feb. 24.—Bluestem, $1.45; club, $1.40; oats, $37; barley, $37. Timothy hay, $21; wheat hay, $21; alfalfa, $20.

Portland Market.

PORTLAND, Ore., Feb. 24.—The onion market has reached the $10 level, that price now being paid to growers. Only a few cars remain unsold. Dealers think the maximum price of the season has been reached, as consumption in the Coast market is very small, and Japanese and Australian onions are about due.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers:

Oats—No 1, $36@37.50 per ton.

Corn—Whole, $47; cracked, $48 per ton.

Butter——City creamery, prints, 42@43c per pound; cubes, 39c.

Wool.

BOSTON, Mass., Feb. 23.—The Commercial Bulletin will say tomorrow:

"Activity has been more pronounced again this week in the wool market, not only on manufacturers' account, but also among dealers in a speculative way. Practically everything has been in demand and scoured sorts have been especially active with prices a cent or two higher in the grease than a week ago.

Yakima Wool at 40 Cents.

The 1917 wool market at North Yakima opened Saturday with sales by Dan Goodman and Coffin Bros., with a top price of 40 cents a pound, which made a new high record price in the wool business in this country and a range of 10 cents a pound higher than the price which prevailed last year. Mr. Goodman sold approximately 20,000 pounds. The Coffin clip was only a small clip of Lincoln ewe wool in very fine condition.

Humble Spud

Takes Seat Among the Mighty

(Continued from page one.)

For the 10 years, 1877-1886, the average price was 51.4 cents per bushel, or 86 cents a hundred, the lowest price being in 1884, a little over 39 1-2 cents per bushel, or 66 cents a hundred, with the total production for that year 190,642,000 bushels; and the highest price in 1881, 91 cents per bushel, or $1.52 a hundred, with the total production for that year 109,145,000 bushels.

For the 10 years, 1887-1896, the average price was 48.9 cents per bushel, or 82 cents a hundred, the lowest price being a little over 26 1-2 cents per bushel, in 1895, or 44 cents a hundred, with the total production for that year 297,237,000 bushels; the highest price being almost 76 cents per bushel, in 1890, or $1.27 a hundred, with the total production for that year 148,290,000 bushels.

For the 10 years, 1897-1906, the average price was 52.1 cents per bushel, or 87 cents a hundred, the lowest price being 39 cents per bushel, in 1899, or 65 cents a hundred, with the total production for that year 228,785,000 bushels; the highest price nearly 62 cents per bushel, in 1905, or $1.03 a hundred, with the total production for that year 260,741,000 bushels.

For the 10 years, 1907-1916, the average price was 69.7 cents per bushel, or $1.16 a hundred, the lowest price being nearly 49 cents per bushel, in 1914, or 82 cents a hundred, with the total production for that year 409,921,000 bushels; the highest price $1.46 per bushel, in 1916, or $2.43 a hundred, with the total production for that year 285,437,000 bushels.

Retail at $4.

One of the Spokane grocers on Saturday announced the price of potatoes at $4 per sack, any number of sacks to a customer; another announced the price on Saturday at $3.50, but not more than one sack will be sold to a customer. Since October 16, when the retail price was $1.40 a sack, potatoes have made 13 advances in price. Here they are: October 18, 1.50; October 20, $1.65; October 25, $1.75; October 27, $1.85; November 4, $1.90; January 3, $2; January 15, $2.25; January 22, $2.50; February 7, $2.75; February 15, $3; February 20, $3.25; February 22, $3.50; February 24, $4.

Ten Cents for Baked Potato.

Potatoes were listed at $75 for Yakimas and $70 for locals on the Tacoma market Saturday. Tacoma restaurants have taken potatoes from the free list, and, beginning tomorrow, baked potatoes will be sold at 10 cents and German fries at a nickel.

At Seattle.

Seattle advices of Saturday estimate that there are between 125 and 150 carloads of potatoes in storage there and less than 100 carloads in the entire Yakima valley. California and Chicago speculators, who were never before on this market, are holding approximately 100 carloads of Puget sound potatoes. It is not believed there are more than 20 cars of Yakima Gems on this side of the mountains. Bid prices for Gems run from $70 to $75 a ton, with selling prices at $80 to $85, and a majority of the regular jobbing houses are buying short, content to have enough to fill current orders without attempting to anticipate the future. Puget sound potatoes are selling at $75, with quotations to jobbers of $60 to $65. Brokers who endeavored today to buy some of these potatoes in storage met with flat refusal by holders to quote.

Congress will adjourn March 4 without passing any embargo laws against the exportation of farm and other food products. Unwise agitation for that un-American plan to cheapen agricultural products for the deceptive benefit of city dwellers practically subsided several weeks ago. Open discussion of the issue in congress and the press convinced the president, members of congress and thoughtful city people that an embargo would injure the farmer and in the long run be detrimental to wage-earners in manufacturing and commercial centers.

The truth is that, aside from potatoes, prices of farm produce generally have not advanced in greater ratio than the prices the farmer must pay for clothing, boots and shoes, grain sacks, implements and machinery, coal and many other necessaries. Flour, cornmeal, meats, dairy products, eggs and poultry, generally speaking, are not unreasonably high. Dairy products, in fact, have been selling too low, if the producer is to have a fair return for his labor and investment.

Potatoes are excessively high just now. But so far as potatoes are concerned, we have already a practical embargo. We are importing, not exporting, potatoes, which are on the free list, and New York is bringing them in from Bermuda and Canada.

But that is a condition that will soon adjust itself under the natural working law of supply and demand. As we are importing, not exporting, potatoes, an embargo could not relieve the shortage.

An embargo law, in fact, would have the converse effect from that expected by its advocates, since its only effect would be to discourage the planting of potatoes for the next harvest.

Will sell any or all at a bargain on terms to suit purchaser or will exchange part of holdings for Minneapolis and Chicago property. For particulars write G. Seaton, Apt. D, W1311 6th ave., Spokane, Wash.

NEWS FOR BREEDERS

The north side Twin Falls tract in southern Idaho has wintered 280,000 sheep the last winter. Of this number, 17,000 are owned on the tract. There has been for the last few years a steady increase in both the number wintered and the number owned. Farmers have received higher prices for their hay this winter than ever before. There has been no disease or difficulty of any kind and the sheep have come through the winter in good shape. On the Overlook farm the purebred Hampshire ewes have been lambed nearly 150 per cent. Most of the lambs are yet to be dropped on the tract. While sheep have increased, the number of hogs has decreased, until where there were about 15,000 on the tract three years ago, there are now only about 5000.

Jars, a Percheron stallion owned by Davis Brothers, Filer, Idaho, is now 7 years old and has worked regularly each season since maturity. He has done his part at the plow and in the hay field, and the last year Davis Brothers have worked him and another stallion all the year on a transfer wagon, pulling heavy loads. They begin to ease up on the work the first of February and stop entirely before the breeding season begins, on April 1. The result is that the horse is hard, strong and is a very sure breeder. Last year he served 116 mares, and they know now of at least 45 that are safe in foal that were only covered once. All mares were bred by the season, and they believe fully 90 per cent of the mares are in foal. The Messrs. Davis fully indorse the expressions of Dr. Nelson about working the stallion, in The Farmer of February 15, and point to Jars as an example of how the plan works. He is a horse of naturally a very fine disposition and works as quietly and safely as a gelding, but they contend that working regularly not only one makes a horse more sure as a breeder of strong, vigorous colts, but has the effect of making his disposition better and the horse easier to handle.

H. H. Schildman of Filer, Idaho, recently returned from a three weeks' trip in Iowa and Nebraska, where he selected a foundation herd of 20 head of registered Shorthorn cows and heifers, 10 of which now have calves at foot. One of the best is Nerissa 93110, a Scotch-bred cow of the Butterfly family, tracing to Imp. Emma and Imp. Galaxy. She has size and very fine breed type. Crimson Matchless 2d is a fine, big roan cow by Lord Matchless, tracing to Imp. Matchless 16th by Senator. Another fine roan is Miss Heiress, also by Lord Matchless. She has a calf at foot fit to show anywhere. He is by Comet, a son of Snowflake, a Scotch bull of strong Cruickshank blood. The calf has an excellent head, a long body and is good all over. Mr. Schildman has in Double Knight, by Good Choice, a son of Choice Goods, the undefeated international champion, a young bull of straight lines, fine head, good, deep body and good quarters. His old roan bull, Stanley, is by Cherry Grove Bamff 16th, dam Ethel by Sterling, a very low, block animal, with extra heavy rounds, weight a ton, and is a proven good breeder. Mr. Schildman has several young heifers in good condition that he will push right along and show at the southern Idaho fair at Filer this coming fall, and probably at Rupert and Burley, and possibly at the state fair. There is considerable interest and a good outlet for Shorthorns on the Twin Falls tract, and Mr. Schildman hopes to see a Shorthorn association organized at the fair at Filer next fall.

Already the indications are that the annual meeting of the Cattle and Horse Raisers' Association of Oregon, to be held at La Grande, Ore., April 24 and 25, will be a great meeting. Secretary S. O. Correll has the program practically completed. The speakers will include T. W. Tomlinson, secretary of the National Live Stock association; Professor E. L. Potter, animal husbandman of the O. A. C.; George C. McMullen of the live stock commission firm of Witherspoon-McMullen, Kansas City, the man who sold more cattle last year than any other man in America; W. B. Webster of the Kansas City stock yards; A. D. Dunn, the silver-tongued orator and Shorthorn breeder of the Yakima valley, and Ephraim Barnes of the United States forest service. Governors Lister of Washington and Alexander of Idaho have been invited, and are expected to address the meeting, and Governor Withycombe of Oregon will be in attendance during the entire session. Letters received indicate a big attendance. La Grande citizens will have charge of the entertainment features. Two thousand dollars has been guaranteed for expenses, and gigantic plans have been made. Probably a cowboys' breakfast will be given the second morning, moving pictures and other entertainment will be provided, and a banquet the last night will close the meeting. Besides this, a purebred stock show will be given and the fine beef cattle and horses will be on parade. H. A.

TWO SHORTHORN SALES.

Keep in mind the two Shorthorn sales, both of which will occur the first week in April, and which constitute two leading spring Shorthorn sales of the northwest. Frank Brown of Carleton, Ore., is the manager of both sales.

The first sale will be held at the Portland Union stockyards, April 3, 1917, when close to 100 head of choicely bred young bulls and heifers will be sold, and will be followed by a sale at Spokane, Wash., on April 5, with a like number.

The American Shorthorn Breeders' association has recognized these sales as two of the most important in the west, by giving $250 in cash premiums and also two silver cups at each show, one for the best bull and the other for the best female. These prizes will be offered for animals only that are to be sold in the sales.

This sale is evidence of the cooperative spirit with the small breeder to find a market for his surplus of bulls and heifers, and the man who is in the market for a carload of bulls or heifers can not overlook the opportunity to attend this sale.

KIGER DUROCS SELL.

The F. M. Kiger Duroc Jersey swine sale at Gresham, Ore., February 21, resulted in no sensational prices, but all the females sold at fair values. The show gilt, Kiger's Maid, farrowed March 31, 1916, topped the sale, going to E. M. Clark of Nehalem, Tillamook county, Ore., for $80. She has the appearance of an excellent brood sow, and is a high-class show animal. Mr. Clark was the heaviest buyer, taking 13 gilts for a total of $715. Besides that, he got the boar, Oregon Lad, at the bargain price of $30.

Mrs. L. G. Ewalt, Aurora, Ore., took three gilts for $185.

Another buyer was Thomas McDougal, Tigard, Ore., who took four for $240.

R. Curtis of Fairview took three for $167.50.

Other buyers were F. A. Coffin, Monmouth, Ore., one gilt, $50; Fred Hicks, Corbett, Ore., gilt, $50; H. McGinnis, Boring, Ore., gilt, $52.50; C. L. Denny, Estacada, Ore., gilt, $55.

Boar prices were not so good. P. L. Embry, Oswego, Ore., took one for $20, and F. L. Blanchard, Yamhill, Ore., one for $30.

BREEDERS' ASOCIATION.

The annual meeting of the Lewis County Pure Breeders' Association was held in Chehalis, Lewis county, Wash., at the St. Helens hotel in Chehalis following luncheon. The officers of the organization were reelected as follows: H. B. Coffman, president; F. M. Svinth, vice president; George R. Walker, secretary-treasurer. It was voted to have the second annual outdoor meeting of the association at Cloquato Grove Saturday, August 4. There was an excellent attendance.

STALLION SALE COMING.

The first annual Twinn Falls County Stallion and Colt show will be held at Filer, Idaho, Saturday, March 10. A fairly nice list of prizes will be given and it is believed many of the fine colts sired in the neighborhood and all over the county will be shown.

SELLS 27 HOSTEIN COWS.

James O'Grady has sold 27 head of Holstein cows to Dettling and Inglin at Stanfield, Ore. Mr. O'Grady has retained 20 head as foundation for another dairy herd which he will build up.

Dispersal Sale at Hood River.

A dispersal sale of registered Jerseys will be held at Hood River at the farm of W. G. E. Smith April 11. J. W. Hughes, auctioneer.

VOL. XL. MARCH 8, 1917. NO. 10.

O say, does that star-spangled banner yet wave
O'er the land of the free and the home of the brave?

I pledge allegiance to my flag, and to the republic for which it stands---one nation, indivisible, with liberty and justice for all.

$275 ONLY ONE WEEK TO MARCH 17TH $275

Then Your Opportunity to Grasp This Big Prize Will Fade Away

Only One Week to Win

Besides the Possibility of Your Winning One of the Thirty-Two Cash Prizes You Get This Paper at the Very Low Special Rate of 3 Years for $1.50

NOTICE—The Contest Editor is always pleased to answer any questions and wishes contestants to feel free to make any inquiries when they are in doubt. Letters of inquiry must be signed, however, in order to secure answers. It is not found desirable to try to answer inquiries through the Farmer, as the greater number of the questions asked have already been answered several times on this page. Sign your names, because your letters will not be used, in any event, without your consent and no contestant's name will be attached to any published letter without first securing the special permission of the writer. It is a genuine pleasure to answer your inquiries.

Read the Conditions

Simply add up the figures in the puzzle chart as if they were in one long column. Your success depends on the accuracy of your total thus obtained.

Figures run from two to nine, and there are no double figures or characters which are not figures. The tail of the "6" has a decided curve, while the tail of the "9" is straight. All other figures have the usual characteristics, allowing no question as to the identity of any figure.

In event that no one submits the correct total, prizes will be awarded for the next nearest solutions.

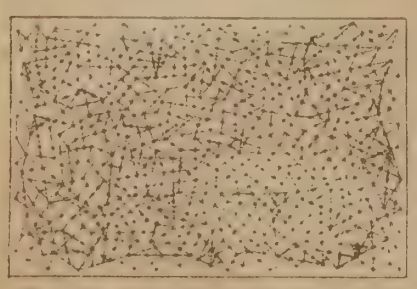
This contest is restricted to persons residing in Washington, Idaho, Oregon and Montana.

A payment of $1 to $1.50 on subscription to The Farmer entitles the subscriber to enter the contest.

If your subscription is already paid in advance, your expiration date will be set ahead beyond this date to which you are now paid the full period for which you pay at this time. The advantage of paying $1.50 instead of $1 is that the winner of any of the first four prizes receives additional prize dividends apportioned on the amount paid in on subscription, besides the fact that $1.50, during the contest, pays for a three-year subscription to the paper, while $1 pays for only one year.

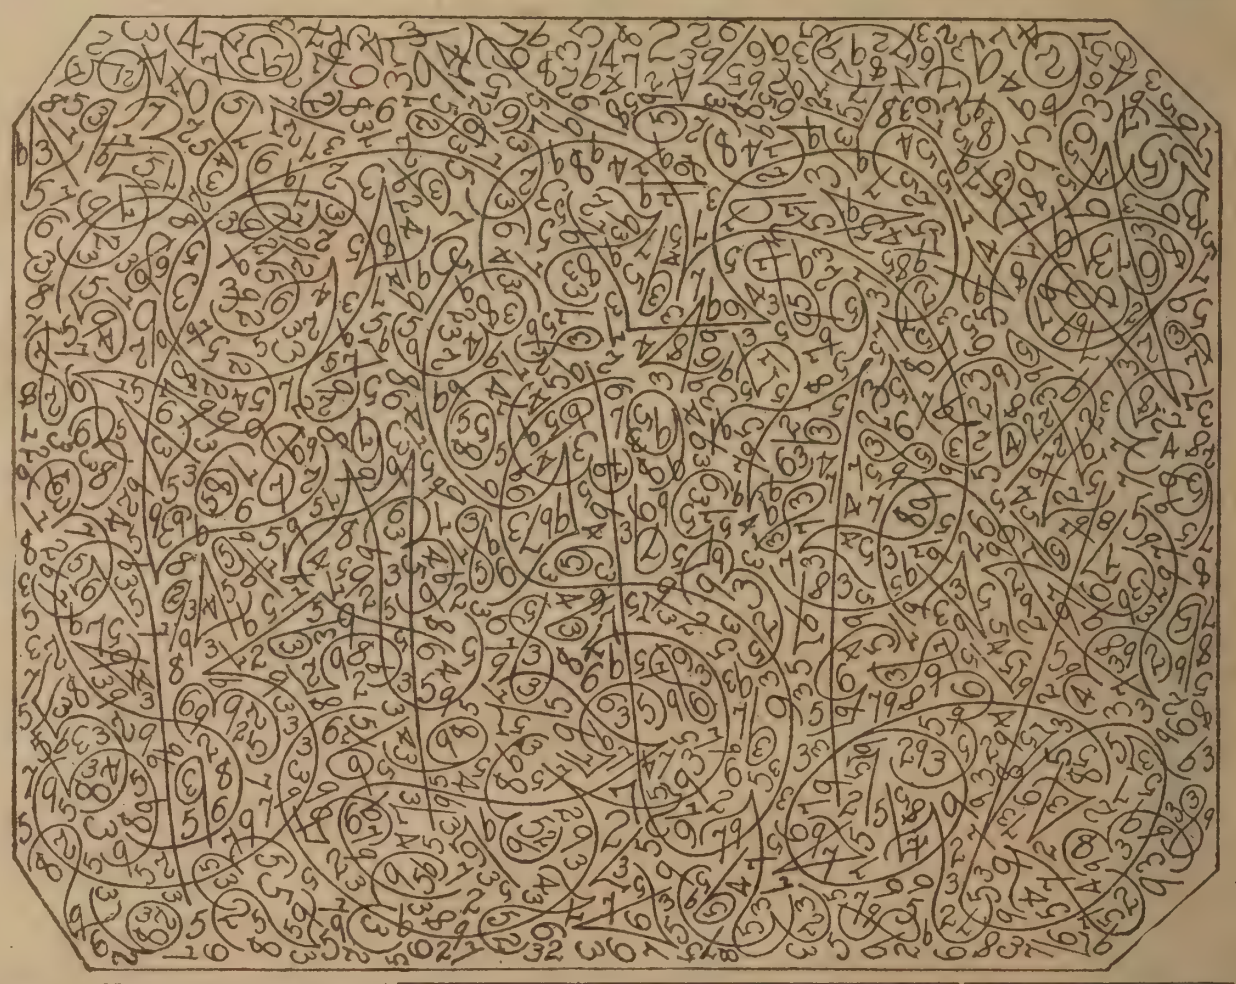
More than one solution may be submitted by any contestant, by an additional subscription payment of not less than $1 nor more than $1.50. It is not necessary to pay the same amount with each solution if more than one is submitted.

You can send in a subscription for some one other than yourself and have the solution registered in your own name. Remember that by paying $1.50 instead of $1 on subscription, the larger will be your dividends if you win one of the four leading prizes; but not more than $1.50 will be received with one solution.



Deciding Ties

In the event of ties on the first problem, those tying will be required to solve a second puzzle, like the small illustration, only considerably larger. Only those tying on the first problem will be eligible to solve the second, or tie-breaking, problem.



The second problem will involve drawing a continuous line through the greatest possible number of dots. Rules for solving the second problem will be published more fully in event that it becomes necessary to present it, and these rules, together with extra charts, will be mailed to each tying contestant just as soon as possible after all answers to the first puzzle have been received and registered. The small illustration simply gives an idea of the nature of the second problem and nothing can be done toward solving it until it is determined whether there are any ties on the first puzzle, which will be known after March 17, 1917.

In case of ties on the second problem, the same problem will simply be rearranged and another solution asked from those tying on the second problem. If two or more persons tie for any prizes on third solution, each will receive the full amount of the prize instead of a division being made of the prize money.

This is what the second problem will be like:

From the date of publication of this second problem one week will be given for its solution.

$750—Prizes—$750

FIRST PRIZE, $200,
to which will be added 50 times the amount paid by the subscriber with the winning solution. For example, if you pay $1.50 on subscription, this prize will be worth $275.

SECOND PRIZE, $100,
to which will be added 20 times the amount paid by the subscriber with the winning solution. This prize may be worth $145.

THIRD PRIZE, $60,
to which will be added 2 0times the amount paid by the subscriber with the winning solution. This prize may be worth $90.

FOURTH PRIZE, $50,
to which will be added 10 times the amount paid by the subscriber with the winning solution. This prize may be worth $65.

FIFTH PRIZE, $40.
SIXTH AND SEVENTH PRIZES, Each $20.
EIGHTH TO SIXTEENTH PRIZES, Each $7.
SEVENTEENTH TO THIRTY-SECOND PRIZES, Each $2.
CASH MUST ACCOMPANY.

Don't send in your charts and working papers unless called for by the Contest Editor. Simply write your solution in blank space provided in "Registration Blank."

Something to Know

If your subscription is paid in advance, further payment will be credited on an extension of your subscription from the time to which it is now paid.

Any solution unaccompanied by payment on subscription will not be entered.

Far-Reaching Creamery Trust Alleged

Pacific Northwestern States Included in the Indictment Following Probe by U. S. Authorities

The investigation has been on for some time which led to the indictment by the United States grand jury at Boise, mentioned in last week's Farmer, charging a creamery trust in eight western states, including eight corporations and 11 individuals. Leon Bone of Salt Lake, special agent of the bureau of investigation of the U. S. department of justice, was in charge of this investigation. Mr. Bone is reported as saying that the operations of the defendants had been under examination for two years. Word also comes from Salt Lake that the probe has been a most thorough one and that the federal authorities are in possession of letters and correspondence exchanged between the creamery officials in the several states, and that upon this correspondence indictments were founded. It is also understood at Boise that much of the data submitted to the grand jury concerning the operation of the defendants in Idaho was obtained by William G. Scholtz, director of farm markets of the state of Idaho, who was one of the witnesses before the body.

Here is the list of the companies in the alleged creamery trust:.

The Jensen Creamery company, Salt Lake.

The Mutual Creamery company, Salt Lake.

The Henningsen Produce company, Butte.

The Schallinger Produce company, Spokane.

The Commercial Creamery company, Spokane.

The Hazelwood company, Portland.

The Hazelwood company, limited, Spokane.

The Clock Produce company, Seattle.

The following individuals were also indicted in connection with the indictments of the eight corporations: W. F. Jensen, D. E. Newman, H. A. Schellinberger, A. P. Henningsen, W. F. Henningsen, Carl Schallinger, E. W. Ellis, Carlyle Hall, B. B. Corless, R. A. Goodhue and W. W. Hamilton.

"Espionage" Charged.

It is charged in the indictment that from March 1, 1914, until the date of its presentation the defendants have conspired to restrain interstate trade and commerce in creamery and dairy products to prevent the purchase of butter fat and other raw materials by other manufacturers and dealers in these products within the states of Oregon, Washington, Idaho, Montana, Nevada and California, and to cause their financial loss and ruin by eliminating them as competitors and maintaining a system of "espionage."

"They have given short weight in manufactured products placed upon the market, thus defrauding the consumers and thereby enhancing their own profits, to the end that they might thereby be better enabled to eliminate competition in other sections of territory," the indictment recites.

Charge is made that the defendants temporarily paid more for raw materials than market conditions justified in territory where they met with competition, and that they have given false weights and tests to producers in localities where they met with competition, showing a higher percentage of butter fat than was actually present, for the purpose of causing such producers to believe that similar tests by their competitors were false.

In localities where the defendants met with no effectual opposition it is charged they have given producers false tests of butter fat, showing a lower percentage than was actually contained in the materials furnished, thereby defrauding the producers, for the purpose of enhancing their own profits and enabling themselves more effectually to eliminate competition.

It is charged that employes and agents of the defendants have been induced to give false tests in the buying and testing of raw materials, and that the defendants have secretly attempted to obtain the support of influential persons in certain localities by means of unwarranted favors shown, intending through their influence to obtain the control of the available supply of raw materials.

Accused of Attempted Bribery.

False and misleading statements as to the methods and products of competitors have been made, it is charged. The defendants are charged with attempts to bribe the agents of common carriers to divert to themselves shipments of raw materials intended for their competitors; and it is charged that the defendants have hired and attempted to hire employes of competitors and decrease their efficiency; that they have prevented and attempted to prevent their competitors from obtaining storage facilities for their perishable products, in order to cause a deterioration in the quality of such products sufficient to require their sale at a loss.

Attempts have been made to influence legislation in certain of the states named, it is charged, in favor of the defendants and to the injury of competitors; it is charged that the defendants have endeavored in certain states to prevent and obstruct the enforcement of existing laws when a failure to enforce them would inure to their benefit and to the injury of their competitors.

Division of Territory Alleged.

It is charged that by mutual agreement they have apportioned among themselves the various sections of the territory from which they obtained raw materials and in which their manufactured products were marketed, in such manner as to prevent competition among themselves, either in the purchase of raw materials or in the sale of manufactured products, and in like manner have, by mutual agreement, fixed prices in the different sections of such territory, both as to prices paid for raw materials and as to prices demanded for manufactured products.

These prices have been so arranged, it is charged, as to greatly hinder and restrain their competitors, in that higher prices were paid for raw materials in those sections where the defendants had no competition, and that lower prices were demanded for manufactured products in the markets entered by their competitors.

It is charged that the defendants, by mutual agreement, paid higher prices for raw materials than market conditions justified, and particularly by the contemporaneous market prices of products manufactured from such materials, for the purpose of forcing their competitors either to retire from business or to suffer severe financial loss. After eliminating competition by the methods alleged, according to the indictment, and by the means of the exclusive control of the markets thereby obtained, the defendants have demanded and obtained from the consumers of such manufactured products "excessive and unwarranted prices for such products" and it charged they thereby obtained for themselves further finan-

(Continued on page thirty-four.)

Swindlers Get Their Deserts

Induced Thousands of Farmers to Buy Stock

Pertinent editorial comment on the conviction of the leaders in the Northwestern Trading company at the recent trial in Spokane is made by the Portland Oregonian in a recent issue. The men convicted of conspiracy to defraud were Gale Smith, president of the company; O. C. Fowler, C. L. Davies and S. T. Knudson, other officers. Their conviction followed the wholesale filching of thousands of dollars from the farmers of the three northwestern states, it appearing in the trial that the endorsement of the trading company by the Washington State Grange and the Farmers' Union of Washington, through committees of these organizations, played a part in enabling the swindlers to carry on their operations. The Oregonian's editorial follows:

In the conviction and sentence of the men who conducted the Northwestern Trading company one of the worst gangs of swindlers which ever infested the northwest has received its deserts. On the pretext that they would buy merchandise direct from the manufacturer for cash and sell only for cash and would thereby make large profits with small risk, they induced thousands of farmers to buy stock in the company. The fact is that their main purpose was to sell stock and to pay themselves large commissions on its sale, for they bought little from manufacturers. They bought from jobbers on time, like any retail merchant, and soon loaded the company with debt. They played the old game of the get-rich-quick man to get money for nothing by fraud, and if Judge Van Fleet erred at all in sentencing them, he erred on the side of leniency.

Every important statement made by Gale Smith and his confederates has been proved to be false. They promised to do a cash business, but they bought on credit. They represented that the company made a profit when in fact it lost money all the time, and on this false pretense they raised the price of shares by degrees from $20 to $75. They promised not to receive any money from the company beyond salary as officers, but they received large sums as commissions on sales of stock. They professed to have employed an independent agency to make collections, when in truth they organized their own collection agency and through it threatened suit against stockholders who became delinquent.

The officers of the grange and farmers' union can not escape a share of the blame for the fraud which was perpetrated by this gang of swindlers on their members. These officers helped the game by announcing that they had investigated the company and had found it sound and good, though it was unsound from the first. Whether they knew the truth or not, they are unfit leaders. If they knew it, they deceived their constituents deliberately; if they did not know it, their investigation was a sham or they were incompetent to form a judgment on the facts.

Success for a time of this gang in victimizing citizens of Oregon and Washington under the noses of the state corporation commissioners and in defiance of the laws should be a spur to these officials to exercise unceasing vigilance against fraudulent stock selling. After promoters have presented a fair-seeming project which justifies a license to sell stock, watch should be kept upon them to see that they live up to their promises and that their statements made at the outset continue to be true. Every dollar sunk in such wildcat companies is a dollar diverted from legitimate investment, and every person thus victimized is filled with suspicion which injures the good name of the Pacific northwest. There is plenty of honest work for the people's savings in developing the country; the results of thrift should not be permitted to flow into the pockets of the Wallingfords.

Washington Portraits No. 5.

Alvin Anderson, one of the younger farmers of Wahkiakum county, was born and raised on the farm near Oneida. He has a dairy farm of about 7000 acres; has been raising some beef cattle, although he intends to go into the dairy business exclusively. The soil of this section of the county is very fertile, being mostly reclaimed tideland, and is ideal land for dairy purposes.

The next in the series of Washington portraits will be that of Virgil Dunbar of Pateros, and will be given in next weeks' issue of The Washington Farmer.

POTATO SCAB.

Treat the Seed Before Planting.

To the Editor of The Washington Farmer: Will you please give a formula for treating seed potatoes for scab? A. L.

The above question is answered by O. M. Morris, professor of horticulture at the Washington State college, as follows:

The best treatment for seed potatoes infested with scab is one ounce of corrosive sublimate, dissolved in seven gallons of water. Soak the potatoes in this solution for one and one-half hours. Drain and cut before planting.

Formalin can be used at the rate of one pint to seven gallons of water. Soak the potatoes in this for an hour and a half. The corrosive sublimate is better because of the fact that it destroys other fungous pests that may be on the potatoes at the time. One of the most common in the northwest is rhizocatonia. The formalin treatment will not destroy this. Either of these solutions can be used for the treatment of four batches of seed before making a fresh solution.

Dishonesty in Live Stock Sales

"I Have Seen the Checks the Seller Received, but Not the Ones the Buyer Gave Back"

The Farmer has already called attention to the old-time evil of the New York stock exchange known as "wash sales," when two or more brokers conspired to make large bogus sales on the floor of the exchange for the purpose of running up the quoted price of the stock they were manipulating. That evil is now practically stamped out in Wall street.

R. P. Stericker, secretary of one of the national purebred horse societies, the Cleveland Bay Society of America, indicates by his letter, given below, that there is need to a greater or less extent of a campaign that shall wipe out "wash sales" at auction sales of purebred live stock:

To the Editor: Where there is collusion or dishonesty it is almost impossible for prices at auction sales to be "bona fide." I can't see how this can be obviated.

The system among dishonest people of selling an animal privately (before a public sale) and then running it through the auction to any price agreed upon is both old and reprehensible. Nobody with a grain of common sense believes in these absurd prices and I for one would like to see it stopped, but how?

I know that private sales are often "padded." I have seen the cheques that the seller received, but not the ones the buyer gave back. I know such transactions "throw dust" in a few people's eyes, but not many.

This particular sale you speak of is "on the face of it" fictitious. It will not be long until some other sale "tops" this one. R. P. STERICKER,
Secretary.

Chicago, Ill.

Letters were sent by the Farmer to the secretaries of the great Pure Bred associations of the country, enclosing the statement from E. A. Stuart of the Carnation Stock Farm, together with statements and affidavits in reply regarding the sale of the Holstein bull calf Finderne Mutual Fayne Valdessa for the alleged price of $21,500 at the Pacific International Stock Show and sale at Portland, Ore., last December. The following points plainly indicate the conflicting nature of these statements and counter-statements:

In a letter dated October 2, 1916, B. Meyer, the breeder, offered the bull to E. A. Stuart, president of the Carnation stock farms, near Seattle, for $5000.

In a letter of November 17, 1916, Mr. Meyer told Mr. Stuart that the animal had been sold. He failed to give the price, but his own herdsman told Mr. Stuart that a Mr. Von Herberg was the purchaser and the price was $2500.

The animal's next appearance was at the Portland sale, and Mr. Meyer, its breeder, was its reputed owner. In his transmitting letter to Mr. Gue, the auctioneer, Mr. Meyer said, "I consign this bull to your sale without any restriction whatever." But in his answer to the Farmer's telegram of inquiry of February 4, Mr. Meyer says: "Bull was sent by me to the sale under the recommendation of Von Herberg, guaranteeing me $5000 at least, and all he would bring over it. What my herdsman said was not true."

When the Farmer sent another telegram, asking Mr. Meyer to be more explicit, he telegraphed this reply: "The bull was sold at auction for $21,500 to Mr. Von Herberg. After deducting commission, freight and expense, I received the balance of my money in full. Exact amount what I got is my business."

In its letter to the secretaries of the pure bred live stock associations the Farmer added: "The personal differences whatever they may be, between Mr. Stuart and Mr. Von Herberg, are of the merest incidental character so far as the Farmer is concerned, but the putting of the livee stock industry, which promises so large for the Pacific Northwest, on a permanently stable and prosperous basis is the utmost moment to the Farmer, and this cannot be done if speculative prices, created by 'wash' sales, if such there be, go forth as bona fide sales."

A statement also was sought from these secretaries as to how auctions of pure bred live stock could be so conducted and guarded that they would give complete assurance of being bona fide sales.

ENORMOUS PRICES.
Always React On Industry.

The following letter will be read with interest. It is from Mr. Winslow, the secretary-treasurer of the Ayrshire Breeders' association:

To the Editor: It is unfortunate when in any purebred life stock society their reputation either by the private owners or by the sales committee or by any one else is such that suspicion is cast upon the prices brought. Any attempt to inflate the prices beyond the actual breeding value always reacts. The fact of this animal bringing $21,500 is in itself sufficient to cause suspicion, whether just or unjustly I do not know, but I do not think the Holstein association as an association will encourage anything of that kind as I am personally acquainted with many of the leading men in that association and doubt their approval of anything of that kind. If that was a bogus sale it was certainly a mistake.

In the Ayrshire Breeders' association we have always disapproved of any attempt to inflate prices, believing the actual value of the animal would warrant its being sold for what it was worth and anything beyond that we have tried to prevent. Good, square and honest sales of desirable cattle of actual worth will usually bring buyers that are willing to pay all the animals are worth and sales of that kind add interest to the stock and are of value in building up their reputation. C. M. WINSLOW.

Brandon, Vt.

BOARD OF REVIEW.
To Protect Live Stock Industry.

Here is the reply of F. E. Dawley, secretary of the American Cheviot Sheep society:

To the Editor: I regret exceedingly to learn that such a controversy has arisen in Holstein-Fresian circles—for I believe that most of the Holstein sales have been conducted very properly. I have been fortunate in being able to keep in pretty close touch with affairs in this section, where the first of the combination sales were held, and where they have largely been developed.

With the increase in sales companies—and the spread of the plan—it would be strange if men have not been drawn in who were less scrupulius than the ones who first inaugurated the system, and there may be some just grounds for criticism.

The apparently high standing of the men who seem to be involved in the transaction which you outline should help to straighten out the tangle, and largely their statements, together with the apparent facts, as shown by correspondence and conversations prior to the date of sale, must furnish the evidence in the case.

I know how well a frame-up can be planned and executed in a cattle transaction, because all farm help is not reliable—nor is it proof against inducements to "get even" with a former employer. Many men of this class have nothing to lose, and are ready to profit by these transactions.

Of course the Holstein-Friesian association should pass on the matter and give the facts to the public. Their interest in the black and white cow will lead them to take such action as they deem just, but the entire registered Live Stock Industry of America is interested, and I am firmly convinced that this matter is but one more evidence that a board made up, much as the American Association of Live Stock Record Associations is, or perhaps that same board, is needed to actually review and act, as a sort of a court of appeals in all such matters.

I have great reason to believe that at least in one case an executive committee and a board of directors, accepted the conclusion of a biased investiga-

(Continued on page twenty.)

Government
Should Own Apple Warehouses?

The Farmer is constantly receiving interesting expressions of personal opinion from its readers, which it is glad to pass on to others.

What the apple business needs is a bureau controlled and operated by federal agents where a buyer can put up his cash for a car of this or that, and the feredal grading expert must turn out a car to that point of demand with no expense, but a wire to the producer, and have all the warehouses and cold storages owned by the government. Not until then will the state of Washington get what she is entitled to for her wonderful apple crop, which in the future will be her chief asset, with wheat second.

MARTIN PENHALLICK.

Neppel, Wash.

USE ELECTRICITY
For Many Farm Purposes.

The vicinity of Twin Falls, Idaho, is pioneering in the use of electricity for farm purposes. By means of transmission lines, power for heat and light and the driving of some farm machinery is obtained. A similar movement is on foot at Burley, Idaho.

Australian Wool for Army.

Whatever wool is sent to England from Austrlia or New Zealand this year can not be offered or sold except to the director of army contracts.

To Stamp Out Rabies Scourge

Spread of Malady Throughout Northwest Calls for Action

What is probably the most widespread infection of rabies in the history of the northwest is being experienced this winter, according to reports from all parts of the four states, especially Oregon and Washington. The coyote menace is calling forth united action by the authorities and the country people of the states in an effort to eradicate them. Washington state has declared war on unmuzzled dogs, also, it appearing that many of them are infected with rabies and are spreading the disease among each other and among live stock.

Oregon Issues Orders.

David N. Roberg, state health officer for Oregon, has announced an ordinance dealing with the matter, and copies of it are being sent broadcast.

It requires that animals afflicted with rabies shall be killed, but also requires that animals suspected of the malady shall be kept under restraint for the period of possible incubation, which is not less than 10 days; that all dogs shall be muzzled or secured when an outbreak of the disease is prevalent or at hand; that suspected dogs, after the 10-day period of observation, shall not be permitted to run at large, unless muzzled, for an additional three months, which is the extreme period for incubation; for the filing of reports on cases called to the attention of officers, and for the summary control of county-wide epidemics.

Thirteen positive cases have been confirmed by examinations of coyote and dog heads since January 6 of this year, while four Pasteur treatments have been given by the state board of health to persons who were bitten by rabid animals. The record of the last two months surpasses that of the previous six.

Washington Regulations.

In carrying out an object intended by the Washington legislature of this year at Olympia when it passed a measure conferring quarantine power on the department of agriculture, Acting Commissioner H. T. Graves has placed under quarantine the entire counties of Spokane, Pend Oreille, Whitman, Garfield, Asotin, Columbia, Walla Walla, Franklin, Adams, Lincoln, Ferry, Stevens, Okanogan, Chelan, Douglas, Grant, Benton, Kittitas, Klickitat and Yakima. The following rules and regulations have been established and a penalty for their violation provided:

1. All dogs running at large within the boundaries of the counties herein specified shall be properly and securely muzzled so as to prevent their biting other dogs or animals.

Provided, that this rule shall not apply to dogs under leash or securely confined on the premises of their owner.

2. No dogs shall be transported or moved from the territory hereinbefore quarantined unless permission has first been secured from the commissioner or his authorized agent.

Penalty.

Any owner, owners or agents who wilfully violate or negligently allow this quarantine or these rules and regulations to be violated shall be guilty of a misdemeanor and be punished by a fine of not more than two hundred and fifty dollars ($250) or be imprisoned in the county jail for not more than ninety (90) days.

Peace officers, under the provisions of section 5, chapter 100, laws 1915, are requested to assist in the enforcement of said quarantine, rules and regulations, and any person is authorized, under the provisions of chapter 13, laws 1917, to destroy, without liability therefor, any dog not muzzled as herein provided and found running at large in the herein defined areas.

Ports Are Rivals
May Mean Bulk Grain Facilities

Rivalry between Portland, Ore., and Seattle, Wash., bids fair to do much toward hastening the day when there will be terminal facilities on northwestern tidewater for handling bulk grain.

The Seattle port commission is openly in the field bidding for the patronage of the farmers and offering them facilities for receiving their grain in bulk or in sacks. Likewise the Portland dock commission has announced that it proposes to do everything reasonable to develop facilities to handle all the bulk grain that can come to that port and retain the lead which it has held as a grain shipping point. Tacoma, a friend of neither Seattle nor Portland when it comes to business activities, and one of the big wheat exporting terminals of the Pacific coast, is saying little, but "sawing wood" with the apparent view of profiting from the Portland-Seattle bout.

Portland May Issue Bonds.

C. B. Moores of the Portland dock commission has announced that the commission will ask the people of Portland to vote bonds this spring sufficient to construct a bulk grain elevator with a capacity of 1,000,000 bushels as the first unit in more extensive construction.

Speaking of the movement of the Seattle people to divert the grain business of the Inland Empire from Portland to Seattle, Mr. Moores said in an address before a Portland booster organization the other day:

"There will be the dedication of a big bulk elevator in Pendleton tomorrow, and Robert Bridges of the Seattle port commission will be there just as he was at the meeting in Corvallis recently to keep Seattle's facilities before the minds of the grain growers.

"At the Corvallis meeting he had the admirable nerve to introduce a motion that the convention adjourn to meet at once in Seattle and consider further the problem of bulk handling of grain.

"Seattle is doing everything in her power to wean the wheat men of the Inland Empire away from Portland as a shipping point, and their energy is to be admired, but Portland must put forth equal energy to hold her own.

"There is a crisis in the grain business, and Portland must prepare to meet it, or be left.

"Grain growers have made it sufficiently clear that they will not deal with private elevators and they have made it sufficiently clear that they are done with the sack method of handling grain. Their sentiment is overwhelmingly for the bulk handling and the elevator.

"It is up to us to provide public elebators, therefore, and the dock commission has proposed to the people in June a bond issue for this purpose."

Mr. Moores, while he expressed a belief that the spirit of the people is conservative and that they are opposed to bonding, declared that Portland is well able to handle the bonds necessary for the enterprise.

Seattle's total tax levy he pointed out is 45.8 mills as against 27.4 in Portland, and her bonded indebtedness $47,000,000 in round figures, as against Portland's $26,900,000.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTEL I.

MY six-year-old son is as happy as a clam in high water when he is in mud up to his neck. On a hot day he would sooner play in the mud than eat. Rogers Akers, age four, feels the same way about it. I have made my boy—Herbert is his name—a sort of mud wallow in one corner of the garden which is surrounded by tall sunflowers and sanded on the bottom, the sand being to cut the edge in the mud. Rogers lives across the street. When he spies Herbert about ready to submerge, across the street he comes, and into the mud wallow he goes, little white dress, stockings and all. His mother, blessed with good sense, doesn't whip him for getting in the dirt. You know, there is clean dirt and dirty dirt. The soil of a well tilled garden is really clean; and when it is merely mixed with water and spread over the legs and face of a baby boy it is still clean, so a little boy can be mud all over and still be clean. That is the philosophy of it. On a hot day, Herbert and Rogers are thrice doubly welcome to all the mud they can find—and if they can't find any, we manufacture it for them.

And so it was with me when I was a youngster of five or six. Memory begins at about that time. There was an immense wheat field with many huge tar weeds in it. There were long, hot summer days while the men were at work in the fields. There was an unpainted shack of a house in which my mother cooked meals for the harvest hands, father being the foreman of the crew. There was a huge trough of cool water down in the barnyard; under it, a mud wallow. There was an old sow and a whole lot of baby pigs that used to come panting out of the tall, yellow wheat, and make a bee-line for the wallow under the water trough. Gracious, how those baby pigs enjoyed that cool mud! And how I longed to roll in it with them. I asked mother one day why I couldn't have some nice, cool, clean mud in which to roll on hot summer days. She laughed. Presently when dinner was over and the dishes washed, she went around to the shady side of the house, scooped out a big hole in the earth, filled it with clean water, and told me to strip and get into it.

Now you know why Herbert has his mud wallow in the sunflowers, and why I have sworn to defend his right to play in mud and water on a hot summer day.

It's play. Watch the baby calf when first it stands on its long, tottery legs. Right away, as soon as it has sucked a time or two, it wants to kick up its heels—falls down in its attempt to do so. Watch the tiny pigs and see them play hide and seek about their mother and among her huge, fat legs. Watch the kittens as they cuff each other and bite each other's and their mother's tail. Watch the whole animal world when it is young, if you please, and you will see that it wants to play. Then, dare you say that baby girls and baby boys, the finest little animals in existence, should not play? Let them play, mud be hanged. When the day's play is over, put them to bed via the bathtub.

I am putting this emphasis on play, because I believe it does not always find its way as it should into the lives of those rarest and best of all farm animals, little boys and girls. It didn't in my case, through no fault of my parents, I think. Even yet, the memory of that huge, yellow, desolate wheatfield is depressing. The air was full of bees, the wheat was full of tar-weed—all the world was full of pricks and stings for a barelegged little boy! My only refuge was the cool mud wallow behind the house, and to it I flew weeping many a time. A bee stung me on the leg—I ran to the mud hole and put mud on the sting. Tar pricklers got between my toes, I put my foot in the mud and it eased the pain. That cool puddle was my playmate and friend in time of need, and today stands out as one of the bright spots of my childhood.

When we look back to the tender age of six, there are long gaps in the memory, and only such monumental things as bee stings, mud holes, stick horses and the discovery of chewing gum stand forth. I remember my first Christmas, which was out at the old "stage station," or Mullinix ranch near Waitsburg, Wash. Among the wonders of that frosty morning was scrap-book bearing on its outside cover a picture of Santa Claus with a red nose, a cheery smile, and long, white whiskers. From whiskers to boots I loved that Santa Claus. I still have the old scrap-book, which now is frayed with age and yellow. But fresh as ever is the memory it brings of that Christmas morning out at Uncle Jack Mullinix's old stage station.

One day I heard father say he was going up to the Big Bend to take up a ranch. That was when I was eight or nine. Soon after that we were jolting over the road in a "covered wagon," father and mother in the seat ahead and I curled up among the bedding and horsefeed, and frequently peering from under the wagon canvas at the wonder of the surrounding country. It got monotonous as the days passed. There was a heavy wind as we went through a long canyon called "Lord's gulch." I was cold, shivering and miserable, and finally lost my nerve and cried. Then we came down into the deep Snake river canyon at Lyon's ferry. Clearly photographed in my mind today are the towering cliffs of the Snake river canyon at that point. High up among the cliffs a cow was grazing, and to me it looked no bigger than a rabbit. We camped there for several days, and the wonders never ceased.

We crossed Snake river on a cable ferry, and met many Indians, some of them with faces painted a brownish red and wearing feather bonnets. We came finally to the water place called Washtucna, where cattle were being "rounded up." The cowboys would dash on horseback after a fleeing steer, swing a rawhide lariat, and in an instant the beef would go down with its heels in the air. Then and there was born in me the desire to learn to throw a rope and be a cowboy. I was for deserting the covered wagon and joining the cow camp at once. One of the cowboys who wore huge, dangling spurs and great hairy "chaps" said he would give me a job.

Many years afterward I rode on horseback through the Washtucna country. I hunted up the spot where we had camped. But it was all changed—for a town had grown up and where once was a grassy range were wheat fields and barbed wire fences. The change was disappointing. It wiped out a sweet memory of childhood, putting in place thereof a string of wheat warehouses, a railroad and a fenced-in spring.

The days that passed as we jolted on to the Big Bend were so full of monotony that I remember little that happened. Often we made dry camps, watering the horses and doing our cooking and washing from the water barrel carried in the wagon. Once we drew up beside a tule swamp. There were many willows, green grass, shade, and out through the willows and tules I could see the water and now and then a swimming duck. My excitement was intense. While father staked out the horses and mother prepared the meal over a camp fire I made my way through the green grass and the shade nearly to the water's edge. Some red willows grew out near the water. My longing for one of those red switches burned into the very depths of my nine-year-old soul. I made a step toward them and there was a whirring rattle in the grass at my very feet, and a spotted snake with a flat head and darting black tongue glided out of the grass a step or two ahead, now and then looking back from beady, black eyes. I screamed and ran.

We had gotten well out into the rattlesnake country. Father went after the snake, thinking it was simply a small, harmless water snake—presently came bounding out looking for a club which he didn't find before the snake got away. After that, I stayed close to camp and we no longer slept under the wagon on the ground.

With the chapter next week the Bunch Grass boy begins life in earnest in the Big Bend country.

The Star Spangled Banner.

The war department, by designating by official order The Star Spangled Banner as the national anthem, has recognized regularly what long has been officially the American national air only by order of the navy department.

The order also directs that when the anthem is played at any place, persons belonging to the military service shall stand at attention facing the music. They are ordered to salute at the first note of the anthem and retain the position until the last note.

"The Star Spangled Banner" was written by Francis Scott Key the morning of September 14, 1814, after the British attack on Fort McHenry.

Key had gone in a small boat to the British fleet in Chesapeake bay to ask Lord Cockburn for the release of a captured civilian. Lord Cockburn held Key, who watched the bombardment of Fort McHenry and through a day and night was exposed to the fire of his friends at the fort.

Lord Cockburn boasted that the fort would last only a few hours, but next morning Key saw the flag still waving, and, taking an old letter from his pocket, he used a barrel head as a desk and penned the words. They were set to the music of "Anacreon in Heaven" by Ferdinand Durany.

Legislature Ends

Tale of Fifteenth Session Told

By the time this issue of the Farmer is in the hands of its readers the 15th session of the Washington state legislature will have adjourned. Its record will have been made.

As is usually the case, these last days are crowded full of measures that have been delayed in consideration from time to time during the session, and many of them will be killed for lack of time in the final hours of the session and many will be passed without full consideration of their merits.

Irrigation Code.

At this writing it appears that the irrigation code for which many of the orchards and arid farming districts have worked faithfully will fail of passage.

This measure was designed to codify and simplify the irrigation laws of the state, and to modernize the system so that water rights held undeveloped under the age-long doctrine of riparian rights might be brought into use in the development of large areas of land now lying useless because of lack of water. If this measure is not enacted it will be because of the opposition which it has met with at the hands of corporate interests desiring to maintain control of waters for power purposes.

$12,000,000 Appropriations.

The legislature is making total appropriations of approximately $12,000,000 for all purposes. The final results of the consideration of appropriation measures, together with the action taken on such measures by Governor Lister in the nature of approvals or vetoes, may show a less total than these figures.

One of the contests of the last few days has been over the proposal to levy 1.9 mills for the institutions of higher learning, which would raise approximately $850,000 more money for this purpose than has been raised under the present levy. The senate has already passed this measure, but the lower house has opposed it with sufficient vigor to indicate that the final action will show a levy of not to exceed 1.55 mills.

Director of Markets.

The senate passed late last week a bill creating the office of state market director, modeled after the Idaho law. How it will fare in the house was considered problematical. It would give such officer a salary of $3000.

Mrs. P. W. Van De Grift, Leavenworth, Wash.: "I wish to thank you for the many good things you print in your paper and to wish you great success."

Standardization

Of Dairy Business Is Advocated

"Our field extends from the pasture to the breakfast table," said Professor G. L. Martin of the University of Montana, addressing the dairymen at the Western Dairy Products show at Portland last week on the subject of standardization of the business.

This standardization should be made to include dairy educational work, production of milk, butter and cream and distribution of all products of the dairy farm, he pointed out.

"Producers and manufacturers must line up to work for quality and definite standards so as to meet competition," said Professor Martin. "We have suffered from lack of efficiency and lack of cooperation. The time has come for us to get together. There is need in the dairy industry for a science of dairy economics."

Show Awards Are Made.

The following are the awards in the show:

Home trade cheese, possible 100—Gustav Kunze, Buhl, Idaho, first (gold medal), 95; John Bogart, Woodland, Wash., second (silver medal), 94 1-2; Hugh Barber, Tillamook, Ore., third (bronze medal), 94

Export cheese, possible 100—Eagle, Idaho, factory of the Boise Cooperative creamery, first, 94 1-2; Montpelier, Idaho, cheese factory, second, 94; Chris Holbeck, Galt, Cal., third, 93 1-2.

In the butter scoring contest Oregon won the silver trophy with a score of 961.5 out of a possible 1000. Washington was second with 950.5, and Idaho third with 942.5.

How Result Was Obtained.

In this contest the five highest scores from each state were added together to determine the state championship. The Oregon scores included were those of the Monmouth cooperatice creamery, 195.5; McMinnville creamery, 194; Woodburn creamery, 191, and Mt. Angel creamery, 183. The possible score was 200.

The Washington team consisted of Skamokawa creamery, 198; Yelm cooperative creamery, 190.5; Old Dominion creamery, Colville, 190; Sorenson creamery, Linden, 189, and the F. S. Kelly creamery, 183. The Washington team won the trophy last year.

In all there were 56 exhibits in this contest, the states represented being Utah, Nevada, Wyoming, Colorado, Washington, New Mexico, Idaho, California and Oregon, but some of the states did not have sufficient exhibits to make up a team of five.

Milk prizes were won as follows, the possible score being 100:

Raw milk—Portland Pure Milk & Cream company, 96.9; Elliott-Brant Rancho, Owensmouth, Cal., 96.75.

Pasteurized milk—Vine Lodge dairy, Portland, 97.25; Crescent Creamery company, Los Angeles, 97.

Milk dealers (determined from a test of milk delivered to five patrons)—Portland Pure Milk & Cream company, 95.78; Pure Milk Dairy, Seattle, 95.44.

Certified Milk—Clover Hill farm, Portland, 98.4; Maplewood farm, Seattle, 96.1.

Raw cream—Fernwood dairy, Portland, 96.15; Elliott-Brant rancho, Owensmouth, Cal., 95.3.

Pasteurized cream—Crescent Creamery company, Los Angeles, 96.9; Hygeia Meadows, Portland, 96.8.

In the short-course butter judging contest the Idaho Agricultural college team carried off the honors with a score of 4699 out of 5100, Oregon Agricultural college being second with a score of 4099.

In the buttermakers' contest the Oregon team won with a score of 4521 out of a possible 5100. Idaho was second with 4318 and Washington third with 4248.

Cattle Shipments Grow.

Montana exported to eastern markets 227,823 head of cattle in 1916, an increase of 53,892 over 1915 shipments, according to reliable reports from that state.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unusued portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Farm Organizations Should Be Led By Men of Brains and Honesty

The trial and conviction of the four officers of the defunct Northwest General Trading company sharply point the moral that the leader of a farm organization should be a man of clear brain and rugged honesty.

Thorough investigation by the United States authorities and a fair trial in the United States court have stamped as swindling the methods pursued by the Northwest General Trading company and its allied branches, thus sustaining the exposures of these concerns repeatedly made by the Farmer during the last two years.

C. B. Kegley and J. C. Lawrence, who examined and indorsed the Northwest General Trading company for the grange and farmers' union, either did not have brains clear enough to detect these swindling methods, or they lacked the rugged honesty to denounce them.

C. B. Kegley has proved himself unworthy of the trust imposed upon him as master of the Washington State grange. He should give place to such a man, for example, as W. H. Paulhamus of Pierce county, or W. J. Sutton of Spokane county, or D. A. Scott of Adams county, or R. C. McCroskey of Whitman county, or D. H. Cox of Walla Walla county, or others who could be readily named—a man who would not advise farmers to buy stock in a swindling concern, which robbed them of $500,000 of good money.

Growing Cheap Products for the Nation to Waste

Governor Whitman of New York very sensibly refuses to be stampeded by "food riots" and other sensational demonstrations in New York city. "No one is going to starve and it is foolish to assert that any one has to," said the governor in a statement to the public. "The people have simply got to eat what they can afford to eat."

Governor Whitman's judgment is borne out by a report just made by the department of health of New York city. It finds that there is "obviously less dependency and real need than has been common for many years past," and "there does not appear to be any sudden or recently developed emergency in this city."

While the health department finds that increased exportation of staple articles of food is a factor in the rise of prices, it also attributes much of the increase to lack of intelligent economy in buying by city housewives.

As a matter of fact, it is nationally an economic benefit for the United States now and then to sell its farm products down pretty close to a clean board. Waste is the besetting sin of Americans—waste on the farm and waste in the cities. When any commodity is over-plentiful it is human nature to undervalue and waste it. A little scarcity now and then sets the nation thinking on plans to prevent waste and ways for the better utilization of all the valuable food products of the farm, the orchard and the dairy.

Great masses of our population, particularly in the large cities, need to be educated regarding the food values of different products. They should give more intelligent thought to their marketing. Too long the American farmer has borne the unnecessary burden of growing cheap products for the nation to waste.

Cooperative Shipping

The possibility of farmers who have only one marketable animal or possibly half a dozen each to ship them to a central open market and secure the same service and freight rates as if they owned a full carload or a full trainload each is realized when it is known that the Portland Union stock yards have received community shipments in which 20 ownerships were represented by one car.

In this shipment, says Secretary O. M. Plummer of the yards, some farmers had only one animal each, but each received the same attention that he would have had had the entire carload belonged to him. He paid his part of the shipping charges, which were figured at carload rates. He received the actual price for his animal that its weight and marketable condition brought.

This is but another illustration of the possibility of cooperation.

Above-Board Sales of Supreme Value to Livestock Industry

Stockgrowing is one of the great national industries. It touches vitally every life in the republic. Several millions of people are directly dependent upon it, and all the rest of the population are dependent upon its food products.

It follows that an industry so vital to the national welfare should be guarded against chicanery, and that breeders of fine stock should be alert, even above all others, to oppose all manner of trickery and misrepresentation.

Letters in this issue of The Farmer from high officials of four great national associations should be read by all who have at heart the maintenance of honest methods and the welfare of those who are engaged in the industry. They were called out by the recent auction sale at Portland, Ore., of a high-bred Holstein bull calf at a reputed but questioned price of $21,500.

The secretary of the national Cleveland Bay association well says that the system of "selling an animal privately (prior to a public sale), and then running it through the auction to any price agreed upon, is both old and reprehensible." He continues: "Nobody with a grain of common sense believes in these absurd prices. I know that private sales are often padded. This particular sale you speak of is, on the face of it, fictitious."

The secretary-treasurer of the national Ayrshire Breeders' association says the reported sale of this animal for $21,500 "is in itself sufficient to cause suspicion, whether justly or unjustly, I do not know."

The secretary of the American Cheviot Sheep association calls on the Holstein-Friesian association to investigate the Portland sale and "give the facts to the public."

And the secretary of yet another national association, the Red Polled Cattle club of America, finds that "it is hard to keep these sales bona fide, the tendency for speculation is so great, and, to many, inflated values, no matter how obtained, appeal as advertising matter of great value."

It may be hard to keep these live stock auction sales bona fide, but the Farmer is determined that its influence shall be thrown always on the side of square dealing and open, aboveboard methods. It does not intend to be made a catspaw if an earnest purpose and vigilant watching will prevent it.

At the same time it will be entirely fair, as it has been scrupulously fair in this case, when suspicious sales are made at auction, to give the dealers who are brought under suspicion generous allowance of its space to explain their transactions and defend themselves.

Washington Gleanings

For $125,000 J. Morris Jones has sold his 2400-acre ranch in Lincoln county to James B. Sammis of Davenport.

The headquarters of the Horn Rapids Irrigation company, which was recently reorganized in Seattle, has been moved to Richland.

Approximately 40,000 tons of potatoes have been shipped out of the Yakima valley this season, and the crop is not yet fully cleaned up.

W. B. Gunnoe, goverment trapper, of Toppenish, during the last year caught 366 coyotes, two foxes, 27 bobcats, three lynx and 35 badgers.

C. E. Berg is constructing a 30x44-foot building at Walla Walla, which will be used as a flour mill. It will have a capacity of 25 barrels a day.

It is reported that the construction of a cheese plant at Oakville will be started within a few weeks by a cooperative company of that district.

The boys and girls' canning and garden clubs of the state last year made $117,306.12 and there are more than 17,000 club members in all the clubs.

Farmers and business men of St. John and vicinity have organized the St. John Elevator company, with a capital stock of $25,000, all subscribed for.

James B. Samis of Davenport has bought the Ellen A. Jones farm in Lord's valley. The farm comprises 2240 acres, southeast of Harrington, and brought about $60 per acre.

A demand is coming from the farmers that a pea day be held in Rosalia and that a man of experience in the pea business be secured to discuss this now demanded crop.

Secretary Lane announces the restoration to entry of 3509 acres in Whatcom county and 500 acres in Lewis county, previously withdrawn in the belief that they contained coal.

W. E. Maas of Cowiche has purchased the 24-acre ranch of John D. Simon in the Moxee valley for $4800. He will take charge of the Moxee property about the 15th of March.

The Kennewick-Richland Marketing union has entered into contract with the Spokane Fruit Growers' company for marketing their 1917 strawberry, asparagus and early potato crops.

O. E. Gibson, N. C. Jamison and County Agriculturist Agent F. W. Rader report the organization of a cow testing association covering the territory between Kent and Seattle. It has 500 cows signed up.

The farmers in the vicinity of Dryad have organized a farm loan association, with about 16 members and $2300 capital. H. T. Clippinger is president; Carl P. Staeger, vice president, and Lloyd Larsen, secretary.

The Washougal milk condenser, which has been closed for an extended time has just been bought by the Hazelwood company of Portland. They have had a representative canvassing the vicinity to secure contracts for milk.

What Others Say

Dakota Farmer: Cheap labor is often expensive and wasteful.

National Stockman and Farmer: We move to commit 90 per cent of the proposed food legislation to the cold storage committee.

Ohio Farmer: It is the duty of the milk producers' organization to teach each member the greater profit of becoming an all-year-round producer.

Farmers' Review: The cold storage man is a speculator, just as is the farmer who stores his wheat or his corn for higher prices, and should not be condemned merely because he is a speculator.

Southern Agriculturist: The world is mad today, and force seems to rule, but sanity will come again, and all nations realize as never before the futility and the foolishness of war.

These Experts Solve Your Irrigation Problems

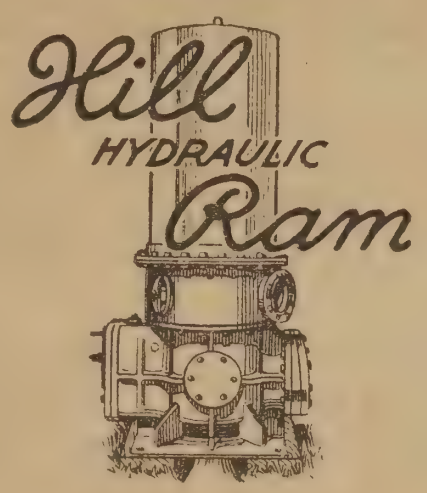
STIRLING B. HILL, C. E.
Consulting Engineer
Inventor of the Hill Hydraulic Ram

W. R. HILL, C. E.
Consulting Engineer

JAMES NICOLSON
Master Mechanic
The man who constructs the Hill ram

Let these men show you
the best and cheapest way to irrigate land; let their knowledge of irrigation guide you correctly and save you money!

CLARENCE R. BRIGGS
President of the National Engineering Co.



C. E. HILL, M. E.
Consulting Engineer

How to Make Waste Land Pay

More dollars per acre are yours if you get water on the soil—and the water question is quickly solved with the Hill Hydraulic Ram. This ram is the latest achievement in low-cost, individual irrigation systems. All you need to operate this ram is a stream or active springs. With sufficient fall you can lift water practically to an elevation as high as 300 feet.

This wonderful ram runs itself. It works automatically. It needs no motive power other than the head or fall of water available on or near your farm.

WITH THE

Our experts will study the conditions on your farm, according to information furnished by you, and tell you just what size ram you need, where and how to place it and how much water it will deliver to you. This service costs you nothing. Then, when you decide to follow their advice and install a ram, this marvelous water-pumping device will work for you day after day, year in and year out, supplying you with water so cheaply and easily that you cannot afford to be without it. It will deliver you 20 to 40 per cent more water than any other ram manufactured

A. L. COFFEY
Secretary-Treasurer Sales Manager

PHOTOS BY JAMES & MERRIMEW SEATTLE

Rams for all Farm Purposes

Water in your home, water in your barn, and water on your land, just when and where you want it, will be delivered to you by the Hill ram. These rams are made in 12 sizes for every purpose, from the small household rams to those supplying sufficient water for modern irrigation systems. They will irrigate any area, from 10 to 10,000 acres.

Think what it means to have the convenience of running water in your home and barn, and water on your land just when you need it to produce the biggest, best and surest crops? The Hill ram makes this possible. And it requires no mechanical skill to operate it. It is simple and sturdy. There is nothing to get out of order. And operating and maintenance cost are practically insignificant. You start it and then forget it. It eliminates the drudgery of water pumping, and water carrying, it relieves you from the worry of drouth. It pays for itself in a short time.

Advice is Free!

Our staff of expert hydraulic engineers will analyze your irrigating problems and suggest the most efficient and economical method of putting water on ten or ten thousand acres. These men are leaders in their profession, and we are able to offer you their advice free of charge, whether you buy a ram or not.

JUST FILL OUT THE COUPON BELOW, *mail it to us and we will write you explaining how a suitable irrigation system can be installed on your farm at the lowest possible cost to you.*

Investigate Right NOW!

Growing time is practically here. Now's the time to install your irrigation system. Then you'll have water when you need it. Don't put it off—but find out right away how easily and cheaply this guaranteed ram will put water on your land.

YOU RISK NOTHING

Our guarantee protects you absolutely. We do not ask you to take any chances whatever, because we make you the most liberal guarantee that any firm can offer. Successful installation and operation of every Hill ram installed by us is absolutely assured. This ram will work for you indefinitely. Find out about it now.

WE ABSOLUTELY GUARANTEE THE SUCCESSFUL OPERATION OF EVERY RAM WE SELL.
WE PROTECT YOU IN EVERY WAY

MAKE MORE MONEY

High prices now paid for farm produce demand that you produce the biggest, best crops in order to profit by the great opportunities that now confront you. Never since the civil war have farm products been in such demand. Don't let your profits be subject to the whims of the weather. Get in the "sure profit" class by putting water on your land, with a Hill ram.

Low Farm Loan Interest

Five and a Half Per Cent Rate Promised

By N. W. DURHAM

Chairman of Spokane Committee on Farm Loan Bank.

From Washington comes the good news that the federal farm loan system will start business with an interest rate that will range between 5 and 5 1-2 per cent.

The federal farm loan board are understood to have arranged for placing half of the entire first issue of farm loan bonds with a syndicate of bankers at New York and elsewhere, at a rate of 4 1-2 per cent. On that basis they feel warranted in making a mortgage rate that will not exceed 5 1-2 per cent, as the law says the mortgage rate shall not exceed the bond rate by more than 1 per cent. This 1 per cent of "spread" between the two rates is to cover the expenses of the system and pay dividends on the stock of the farm loan banks.

Will Appeal Widely.

With the amortization feature of the law, and an interest rate of 5 1-2 per cent, the federal system will appeal to millions of farmers who are now paying higher interest charges and have not the benefit of amortizing their principal.

Let us, for illustration, take the case of a farmer whose place is now mortgaged for $1000 at 8 per cent, and whose circumstances are such that he would have to make renewals from time to time until his mortgage had run for 20 years.

In these 20 years he would pay out $1600 in interest and still be owing the principal of $1000. This is assuming, too, that the mortgage company would make renewals from time to time without charging a commission.

But if he borrowed $1000 from the government, and made it payable in 20 annual instalments with interest at 5 1-2 per cent, his total payments at the end of the 20 years would be only $1673.54 and the principal of the debt would be wiped out.

In other words, he would pay out only $73.54 more than he would have had to pay the mortgage company. But in one case he would be free of debt, while in the other he would still be owing the original $1000.

Amounts Payable Annually.

The following amortization table gives in detail the exact sums the borrower of $1000 at 5 1-2 per cent would pay each year until the debt was extinguished at the end of 20 years:

Interest at 5½ per cent.

Years.	Payment.	Interest.	Applied on principal.	Principal still unpaid.
1	$83.68	$55.00	$28.68	$971.32
2	83.68	53.42	30.26	941.06
3	83.68	51.76	31.92	909.14
4	83.68	50.00	33.68	875.46
5	83.68	48.15	35.53	839.93
6	83.68	46.20	37.48	802.45
7	83.68	44.13	39.55	762.90
8	83.68	41.96	41.72	721.18
9	83.68	39.66	44.02	677.16
10	83.68	37.24	46.44	630.72
11	83.68	34.69	48.99	581.73
12	83.68	32.00	51.68	530.05
13	83.68	29.15	54.53	475.52
14	83.68	26.15	57.53	417.99
15	83.68	22.99	60.69	357.30
16	83.68	19.65	64.03	293.27
17	83.68	16.13	67.55	225.72
18	83.68	12.41	71.27	154.45
19	83.68	8.49	75.19	79.26
20	83.68	4.36	79.26	.....

Note that under the old plan, if the mortgage bore 8 per cent, the annual interest payment would be $80; while under the government system, with interest at 5 1-2 per cent, the annual payment, which would cover both the interest and the amount paid toward reducing the principal, would be but $3.68 more.

Payment Plan Optional.

Farmers borrowing from the federal farm loan banks, however, would not be bound to a 20-payment plan. They will have the choice of any number of payments, from five to 40 years, and the further privilege, after five years, of paying off their debt in larger instalments and getting the more quickly out of debt. On this point the law says:

"Provided, That after five years from the date upon which a loan is made additional payments in sums of $25 or any multiple thereof for the reduction of the principal, or the payment of the entire principal, may be made on any regular instalment date under the rules and regulations of the federal farm loan board."

A Way Will Be Found.

Hans Larsen writes from Goshen, Whatcom county, Washington: "I have read considerable regarding the federal land banks, but there is one thing I have not learned yet. I understand you can sell your land and transfer the mortgage to the buyer, but in case a man would sell a portion of his land after he has got a loan on it, how can it be adjusted then?"

There seems to be no express provision in the law covering this point, but we think it will be met by means of regulations to be adopted by the federal farm loan board at Washington.

Crenshaw Sells Ranch.

John Crenshaw has sold his ranch of 160 acres two miles east of Garfield to George Draper of Elberton. The land brought $90 per acre. In turn, Mr. Draper disposed again of the Crenshaw farm to Alvin Johnson of Elberton, while Mr. Draper takes over 80 acres of land beglonging to Mr. Johnson, which joins the Draper ranch. This last 80 acres brought an even $100 an acre.

Pit Silos

Built on Farm of Kapps Brothers

By H. W. REAUGH.

Kapps Brothers, living 12 miles northeast of Corfu, built a pit silo last summer. W. E. Kapp said that the first operation was to make a collar 18 inches deep and 12 inches wide. This circle was 10 feet in diameter. The rocks were put in this trench and cement poured in. This took three loads of rock, one load sand and two sacks of cement. The cement was mixed four to one. That is, four sacks sand to one cement. The pit was then dug out 10 feet and thrown out with a shovel. This was then made perfectly perpendicular by means of a steel straight edge, then plastered about half an inch thick with a mixture of sand and cement, two to one. The pit was dug 20 feet deep. The dirt in the last 10 feet was hauled out by means of a windlass. The plastering took seven sacks of cement and one load of sand. The work of construction took two men 10 and a half days each.

The cost of the 10x20-foot pit silo would be as follows:

9 sacks cement at 80c	$ 7.20
2½ days hauling rock and sand, at $5.00	12.50
Digging, 2 men 10½ days, at $5.00	52.50
Total	$72.20

This gives a total cost of $72.20 but as a matter of fact but $7.20 was in actual cash. The work was done at slack time and the work was put into permanent equipment.

This silo was filled with Russian thistle on top, center of rye and thistle and lower part with rye. The rye and thistle made a very excellent silage which stock relish best. Mr. Kapp says that his young stock are in much better condition than usual for this season of the year, and is a strong advocate of silage after one year's feeding.

Sheep Clubs

For Spokane County Boys and Girls

By W. W. SKUSE.

It is planned to make the second season of club work in Spokane county very much broader in scope and more valuable than was possible in 1916, which was necessarily a season of pioneering.

This year there will be 40 to 50 clubs, having a total of 400 to 500 members. The different kinds of clubs will be canning, pig, sheep, legume, potato and land reclamation, with about an equal proportion of each. Out of these the new clubs this year are the sheep, legume and land reclamation clubs. We look particularly for great results in the sheep clubs.

Through the kindness and cooperation of F. M. Rothrock we will be able to secure at least 50, and we hope 100, orphan lambs. These lambs will be taken and fed by hand until one month of age. They will then be ready for the boys and will be shipped by express from the central part of the state, where Mr. Rothrock's flocks are kept. It is estimated that a lamb will not cost over $4, which represents only the cost of labor of caring for the lamb and the express charges. Where necessary E. E. Flood of the Exchange National bank is willing to loan the purchase price to a boy on the same plan used last year with the pig club members. There sheep clubs will fit in fine with the legume and land reclamation clubs, and it will mean the start of many farm flocks as the pig club meant the introduction of purebred swine in many communities.

Red Most Conspicuous.

Of all colors, red is the most conspicuous at a distance.

Distribution Problem

Is Attacked by Inland Empire Dairymen

At a meeting of dairymen in the convention room of the Spokane Chamber of Commerce a week ago the Inland Empire Dairy Producers' association came into being, and while little was done other than perfecting that organization it was made manifest that one of two things must come to pass at no distant date. Namely, either the distributing companies of Spokane must so district the city as to eliminate the present heavy overhead expense and thereby pay the producer a price for his milk sufficient to save him from actual loss or the producers will do it themselves.

This determination, while barely touched upon during the meeting, was strongly indicated by discussions among producers prior to the meeting and is clearly aimed at in several sections of the constitution of the new association as formulated and adopted during the day.

A. H. Weeks of Valleyford voiced the sentiment of all when he said:

"The purpose of this organization, as I see it, is primarily to work for the general betterment of the dairy industry, but particularly to establish a price for our products that is equitable and just to both ourselves and to the consumers. Heaven knows, the consumer is paying enough, but with the present price of feed there isn't a producer in the room that is making a penny; few, if any, that are breaking even. It is wasteful methods of distribution that is breaking us, and that is the big problem we have got to solve.

"The distributors claim that it costs them 8 cents a gallon to deliver milk in Spokane, and no wonder. I personally have counted five milk wagons from five different companies covering the same district. Five complete outfits doing what one could do. It shouldn't cost more than 4 cents to distribute milk if done without waste.

"What we want here is an organization that is broad enough to stop this waste by establishing a cooperative distributing center of our own if necessary, and that is broad enough to further reduce our expenses by buying and selling all seed, feed and other supplies used by its members."

Cooperation Provided.

When the constitution was completed, a task that took nearly the entire day, it contained this provision:

"And this association, when deemed necessary, shall have the power to incorporate to the end that it may carry on cooperative buying, selling and distributing of anything pertaining to the dairy industry."

There were 75 dairymen present when the meeting opened, and all had come to point out the impossibility of continuing in a business that is losing them money even when nothing is taken out for labor, and to take immediate action toward bettering conditions. Conversations before the meeting disclosed the fact that all were of too near the same mind to necessitate argument of these questions in the meeting and that nothing could be done until an association was formed, so the dairymen gave their undivided attention to organization.

Costs 18 Cents; Sells for 14.

Only once was the question of price brought up during the deliberations. This was when T. A. Sheldon of Cheney in response to the question of what it cost to actually produce a gallon of milk declared he had been testing and weighing his milk and feed for five years, and, allowing himself $1.50 a day for labor, the milk for which he receives 14 cents a gallon costs him 18 cents a gallon to produce.

While waiting for the report of the committee drafting the constitution and by laws N. M. Crider of Thornton started an argument that resulted in the organization of a cow testing association. He stated his belief that every man should have a Babcock testing machine on his place; that he tested his cows two or three times every month and any time he thought the distributors weren't giving him a fair test it didn't take him long with his records to reach an understanding.

Questions Testing Value.

J. C. Graham of Palouse stated that the Babcock test on the farm was a good thing, but that most dairymen didn't have time to test and if they did were told by the distributig companies that they didn't know how. "The best plan to my mind," he said, "is to have an official tester who comes every month; who is vouched for by the state college and by the government and whose figures no distributing company will dispute." Mr. Graham then told of the splendid results accomplished by the Whitman County Cow Testing association, of which he is a member, and explained the workings of the association.

Boosted by David Munroe, J. L. Smith, N. C. Hansen of Freeman and others, enthusiasm for a testing association spread quickly, and upon a request from H. S. Findley of Cheney, president of the association, for an expression as to how many would like to join a testing society 35 dairymen owning 490 cows signed up. Details as to the organization and operation of the cow testing association were left to the executive committee of the parent association.

Officers Are Elected.

The election of officers resulted in the installing of Mr. Findley as president, B. E. Smead of Opportunity as secretary-treasurer and Arthur E. Hooper of Ferrell, Idaho, vice president. The executive committee consists of R. H. Gray of Post Falls, Idaho; David Munroe of Hayford and James C. Graham of Palouse.

These men had really been elected two weeks previous, when the association held its first meeting and adjourned to complete organization at this time. They were placed in nomination all at once by Mr. Weeks and their election ratified. Herb Sharp, however, didn't understand the procedure and raised the cry of "railroading," masking his remarks under a thin cloak of apparent good humor. The matter, while regrettable, was not taken seriously by the other delegates.

The various committees will be appointed by President Findley as soon as possible and active work started toward bringing about the results needed and desired by the dairymen.

Among those present at the meeting, 42 of whom signed up membership cards and paid a year's dues before leaving the hall, were:

Alfred H. Weeks, Valleyford; N. M. Crider, Thornton; David Munroe, Hayford; O. A. Burnett, Nine Mile Falls; T. A. Sheldon, E. H. Dickens, F. E. Newton, Robert Gehrke, G. E. Olson, Ole Oslund, George Blackshaw, William Rudolf, Albert Schultz, Mrs. S. K. Betz, E. D. Mault, S. D. Stroup, W. R. Millsap, J. L. Ankrom, all of Cheney; J. L. Smith, Spokane; Robert H. Gray, Post Falls, Idaho; James C. Graham, Palouse; Fred A. Anderson, Mead; Arthur E. Hooper, Ferrell, Idaho; L. Falk, Tyler; S. O. Ridout, Sprague; M. F. Middelburg, Deep Creek; N. C. Hansen, Freeman; S. S. Ferns, Sprague; James Anderson, Opportunity; John P. Ramsey, Sprague; B. E. Smead, Joseph Ulowetz and C. D. Black of Opportunity; J. H. Kanby, Peck, Idaho; Frank Kepke, Deep Creep; Alex Irvine, Espanola; Herb Sharp, Colbert; Henry Mertz and John Anderson, Opportunity; John Bedk, Spokane Bridge; F. J. Kenney and Henry Tank, Espanola; John Pringle, Trent; Andrew George, Medical Lake; A. J. Mollendorf, Espanola; E. N. Wisdom, Medical Lake; W. C. Powell, Spokane, and I. L. Hixon, Chewelah.

$225 SOMEBODY WILL WIN SIXTY QUESTIONS SOMEBODY WILL WIN $225

With the opening of the second period for those using our Contestant's Helpful Outfit, February 22, the first prize dropped from $300 to $225. On March 14 this prize reduces again to $200. Better start now by getting our Contestant's Helpful Outfit.

Read the Plan and Rules of This Big

FARM INFORMATION CONTEST

There are 60 questions which everybody should try to answer. They are interesting, they are entertaining, and the prizes make it worth your time to try to answer them. Look into the contest plan and fix your aim on the big cash awards.

READ THE RULES

Answer These Questions

26. How many seconds in the month of February, 1916?

27. What article of diet is commonly called the staff of life?

28. When did the law go into effect which prescribes the number of stars and the number of stripes which there shall be in the flag of the United States? (Our CONTESTANT'S HELPFUL OUTFIT answers the question.)

29. On what horizon does the new moon set; east, west, north or south?

30. What apple has the same name as a high political position?

(Five more questions will appear next week.)

Answers to the sixty questions from those who have secured our Contestant's Helpful Outfit have started to roll in, with the result that a very large number of persons will be registered in the First Period of the contest for the $300 prize. Read the Enlarged List and familiarize yourself with the advantage of using our Contestant's Helpful Outfit.

$800—IN CASH to Be Paid—$800

We will positively give EIGHT HUNDRED DOLLARS in cash awards (and more in event of ties) to the winners. As explained in the rules which follow, there will be five questions run in every issue of the Farmer for 12 weeks. The last five questions will appear in the issue of April 19.

Open to Four States

Contestants must be residents of Washington, Oregon, Idaho and Montana.

Five Questions Each Issue

The contest will be composed of 60 questions. Five will be run in each issue of the Farmer for 12 issues.

Answers to each question except No. 45 can be given correctly in from one to 10 words and will be given a score of 100 if correct. Answers to question No. 45 will be limited to 100 words each, and will be graded as to the common sense and general knowledge of farm conditions shown by the contestant without regard to spelling, grammar or penmanship. As with the other 59 questions, a perfect answer to No. 45 will be scored 100.

Perfect Score Is 6,000

The contestant who comes nearest to a score of 6000 and complies with all the conditions of the contest will receive the first prize; the next nearest, second prize, and so on. In case of a tie each tying contestant will receive the full amount of the prize.

There are 35 prizes as follows:

$150 is amount of First Prize.

$100 is amount of Second Prize.

$50 is amount of Third Prize.

$20 is amount of Fourth Prize.

$10 is amount of Fifth Prize.

$5 each, Sixth to Tenth Prizes.

$2 each Eleventh to Fifteenth Prizes.

$1 each, Sixteenth to Thirty-fifth Prizes.

OTHER RULES

The answers will be passed upon and graded by a fair-minded, thoroughly competent judge.

Two weeks will be allowed for sending in answers after April 19, 1917, date of the issue containing the last five questions.

Remember, your failure to answer all the questions will not necessarily exclude you from the contest. There are 60 questions to be answered and it is not reasonable to suppose that all our prize winners will attain a perfect score. Your answers must all be sent in at the same time. Do not send any answers until you have completed the full list or as many as you can answer.

Those who use our CONTESTANT'S HELPFUL OUTFIT will be able to send in their complete set of answers without delay, there being no need of their waiting for the questions as they appear in The Farmer from week to week down to the final issue of April 19. In order to get as prompt returns as possible from those contestants who use our CONTESTANT'S HELPFUL OUTFIT, extra inducement is made in the prize awards. SEE ENLARGED PRIZE LIST.

Announcement of prize winners will be made and prize checks mailed as soon after close of contest as possible.

If any point is not clear, do not hesitate to write the Farm Information Editor.

All answers must be mailed on or before midnight, May 3, 1917, as shown by post-office dating stamp on your envelope.

ORDER COUPON—If your subscription is paid ahead, the time paid for herewith will begin at the date to which you are now paid.

FARM INFORMATION EDITOR,
Review Building, Spokane, Wash.

Enclosed find $1 for one year, or $1.50 for three years' subscription to

THE WASHINGTON FARMER.

and enter me as a contestant in the Farm Information Contest. I am also to receive at once the complete CONTESTANT'S HELPFUL OUTFIT, consisting of guide against wrong answers, reply blanks, rules and all information to aid me to win a reward.

Name .....

R. F. D. .....Town .....

State .....

Notice—Amount of remittance to be either $1 for one year's subscription to the Farmer or $1.50 for three years' subscription.

Answer this question: Are you now a subscriber?.....
If you wish paper sent elsewhere, fill in name and address.

A Valuable Aid to Contestants

One complete CONTESTANT'S HELPFUL OUTFIT, including all of the 60 questions and instructions and helpful warnings as to answers which would be wrong, and the correct answers to some of the most difficult questions, is truly a big help to the contestant.

To each contestant who sends in a new renewal or an extension of his subscription at the time of registering for the contest, this complete CONTESTANT'S HELPFUL OUTFIT will be sent in combination.

We feel that those beginning on the contest will find these suggestions as to what to avoid distinctly useful. This equipment supplies in convenient form everything needed to enable you to apply your ability to the best advantage, and will contain information enabling you to answer the most difficult questions correctly.

Puts Questions in Reach of Children

This CONTESTANT'S HELPFUL OUTFIT puts the solution of the questions in the reach even of the children, it being the purpose to make it possible for everybody in Washington, Oregon, Idaho and Montana to compete. This outfit includes, besides general information about the plan of the contest, the following:

Guide against wrong answers, which includes either correct answers of more difficult questions or easy references as to where to find the correct answers; and blank forms on which to write your answers in such a way that there can be no confusion when your answers are taken up by the judge for scoring.

It will be worth considerable to you to be assured that your answers are reaching the Farm Information Editor in such form that he will know in every instance exactly what question you intended to answer. This CONTESTANT'S HELPFUL OUTFIT will make it possible for you to

Begin Work at Once

On account of the large number certain to send for our CONTESTANT'S HELPFUL OUTFIT, thus making it possible for them to answer the entire 60 questions without delay, it is deemed advisable to offer some special inducements to secure prompt returns from this particular class of contestants. By securing the early replies of those who are thus supplied with the entire 60 questions, we will be able to have their papers carefully scored before the final rush of answers toward the end of the contest.

Understand, it is not absolutely required that those who use our CONTESTANT'S HELPFUL OUTFIT send in their replies at once, but, in order to induce them to get in early, the following plan for enlarging the awards to those prize winners whose answers come in early is offered:

ENLARGED PRIZE LIST—$800 IN PRIZES—ENLARGED PRIZE LIST

For those who use our CONTESTANT'S HELPFUL OUTFIT.

Thirty-Five Prizes	Amt. of prize if winner sends in answers during 1st period, Feb. 1- Feb. 21	Amt. of prize if winner sends in answers during 2d period, Feb. 21 Mch. 14	Amt. of prize if winner sends in answers during 3d period, Mch. 14 April 5	Amt. of prize if winner sends in answers during 4th period, April 5 April 19	Amt. of Prize for winner who does not send in answers before April 19
First Prize	$300.00	$225.00	$200.00	$175.00	$150.00
Second Prize	200.00	175.00	125.00	110.00	100.00
Third Prize	100.00	87.50	62.50	55.00	50.00
Fourth Prize	40.00	35.00	30.00	22.00	20.00
Fifth Prize	20.00	17.50	15.00	11.00	10.00
6th to 10th 5 prizes each	10.00	8.75	7.50	5.50	5.00
11th to 15th 5 prizes each	4.00	3.75	3.00	2.20	2.00
16th to 35th 20 prizes each	3.00	2.50	2.00	1.50	1.00

To secure our CONTESTANT'S HELPFUL OUTFIT, fill out order coupon on this page and send it in to Farm Information Editor, with your personal check, money order or 2-cent stamps, for $1.00 for one year or $1.50 for three years.

America Humiliated

By Congress, Says President Wilson

Notwithstanding the fact that over 500 members of congress out of the total of 531 were favorable to granting to President Wilson the power he asked to protect American ships from submarine attacks in the war zone, a few senators "talked the bill to death" and congress adjourned Sunday, March 4, without passing any measure on that subject.

The trouble arose when less than a dozen senators organized a filibuster with a view to preventing a vote on the measure until the hour for adjournment was reached. The constitution requires that congress adjourn on March 4. Among these few senators were Senator Stone of Missouri, chairman of the foreign relations committee; Senator La Follette of Wisconsin and Senator Jones of Washington.

Extra Session Required.

Immediately following the adjournment, President Wilson took the only course left him without leaving American shipping unprotected, and called a special session. At the time this is written no action has been taken, Monday being given up to other matters.

President Wilson's appeal to congress was to empower him to take whatever action he found necessary in the way of arming American vessels or convoying them with naval vessels through the territory infested by German submarines. He called it "armed neutrality" which he wished to establish, and promised congress that he would undertake no warlike move without calling congress together and securing its approval.

Stone Reveals Secrets.

Considerable criticism of Senator Stone of Missouri has been heard because, in a heated speech in congress Saturday night, he declared that it was one of the plans of the naval department to equip merchant ships with small "submarine chasers," designed to act as scouts and keep submarines at a safe distance from the merchant ships. This was called by some an unwarranted revelation of naval secrets, which would tend to forewarn the submarines so that they might be prepared to meet such opposition.

Mexican-Japanese Plot.

The most startling feature of the war news during the last week was the disclosure of an attempt by German officials to enlist Mexico and Japan in war against the United States in case this country failed to remain neutral during the submarine campaign. In some manner, yet unexplained, the United States government has come into possession of a note from Foreign Minister Zimmermann in Berlin to former German Ambassador von Bernstorff in this country, proposing to the Mexican government that it negotiate with Japan for an alliance if the United States did not maintain neutrality. It is believed that the message was delivered to Mexico, but not to Japan. German officials in Berlin have admitted that the plot actually existed, and that the message as published was correct.

Japan Friendly to U. S.

Following the disclosure of the plot, Japanese officials made public statements to the effect that an alliance against the United States would have received no consideration from the Japanese government had it been presented; that Japan was in alliance with England, France, Russia and Italy, and proposed to remain true to them till the end of the war.

Mexican officials, however, have issued no statement concerning the German proposal or Mexico's attitude toward it.

Jones Defends Germany.

In his opposition to arming United States ships for travel in the war zone, Senator Jones of Washington declared that such movement was one directed not against general submarine war, but against Germany. He declared that England had established a blockade around Germany and Greece, and that American ships had stayed out of those waters because this country did not wish to offend England and her allies.

Submarine Successes.

England claims that the German submarine has proved a failure; that fewer ships than expected have been sunk, and that she can build new ones fast enough to supply the increasing deficiency.

Germany announced at the reopening of the submarine campaign that it must sink vessels each month with a total carrying capacity of 1,000,000 tons. It is declared now, however, that vessels of less than half this tonnage have been destroyed during the first month of the renewed campaign.

President Inaugurated.

In the midst of the tension brought about by the European war and the many side issues which it has created, President Wilson and Vice President Marshall paused Monday for their second inaugural. Owing to the constitutional requirement that the inauguration of president take place on March 4, President Wilson took the oath of office for his second term Sunday in the presence of only a few close friends and members of his cabinet. The chief justice of the United States supreme court administered the oath. The president, in conformity with custom, kissed the Bible as a symbol of acknowledgment of reliance upon divine guidance. He turned its pages and kissed the verse reading, "The Lord is my refuge and strength; a very present help in time of trouble."

Vice President Marshall took the oath of office before the United States senate Monday.

Bone Dry Regulation.

Congress has passed and President Wilson has signed the measure which makes every state that has voted against the manufacture and sale of intoxicating liquors bone dry. The measure is a postoffice bill prohibiting the shipment from one state to another of liquor. This has the effect of prohibiting the use of a "permit system," such as the state of Washington has had, making it impossible for persons in states with laws like the Washington law to import drinks.

The measure was intended originally to become effective at once upon being signed by the president, but a supplementary resolution passed by both houses of congress delayed its going into effect until July 1, up to which time states having a permit system may continue to get liquor under such regulations as the state laws provide.

Particularize Your Question

Intelligent Farmer Knows More About the Soil Than He Can Tell

IV.

In the previous number of the series I have discussed the Farm Plant, and the helps in its construction and adaptations which the college can offer.

In this number I shall talk about the soils and the crops which grow thereon.

Every intelligent farmer who has been raised on the farm or who has operated a farm, large or small, for any considerable period of time, knows a great deal more about the soil than he can tell. I walked into the greenhouse years ago with Professor Balmer, who had been raised in a greenhouse. "William," said he, "you are using too much water." Whether it was the appearance of the leaves of the plants or the looks of the soil in the beds, or the feel of the atmosphere that told him this, I do not know nor do I think that he could have told. He knew instinctively from long experience. Something told him through his various senses what the trouble was and what the remedy. So with the farmer who knows his own soil. He watches it for the time to plow, to till, to seed. Whether he feels it, or smells it or tastes it or simply looks at it, he knows more about it than he could ever explain to you, or to himself either. People are perpetually holding at a discount the most wonderful but real knowledge of the soil and of farm things which are essential to succeed. But great as is his knowledge and egotistical as he often is about anybody else's knowledge, yet the sensible farmer realizes that there is a world of knowledge which he as yet does not possess, which he might get and from which he would derive both pleasure and profit if he did possess it. And herein the college longs to help him, both generally and specifically. Not that it has boxed and stored up all this scientific knowledge ready to be drawn forth upon occasion. There is no greater, nor any more foolish conception of the matter than this. It is like the conception that every ailment is a specific disease and that for each one of these there is a specific remedy. The doctor looks at you. "O yes," he says, "you have coronditis. It is very bad." Forthwith he pops a little specific pill down your throat and you are well.

Now this is not the right way in medicine nor in farming either. But the agricultural scientist is skilled in diagnosing the case and in prescribing the general remedial agencies. Is your soil too acid? Is it not properly drained? Does it lack humus? What about the subsoil? Are the methods of tillage and manipulation wrong? Are your cropping systems defective? Is your soil alkaline? Is it a hopeless case, which you should abandon?

The professor asked his class in examination, "What would you do if your soil were underlaid with hard pan and strongly impregnated with alkali?" "I would sell out to an eastern sucker and skip the country," answered the bright youth.

Would lime be good for your soil? The college man can and will help you, if you ask him, and if you will be reasonable about it. I say be reasonable, for you can not expect him to know by intuition your problem. Where is the land located, in swamp, forest or desert? (Better give section, township, range). What is the rainfall? Elevation? Subsoil? etc., etc. Give anything that will throw light. Be reasonable as to the time of answer and explain if there is reason for especial haste. Don't imagine that the man is on tap just waiting for you. He is busy, overcrowded. Others also are waiting. Don't be foolish or unreasonable in the questions you ask. "Will maple trees grow on my soil?" wrote a man to me years ago, sending a sample of the soil. "Plant two or three maple trees and find out," replied I. "What chemical element is necessary for this soil to give high color to the apples?" wrote a fruit farmer, and stormed because he did not get a specific answer. No chemical element added to the soil will make the bright red or yellow apple. Wenatchee soil transplanted to Pullman leaves the bright color of the apple behind it at Wenatchee. Pullman soil transplanted to Wenatchee will grow bright colored apples. It is not a chemical element in the soil but conditions of sunlight and climate and exposure that will do the color business for you.

E. A. Bryan

In his next article Dr. Bryan will tell of the help that may come to the farmer from the state college by advice which will ward off the fake crop, or the crop unsuited to conditions, or the crop less profitable than the old standbys or more hazardous than the staple ones.

Spokane Valley Growers Should Act Promptly

After years of disappointing waiting the growers of the Spokane district are offered a cannery and good prices for all their surplus produce. There is only one provision to the offer, but it is vital—sufficient produce must be guaranteed by the growers.

The work of securing the necessary contracted tonnage is lagging and a fine industry is in peril. It is necessary that the growers should know that fact and act promptly upon it. They should be alert and acting on their own initiative.

GREEN MANURING

Soil Fertility and Pasture.

Green manuring, often spoken of as cover cropping, should be practiced more.

Henry Holtz of the experiment station of the state college at Pullman, Wash., states that green manuring prevents washing, adds organic matter to the soil, prevents leaching, and affords winter pasture.

Summerfallowed fields, corn fields and even stubble fields wash badly in spring, due to heavy rains and frost. This can be largely prevented by a green manure crop. In some sections of eastern Washington, where the organic matter is getting low, and there is a rainfall of 15 inches or more, rye can be sown in the stubble in the fall and plowed under in the spring when the rye is about 8 to 10 inches high. This material will easily decompose during the following season. In orchards, crops that are well suited for this, especially in the irrigated sections, are vetch, rye, wheat, rape and peas.

In the Coast sections lying west of the Cascade mountains, where the rainfall is high, a large amount of the plant food material is leached beyond the root zone. This can be prevented by the use of green manures, which will take up the soluble plant food materials and return them again to the soil when plowed under in the spring.

In addition to the beneficial effects upon the soil, green manuring crops make good winter pastures.

Much better results can be secured by plowing under two or three tons of barn yard manure per acre with the cover crop. Organic matter must be sustained either by green manuring, crop residues or barn yard manure, if the soil fertility is to be maintained.

Western Branch, Washington Shoe Mfg. Co., Seattle, Wash.

Commission Market Law

California in Mixup in Carrying Out Measure

A spirited fight is progressing in California over the state's recently enacted commission market law. Senator Brown of Los Angeles, who carried the measure through to the finish, is charging that State Food and Market Commissioner Weinstock is working in open hostility to the purposes of the law.

As a vigorous movement has been started for state marketing laws in Washington and other western states, readers of The Farmer will be interested in the lively controversy now waging in California.

"My bill was intended to reduce the cost of living to the consumer by bringing him into direct contact with the producer," says Senator Brown. "But Director Weinstock, instead of establishing markets to bring producer and consumer together, has been going about establishing little trusts among producers so the cost of produce to the consumer will be higher instead of lower. My bill was not intended to establish trusts and higher prices, but to break trusts and lower prices.

"Director Weinstock says $25,000 appropriated under my bill was not meant to establish markets in all the cities of the state. Of course not. I am surprised that a business man should talk that way. No good business man would try to establish a hundred warehouses or stores until he had found that one warehouse or store was a success.

"My bill intended that an experimental market should be set up in Los Angeles or San Francisco to try out the purposes of the act and $25,000 was ample for that work."

In his report to Governor Johnson, Director Weinstock flatly says that he was not from the start in favor of the state engaging in the actual business of selling farm produce by commission or otherwise, and that the governor, who has shied at the commission market act from the jump, had fully agreed with him.

Weinstock then tells of his activities in organizing farmers into marketing associations and how he enabled them to sell their produce at increased prices.

Here are some of the paragraphs from Weinstock's report, in which he takes issue with Senator Brown and insists that the scheme of the Los Angeles man is visionary and impractical.

"There is another class of free market enthusiasts which believes that the high cost of living could be solved if our miscellaneous farm products could be brought together in a state depot in each of our largest cities and there be sold at public auction to all kinds of buyers, including wholesalers, retailers and households.

"The conclusion reached after survey and investigations was that it would be extra hazardous to undertake the establishment of markets in San Francisco and Los Angeles at this time in view of the existing physical conditions; that to undertake it under unfavorable conditions would spell failure and would give the whole auction idea for California marketing points a black eye for a long time to come, and that, therefore, it would not be wise to undertake it unless there were reasonable assurance that it was likely to succeed.

"It is not at all practicable to sell by public auction perishable products in small household quantities that must be gotten in the hands of the housewife during the earliest morning hours.

"While I personally welcome the establishment of every new free market, I do not regard them as the panacea for marketing ills, as they touch simply the barest fringe of the problem of distribution, and at best the sales thereon represent only—and under the most favorable circumstances would represent only—an insignificant fraction of our gross home consumption of such farm products."

The Berkeley (Cal.) Citizens' committee, organized to fight the high cost of living, has also opened a fight on Commissioner Weinstock, independent of that begun at Sacramento by Senator W. E. Brown of Los Angeles. The committee has appointed a delegation to confer with Brown, however, and will join forces with him if he will support its demand for state markets as distinguished from free markets.

Champion Wether

Dresses Out Sixty Per Cent Meat

By E. J. IDDINGS.

The University of Idaho's purebred Southdown show wether, Thickset Lad, was sold a few days ago to the Hagan & Cushing company of Moscow, Idaho. He went over the scales at 200 pounds, live weight, sent directly from the university farm. The carcass after 24 hours' shrink weighed 120 pounds, or a dressing percentage of 60, with the initial weight on foot taken without shink. The significance of this percentage will be understood when it is considered in connection that the average lamb or mutton carcass dresses 48 to 50 per cent.

Thickset Lad was a wether of the university's own breeding and was a very thick, compact and heavily fleshed wether. He was grand champion wether at the Spokane Interstate fair in September and at the Northwest Live Stock show in December.

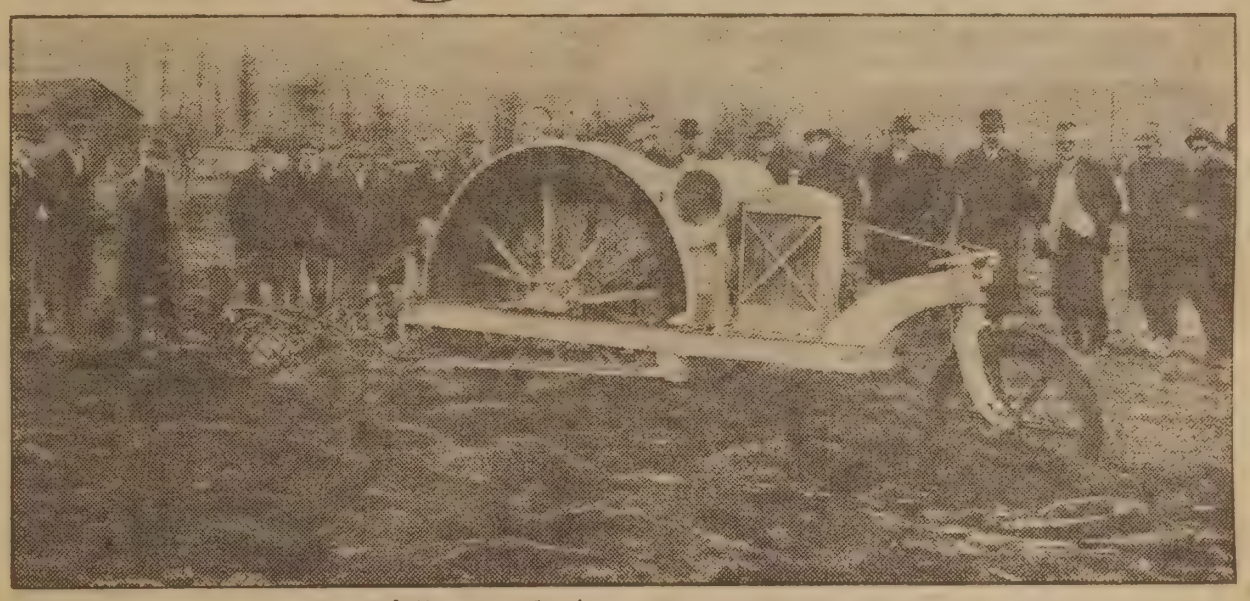
INDUSTRIAL CLUBS.

Bossburg Students Enthusiastic.

By V. J. TUCKER.

The pupils and the principal of the Bossburg school held a meeting, one Friday afternoon, and organized two industrial clubs. One, a poultry club with a membership of nine, the other a vegetable club with six members.

These clubs were organized under the direction of T. N. Newbill, state club leader, and have measured up to the standard set by the department of agriculture. The pupils understand fully what is expected from them. They are enthusiastic about their club work and expect to make good.



We have chosen this kind of work because this locality is well adapted to the raising of vegetables and poultry. Corn is not a success in this immediate vicinity. What is true, however, of this section of Stevens county may not be true of country ten miles or less from here.

We think the club should be not merely a pastime for the children, but a medium through which they will acquire the habits of industry and thrift and learn to do things in a business like manner. At the same time the club members may be making money. Think of the advantages, financially, and yes, morally, of a club of nine members working together for their common welfare. Why wouldn't it be practical for all of them to raise the same kind of standard bred poultry, feed and care for them properly and market their products as a corporation would? Even if each member had only a dozen chickens, by combining their products, the club would be in a position to command a good price for its eggs for hatching and for what other products it may have to dispose of.

The same line of reasoning will apply equally as well with the vegetable club. This work of cooperation will not be perfected the first year, nor the second, but cooperation in marketing is sure to come. Why not encourage the boys and girls in our clubs to do their marketing in the right way?

Stevens county has contracted for a county agriculturist for a term of two years. The Bossburg clubs are waiting impatiently for him to arrive at Colville. He will find a hearty welcome in Bossburg and a bunch of youngsters anxiously waiting to hear more about club work.

The Big Bull Tractor

Big Bull Tractor Plowing at Enumclaw, Washington.

How the Bull Will Pay

Various manufacturers make various claims concerning various tractors. Some claim a low operating cost, some a low maintenance cost, and some a low purchase price. The Big Bull possesses every one of these admirable features and possesses a still stronger feature in addition, which claims are substantiated by the testimony of hundreds upon hundreds of users.

This feature of the Bull Tractor running in the furrow bottom has the capacity for increasing the productivity of the soil and increasing the crop yield. Nothing desirable in a tractor is lacking in the Bull. There is nothing which can be accomplished by any other tractor of its size which can not be accomplished better, cheaper and quicker by the Bull, and the Big Bull is the only tractor which produces enough additional crop to pay for itself.

It Is Not the Number of Plows You Pull, But the Number of Acres You Plow, That Counts.

The Bull could be converted into a 3-plow machine or a 4-plow machine, merely by gear reduction, but being guided by the recommendation of the best authorities on the subject, we prefer to move faster in the field at a speed which will throw a perfect furrow, and while pulling fewer plows, the accomplishment of a day's work is equal or more than any other tractor in the same class pulling an extra bottom.

Orchard Value Questioned

Income From Fruit Crops in Some Localities Induces Orchardists to Dig up Trees and Put in Other Crops.

BENTON COUNTY, Wash.—Abandonment of orchards is seen in some instances, owing to failure to make money out of them during the past few years. Some orchards are reported to be in process of grubbing up.

STEVENS COUNTY, Wash.—Feed is grown almost entirely for home consumption, dairy cattle, beef cattle and hogs being used to "market" it.

Orchard Value Questioned.

PROSSER, Benton county, Wash., Feb. 24.—We have had good weather this month up to yesterday it turned cold, 20 above, and today it is snowing. The first half of February was good plowing weather and the farmers put in good time. The products of this county that have the most money in at present are sheep and wool, wheat, alfalfa hay, poultry, small fruits, apples, pears, etc., potatoes, grapes, onions and corn. I do not count small garden truck. We grow lots of apples, but it costs more to raise them than we get out of them. There is quite a bit of hay on hand yet. Some farmers are increasing their onion and potato fields. No crops are being abandoned except the orchard. About one-half of the orchards are being cut out on account of the cost of spray and no price for fruit. Some of the farmers are going to plant sugar beets for a tryout. The coming season does not look well at this time for small grain. The fall and winter were too dry. Some of the sheepmen are lambing now, but it is most too cold; there is no sunshine.

G. W. WILGUS.

Feed Crops on Farms.

HUNTERS, Stevens county, Wash., Feb. 26.—The 10 leading products of this section are alfalfa hay, cream, pork, beef, wheat, oats, barley, corn, apples and eggs. The first five are all produced on an extenstive scale. Though other kinds of hay are produced, such as clover, timothy and grain hay, alfalfa is the predominating hay crop. All the hay is consumed in this section. The cream is collected and pasteurized at Hunters and shipped to Spokane. What butter is produced on the farms is sold locally. The raising of hogs and beef cattle is on the increase. Good stock is becoming more and more appreciated and purebred Shorthorns and Herefords are being introduced. On account of the high price of wheat last year's acreage was large and the coming season will see an even greater acreage sown. Practically all the oats, barley and corn is consumed on the farms or locally. The eggs come practically all from barnyard flocks. The production of eggs amounts to considerable and the surplus is shipped out by the merchants. The outlook for the coming season is decidedly promising, particularly to the producers of pork, beef and wheat.

ELIAS NELSON.

Hot House Practical.

GRANDVIEW, Yakima county, Wash., Feb. 24.—As to leading crops here the first is alfalfa, then dairying and then corn, as it leaves the land in fine shape for other crops. If there is any increase it is in the dairy. No crops have been abandoned and no news ones are being tried out; some think poultry pays. Hogs are a good stock now. Apples and peaches have not paid very well, pears are a good crop to raise, quite a number will try a few beets. Some are trying beef cattle, but owing to the small farms can not do much. One man has a hothouse for early vegetables and seems to be doing well.

E. H. FAULKNER.

Vetch Proves Valuable.

VADER, Lewis county, Wash., Feb. 26.—The leading products from the farms around Vader are dairy products, hay, beef cattle, potatoes and poultry. Alfalfa is not raised here. Vetch is raised by some of the farmers. It does well and is a paying crop. The present high prices of potatoes have created a desire in many people to plant heavily this spring, but the high price of seed will have a tendency to curtail the acreage to a certain extent. Stock in this section has done well this winter. Hay is more plentiful in this county and not so much in demand as it was last spring. Milch cows are variable in price. Butter fat is high, poor cows are low in price. I believe the coming season is quite promising to the dairyman, as dairy products are up and probably will be a good price through the spring and summer. If so, it will bering up the price of dairy cows, which is very low at present time. The poultry industry does not look quite as bright as last year on account of the high price of feed. The price of eggs may stay high enough to off-set the price of feed.

L. S. WILSON.

Horses Are Improved.

EPHRATA, Grant County, Wash., Feb. 19.—The products of Grant county are led by wheat, practically all of which is of the bluestem and Baart varieties. The last few falls have been so dry that it has been impossible to sow fall wheat and get it up, so consequently spring wheat has been sown almost exclusively. There is considerable rye grown in the southern part of the county, but very little oats or barley, except in some of the bottoms. Beef cattle would be the next of importance in an agricultural way. Probably more than 100 carloads of beef cattle are shipped yearly. The people are gradually getting better bulls in the country and the beef stock is getting better each year.

The fruit industry is probably third in importance. Between 50 and 70 cars of fruit are shipped yearly. This will gradually increase as but few of the young orchards are in bearing and in two more years many times this amount will be shipped. A great many pumping plants are scattered over the county and several irrigating districts that are supplied water by pumping are also located in the county.

Alfalfa growing is gradually becoming an important industry. This will increase. Dairying is gaining in prominence, as many persons are buying cows and either shipping their milk to local creameries or creameries outside of the county. There is hardly a farmer in the county but is raising from one to 12 head of colts per year, most of which are sired by purebred Percheron stallions. The type of horses raised in this county is exceptionally good and with the feeding of young mares coming on the grade will be improved all the time. There has not been as much precipitation as usual, but there is considerable snow on the ground now which will help bring the moisture up for this year's crop.

H. W. REAUGH.

Ground Is Wet.

RITZVILLE, Adams county, Wash., Feb. 25.—The 10 leading products in this county are as follows: Wheat, barley, oats, potatoes and common vegetables, as well as all kinds of fruits and berries. Vegetables, fruits and berries are raised only for home consumption. In the line of animals, hogs take the lead, next sheep, beef cattle, work horses and dairy stock. There are no new products except ensilage being tried out to speak of, only the changing of different varieties of grains. Forage crops are timothy, red top and clovers on peat soils and alfalfa on irrigated, sandy tracts. With other tried-out forage crops there has not been a marked success. The coming season is considered favorable providing spring sets in at a proper time. Everything at present is in a dormant condition. Today sees five inches of snow here. Moisture on summer fallow is down deep, which is necessary to produce a good crop. The winter has been long and steady, but rather mild. Stock of all description look well where they received care.

JACOB HARDER.

Prospects Improve.

METHOW, Okanogan county, Wash., Feb. 26.—Some of the leading products of this county are to my belief classed as follows: Beef cattle, apples, dairy products, wheat, oats, hay, hogs, vegetables, lumber and ore. The apple is increasing in importance. None of them have been abandoned. More intelligent light on the production of all of them has boosted all of them. No farmers are trying any new product that I know of. Alfalfa hay is the main feeding product here, with corn for feeding hogs. The coming season looks 50 per cent more favorable than it did a week ago, owing to 18 inches of new snow, which will insure moisture to the hill ranches, which are the producers of all the grain in the county. Beef cattle selling at Pateros; steers 8 1-4 cents, live weight, highest price on record here.

CHARLES GRANT.

No Changes in Crops.

MEAD, Spokane county, Wash., Feb. 23.—The per cent value of crops grown here is about as follows: Wheat, 50 per cent; oats, 15 per cent; apples, 5 per cent; hay, 4 per cent; beef, 3 per cent; peas, 2 per cent, and cabbage, 2 per cent. No material change being made in the amount of any crop grown, none are being abandoned as unprofitable and no new ones being tried.

Built for the Field Test.

Three-Quarters of a Century of "Knowing How" Hammered Into Every One of Them.

The product of the Parlin & Orendorff Co. has always been noted for simplicity of construction, great strength and ease of operation. It was upon such a basis that the founders of this business made their implements, established their reputation, and built their factory. It is upon the same foundation that the business has been carried on to this day, and in 1917 we celebrate our Diamond Jubilee; 75 years of practical experience gained through constantly striving to provide for the exacting requirements of three generations of American farmers.

For an even three-quarters of a century we have met the demand, and today we operate the largest and oldest permanently established plow factory in the whole world. "It's the way we build them."

P&O

Light Draft Plows, Harrows, Planters and Cultivators are made in all types and sizes, to meet the conditions in all sections, and are Backed by an Unqualified Guarantee.

We also make the most complete line of Traction Engine Plows produced, and we have a special catalog devoted to these famous plows.

The P&O Little Genius Engine Gang Plow

was the most popular plow shown at all points on the 1916 National Tractor Demonstration.

We will send P & O Catalogs to any address. While P & O Implements are sold only through established implement dealers, we welcome correspondence from farmers in all sections.

What Is the A. B. C.?

Audit Bureau of Circulations.
This is an association, nation-wide in its scope, not conducted for profit. Every publisher having membership in this organization pledges himself to sell circulation as a commodity, both as to quality and quantity. Advertisers using our columns are safeguarded. They know that we give all the circulation we offer.

Wheat and Hogs

To Be Ready for Coming Change

The packers of the state of Washington sent something like $14,000,000 out of the state of Washington during the year 1916 for hogs and hog products. This money, which once circulated in this part of the country, has now passed into other hands simply because we did not raise our own hogs.

At $6.35, which was the average price paid for hogs on the Seattle market last year, farmers received 85 cents a bushel for their wheat.

Taking these items as his text, F. C. Sharkey, manager of the Union stock yards of Seattle, expressed a forcible opinion on the past, the present and the future of the hog business in western Washington.

"Every farmer who has curtailed his breeding stock during the past year because of high priced grain and low priced hogs has made a big mistake," says Mr. Sharkey. "It is a fact that at going prices for hogs and wheat he was apparently losing money by sticking with the business, but now he is facing the fact that eventually conditions will change; that in Russia three great wheat crops have accumulated; and that when the bars are let down and this tremendous tonnage is thrown on the market, wheat will go down—and hogs will go up. When you add to this the fact that even during this unfavorable year of 1916 the man who sold his wheat on the hoof got 85 cents a bushel for it, and that by so doing he was enabled to keep his herd and so to be ready for the change which is coming, you can see whether or not the few who did this were wise. Nothing is more certain than that with the turn which must come, soner or later, wheat will go down and hogs will continue to go up."

Asked as to the feeding problem in western Washington, where corn has not yet become a certain crop, Mr. Sharkey pointed out the possibilities of wheat and peas, both of which do well west of the Cascades.

"And don't forget our pasture," he added. "On the right sort of pasture hogs can be carried up to the point where they have the frame, the bone and vitality, for the final work of finishing them for market. Peas will do this hardening just as well as will corn, although it may take a few more of them."

Road Betterments

Farmers Take a Keener Interest

By FRANK W. GUILBERT.

The farmers are taking a keener interest in the way their funds are spent for road betterments than ever before. They are, I believe, becoming less suspicious of the intentions of their neighbors and other residents of their districts or counties than heretofore. They are listening, too, with less interest and faith in the stories told them by a few clever tongued, so-called leaders, about the wasteful methods of everybody who happens to have something to do with the administration of their affairs.

I am willing to admit much money has been wasted in making roads and unquestionably more will follow, but not nearly so much is being thrown away in proportion to the amount spent now, as was the case even two years ago. The reason is that the farmers are getting over the idea that no matter what they may do or say the waste will go on forever, and they are reasoning with those whom they have authorized to represent them in getting results. I'll further admit that some groups of officials make one feel that he has been insulted, if he offers a suggestion or objection, but these are also growing less in numbers. Another good sign.

In my judgment the taxpayer has been just as much to blame (possibly more so) as the official. Often he has gone before a board of commissioners, or other authorities, demanding certain things unfair to the general public and with no reason apparent but his own selfish ends. Of course, he has been turned down. Demands of public officials must be based upon fairness and common sense and must be for those things of common good to the district involved.

The reason, I believe, to which the improvement in the understanding between the individual and the public official is largely due is the growing interest in and better attendance at community gatherings, fostered by clubs, local granges and kindred organizations. When groups of interested people come together often in an honest endeavor to learn and work with each other and their neighbors on a fair basis for the betterment of all, good results will surely result.

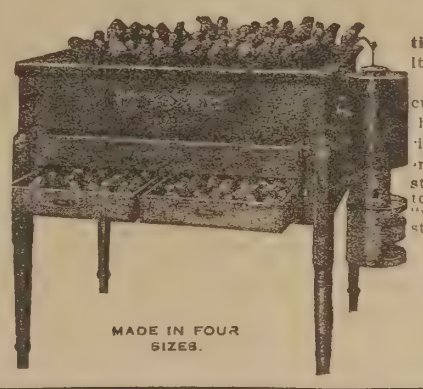
Skagit County Pomona.

The following officers were recently installed in the Skagit county Pomona grange: Master, Mrs. Elsie Tait; overseer, F. M. Kirby; lecturer, Miss Anna Callahan; steward, Tandy Knight; treasurer, L. A. Warren; secretary, L. B. Laraway; gatekeeper, Lee Ellwood; lady assistant steward, Mrs. Daniels.

William Bouck of Sedro-Woolley, Elsie Tait of Summit Park, Charles Millward of Bay View and N. Van Zile of Summit Park were appointed by the master as a committee to arrange for a county grange fair sometime during the coming fall.

What Does Silage Cost?

The acres used and cultivated time and again, and the area to be gone over to get the fodder are the big items in Silage cost.



Nitrate of Soda, as a Top Dressing worked in when cultivating, will cheapen production of your Silage.

Bigger, more succulent stalks and bigger ears will be yours.

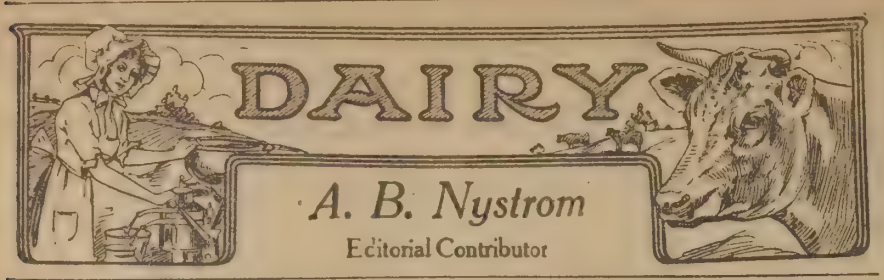
Which Do You Want?

OUR New Book on Subsoiling —written by practical farmers who tell, in their own words, how the subsoiling feature of the Big Bull Tractor increased their crop yields 10% to 33⅓%. Mighty well worth while reading, tells how to put money into your pocket. A copy is yours for the asking.

THE **Monthly Tractor Bulletin** keeps you posted on the latest developments in modern power farming methods and the new uses and achievements of the Big Bull Tractor. Every issue is chock-full of interesting and helpful information. Three month's subscription free.

"The Bull Gang with the Bull"



is the most popular tractor in the world today—because of its many unique features—the subsoiling feature of the long spade lugs on the drive wheel which runs in the bottom of the furrow ("the best way of subsoiling known up to the present time," uses no extra power and charges nothing for its work) its low fuel and upkeep cost—its ability to work fast and continuously for many hours, day and night, without overheating, its self-steering device, its simplicity, accessibility and sturdiness.

Write us today whether you want the Subsoiling Book or the Monthly Tractor Bulletin.

Dairy Questions

Are Answered by A. B. Nystrom

Can you give me an explanation for bloody milk? G. T., Wallula, Wash.

If the milk is bloody immediately after it is produced it is probably due to the rupture of some blood vessel in the udder and this will no doubt gradually disappear. Sometimes when the udder has received a blow, or when there is some diseased condition present, the milk shows red from the blood; or in other cases when the cows have just recently freshened the pressure of the blood in the udder is sufficient to burst some of the blood vessels and the blood again appears in the udder. If the milk does not turn red until after it has stood 12 to 24 hours it is due to the presence of undesirable organisms, and thoroughly scalding all utensils will eradicate them.

After studying the bulletin of "Feeding Dairy Cows in Washington" I concluded that we are starving our sows, as up to a short time ago we were feeding only alfalfa and four or five pounds of carrots. I noticed that alfalfa is too narrow by itself, so started feeding timothy during the day, which is the only other feed I have.

I have five cows, milking about 10 gallons a day, and outside of 14 quarts of milk and four pounds of butter a week for our own use, they brought in $40 in December and $35 in January. Are the cows worth while to be fed a grain ration? I mean could they be brought up on their cream enough to pay for the grain or had I better sell off the cows and buy better stock? With proper feeding would they be average cows? Grain sells here for $1.75 to $2 per cwt.

F. R. F., Addy, Wash.

It seems to me that you should feed more of the carrots or other succulent feed. I believe you could bring your cows up to two and a half gallons per day if you would feed from 30 to 40 pounds of carrots per day rather than four or five. If you can not get the carrots, I think it would be well for you to buy some dried beet pulp and soak it overnight in four or five times its weight of water, feeding about 25 to 35 pounds of this soaked pulp per day. If your cows are large cows they will not need any grain, but if they are small it may be necessary for you to feed grain in order for them to get enough nutrients to manufacture all the milk they are capable of making. Try feeding a little heavier and see if they will not respond. Feed all the hay they will eat, and if you decide to feed grain, mix a little bran and oil meal, or perhaps bran and soy bean meal, equal parts, giving them about two pounds per day of this. Of course, it does not pay to feed expensive grain to poor cows, but perhaps your cows are good ones and will pay for the grain that they eat, if you give it to them. The best thing is to try it out.

Please give me a grain ration to go with the following for milch cows: All of the second crop of hay (clover and mesquit) that they can eat, four or five gallons cut rutabagas mornings, and silage (first cutting of grass) evenings. We have fed no grain of any kind so far this winter. We have some cows coming fresh that we like to feed grain and some of the best of the rest. The silage is put in whole from the field. Do you think it will pay us to buy feed at present high prices?

J. G., Ocosta, Wash.

The ration you are feeding seems to be a little wide; that is, it contains a little too much carbohydrates in proportion to the protein, and in view of this fact I believe it would be wise to feed some grain, such as oil meal, soy bean meal or cotton seed meal, or perhaps a mixture of these three. These feeds are rather high in price at present, but if you use only a small quantity of them you will find that you can furnish protein much more cheaply by the use of these feeds than by buying bran, shorts or other milk feeds.

You do not state what feeds are available, nor the prices of them, so I am not able to give you definitely a ration that will suit your conditions. Allowing the cows to eat as much of the hay as they will eat up clean, and giving them from 30 to 40 pounds of rutabagas and silage together each day, I would suggest that you mix equal parts of oil meal, soy bean meal and cotton seed meal, feeding this to the cows at the rate of one pound for each six or seven pounds of milk. If you can get bran at $25 per ton or less, I would suggest that you feed some of this as well. The mixture would then be two parts of bran, one each of the others, and you should feed to the cows in proportion of one pound to every five pounds of milk.

IS FAKING STEALING?

To Lie About Type of a Cow.

By D. C. HOWARD, Oregon Agricultural College.

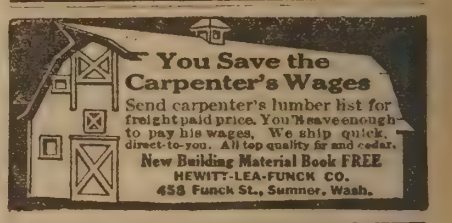
These days we hear a great deal said of the art of breeding. The world as a unit is benefited by the art and skill of the successful and constructive breeder. The product of the truly constructive breeder is sought after. His fellow breeders show their appreciation of his attainment by paying him well for his live stock. To a great extent the purchaser must depend upon the word of the breeder as to the breeding and production of the animal. This is true in all classes of live stock. In dairy cattle we have, first what we can see of the animal, or her type; and, second, what the records show, or her production. No doubt we can safely say that these two factors are of equal importance.

Only the Breeder's Word.

If a breeder in any way manipulates the test of a cow, or misrepresents her production, he is regarded as a crook and is dealt with accordingly. This, then, if type and production are equal, reaches only one-half the lie. The man who misrepresents the type of a cow whose progeny he expects to sell is as much a thief as the man who lies about her production. Yes, more so, for the public has the official records on the cow's production and he has only the breeder's word on her type.

Mutilate or Retouch.

I may lie to a buyer or to the public in three ways about the type of a cow. First, I may tell them verbally or in writing that a cows' type is up to a certain standard. Second, I may substitute the picture of another cow of superior type. And third, I may mutilate or retouch a picture until it is misleading and a gross misrepresentation.



The third of these methods is quite common, and probably the most dangerous. These fake or counterfeit cows find their way into live stock and agricultural papers. They represent a lie that undoubtedly represents the character of the breeder and should warrant his exclusion from the fellowship of the true, constructive breeders. The publicity men and breeders should use their influence and power against such practice, and deal accordingly with an offender.

As Much an Offender.

To show a cow through the press with an udder artificially padded, or a back line radically modified is as much an offense as doping a heavey horse, or selling a gold brick.

We all love beautiful live stock and prize and admire their pictures. We desire a stylish pose; we want their pictrues to show all there is in the animal, to display all that we desire; but we want no fakes, no imaginary sketches or padding. We can overlook a flaw in nature's handiwork, but we can not tolerate a fraud.

48 First St., Portland, Ore.

Are Your Cows a BURDEN?

Many cows are a constant drag on their owners when they could just as well be good producers—if properly handled.

Don't forget that your cows can get physically "off color" just as you sometimes do. Watch the milk yield; if it is going down without apparent reason, something is wrong with the cow. Overfeeding is likely to make the condition worse; she needs a medicine that will clear up and strengthen her organs of production.

Kow-Kure is making thousands of new friends among the best dairymen every year, because it supplies this great need. It is a cow *medicine*, pure and simple—not a food. It has great curative and tonic powers that immediately act upon the digestive and genital organs and enable the cow to thrive on her natural food. Kow-Kure has back of it twenty years of success in making backward cows profitable and in the prevention and cure of Abortion, Barrenness, Retained Afterbirth, Milk Fever, Scouring, Lost Appetite, Bunches and other common ills.

You can buy Kow-Kure from the best feed dealers and druggists. Sold in 50c. and $1.00 packages.

The Jitney Cow

Is a Menace to Dairy Industry

The following letter adds to the value of the discussion which has been carried on by the Farmer with regard to the best interests of the dairymen. The letter is from E. C. Calloway, milk chemist of the city of Portland, Ore.:

To the Editor; Just as the public are learning that it is bad policy to patronize jitneys and allow them to run in opposition to a reliable and well regulated public service corporation, they are also learning that the one and two-cow dairy should not be allowed to exist within the limits of a city and compete with reliable dairies and milk dealers that are regulated by law.

The one and two-cow dairy furnishes a destructive competition to the milk business, especially in mild climates, and they are so numerous that they must be reckoned with. It is their universal practice to cut prices one or two cents per quart in order to get business. They figure that there is no cost to the production except the investment in the cow. They graze the cow on a vacant lot (unless the owner orders them off), give her a well balanced ration of potato peelings and slops, and the children do the milking and deliver the milk. No dairyman that is compelled to deliver milk of standard quality is able to meet such competition.

It is being recognized that it is only fair and just that the one-cow dairy should be regulated just as much as the fifty-cow dairy. It is also being recognized that the man who lives next door to one of these city cows has a right of protest. No farmer would think of building his barn 20 to 50 feet from his dwelling. Yet that is what many city dwellers have to endure from their next door neighbor. There is a depreciation of all property adjacent to a city cow barn; but our laws so carefully guard the personal privilege of the individual that the property owner has small chances of damages in a court of equity. The one and two-cow dairy in the city limits is thus a menace to propertly interests as well as to the dairy industry. E. C.

WELLBRED STOCK

Few Appreciate Their Benefits.

By H. H. BEIER.

Few people realize or appreciate the benefits that may be derived by the average dairyman when a herd of wellbred dairy stock is brought into their community. In a great many cases when a herd comes into a locality the people begin to calculate how much money that man is going to make out of his live stock sales. The neighbors watch this herd and begin to like the stock, and in a short time they will make a purchase of a sire for their herd or some females for a foundation to build on. In a few years' time the effects of this herd can be seen in every dairy herd in that community in the way of a higher grade of stock. If the farmer with a small herd had to send to another state or great distance for these animals, it is needless to say that in many cases he would not be using the well-bred stock that he does.

There have been two herds of registered Holstein cattle that came into the Boise valley and established a splendid reputation for production and show stock and are now sold and gone. What is left to show for them? This question is easily answered when we look around. There are eight members of the Boise Valley Cow Testing association using sires from one of those herds. Five of these sires are from A. R. O. Davis. The farmers should be very grateful to the men that have introduced good stock into their community.

BROCCOLI CONTRACT

Lane County Farmers Sign Up.

Contracts to purchase broccoli to be grown on 300 acres of Lane county farm lands have been signed by H. A. Raser and W. T. Langleis of the Western Broccoli association, recently formed in Eugene, Ore. Fifty farmers have accepted the terms offered by the company. The crop is expected to total 60,000 crates, and will be shipped to eastern markets in carload lots. Growers will plant from 1 to 22 acres of broccoli.

Needs Firemen.

London, England, can spare no more firemen for the army.

Dr. David Roberts' COW CLEANER

You can't watch your cow too closely during the freshening period. Thousands of healthy, profitable cows are disabled every year because their owners do not take measures to make them clean properly. If you have a cow or heifer about to calve, *now* is the time to make sure it will clean properly by giving it Dr. David Roberts' Cow Cleaner. Dr. Roberts' Cow Cleaner ripens the cotyledons, or buttons, which hold the afterbirth and it comes away by its own weight. It does away with the forcible removal of the afterbirth, which frequently brings on blood poison, sometimes causing death. Come to the aid of your cows and heifers—give them Dr. Roberts' Cow Cleaner. It means health for the animals and profit for you.

Dr. David Roberts' Calf Cholera Remedy

should be given to your calves as soon as the dreaded scours appear. (*Scours lead direct to calf cholera, that highly contagious, death-dealing disease.*) Calf Cholera Remedy prevents fermentation of the food in the digestive organs and liquefies the poisonous gases which cause scours. It soothes the irritated mucous membranes and regulates the flow of the digestive juices. The calf's digestion becomes normal and the trouble disappears. Be prepared to save your calves.

Breeding Tonic makes sure breeding. Prepares organs for breeding. Use regularly and you will have fewer accidents and better, healthier calves.

Cow Tonic, Calf Meal, Diolice, Badger Balm, Laxotonic and Stokvigor—valuable remedies, which should always be kept on hand.

Get Dr. Roberts' Live Stock Prescriptions at your drug store—nearly 4000 dealers in U. S. Look for and insist on getting the package bearing Dr. Roberts' picture. If you do not already have the 134-page "Practical Home Veterinarian," treating all diseases of all live stock, send $1.00 and receive by mail, postpaid. Address

Dr. David Roberts Veterinary Co.
150 Wisconsin Ave., Waukesha, Wis.

Feed Your Calves at Half Cost

A properly constituted Calf Meal is equal to and better than cow's milk for raising calves, because it takes the place of milk, thus saving 50% of your feed bills.

LILLY'S Calf Meal

is thoroughly cooked under 60-lb. steam pressure. It is all food, easily digested, fresh and sweet with that nutty flavor so relished by calves.

Most Dealers sell it. If yours does not, write

LILLY'S Seattle, Portland

A GRADE GUERNSEY COW in Montana produced in one month 1815.1 lbs. milk and 87.71 lbs. butter fat, an average of over 3 lbs. of butter daily.

Necessary Feed

What Does Working Team Require?

W. B. writes: "Please inform me what a big team of horses plowing every day would consume of hay. I feed them good oat hay in the morning and evening and oats at noon, and also morning and evening."

The Answer.

E. L. Potter, professor of animal husbandry at the Oregon Agricultural college replies to the above question as follows:

A proper allowance would be one pound of oats for each hundred pounds live weight per day. That is, a 1500-pound horse would get 15 pounds of oats, divided in three feeds of five pounds each. A quart of oats weighs a pound. The hay would be about the same as the oats, only divided into only two feeds. Five pounds in the morning and 10 pounds at night would oe about right. If the oats are measured and fed in the amounts indicated it will not be necessary to weigh or measure the hay, since the horses will clean up about the amounts quoted. Would make them clean up the mangers pretty well unless the hay was rather poor. Larger or smaller horses would be fed in proportion.

Beet Pulp Value

For Feeding Cattle and Sheep

By E. L. POTTER.

The byproducts from the manufacture of beet sugar are two—pulp and molasses. In the process of manufacture the beets are cut into small pieces and the sugar extracted with water. The remaining material is known as beet pulp and is used entirely for stock feed. The sugar beet contains a good deal of mineral matter of an alkaline nature and which is dissolved out with the sugar. It has not been possible to completely separate the sugar and the alkalies, so as much sugar as possible is taken out and the residue is sold for stock feed as beet molasses.

Feeding Value.

The wet pulp contains about 90 per cent water. The 10 per cent of dry matter has about the same feeding value as the same amount of wheat or barley. Where the pulp can be fed, its value is therefore about one-tenth that of wheat or barley. This is its value to the animal. What the farmer can afford to pay for it is another problem. On account of the high water content, the pulp can not be hauled far, and, furthermore, spoils quickly. It can be preserved in the silo, but this involves considerable expense, and even then the loss is considerable. The pulp is made only during the fall and winter months, hence the most satisfactory method of handling the pulp is to feed it to fattening steers or lambs in yard right at the sugar factory. In this way the pulp is fed about as fast as made, and handling and hauling reduced to a minimum. The pulp, however, must be fed with some other feed, and in the west this is preferably alfalfa.

Steers Need No Grain.

Steers given 40 to 60 pounds of pulp, together with all the alfalfa they will eat, fatten rapidly. Lambs, however, require some grain.

It is quite common for some big cattleman to contract the entire pulp output of the factory. The prices range from 50 cents to $1 a ton, depending on the location of the factory with reference to the cattle markets and to the supply of alfalfa.

Good Dairy Feed.

In actual test, the dried pulp appears about equal to wheat or barley for growing stock and for dairy cows, especially when mixed with other feed to make it more palatable. For fattening purposes it is less valuable, and consequently is seldom used for beef cattle or sheep. Hogs do not like it, and tests by the Oregon experiment station indicate that it has little value for hog-feeding purposes. It is, however, a very desirable dairy feed, and its use for this purpose is growing rapidly.

The molasses contains about 75 per cent dry matter, which is largely sugar. The value of the molasses is about three-fourths that of wheat or barley. It is very digestible, and, being high in carbohydrates, should be especially suitable as a supplement to the protein roughages of the west. The large amount of alkali, however, makes it unpalatable, and, if fed in large amounts, it is strongly purgative. Of course the stickiness makes the feed very unhandy. For these reasons it is usually mixed with some other feed. Some places the cattle feeders who buy the wet pulp also buy the molasses and feed it by sprinkling it over cut alfalfa hay. The manufacturers also commonly mix the molasses with either ground alfalfa or dried pulp, dry and marketed in this form. This makes a good feed if it can be obtained at a satisfactory price and if one is sure of what he is getting. Manufacturers often mix low-grade products in such molasses feeds, and even where not adulterated the alfalfa hay is commonly of the lowest quality.

On the whole, the beet sugar byproducts make very satisfactory stock feed. They are usually safe and nutritious, and well worth the consideration of the stockman who is obliged to purchase feed. The manufacturers must sell to the stockmen, but some of them depend upon clever and expensive salesmanship to dispose of their output at more than it is really worth, while others try to make a price that will sell their goods with the minimum cost of advertising and salesmanship.

FOR SALE OR TRADE

1 Weyerhaeuser silo, 10x26, new, all painted, in first-class order. Will sell or trade, reasonable.
H. C. RUTLEDGE, Littlerock, Wash.

Veterinary

Dr. S. B. Nelson

1. I have a mare that raises good colts and is a fine, well-built animal herself, but she is cold shouldered. After she is worked a few minutes she is as good a pulling horse as a person would wish to own. Will her colts be affected the same way. 2. I have a cow that I want to dry up for beef. She has a large udder that will not dry up. She was fresh in September and I dried her up in six weeks. She did not give over a gallon of milk at freshening. Is there anything I can do to reduce her udder? F. F. P.
Cape Horn, Wash.

1. No, her colts will not necessarily be affected the same way especially if they are never worked alongside of her and especially if they are broken by a very careful driver.

2. Regarding your cow try applying daily to the udder common camphor ointment. Apply the ointment once daily rubbing it in fairly well. Also for a few days put her on a dry feed. Do not give her any green feed, silage, roots or grain. If necessary give her a handful of epsom salts in a quart of water once daily so that she may not become constipated.

I have a young mare that is crippled. She can not back and when hitched up stands spraddled out behind. She can not get her left hind leg over a wagon tongue. She is not swollen any, but after a hard pull her muscles jerk and she will change from one foot to the other and puts both hind feet as far back as she can. J. A. P.
Mountain Home, Idaho.

I am not able to make a definite diagnosis of the trouble affecting your mare, but I am of the opinion that the trouble is a nervous one of some kind, and as a general treatment I am going to advise you to give the mare one ounce of Fowler's solution of arsenic morning and evening for 30 days. If you notice swellings below the eyes then stop the treatment for a day or two and resume. It is possible that this might help her, although I am not sure.

1. As soon as our cows are turned out of the barn each day they go to a little knoll and eat a considerable quantity of the soil there. What is lacking in their food? We are feeding oat and alfalfa hay, oil meal and shorts, also good handful of salt each day. 2. Have a 2-year-old heifer about to freshen that froths at the mouth, often forming a little pool in her feed box. When bringing her from the pasture last fall, a distance of 12 miles, she even passed a little blood with the froth. G. B.
Monroe, Wash.

1. Try adding a spoonful of precipitated calcium phosphate to her feed once daily or once every other day for a while. 2. In regard to the second heifer, you should have her teeth and mouth examined to see if there is some offending object there, such as a sharp, or broken, or split tooth, or some foreign substance lodged between the teeth. The treatment will, of course, depend upon what is found.

B. A. Brooks, Springdale, Wash.: "I am a retired railroad man, settled here on a farm two years ago and at the same time I subscribed for The Washington Farmer, and it has been of so much value to me as a beginner on the farm that I feel it my duty to write and tell you how much I appreciate the instruction I have received from the paper. The best of all is that if we do not receive the instruction we desire in the paper all we have to do is to write and ask you any question we may desire and you will answer it in a way that can be relied upon."

Made by WEYMAN-BRUTON COMPANY, 50 Union Square, New York City

The shape of the egg is no indication of what the sex of the chick will be.

Hatch the chicks by the end of March or first of April for early fall laying.

Select uniform eggs for hatching. They should weigh about two ounces if laid by hens. Pullet eggs may run less.

Do not pay as much attention to the breed as to the strain in buying eggs for hatching, if the purpose is to raise good egglayers.

Eggs may be kept two or three weeks for hatching if kept in a temperature of 40 to 50 degrees, but the fresher they are the better. They should be kept in a cool, dry cellar, and not in the pantry near the stove.

The best eggs for hatching come from flocks that have free range. By proper feeding, good hatching eggs may be secured from flocks confined in limited runs, but those from free range flocks are usually the best. J. D.

Elects Officers.

At the annual meeting of the Washington County (Oregon) Poultry association the following officers were elected for the coming year: W. T. Lethin, president; Walter Roswurm, vice president; G. M. Littlehales, secretary; R. H. Greer, treasurer; A. Bryant, J. Murrow, W. F. Benfer, executive committee.

Premium Poultry Club.

Some of the seventh and eighth grade students of the training school at Albion, Idaho, have been organized into a poultry club with Miss Jackson assisted by Miss Mayer (student teacher) as leaders. The name chosen by the club is Albion's Premium Poultry club; club flower, pansy.

Poultry Science

Takes Place of Plague of Systems

By PAUL E. TRIEM.

Most of us who have fallen victim to recurrent attacks of the chicken fever during the past 20 years have been able to study the gradual evolution of what may be called the "science of getting eggs." There was a time when a chicken was a chicken, and that was all there was to it. If she was a hen or pullet, either she laid eggs or she didn't. If we had a flock of, say 20 alleged layers, we took our net returns in the form of egg checks minus feed bills, with all the fortitude of constitutional fatalists. Perhaps we got one egg; perhaps we got 20. It was all up to the little gods of chance.

Then came the era of "systems." They broke out like measles. These systems for getting eggs, and incidentally from two to ten dollars net profit per feathered head each year, possessed all the potency and charm of mystery and magic. We mastered them, applied them to our flock, fought with the neighbor acres the line fence, who was proselyting for a different system—and eventually we recovered, sadder and wiser chicken men.

Science Intervenes.

And now, after all the turmoil and windy disturbance of these chaotic years, comes the still, small voice of science. It doesn't tell us how to make five or ten dollars net profit on every hen, but it does tell us what we, collectively—the chicken men and women of today—know about getting eggs. No extravagant claims are made. Consider, for instance, this sentence from a recent federal bulletin on "Winter Egg Production":

"The production of eggs in winter from pullets and to some extent from hens," says the author, "can be greatly stimulated by good methods of feeding, housing and handling."

Sounds rather flat after the "five dollars per hen per year" school of literature, doesn't it? But there is this trifling difference in favor of the federal bulletin: There is nothing in it but what is practical, and if its advice is carried out conscientiously and in full "the production of eggs in winter will be stimulated." That is about all there is to it. Fall and winter eggs mean a satisfactory profit.

Among the practical points brought out in this practical little "Circular No. 71" are the following:

Winter quarters should be disinfected and made winter tight before the layers are placed in them. Change the litter, or the surface of the dirt floor. Be sure that three sides of the house are tight, and so eliminate drafts. Fresh air is a foe to dampness, and dry, cold air is perferable to moist, warm air. Cull out all underdeveloped and weakling hens. March and April hatched pullets will be in the best shape for the winter campaign. Make the hens exercise for all whole grain by feeding it in deep litter. Diversity in grain, green food and animal substitutes for the insects of summer is necessary. Beef scrap or a satisfactory substitute is an essential often overlooked by the farmer. Keep the hen house clean in winter. Spray against mites with kerosene at least once a month, and look out for lice. If any of the birds develop colds or other sickness, isolate them. A good remedy for colds is as much potassium permanganate as well remain on top of a dime, in a gallon of water, to be used in place of the regular drinking water.

Judge Not.

In men whom men condemn as ill,
I find so much of goodness still,
In men whom men pronounce divine,
I find so much of sin and blot,
I hesitate to draw the line
Between the two, when God has not.
—Joaquin Miller.

Everywhere in the West, Albers "Progressive" products are a favorite with successful poultry raisers. They find that for a clean, wholesome, nourishing ration, nothing equals Albers Chick Food.

A perfectly-balanced ration of grains, free from grit or shell. Albers "Progressive"-fed chicks feather naturally and are free from stomach disorders. They rapidly develop into healthy, profitable chickens.

When you write to advertisers, be sure to say that you saw their advertisement in this paper.

One reason why some men do not succeed is that they seem to know too much — that is, they divide their thoughts and emotions. If a man would succeed, he should at least appear to know nothing except that which he is doing and its related subjects. Either that, or he must have great powers of concentration, so that, no matter about disturbing influences, the war in Europe, politics or any other subject, he can force his mind on whatever he is doing and hold it there until his work is accomplished.

LIME AND SULPHUR

As to Cost of Making Solution.

To the Editor of The Farmer: In your issue of June 22, 1916, there appears an article by Granville Lowther that a Mr. Congdon of the Yakima valley can make a lime and sulphur solution at $3 per barrel, as against $8 that he had to pay the manufacturer, and judging by that the spray should test 30 degrees baume. As to the first part, I agree with Mr. Congdon that some of the manufacturers are making a very poor article at its best, and perhaps some dealers are diluting it in order to get a better profit, and let the grower pay for the consequences. I have had occasion to test some of the lime and sulphur solution offered for sale in the open market, which was guaranteed to test fully 30 degrees baume, and when I tested it one tested 27 degrees and another, made by a different concern, tested 25 degrees baume. Now, I ask if a grower sprays his trees according to their directions, one part of lime and sulphur solution to from 10 to 12 parts of water for dormant spraying, what will be the results? All his work will be for nothing, and his orchard will be in about the same state as before spraying. Test your spray and see that it will test 30 baume, then dilute with one part of lime and sulphur to 10 parts of water, providing, of course, that your concentrate is manufactured of pure lime and sulphur and no other chemicals added, and I will promise you desired results, providing, of course, you do your part right and spray every limb and twig, including the trunk thoroughly. Now, this is what got me into the spraying manufacturing business. Like Mr. Congdon, I could not get what I wanted. The more I sprayed the worse, apparently, my orchard got. So much so, in fact, that I intended to cut down my trees, and I believe if it had not been for my good wife my farm would have had another name than Aetna orchards. Now, I do not intend to impose on your valuable space, but there is another thing that I would like to mention, as there are many of my customers that are subscribers to The Farmer, and no doubt read the articles of Dr. Lowther, as I do myself and find them interesting, and sometimes I am able to learn something that I did not understand before, as we are never too old to learn. I have made a study of orchard problems for about 28 years, so I am not what you may call a novice. Now, by reading the aforesaid article, there is no doubt in my mind that the consumer thinks he is held up, as it were, if lime and sulphur can be made at $3 per barrel. The manufacturer would in that case make $5 clear profit, and that is, to say the least, worse than highway robbery. At least I would think so. Now let me get down to facts and figures. I have at my desk a farmers' bulletin just received from the department of agriculture of Washington, D. C. It is bulletin No. 650, and anybody can send for it and it will be sent free of charge. In it we read that to make a lime and sulphur solution testing 32 and 34 degrees requires 160 pounds of commercial ground sulphur and 80 pounds stone lime to make 50 gallons of lime and sulphur solution. Now with sulphur at 3 cents per pound, bases and lime at $1.50 per barrel, making the cost of sulphur $4.80 and the lime at 60 cents, making a total of the sulphur and lime $5.40. The barrel will cost about 75 cents. To this must be added shipping, which amounts to about 25 cents per barrel, and fuel consumed and labor, which would be about 50 cents, making a grand total of $6.90. We will say nothing of wear and tear on machinery. By this you will see that it is impossible to make a barrel of lime and sulphur for $3. There must be a mistake somewhere, and I think such articles should not find their way into print, for they are misleading.

B. LEIS.

Beaverton, Ore.

I fully agree with Mr. Leis that nothing should find its way into print that is misleading. Just now it is difficult for me to get at the materials for reply, because I am at El Campo, Texas, away from home, have not access to my former article, can not get the prices of sulphur at the two periods of time implied by Mr. Leis' figures and mine. But may it not be that both statements are correct, and that the difference is in the different circumstances under which the sprays were manufactured? For instance, Mr. Congdon probably bought his sulphur and lime in the latter part of 1915. Mr. Leis is quoting recent prices. I am not where I can verify the difference, but I do know that sulphur within the last year has advanced materially and rapidly, Mr. Leis quotes lime by the barrel and sulphur by the pound. Mr. Congdon doubtless bought by the carload. Mr. Leis quotes barrels at 75 cents each. Mr. Congdon probably used no barrels, for I know he had a large reservoir, from which he could have drawn his spray directly into the spray tank without barreling. Mr. Leis quotes the cost of shipping; but Mr. Congden did not ship, he manufactured for home use.

Now, I do not know whether all these different conditions would make the difference in price or not. But I do know that my informant was our fruit inspector, with whom I went to examine some experiments he was making in sprays and other matters, and who showed me the spray manufacturing plant. I have reason to believe that he thought he was telling me the truth, and I have every motive to be correct in my statements of fact.

G. L.

One-Crop System

Is Opposed by Laws of Nature

By PAUL E. TRIEM.

The history of agriculture is filled with instances of a community which finds one particular product of the soil which it can raise to better advantage than most others, and which, in consequence, gradually becomes a one-crop country. Strawberries, potatoes, lettuce, celery, peas—almost any fruit or vegetable—may form the nucleus of the system; but in the end the results are pretty much the same: Nature apparently overlooks, for years, perhaps, the attempt to pervert her laws, but eventually she puts a stop to the whole vicious system.

Consider the history of a typical "strawberry district," for instance. Early in the development of such community it became apparent that fine berries can be raised and put on the market so as to command a premium. One after another, the farmers in the favored district fall into line, until most of the available land is cropped to berries. The virgin soil is well supplied with humus and is free from strawberry pests, and for several seasons the enthusiasm continues. Growers from older districts predict trouble, and are laughed at. It is a case of sour grapes with them.

Varieties "Run Out."

Then something happens. The yield begins to fall off, and the varieties which have been found best for local requirements are said to be running out. Other varieties are tried, but apparently they are run out to begin with. The truth comes hard, but it comes at last; it is not the plants, but the soil that is exhausted.

Or it may be that another enemy arrives before soil depletion. The vanguard of the hosts of insect and fungus pests may appear in the form of grub or weevil. Things will never be the same after this first break-in of the old system. The weevil, once established in the soil, can, perhaps, be controlled by suitable measures, among the most prominent of which will be rotation of crops. The old, vicious order is broken, in any case, for it will never again be possible to crop the land uninterruptedly, year after year, to berries. A sort of garden of Eden period initiates the culture of many crops, in many new communities, but a time always comes when the farmer must go out into the world of law, the ultimate statement of which is that nature abhors the one-crop system.

Saves Fruit

Cannery for the Spokane Valley

That Spokane valley may have a cannery in the near future seems very probable because of the enthusiasm with which the growers received the proposition as brought before them by W. H. Paulhamus of the Puyallup and Sumner canneries. Mr. Paulhamus and his superintendent, Walter Vary, recently spent three days in the interest of a cannery in Spokane valley. Meetings were held at Green Bluffs, Otis Orchards, Vera, Opportunity, Meadow Lake, Hazelwood and Sunset prairies. Mr. Paulhamus explained the work of the Sumner and Puyallup canneries and the need of such an establishment because of the inability to ship fresh fruit long distances in good condition. Tonnage is already being signed up for strawberries in the Green Bluff district; The Hazelwood and Sunset districts will furnish green beans and strawberries; other districts will furnish fruit and garden products as well. Representatives of the Spokane Chamber of Commerce are cooperating with the growers in following up the campaign for securing tonnage.

The Farm Garden

Article 2

Plan It Early

Vegetables Differ Widely in Conditions Required for Maturing Successfully—Plans Should Be Laid Accordingly.

The garden, whether on the farm or in the city back yard, should be planned as carefully and as far in advance of actual planting time as practicable. Especially is this true if one would have vegetables from it early in the spring and have a continuous succession of "good things to eat" from it throughout the summer and fall.

The Location.

Don't be stingy with your garden plot. If your farm is worth $100 an acre, interest on the investment in half an acre would be $5 if figured at 10 per cent. Therefore, give the vegetables room.

There are many points to be considered in selecting the location.

First, the soil must be good. One can not "gather grapes from thorns," nor spinach and cabbage from rocks or hardpan.

Second, since different vegetables require different soil and different conditions of moisture and temperature, it is not always advisable to confine the garden to one plot. Certain plants must be protected from frost or extreme heat. Others suffer no injury when they are subjected to moderate cold. Others not only can endure, but actually require much warmth. Some require much moisture; others comparatively dry soil. What would a watermelon do in a cold, wet lowland? What would celery do on a dry, hot hillside?

Third, the garden should be protected as much as possible from the March wind and the snow flurry of early spring. Especially is this true of the more tender varieties, which it is desired to bring into use early. Transplanted plants should be guarded against extremes of both heat and cold. It is therefore advisable to select for the garden a location protected by buildings, trees, hedges or even special board fences. Since the early spring protection needed is from cold weather rather than from heat, it is generally advisable to select a slope facing to the south, but in so doing it must not be forgotten that presently the need will be protection from heat rather than from cold.

Local Conditions Vital.

While there are many vegetables that will grow satisfactorily in almost any part of the northwest, it must not be forgotten that many others require conditions that are found only in certain localities. This feature should enter largely into the planning of the garden. There are vegetables that need only a short season, but a warm one. Others grow rapidly and thrive under comparatively cold conditions. Others require a long, uniform season neither hot nor cold.

Roughly speaking, there are three general divisions of vegetables suitable for a cool season. (1) The following are among those which do well and mature in a short, compartively cool season: Peas, spinach, turnips, radishes, kohl-rabi, leaf lettuce and mustard. It is possible, however, in the average locality to carry these vegetables well into the summer by a second planting. (2) Among those which are unable to withstand excessive heat, head lettuce, early cabbage and cauliflower are prominent. It is therefore wise to start these plants in a hotbed or cold frame, having them growing well and ready for transplanting by the time the weather will permit them to grow in the open. (3) There is a third class, consisting of a large number of the most common and useful vegetables, such as onions, beets, parsnips, carrots, kale, salsify (oyster plant), parsley and leek. These vegetables will endure considerable heat if other conditions are entirely favorable, such as moisture and proper cultivation, but they do much better in localities where excessive heat is not experienced.

Warm Weather Vegetables.

Vegetables that do well in warm seasons, that, in fact, require much warm weather and practically total absence of frost, may be divided into two classes: (1) The first class includes that large division of staple garden products such as sweet corn, beans of most varieties (including Lima beans), muskmelons and watermelons, cucumbers, pumpkins and squashes. These vegetables mature in a moderately short season, and can be planted in the open garden. They should not be planted until danger of frost is passed. If planted before the ground is thoroughly warm many of them will not do well, even though a good stand is secured. Especially is this true of the cucumbers. (2) Tomatoes are the king of this second class, which is quite limited. Peppers and eggplant are others. They require both a long season and a warm one, wholly free from frost. Few localities in the northwest possess the climatic requirements to insure success with them if planted in the open. They should therefore always be started in hot or cold frames and be well developed by the time frosts are passed. A locality subject to frosts before late in the fall is entirely unsuited for their production.

This is the second article in the farm garden series now being run in The Farmer. Personal experiences and experimentation by agricultural colleges and university departments are the sources drawn upon.

Pull Stumps At Low Cost

USE our "Climax" stump puller. Automatic ratchet pawl—no springs or traps. Heavy enough and strong enough to pull out largest stumps. Will not roll or tip forward under heavy strain. Low down pull, great strength and leverage. Prices $16.95 to $65.00 f. o. b. factory, Southern Minnesota. Write for catalog—Mailed free.

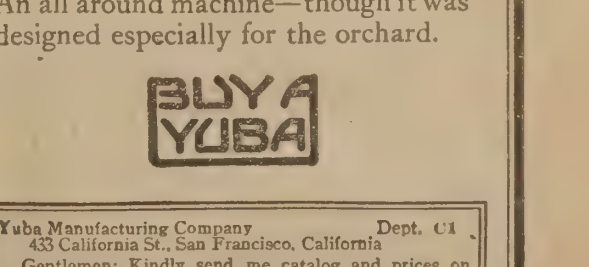
La Crosse HAPPY FARMER Tractors

Model "A" 8-16 H.P. $585.00

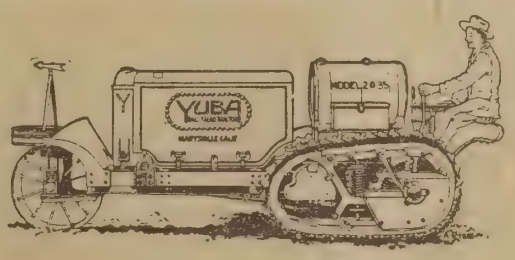
THE EFFICIENT FARMER'S CHOICE

Low in first cost—low in upkeep. Built on simple, practical lines, with only ⅔ the parts used in other tractors. Now "making good" on the farms of owners everywhere. Model "A" 8-16 H. P. Light Weight Tractor, pulls 2 or 3 plows according to soil conditions.



WRITE FOR CATALOG

Model "B" our wonderful *kerosene burner*. Guaranteed drawbar pull 2000 pounds, or 3 14-inch plows. Hyatt Roller Bearings throughout. Handles any belt work. Weight only 3700 lbs. We have a distributor near you for prompt service.



LA CROSSE TRACTOR CO.
Dept. 18, Minneapolis, Minn.

LIVE DEALER AGENTS WANTED

Model "B" 12-24 H.P. $735.00

What will it do for me?

Yuba 20-35

It will plow 15 to 20 acres per shift.

It will disc 35 to 40 acres.

It will haul 20 tons on high speed on a reasonably good road.

It will operate a 32-inch separator.

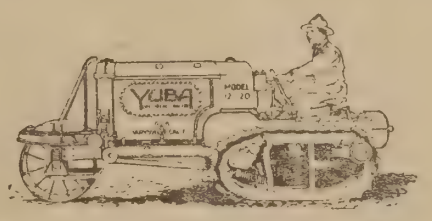
It will pull an independently operated combined harvester with a 20-ft. cut.

It is powerful enough for any job—small enough to go almost anywhere—simple enough for any one to drive.

It is the ideal machine for the wheat farmer, the rice grower, the bean raiser and the contractor.

BUY A YUBA

Which size is best suited for your needs?



Yuba Manufacturing Company

(Formerly The Yuba Construction Company—change in name only)

433 California Street
San Francisco

Factories at Marysville and Benicia, California

What will it do for me?

Yuba 12-20

It plows 10 acres, cultivates 25 acres, and hauls 12 tons per shift.

It will operate a 6-inch pump.

It is narrow enough to go in 7-ft. hop rows, or 7-ft. vineyards.

It is the right design for beet growers who plant in 20-inch rows.

It is the only tractor for the asparagus grower.

The Model 12-20 and the Yuba plow form a one-man outfit—even in the orchard.

An all around machine—though it was designed especially for the orchard.

Disk Alfalfa

Have No Mercy on the Plant Roots

By C. Powers, Deer Park, Wash.

Adams J. Smith, a farmer, living in southern Stevens county, Wash., believes that he has proved conclusively that vigorous tearing up of the soil in alfalfa fields is beneficial to the crop. In an interview on the subject of his own experience Mr. Smith says:

Pulverize Soil.

"I believe I have found the one thing that is needed by alfalfa in this section when the season is unusually dry," said

Adam J. Smith.

Mr. Smith, as we were viewing the thick and dark green mass of the vegetation. "The thing is to pulverize the soil around the roots as much as possible after a cutting. This year after the first cutting I went over that portion of the field with a disk harrow thoroughly in both directions. My son tended the other part of the field, where the alfalfa does not look so well, and he did not use the disk because he was afraid of cutting the roots of the plants and thus injuring them. On this portion I went right ahead, leaving the alfalfa roots to look out for themselves, determined to fully test my theory, feeling that a poor crop is worse than none. You can see the result. That alfalfa would satisfy any one, while the yellow, spindling stuff is not worth raising.

"Many farmers make the mistake of being too careful about the roots of crop plants. The roots, especially of alfalfa, go very deep and they can take care of themselves. Everybody who has studied dry farming methods knows that keeping a dust blanket on the surface helps any cultivable crop materially in time of drouth. I believe that my theory as to this treatment of alfalfa had its inception when I, as a boy on an Iowa farm, put a heavy harrow on a cornfield where the young shoots of corn had just come above the surface. Neighbors looked on with disgust, declaring that I would pull out all the tender plants by the roots. I could see from the start that they were on the wrong track, and that while some of the plants were torn out by the harrow teeth, the loss amounted to little and the whole field was likely to be vastly benefited by the treatment. This proved to be the case, and the next year all the neighbors harrowed the fields of young corn with excellent results.

"In this case it was not the dust blanket that I was after, for the conditions were vastly different, but the results were the same. After a rain the Kansas soil was so badly caked that the young shoots of corn had too much to contend with, and the harrow teeth broke up the clods and thus liberated them. Then, again, the weeds were beginning to get their growth in the fields, and before the corn would be high enough to cultivate they would have such a start as to make much trouble for the farmer. I know that since those boyhood days of mine the farmers of the country have quite generally learned the beneficence of the harrow act at the proper time. It has saved them much labor and added to the value of their corn crop. It was an experiment on my part, but when I thought of it in studying my alfalfa problem I resolved to try a modification of it and watch for the results, which are just what I hoped for. Hereafter I shall raise more alfalfa, for I know now just how to treat the crop to make it grow."

Dishonest Sales

Work Injury to Stock Industry

(Continued from page four.)

tor, who not only acted in the capacity of detective, prosecuting attorney, judge and jury, and the verdict was not in accord with the weight of evidence, which in many instances was twisted to suit the views of the "investigator." Such decisions are not fair, and work to the disadvantage of the breed, and the industry in general—so to sum up, I would say that to protect the entire live stock industry; we need a court made up of representatives of all the live stock associations, who shall act as a board of review, to whom all these controversies can be referred, and who shall recommend final action and punishment.

F. E. DAWLEY.

Fayetteville, N. Y.

INFLATED VALUES.

Tendency for Speculation Great.

The following reply was from H. A. Martin, secretary of the Red Polled Cattle Club of America:

To the Editor: I do not know as I am competent to speak on this question of public sales. As we do not have many public sales of Red Polls. In the first place we never have had but few monied men handling Red Polls, and we have had conditions as presented by the every-day farmer, and in so doing have worked up a private sales trade, which has taken care of all the suprlus they had to offer, and today it is a difficult matter to get up a sale of any size without robbing the breeding herds, as the breeders are all sold out very close. What few sales we have we have tried to have them bona fide sales which so far as I have ever been able to learn they have been clean cut, straightforward sales.

But I do know this, it is hard to keep these sales bona fide, the tendency for speculation is so great and to many inflated values, no matter how obtained appeal as advertising matter of great value. There is no doubt of the great value of such sales for advertising if on the square, but the public is rather skeptical for the reason they are never sure whether they are on the level.

One thing I believe would help in such sales, if all animals were listed by the owners, without any restrictions, and the sales manager in their advertising would so list these animals giving date such animals were listed with him for the particular sale.

The owners not to price such animals at private treaty nor to report them sold, but in answer to any questions about such animals to give the inquirer the exact facts, stating such an animal is listed for public sale, giving date of listing, and information in regard to the public sale said animal is listed to be sold.

I find quite often where animals have been listed for a public sale the owner or party that listed the animals, in reply to a private inquiry, report such an animal as sold, when in fact they are not sold, but booked for some public sale. I see this seems to be the case in this controversy you refer to.

In handling public sales we have to deal with human beings, the fickleness of which is a problem only partially solved, and I feel at a loss to advise, for so many things we think will solve the problem fail.

Thank you for your kind interest in bringing this matter before the people in the fair and intelligent manner you have.

H. A. MARTIN, Secy.

Gotham, Wis.

Takes Possession of Raw Jute.

The Great Britain war office gives notice that it takes possession of all unsold stocks of raw jute in the united kingdom and intends to take possession of any unsold stocks arriving after February 17. All dealings in raw jute on spot, in transit, or in course of shipment prohibited. Dealings in jute for storing in India or for shipment from India direct to allied or neutral countries not prohibited.

Trade Unions in Norway.

Norway has a total trade union membership of 25,000.

To the Washington Farmer: Enclosed find $1.50 and the date on the wrapper of The Washington Farmer showing my time does not expire until December 17, 1917. However, it is your mistake and your treat. Yours for almost four years more of The Washington Farmer. I like it best of any farm paper.

Wauconda, Wash. J. A. SUMMERS.

DELCO-LIGHT

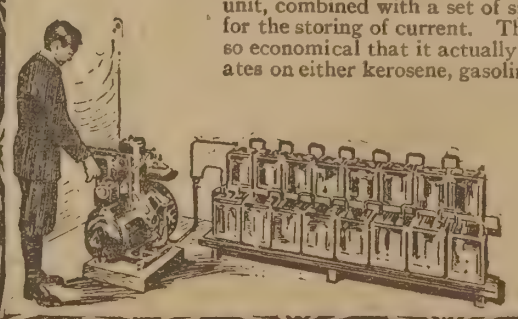
For the first time electric light and power are available to anyone—anywhere.

Heretofore, the benefits of electricity have been confined to those who live in the larger towns and cities.

Now Delco-Light makes electric current universally available.

Delco-Light is today furnishing thousands of farm-houses with brilliant, convenient, safe and economical light.

It is furnishing power to operate pumps, washing machines, churns, cream separators, milking machines, vacuum cleaners, etc.



It is lighting country churches, stores and public halls.

It is furnishing light and power to summer homes and camps, to houseboats and yachts, etc.

It is lighting rural railway stations and construction camps.

It is lighting the camps of United States troops on the Mexican border, and it is disclosing heretofore undreamed-of beauties in the depths of Mammoth Cave, Kentucky.

Altogether, over 15,000 Delco-Light plants are in operation, and Delco-Light offices and service stations are to be found in almost every part of the world.

Delco-Light is a complete electric plant—the engine and dynamo in one compact unit, combined with a set of specially built and wonderfully efficient batteries for the storing of current. The plant is so simple a child can care for it, and so economical that it actually pays for itself in time and labor saved. It operates on either kerosene, gasoline or natural gas.

Essence of the Big Questions for Busy Men and Women

OUR WEEKLY MAGAZINE DEPARTMENT

Stories, Pictures and Home Helps for All the Folks

Bought Ten Acres From Indians

William, George and Joe Butler Came From England in 1887

By H. H. BUSHNELL

"It was in the chill November" that "took" the "North Bank" and rode east along the southern fringe of the state of Washington. The wind blew furiously, and the Columbia had no peace. Under the spite of the wind it even lost its majesty. River and sky were like an irritable giant and his nagging, peevish, giantess wife. The furious gust tore the water to rags, across its surface drifted clouds of spray like dust, and the fretted, angry river snarled back at the leaden clouds.

Over in Oregon, where in milder weather the beautiful falls toss their heads and shake their shinning tresses down over the mountainsides, the hand of winter had plastered them as tightly to the rocks as ever an Italian barber has plastered the locks of some young dandy to his forehead. But winter used cold instead of hair oil and bayrum.

I "detrained" at Skamania station, and walked about a half mile through the blast of the wind to Butler dock. Here William Butler established a

"Mike," William Butler and Joel Butler.

farm years ago, and here he justified his judgment.

William, George and Joe Butler came from Lincolnshire, England, in 1887, landing at Quebec. "I never saw London in my life," said William. "I was born in England and grew up there, but I know naught of London."

They were farm hands and naturally sought farming country in the new world. From Quebec they went to Toronto, thence to the farms of Canada, and by degrees drifted westward and south. I think it was in 1887 they reached Portland, and two of them went to work on the Ladd farm, milking cows and caring for stock generally. Later still William and Joe went up the Columbia and fished. In 1892 they bought 10 acres from the Indians. This was on a sort of island, formed by the river and a slough through which in times of low water two streams meander. Later on they acquired more land from the government.

A neat little home was erected; William Butler married and children were born. A store was built close to the dock; horses, cows, pigs and chickens were produced, and a home orchard grew to maturity. Wonderful crops of root vegetables were produced there. This was due to the fertilizer applied.

Mr. Butler took me down along the slough and showed me the dog salmon coming up to spawn. Wagonloads of these fish crowd their way over the riffles up to the pools and give up their lives that their children may live, according to the race habit of the fish. And wagonloads of the dead salmon the Butlers gathered and used to enrich the soil.

About six years ago he decided to plants walnuts. "There's always a market for walnuts," said he. So he put in a nice little orchard.

"You may say," he said, "that the man who cultivates walnut trees has the right of it. Many told me that walnuts don't need cultivation. When they say that to me I bring them out and show them my trees—the ones I've cultivated and the ones I haven't cultivated. The difference is right there."

When I got to the Butler place William and Joe were conveying some surplus live stock to the dock for shipment. The pigs went in crates without much difficulty, but the Holstein bull—a pretty good bull, too—felt pretty frisky. Finally, they hitched the team to the wagon, tied "Mike" to the rear axle, and he stepped right along, because he had to. Still more obstreperous was a steer, which lay down and bawled all the way to the dock.

After dinner, we sat and talked a while. I asked him about England and farm conditions there. He liked this country far better. "What have they in England better for the working man than we have here?" he asked. "Nothing."

"They build good roads," said Joe.

"Yes," admitted his brother, but that was about all he would admit. He told stories of the low wages and long hours. He drew pictures of opportunities here as compared with England. "Farm laborers," said he, "never eat with the farmer's family in England. They get bread, meat and potatoes, with no variety. Here the workman is treated as a fellow human. He is treated according to the way he works. There is not much chance to get ahead there; here he can."

Speaking about variety in the way of food, I looked across the table where we had eaten. Two kinds of meat there were, and preserves and pickles and cheese—an abundance and a variety seldom seen on city tables.

"In England the farm help were not allowed to ride on anything," he said. I was back there on a visit once, and I told them about the improved farm machinery of America, and they said: 'Bill Butler, he's a proper liar now.' I got some folders and showed them the pictures and made them believe me."

But later he told me that he thought communities should have market booths in the cities, as they did in the old countries, and he thought the country people do not pay enough attention to the appearance of what they have to market. It should have a standard of appearance as well as a standard of quality.

In England, he recalled the flocks of sheep, and he is considering the purchase of a few sheep for his place. He recalled how the English farmer rotated his crops and what excellent yields he secured with sheep on the pastures. He has disposed of a good many of his hogs and is building up a new line with purebred Duroc Jerseys, which he likes pretty well. He thinks they are well adapted to northwest conditions.

The Butlers have a store at Skamania, where Mrs. Butler and Johnny, age 12, look after the business a good part of the time. Miss Lucy Butler attends to the housework at the farm. Mrs. Butler says she hopes they can get rid of the store—she wants to get back home.

The farm home is built for comfort. Some time ago Mr. Butler bought a spring back in the hills, and water is piped across the slough and into the kitchen. There is plenty of wood in the woodshed; there is fish put down in brine; there is pork prepared for winter; there is fruit made ready for the days of nonproduction, and plenty of vegetables. Preparedness—that is the word which describes the Butler farm home. Snug and stout and well stocked for a siege, it stands like a fortress for its inmates, a shelter from the rough weather of the world.

MILLION ACRES.

Land Filed on at Miles City.

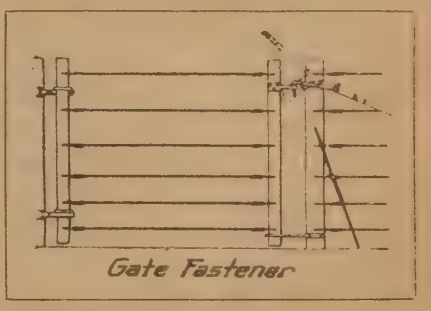
By A. B. KEITH

All records were broken at the land office at Miles City, in eastern Montana, for the month of January, both in the amount of land filed on and in cash receipts. The number of entries for the month of all classes, but mainly under the 640-acre homestead act, was 2289 and the amount of land involved in these entries was nearly 1,000,000 acres, more than enough to constitute a county under the present county division law. The money received was $75,906, the biggest month's business in the history of the office, and one that will probably stand as the record.

If a million acres of grazing land was entered on during the month of January, one month more of such business would exhaust the available grazing land, and while it is not expected that the January rush will be repeated, it is expected that the land will be entered upon at a lively pace.

Chris Maurer recently disposed of his ranch near Point of Rocks in Madison county, 720 acres, for $25,000. Half of the total is under cultivation in hay and grain. George Rebich of Dillon was the purchaser. The deal included the farm implements, buildings, machinery and improvements. The Maurer ranch is ideally located and considered one of the best in the section.

Mints' Coinage.



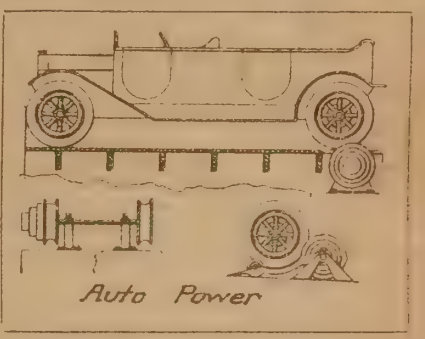
Since the United States mints were established, in 1792, they have coined 733,000,000 dimes, 855,000,000 nickels, 2,345,000,000 cents. Where are they now? It is estimated that probably not more than half these coins are still in existence and that only a small fraction is in active circulation.

Inventions

By C. J. LYNDE, Macdonald College, Quebec.

Wire Gate Fastener.

The end of the flexible gate shown here is held at the bottom by a loop

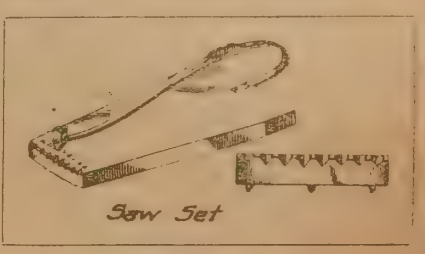


Gate Fastener

and at the top by a hook attached to a long lever. The heavy lever handle holds the gate closed.

Transmission Apparatus.

In one modification of the appartus shown here the rear wheels of the automobile run on two grooved

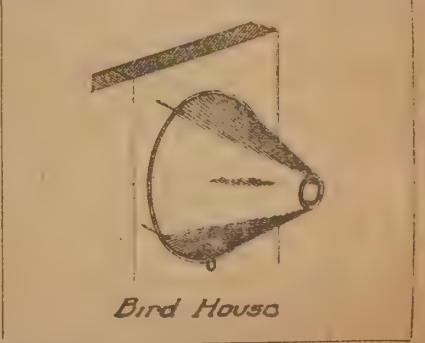


Auto Power

wheels; in the other they run between grooved wheels and idler wheels. The power is taken from a pulley on the axle of the grooved wheels.

Saw Set.

The notches numbered 5, 6, 7, etc., are used to set the teeth of timber saws at the proper angle for different woods: notch 5 is for maple, 6 for beach, 7 for hemlock, 8 for pine, 9 for



Saw Set

spruce, 10 for basswood, 11 for a hand saw, and 12 for oak. The operator places each tooth in turn in the proper notch; then places the setting tool on the tooth and strikes it with a hammer.

Bird Houses.

Boys and girls who intend to set out bird houses this spring should do so at once, because the birds begin

Bird House

looking for suitable places as soon as they arrive. The house shown here is simple and good; it sheds the rain and provides excellent drainage.

Desert Roads.

A plank road in portable parts is being laid in the California deserts for economy and convenience.

Contests Bare Queer Things

Show What You Know and Win Some Money

By the Contest Editor

A freight brakeman started on an eastbound freight train from Pullman, Washington, to Moscow, Idaho. The train was a mile long. He walked the whole length of the train, arriving at the front end just as it pulled into Moscow. The distance between the two cities is ten miles, and the train was going twenty miles an hour. How far did the brakeman travel and at what speed?

Send your answer to the above problem to Figure Editor, Review Building, Spokane. The twelve best answers will be published in The Farmer of April 14.

Answers Peggy in Rhyme.

Poetic expression was given in the Farmer February 15 to the distraction of a subscriber at Forest Grove, Ore., caused by her efforts to solve the figure problem. The subscriber signed herself "Peggy." A more optimistic view is taken of the same problem by "Elizabeth" of Roberts, Idaho, who writes:

In regard to Peg's dismay, I will try, without delay, to tell her of my success, for I feel that I am blessed.

At first I said, "It can't be done," but at last I found it fun.

Why, the twos they came right down, and the threes followed like a houn'; the fours were really glad, but the fives were rather sad, though they followed right in line while the sixes skipped behind; the sevens, they were just the thing, tall and stately and of course quite proud, while the eights said with a swing, "We will follow with the crowd." "We will, too," replied the nines, "and we will have some fun."

So now I say, "It can be done.' Of course I don't say I have hit it right, but I still hope with all my might.

ELIZABETH.

The figure contest closes on March 17, leaving only one week to compete for the $275 prize and 31 other prizes to be awarded to the winners

Bible Twisted, Distorted.

Farm folks are just like other folks, contrary to the impressions of our city bred friends, who try to tell the farmer how to farm. They are interested in other questions besides how to make cows give cream instead of skim milk, as is emphasized by the interest awakened by question No. 9 in the Farm Information Contest, "In what year was the edition of the Bible known as the 'Vinegar Bible' published?"

In centering attention on this rather curious question many interesting facts have been revealed as to the history of the Bible. This great book is shown to have had its ups and downs, and to have been the victim of the whims of the wag, the jokesmith, the heretic and the blundering proofreader.

The "Vinegar Bible," so called, is an edition of the Bible for which both the printer and the proofreader, or both, must be made the "goat." This queer appellation came from presumably a typographical error in the title over Luke xx., in which the "Parable of the Vineyard" read, "Parable of the Vinegar." The error is laid up against the Clarendon Press, Oxford.

There have been numerous freak editions of the Bible known variously as "He-Bible," "She-Bible," "Breeches Bible," "Bug Bible," "Ears-to-Ears Bible," "Murderers' Bible," "Printer's Bible," "Rebekah's-camels Bible," "Thumb Bible," "Wifehater Bible," and "Wicked Bible."

The "He-Bible" may indicate that as early as 1611 the controversy over equal rights between men and women was beginning to materialize. The "He-Bible" was the first edition of the King James Bible, having a certain passage (Ruth iii. 15) translated, "He went into the city" instead of "She went into the city," as in subsequent editions.

It may have involved the moot question which will not down even to this day as to whether angels are male or female. Who knows?

Then came the "She Bible" soon after in the same year to correct the "He Bible," the women as usual demanding the last word and having it.

The "Breeches Bible" was the Geneva Bible published in 1560, reading in Genesis iii. 7, "They sewed fig leaves together and made themselves breeches," the "breeches" being substituted for aprons. This particular edition was different from others apparently only in the manner in which it described the events in the Garden of Eden following the raid on the apple orchard.

The "Bug Bible" published in 1551 read in Psalms xci. 5, "So that thou shalt not need to be afraid for any bugges (terrors) by night."

The "Ears-to-Ears Bible" which came out in 1810 is so characterized by reason of an error which looks very much like the work of some bloomin' Englishman. In Matthew xiii. 43 it read, "Who hath ears to ear (hear), let him hear."

The "Printer's Bible," published about 1702, was an atrocious libel on the printer's craft, reading in Psalms cxix. 161, "Printers (princes) have persecuted me without cause," expressing quite aptly the emotions of the latter day editor when he picks up his own paper and discovers that the printer by the omission of the little word "not" has turned his perfectly well intentioned defense of some maligned brother into the most direct charge of criminality.

"The "Rebekah's-camels Bible," which appeared in 1823, read in Genesis xxiv. 61, "And Rebekah arose and her camels (damsels)."

"Murderer's Bible" came out about 1801, reading in Jude 16, "These are murderers," meaning murmurers. The "Thumb Bible" was an Aberdeen edition of 1607, about the size of the thumb, one inch square and a half inch thick. The "Wifehater Bible" was the scriptural sensation of 1810, reading in Luke xiv. 26, "If any man come to me and hate not his father * * * yea, and his own wife also."

The worst of all, doubtless, was the "Wicked Bible," in which the word "not" was omitted from the seventh commandment.

Thousands of readers of the Farmer are following the questions in the Farm Information contest, announcement of which is carried this week on page 9, and many have ordered our Contestant's Helpful Outfit which is included with every new, renewal or extension subscription to the Oregon Farmer, Washington Farmer or Idaho Farmer, except those subscriptions which are entered in the Figure Contest.

Farm Machinery

Why Have the Prices Increased?

A letter to the Farmer from G. A. Ranney, secretary and treasurer of the International Harvester company, under Chicago date of February 19 says:

"The article in your issue of December 7, 1916, intimating that a trust is 'advancing prices of farm machinery' has just come to our attention. We think you should be advised that the Chicago dispatch on which the article is based was grossly incorrect, and that the coupling with it of our Spokane representative's statement about certain increases of prices for this company's products is calculated both to mislead your readers and injure us.

"The 'conference' referred to was of thresher manufacturers alone, not makers of general farm machinery. We were neither represented nor interested in that conference in any way, and know nothing of its purpose or action.

"This company makes its prices without consulting its competitors, and such increases in the prices of its products as have been announced have been due to increases in raw material and labor costs."

Fur-Bearing Animals.

The British commercial attache at Petrograd reports the publication of an imperial decree dated November 7, 1916, empowering the Russian minister of agriculture to create on crown lands reserve areas for the preservation and breeding of fur-bearing animals and of birds. The decree applies especially to the preservation of sables in Siberia.

WHAT EVERY FARMER WANTS

Cheap and Efficient Transportation His Great Need—How It Can Best Be Assured.

THE present situation of the railroads presents two alternatives, efficient federal regulation or federal ownership.

The experience of other countries proves conclusively that government ownership of railroads is more costly and less efficient than the system of private ownership in this country. The railroads of the United States have the lowest freight rates, the smallest capitalization per mile, the highest operating efficiency and pay the highest wages of any railroads in the world.

High Rates on Government Roads

The charge for hauling a ton of freight one mile on the government-owned roads of various countries and on the privately owned roads of the United States is shown in the following table:

	Average Freight rate per ton mile
Germany (Gov't Rys.)	1.24 cent
France "	1.30 cent
Australia	
New South Wales "	1.59 cent
South Australia "	1.15 cent
Switzerland "	2.63 cent
Canada (Private ownership)	.76 cent
United States (Private ownership)	.73 cent

No railway system under government ownership can show a record for cheapness and service approaching that of American railroads under private ownership. What the railroad situation needs is the adoption of a system of national regulation that will encourage initiative and investment and enable the carriers to meet the growing requirements of American business.

Keep Railroads Out of Politics and Politics Out of the Railroads

It is to the interest of the railroads and the interest of the whole country that the railroads keep out of politics and that politics be kept out of their management.

Government ownership under our political system would make the control of the railroads a partisan issue at every election. It would bring political and economic disaster.

No man in the country stands to lose more by the adoption of a political system of railroad management than the farmer. None will profit more from efficient national regulation that will do away with the present conflicts and waste of local control and enable the railroads to make the extensions and improvements necessary to keep pace with the business progress of the nation.

We invite discussion of this question, and shall be glad to answer questions and supply information on request.

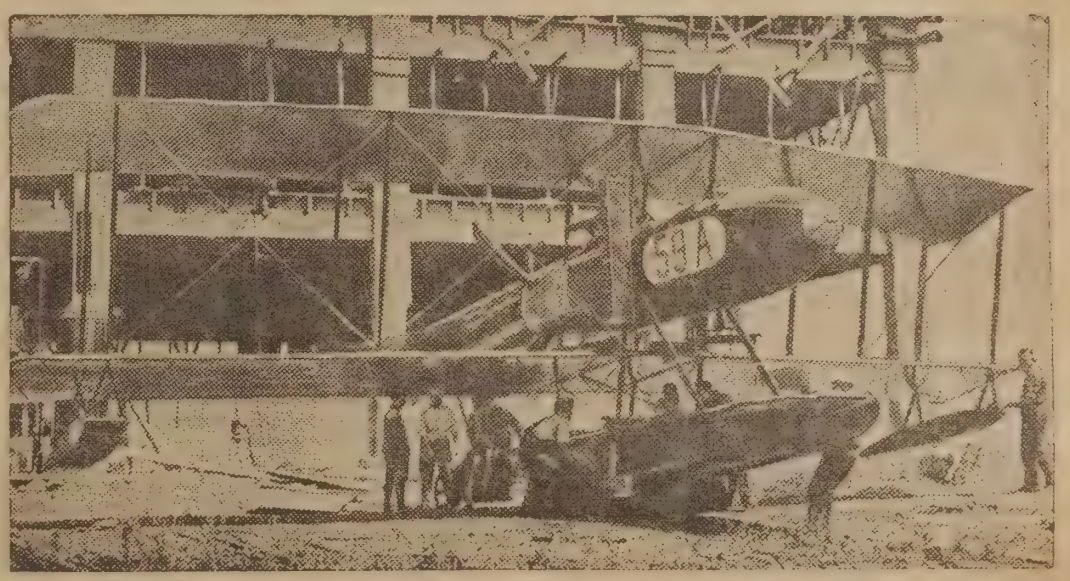
All the World's a Stage, and All the Men and Women Merely Players

Picturesque Sight Common in England

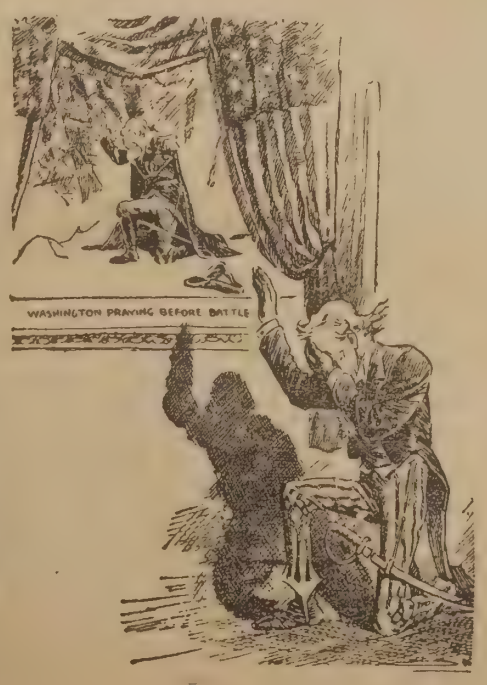
In the above photograph is shown three of the members of the British Women's Land league in the costumes which they wear during their daily labors on a large farm near Evesham, England. Linen smocks, riding trousers and high boots, capped by wide-brimmed felt hats, make the farmer girls of Britain a picturesque addition to the scenery of the English countryside.

Woman Leads Food Rioters



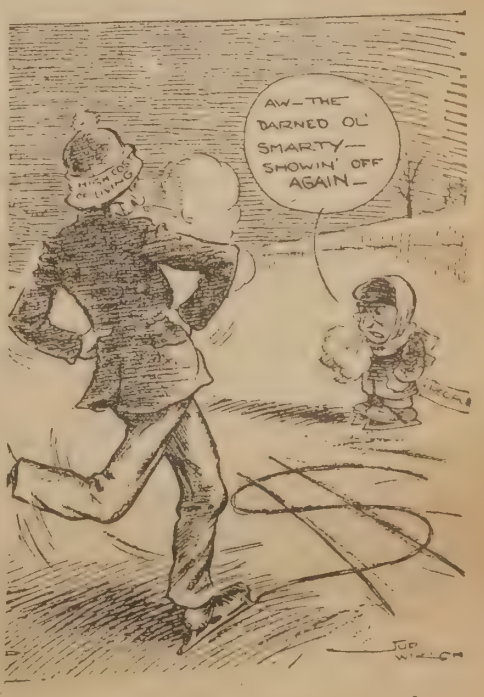
"Sweet Marie" Ganz, indicated in the photograph by the arrow, was the leader of the East Side women who stormed the New York city hall demanding food and relief from the excessive food prices. She is a former I. W. W. worker. She was arrested and found guilty of disorderly conduct, but was released under suspended sentence. "Sweet Marie" was photographed outside the New York city hall surrounded by her followers whom the police were endeavoring to disperse.

Guarding Great New York Bridges



Naval militiamen line the roadways and approaches of the Brooklyn, Manhattan, Williamsburg, Queensboro, Hell Gate and other bridges from New York to Long Island, while others guard the bases of the bridges from possible attack from the water. Tugs equipped with light caliber guns patrol the water and halt any craft approaching close enough to do any harm to the bases, the destruction of any one of which would send the giant structure crashing into the river almost 200 feet below, together with its vast burden of trolley cars, elevated railroad trains, foot passengers, automobiles and trucks.

Speedy and Powerful Navy Air Scout



Above is shown a photograph of the new 300-horsepower navy seaplane which has been built for the United States navy at New London, Conn. It is as speedy and as powerful as any of those used by the foreign governments and is the first of the new giant air fleet to be delivered to the navy.

WHEN KNIGHTHOOD WAS IN FLOWER

or, the Love Story of Charles Brandon and Mary Tudor, the King's Sister, and Happening in the Reign of His August Majesty, King Henry the Eighth.

By EDWIN CASKODEN (Charles Major).

Copyright, 1898, The Bobbs-Merril Co.

SYNOPSIS.

Charles Brandon, who has neither wealth nor title, wins distinction for having defeated the heretofore unconquerable duelist, Judson. Brandon is installed as one of the captains of the guard of King Henry VIII. Edwin Caskoden (who tells the story) is Master of the Dance at London Court. The two young men become fast friends. Edwin tells Brandon of the willful, but adorable Mary Tudor, who had coaxed her royal brother Henry out of many proposed marriages which had been arranged for Henry's advantage. Edwin confesses that he, like scores of other men, had fallen in love with Mary, but upon Mary's refusal to marry him, he immediately became attracted to the good and beautiful Lady Jane Bolingbroke.

At their first meeting, Mary and Brandon have a tilt, in which Mary comes off second best and acknowledges it. Wondering as to Brandon's social accomplishments, and to settle a wager with Sir Edwin that he could not dance, Mary invites Brandon, Edwin and Jane to her drawing room. To her surprise and Edwin's delight Brandon is perfectly at ease and proves that he knows more about dancing than the Master of the Dance, himself. He teaches the Princess Mary one of the new French dances. At a ball, given by Mary, Brandon makes an enemy of the Duke of Buckingham, the most powerful nobleman in the realm. The evening is spent with the new dance, which greatly pleases the king. Brandon begins to realize that he loves the unattainable Mary, and, what is worse, Mary knows she loves Brandon. A party, including Brandon, spends a few days at Windsor, during which time the king makes several knights. Brandon would have been one of these had not Buckingham poisoned the king's mind against him. In the meantime, the old French king, Louis XII., whose wife, Anne of Brittany, had just died, has asked Mary's hand in marriage.

Brandon avoids Mary for some time, but when next they meet, they declare their love, but agree that they can never belong to each other. Brandon resolves to leave as soon as possible for New Spain.

In the meantime negotiations for Mary's marriage with Louis XIII. became an open secret about the court. Mary, longing to know the outcome of her complicated affairs, persuades Jane to go with her secretly to Grouch, a Jewish fortune teller, who lived in Billingsgate Ward, in the worst part of London. They disguise as orange girls and make the trip, after the more prudent Jane, unbeknown to Mary, asks Edwin to follow them at a distance. This being impossible for Edwin to do, Brandon goes. Shortly after the girls had emerged from Grouch's, they are pursued by four horsemen. Brandon overtakes them and kills two. The other two horsemen attack Brandon from their saddles. Brandon thrusts his sword into the throat of one of the horses and it falls, pinning its rider underneath. His cry brings his companion to his side, which gives Brandon a chance to escape with the girls. During the fray the mask from the face of one of the men falls and Brandon recognizes Buckingham, but does not speak of it to anyone.

Brandon, weak and wounded, is arrested for the murder of two citizens of London. He is taken to Newgate, the most loathesome prison in London at that time.

CHAPTER IX.—(Continued.)

Buckingham had gone to pay his respects to the queen, and on her way back espied Mary waiting for the king in the ante-room, and went to her.

At first she was irritated at the sight of this man, whom she so despised, but a thought came to her that she might make use of him. She knew his power with the citizens and city authorities of London, and also knew, or thought she knew, that a smile from her could accomplish everything with him. She had ample evidence of his infatuation, and she hoped that she could procure Brandon's liberty through Buckingham without revealing her dangerous secret.

Much to the duke's surprise, she smiled upon him and gave a cordial welcome, saying: "My lord, you have been unkind to us of late and have not shown us the light of your countenance. I am glad to see you once more; tell me the news."

"I can not say there is much of interest. I have learned the new dance from Caskoden, if that is news, and hope for a favor at our next ball from the fairest lady in the world."

"And quite welcome," returned Mary, complacently appropriating the title, "and welcome to more than one, I hope, my lord."

This graciousness would have looked suspicious to one with less vanity than Buckingham, but he saw no craft in it. He did see, however, that Mary did not know who had attacked her in Billingsgate, and he felt greatly relieved.

The duke smiled and smirked, and was enchanted at her kindness. They walked down the corridor talking and laughing, Mary awaiting an opportunity to put the important question without exciting suspicion. At last it came, when Buckingham, half inquiringly, expressed his surprise that Mary should be found sitting at the king's door.

"I am waiting to see the king," said she. "Little Caskoden's friend, Brandon, has been arrested for a brawl of some sort over in London, and Sir Edwin and Lady Jane have importuned me to obtain his release, which I have promised to do. Perhaps your grace will allow me to petition you in place of carrying my request to the king. You are quite as powerful as his majesty in London, and I should like to ask you to obtain for Master Brandon his liberty at once. I shall hold myself infinitely obliged, if your lordship will do this for me." She smiled upon him her sweetest smile, and assumed an indifference that would have deceived any one but Buckingham. Upon him, under the circumstances, it was worse than wasted. Buckingham at once consented, and said, that notwithstanding the fact that he did not like Brandon, to oblige her highness, he would undertake to befriend a much more disagreeable person.

"I fear," he said, "it will have to be done secretly—by conniving at his escape rather than by an order for his release. The citizens are greatly aroused over the alarming frequency of such occurrences, and as many of the offenders have lately escaped punishment by reason of court interference, I fear this man Brandon will have to bear the brunt, in the London mind, of all these unpunished crimes. It will be next to impossible to liberate him, except by arranging privately with the keeper for his escape. He could go down into the country wait in seclusion until it is all blown over, or until London has a new victim, and then an order can be made pardoning him, and he can return."

"Pardoning him! What are you talking of, my lord? He has done nothing to be pardoned for. He should be, and shall be, rewarded." Mary spoke impetuously, but caught herself and tried to remedy her blunder. "That is, if I have heard the straight of it. I have been told that the killing was done in the defense of two—women." Think of this poor unconscious girl, so full of grief and trouble, talking thus to Buckingham, who knew so much more about the affair than even she, who had taken so active a part in it.

"Who told you of it?" asked the duke.

Mary saw she had made a mistake, and, after hesitating for a moment, answered: "Sir Edwin Caskoden. He had it from Master Brandon, I suppose." Rather adroit this was, but equidistant from both truth and effectiveness.

"I will go at once to London and arrange for Brandon's escape," said Buckingham, preparing to leave. "But you must not divulge the fact that I do it. It would cost me all the favor I enjoy with the people of London, though I would willingly lose that favor, a thousand times over, for a smile from you."

She gave the smile, and as he left, followed his retiring figure with her eyes, and thought: "After all, he has a kind heart."

She breathed a sigh of relief, too, for she felt she had accomplished Brandon's release and still retained her dangerous secret, the divulging of which, she feared, would harden Henry's heart against her blandishments and strand her upon the throne of France.

But she was not entirely satisfied with the arrangement. She knew that her obligation to Brandon was such as to demand of her that she should not leave the matter of his release to any other person, much less to an enemy such as Buckingham. Yet the cost of his freedom by a direct act of her own would be so great that she was tempted to take whatever risk there might be in the way that had opened itself to her. Not that she would not have made the sacrifice willingly, or would not have told Henry all if that were the only chance to save Brandon's life, but the other way, the one she had taken by Buckingham's help, seemed safe, and, though not entirely satisfying, she could not see how it could miscarry. Buckingham was notably jealous of his knightly word, and she had unbounded faith in her influence over him. In short, like many another person, she was as wrong as possible just at the time when she thought she was entirely right, and when the cost of a mistake was at its maximum.

She recoiled also from the thought of Brandon's "escape," and it hurt her that he should be a fugitive from the justice that should reward him, yet she quieted these disturbing suggestions with the thought that it would be only for a short time, and Brandon, she knew, would be only too glad to make the sacrifice if it purchased for her freedom from the worse than damnation that lurked in the French marriage.

All this ran quickly through Mary's mind, and brought relief; but it did not cure the uneasy sense, weighing like lead upon her heart, that she should take no chance with this man's life, and should put no further weight of sacrifice upon him, but should go to the king and tell him a straightforward story, let it hurt where it would. With a little meditation, however, came a thought which decided the question and absolutely made everything bright again for her, so great was her capability for distilling light, she would go at once to Windsor with Jane, and would dispatch a note to Brandon, at Newgate, telling him upon his escape to come to her. He might remain in hiding in the neighborhood of Windsor, and she could see him every day. The time had come to Mary when to "see him every day" would turn Plutonian shades into noonday brightness and weave sunbeams out of utter darkness. With Mary, to resolve was to act; so the note was soon dispatched by a page, and one hour later the girls were on their road to Windsor.

Buckingham went to Newgate, expecting to make a virtue, with Mary, out of the necessity imposed by the king's command, in freeing Brandon. He had hoped to induce Brandon to leave London stealthily and immediately, by representing to him the evil consequences of a break between the citizens and the king, liable to grow out of his release, and relied on Brandon's generosity to help him out; but when he found the note which Mary's page had delivered to the keeper of Newgate, he read it and all his plans were changed.

He caused the keeper to send the note to the king, suppressing the fact that he, Buckingham, had any knowledge of it. The duke then at once started to Greenwich, where he arrived and sought the king a few minutes before the time he knew the messenger with Mary's note would come. The king was soon found, and Buckingham, in apparent anger, told him that the city authorities refused to deliver Brandon except upon an order under the king's seal.

Henry and Buckingham were intensely indignant at the conduct of the scurvy burghers, and an immense amount of self-importance was displayed and shamefully wasted. This manifestation was at its highest when the messenger from Newgate arrived with Mary's poor little note as intended by the duke.

The note was handed to Henry who read aloud as follows:

"To Master Charles Brandon:

"Greeting—Soon you will be at liberty; perhaps, ere this is to your hand. Surely would I not leave you long in prison. I go to Windsor at once, there to live in the hope that I may see you speedily. MARY."

"What is this?" cried Henry. 'My sister writing to Brandon? God's death My Lord of Buckingham, the suspicions you whispered in my ear may have some truth. We will let this fellow remain in Newgate, and allow our good people of London to take their own course with him."

Buckingham went to Windsor next day and told Mary that arrangements had been made the night before for Brandon's escape, and that he had heard that Brandon had left for New Spain.

Mary thanked the duke, but had no smiles for any one. Her supply was exhausted.

She remained at Windsor nursing her love for the sake of the very pain it brought her, and dreading the battle for more than life itself which she knew she should soon be called upon to fight.

At times she would fall into one of her old fits of anger because Brandon had not come to see her before he left, but soon the anger melted into tears, and the tears brought a sort of joy when she thought that he had run away from her because he loved her. After Brandon's defense of her in Billingsgate, Mary had begun to see the whole situation differently, and everything was changed. She still saw the same great distance between them as before, but with this difference, she was looking up now. Before that event he had been plain Charles Brandon, and she the Princess Mary. No mere mortal, thought she, could be so brave and strong and generous and wise; and above all, no mere mortal could vanquish odds of four to one. In the night she would lie on Jane's arm, and amid smothered sobs, would softly talk of her lover, and praise his beauty and perfections, and pour her pathetic little tale over and over again into Jane's receptive ear and warm responsive heart; and Jane answered with soft little kisses that would have consoled Niobe herself. Then Mary would tell how the doors of her life, at the ripe age of 18, were closed forever and forever, and that her few remaining years would be but years of waiting for the end. At other times she would brighten, and repeat what Brandon had told her about New Spain; how fortune's door was open there to those who chose to come, and how he, the best and bravest of them all, would surely win glory and fortune, and then return to buy her from her brother Henry with millions of pounds of yellow gold. Ah, she would wait! She would wait! Like Bayard she placed her ransom at a high figure, and honestly thought herself worth it. And so she was—to Brandon, or rather had been. But at this particular time the market was down, as you will shortly hear.

So Mary remained at Windsor and grieved and wept and dreamed, and longed that she might see across the miles of billowy ocean to her love! her love! her love! Meanwhile Brandon had his trial in secret down in London, and had been condemned to be hanged, drawn and quartered for having saved to her more than life itself.

Put not your trust in princesses.

CHAPTER X.

Such was the state of affairs when I returned from France.

How I hated myself because I had not faced the king's displeasure and had not refused to go until Brandon was safely out of his trouble. It was hard for me to believe that I had left such a matter to two foolish girls, one of them as changeable as the wind and the other completely under her control. I could but think of the difference between myself and Brandon, and well knew, had I been in his place, he would have liberated me or stormed the very walls of London single-handed and alone.

When I learned that Brandon had been in that dungeon all that long month, I felt that it would surely kill him, and my self-accusation was so strong and bitter, and my mental pain so great, that I resolved if my friend died, either by disease contracted in the dungeon or by execution of his sentence, that I would kill myself. But that is a matter much easier sincerely to resolve upon than to execute when the time comes.

Next to myself, I condemned those wretched girls for leaving Brandon to perish—Brandon, to whom they both owed so much. It turned me against all womankind for their selfish sake.

I did not dally this time. I trusted to no Lady Jane or Lady Mary. I determined to go to the king at once and tell him all. I did not care if the wretched Mary and Jane both had to marry the French king, or the devil himself. I did not care if they and all the host of their perfidious sisterhood went to the nether side of the universe, there to remain forever. I would retrieve my fault, in so far as it was retrievable, and save Brandon, who was worth them all put together. I would tell Mary and Jane what I thought of them, and that should end matters between us. I felt as I did toward them not only because of their treatment of Brandon but because they had made me guilty of a grievous fault, for which I should never, so long as I lived, forgive myself. I determined to go to the king, and go I did within five minutes of the time I heard that Brandon was yet in prison.

I found the king sitting alone at public dinner, and, of course, was denied speech with him. I was in no humor to be balked, so I thrust aside the fright, for I was wild with grief, rage

When Knighthood Was in Flower

BY EDWIN CASKODEN

guard, and much to everybody's and despair, and showed it in every feature, rushed to the king and fell upon my knees at his feet.

"Justice, O king!" I cried, and all the courtiers heard. "Justice, O king! for the worst used man and the bravest, truest soul that ever lived and suffered." Here the tears began to stream down my face and my voice choked in my throat. "Charles Brandon, your majesty's one-time friend, lies in a lothsome, rayless dungeon, condemned to death, as your majesty may know, for the killing of two men in Billingsgate ward. I will tell you all: I should be thrust out from the society of decent men for not having told you before I left for France, but I trusted it to another who has proved false. I will tell you all. Your sister, the Lady Mary, and Lady Jane Bolingbroke were returning alone, after dark, from a visit to the soothsayer Grouche, of whom your majesty has heard. I had been notified of the Lady Mary's intended visit to him, although she had enjoined absolute secrecy upon my informant. I could not go, being detained upon your majesty's service—it was the night of the ball to the ambassadors—and I asked Brandon to follow them, which he did, without the knowledge of the princess. Upon returning, the ladies were attacked by four ruffians, and would have met with worse than death had not the bravest heart and the best sword in England defended them victoriously against such fearful odds. He left them at Bridewell without hurt or injury, though covered with wounds himself. This man is condemned to be hanged, drawn and quartered, but I know not your majesty's heart if he be not at once reprieved and richly rewarded. Think, my king, he saved the royal honor of your sister, who is so dear to you, and has suffered so terribly for his loyalty and bravery. The day I left so hurriedly for France the Lady Mary promised she would tell you all and liberate this man who had so nobly served her; but she is a woman and born to betray.

The king laughed a little at my vehemence.

"What is this you are telling me, Sir Edwin? I know of Brandon's death sentence, but as much as I regret it, I can not interfere with the justice of our good people of London for the murder of two knights on the streets. If Brandon committed such a crime, and, I understand he does not deny it, I can not help him, however much I should like to do so. But this nonsense about my sister! It can not be true. It must be trumped up out of your love in order to save your friend. Have a care, good master, how you say such a thing. If it were true, would not Brandon have told it at his trial?"

"It is as true as that God lives, my king! If the Lady Mary and Lady Jane do not bear me out in every word I have said, let my life pay the forfeit. He would not tell of the great reason for killing the men, fearing to compromise the honor of those whom he had saved, for, as your majesty is aware, persons sometimes go to Grouche's for purposes other than to listen to his soothsaying. Not in this case, God knows, but there are slanderous tongues, and Brandon was willing to die with closed lips, rather than set them wagging against one so dear to you. It seems that these ladies, who owe so much to him, are also willing that he should die rather than themselves bear the consequences of their own folly. Do not delay, I beseech you majesty. Eat not another morsel, I pray you, until this brave man, who has so truly served you, be taken from his prison and freed from his sentence of death. Come, come, my king! this moment, and all that I have, my wealth, my life, my honor, are yours for all time."

The king remained a moment in thought with knife in hand.

"Caskoden, I have never detected you in a lie in all these years I have known you; you are not very large in body, but your honor is great enough to stock a Goliath. I believe you are telling the truth. I will go at once to liberate Brandon; and that little hussy, my sister, shall go to France and enjoy life as best she can with her old beauty, King Louis. I know of no greater punishment to inflict upon her. This determines me; she shall coax me out of it no longer. Sir Thomas Brandon, have my horses ready, and I will go to the lord mayor, then to my lord bishop of Lincoln and arrange to close this French treaty at once. Let everybody know that the Princess Mary will, within the month, be queen of France." This was said to the courtiers, and was all over London before night.

I followed closely in the wake of the king, though uninvited, for I had determined to trust no one, not even his majesty, until Brandon should be free. Henry had said he would go first to the lord mayor and then to Wolsey, but after we crossed the bridge he passed down Lower Thames street and turned up Fish street hill into Grace Church street on toward Bishopgate. He said he would stop at Mistress Cornwallis's and have a pudding; and then on to Wolsey, who at that time lodged in a house near the wall beyond Bishopgate.

I well knew that if the king once reached Wolsey's, it would be wine and quoits and other games, interspersed now and then with a little blustering talk on statecraft, for the rest of the day. Then the good bishop would have in a few pretty London women and a dance would follow with wine and cards and dice, and Henry would spend the night at Wolsey's, and Brandon lie another night in the mire of his Newgate dungeon.

These were bold words, but I did not care one jittle farthing whether they pleased him or not. The king stared at me and said:

"Caskoden, you are a perfect fiste at my heels. But you are right; I had forgotten my errand. You disturbed my dinner, and my stomach called

"I rode up to the king and with uncovered head addressed him."

loudly for one of Mistress Cornwallis' puddings; but yau are right to stick to me. What a friend you are in case of need. Would I had one like you."

"Your majesty has two of whom I know; one riding humbly by your royal side, and the other lying in the worst dungeon in christendom."

With this the king wheeled about and started west toward Guildhall.

Oh, how I hated Henry for that cold blooded, selfish forgetfulness worse than crime; and how I hoped the Blessed Virgin would forget him in time to come, and leave his soul an extra thousand years in purging flames, just to show him how it goes to be forgotten—in hell.

To the lord mayor we accordingly went without further delay. He was only too glad to liberate Brandon when he heard my story, which the king had ordered me to repeat. The only hesitancy was from a doubt of its truth.

The lord mayor was kind enough to say that he felt little doubt of my word, but that friendship would often drive a man to any extremity, even falsehood, to save a friend.

Then I offered to go into custody myself and pay the penalty, death, for helping a convicted felon to escape, if I told not the truth, to be confirmed or denied by the princess and her first lady in waiting. I knew Jane and was willing to risk her truthfulness without a doubt—it was so pronounced as to be troublesome at times—and as to Mary—well, I had no doubt of her either. If she would but stop to think out the right she was sure to do it.

I have often wondered how much of the general fund of evil in this world comes from thoughtlessnes. Cultivate thought and you make virtue—I believe. But this is no time to philosophize.

My offer was satisfactory, for what more can a man do than pledge his life for his friend? We have scripture for that, or something like it.

The lord mayor did not require my proffered pledge, but readily consented that the king should write an order for Brandon's pardon and release. This was done at once, and we, that is, I, together with a sheriff's sergeant and his four yeomen, hastened to Newgate, while Henry went over to Wolsey's to settle Mary's fate.

Brandon was brought up with chains and manacles at his ankles and wrists. When he entered the room and saw me, he exclaimed: "Oh! Caskoden, is that you? I thought they had brought me up to hang me, and was glad for the change; but I suppose you would not come to help at that, even if you have left me here to rot; God only knows how long; I have forgotten."

I could not restrain the tears at sight of him.

"Your words are more than just," I said; and, being anxious that he should know at once that my fault had not been so great as it looked, continued hurriedly: "The king sent me to France upon an hour's notice, the day after your arrest. I know only too well I should not have gone without seeing you out of this, but you had enjoined silence upon me, and—and I trusted to the promises of another."

"I thought as much. You are in no way to blame, my friend; all I ask is that you never mention the subject again."

"My friend!" Ah! the words were dear to me as words of love from a sweetheart's lips.

I hardly recognized him, he was so frightfully covered with filth and dirt and creeping things. His hair and beard were unkempt and matted, and his eyes and cheeks were lusterless and sunken; but I will describe him no further. Suffering had well-night done its work, and nothing but the hardihood gathered in his years of camp life and war could have saved him from death. I bathed and reclothed him as well as I could at Newgate, and then took him home to Greenwich in a horse litter, where my man and I thoroughly washed, dressed and sheared the poor fellow and put him to bed.

I resolved to raise heaven and earth, and the other place, too, if necessary, before this should happen. So I rode boldly up to the king, and with uncovered head addressed him: "Your majesty gave me your royal word that you would go to the lord mayor first, and this is the road to my lord bishop of London. In all the years I have known your majesty, both as gallant prince and puissant king, this is the first request I ever proffered, and now I only ask of you to save your own noble honor, and do your duty as man and king."

"Ah! this bed is a foretaste of paradise," he said, as he lay upon the mattress.

It was a pitiful sight, and I could hardly refrain from tears. I sent my man to fetch a certain Moor, a learned scholar, though a hated foreigner, who lived just off Cheap and sold small arms, and very soon he was with us. Brandon and I both knew him well, and admired his learning and gentleness, and loved him for his sweet philosophy of life, the leaven of which was charity—a modest little plant too often overshadowed by the rank growth of pompous dogmatism.

The Moor was learned in the healing potions of the east, and insisted, privately, of course, that all the shrines and relics in christendom put together could not cure an ache in a baby's little finger. This, perhaps, was going too far, for there are some relics that have undoubted potency, but in cases where human agency can cure, the people of the east are unquestionably far in advance of us in knowledge of remedies. The Moor at once gave Brandon a soothing drink, which soon put him into a sweet sleep. He then bathed him as he slept, with some strengthening lotion, made certain learned signs, and spoke a few cabalistic words, and, sure enough, so strong were the healing remedies and incantations that the next morning Brandon was another man, though very far from well and strong. The Moor recommended nutritious foods, such as roast beef and generous wine, and, although this advice was contrary to the general belief, which is, with apparent reason, that the evil spirit of disease should be starved and driven out, yet so great was our faith in him that we followed his directions, and in a few days Brandon had almost regained his old-time strength.

I will ask you to go back with me for a moment.

During the week, between Brandon's interview with Mary in the anteroom of the king's bed chamber and the tragedy at Billingsgate, he and I had many conversations about the extraordinary situation in which he found himself.

At one time, I remember, he said: "I was safe enough before that afternoon. I believe I could have gone away and forgotten her eventually, but our mutual avowal seems to have dazed me and paralyzed every power for effort. I sometimes feel helpless, and, although I have succeeded in keeping away from her since then, often find myself wavering in my determination to leave England. That was what I feared if I allowed the matter to go to the point of being sure of her love. I only wanted it before, and very easily made myself believe it was impossible, and not for me. But now that I know she loves me it is like holding my breath to live without her. I feel every instant that I can hold it no longer. I know only too well that if I but see her face once more I shall breathe. She is the very breath of life for me. She is mine by the gift of God. Curses upon those who keep us apart." Then, musingly and half interrgatively: "She certainly does love me. She could not have treated me as she did unless her love was so strong that she could not resist it."

"Let no doubt of that trouble you," I answered. "A woman like Mary can not treat two men as she treated you. Many a woman may love, or think she loves many times, but there is only one man who receives the full measure of her best. Other women, again, have nothing to give but their best, and when they have once given that, they have given all. Unless I have known her in vain, Mary, with all her faults, is such a woman. Again I say, let no doubt of that trouble you."

Brandon answered with a sad little smile from the midst of his reverie. "It is really not so much the doubt as the certainty of it that troubles me." Then, starting to his feet: "If I thought she had lied to me; if I thought she could wantonly lead me on to suffer so for her, I would kill her, so help me God."

"Do not think that. Whatever her faults, and she has enough, there is no man on earth for her but you. Her love has come to her through a struggle against it, because it was her master. That is the strongest and best, in fact the only, love; worth all the self-made passions in the world."

"Yes, I believe it. I know she has faults; even my partiality can not blind me to them, but she is as pure and chaste as a child, and as gentle, strong and true as—as—a woman. I can put it no stronger. She has these, her redeeming virtues, along with her beauty, from her plebian grandmother, Elizabeth Woodville, who, with them, won a royal husband and elevated herself to the throne beside the chivalrous Edward. This sweet plebian heritage bubbles up in the heart of Mary, and will not down, but neutralizes the royal poison in her veins and makes a goddess of her." Then with a sigh: "But if her faults were a thousand times as many, and if each fault were a thousand times as great, her beauty would atone for all. Such beauty as hers can afford to have faults. Look at Helen and Cleopatra, and Agnes Sorel. Did their faults make them less attractive? Beauty covereth more sins than charity—and maketh more grief than pestilence."

After his month in Newgate with the hangman's noose about his neck, all because of Mary's cruel neglect, I wondered if her beauty would so easily atone for her faults. I may as well tell you that he changed his mind concerning this particular doctrine of atonement.

(To be continued in the next issue.)

Cancealing His Identity.

Yon Yonson, a citizen of a Wisconsin town, rushed into the village store one night just before closing time. Yon was hatless, coatless and breathless, and as he dashed in he dropped on his knees and begged the storekeeper: "Carl, Carl, hide me, hide me! The sheriff's after me!"

"I've no place to hide you here, Yon," answered the storekeeper.

"Yon moost, you moost!" screamed Yon.

"Crawl into that gunnysack then."

He was no more than hidden when in ran the sheriff.

"Seen Yon?" he questioned.

"Don't see him here," replied the other, truthfully.

But the sheriff wasn't satisfied and he went nosing around. Soon he spotted the gunnysack.

"What's in here?"

"Oh, just some old harnesses and sleighbells."

The sheriff gave the sack an awful kick.

"Yingle, yingle, yingle," moaned Yon.

Well Named.

"What's your dog's name, sonny?"

"Ginger."

"Does Ginger bite?"

"Naw! Ginger snaps."—Boston Transcript.

Kitchen

Of More Importance Than Parlor?

By LAURA PEARSON FELTON.

One day last summer I was invited to spend the afternoon at the home of one of my country friends. This friend of mine lives on a large farm and has the wherewith to buy all the necessities of life and a few of the luxuries.

When I called I was ushered into the front room of the house, or what proved to be the parlor. The furniture was very elegant, the couch leather upholstered, as were the chairs. The rug was heavy and expensive, although not made for service. The pillows, carefully placed on the couch, plainly were not intended to lay one's head on. They had that "just so" appearance, the same as the other furnishings of the unattractive room. The air was heavy with the odor of moth balls.

My friend very proudly ushered me into this sanctuary of hers and when she had laid my hat away she sat gingerly on the edge of one of the fancy chairs and presently excused herself for a moment to attend to a pie she had in the oven for supper.

I sat for a few moments looking about at the signs of prosperity, but lack of comfort, then followed the direction my friend had taken.

When I reached the kitchen I was given a surprise. Here there was no sign of prosperity. The stove was old, the table had a worn oil cloth on it and the pots and pans being used were so battered they were positively unsanitary.

My friend had lost her air of proud possession here and was just plain Mollie of old times. She was profuse in apologies for the bare kitchen floor and the worn oil cloth—"just hadn't gotten around to buy new," she said. When I asked her if she didn't think a piece of zinc would be more serviceable as a table cover, she was quite surprised and said: "But the oil cloth is so much cheaper."

I tried to make her see that in the long run the zinc was much cheaper and by all odds more desirable. All the time I could not keep from comparing the ragged oil cloth and the worn, bare floor with the marble topped table and the elegant rug in the parlor.

This little, hard-working woman spent the better part of from 8 to 12 hours a day in her kitchen, and perhaps that many hours a month in her parlor. In the parlor were soft cushions and easy chairs. In the kitchen so much unnecessary work was caused by the lack of convenient kitchen furnishings that the owner of the parlor finery seldom had time to rest in the easy chairs or to enjoy the soft rug. Anyway, those parlor things were not bought for use—merely for show.

How much more sensible if the little country friend had taken the money and furnished her kitchen, first with good linoleum, then bought one of the substantial cabinets now provided to save steps, and taken a little pains to make the kitchen—her workshop—light and attractive, and then, with what she had left out of the sum she desired to spend, furnished the parlor.

If I had it to do, I would sweep those moth balls out from under the couch, clear away all the fine chairs and fancy cushions and the fantastic rug. Then I would buy a serviceable, attractive rug, good, solid yet comfortable chairs, a restful lounge, Swiss curtains and some real pillows with washable coverings. Then I would make it understood that these things were to be used by any member of my household as long as they showed they appreciated them enough to take care of them.

Besides the things I have enumerated, I would want some simple, carefully selected pictures on the walls, a bookcase filled with wholesome, interesting and instructive books, a plain library table where one could write or read. I would want the farm papers, newspapers and magazines kept there, too. I would want that best room of mine a place to rest in, because I would have the kitchen so arranged that I would have some time to rest.

The Farmer wishes some of you farm women would write and tell just the kind of a kitchen you would like the best. What do you think of the parlor? Have you one?

He sendeth the spring into the valleys, which run among the hills.

They give drink to every beast of the field: the wild asses quench their thirst.

By them shall the fowls of the heaven have their habitation, which sing among the branches.

He watereth the hills from his chambers: the earth is satisfied with the fruit of thy works.

He causeth the grass to grow for the cattle, and herb for the service of man: that he may bring forth food out of the earth.

Housewives

How Uncle Sam Can Help Them

By ELIZABETH QUAKER.

When speaking of our government, we are apt to grow very enthusiastic and feel a natural pride, yet how few derive any benefit from it aside from the general protection it offers.

Uncle Sam is most generous, both with painstaking efforts and money, in his desire to help the farmwives toward greater efficiency. Now, it seems only fair that they should show their appreciation by taking their problems to him. As did my wise neighbor, who found she had quite a surplus of certain vegetables in her garden, one season. All her previous efforts to preserve this sort of goods had met with "flat failure." So she wrote to the agricultural department about it and soon received Farmer's Bulletin No. 359, Canning Vegetables in the Home. Each season since she is able to include several cans of these vegetables among her winter supplies.

"But I have no particular problem," I hear some one say. Well, then how about your hobby? I overheard an energetic housekeeper remark to a group of neighbor women, the other day; 'I'd rather be a good meat cook than anything else."

Perhaps, your pet ambition is to be able to make a perfect loaf of bread, or grow a beautiful flower garden, or are you anxious to earn a little extra spending money by raising herbs? These and almost numberless other topics are treated by scientists and experts in these little pamplets, which the government prints and you may have a copy for the asking if you state which ones you desire and address, Department of Agriculture, Washington, D. C.

If you do not already have Bulletin No. 359 mentioned above, let me advise you to add it to your next list when sending. It is a practical treatise. Being in terms of the everyday farm wife, not assuming that we all have up-to-date canning outfits.

Then there is the extension work carried on through the state agricultural colleges. If you are real ambitious you may go so far as to earn the B. S. degree right in your own home, by means of a correspondence course. The Pullman Agricultural college offers such a course, I believe.

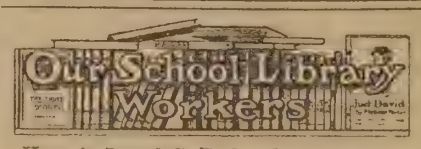
Some eastern universities have issued free reading courses for the farm home for the benefit of those women living within the state.

Heretofore, we might drift along "any old way," but now we must lay hold and pull or get left behind.

Purple Carnations.

A department of the New Jersey agricultural experiment station has recently succeeded in producing purple carnations.

LIKE MOTHER'S TOOLS.



Toys That Are Helpful to Child.

By ALVARA P. WILLIAMS.

A friend with three little children complains that her worst trouble is in making her oldest understand the difference between the child's own property and the grown-ups' things. "She treats everything in the house as if she had a right to use it, and every one else must wait for her," the mother explained. I remember this same tendency on the part of some children in school, and then I used to trace it to homes where the child had nothing it could call its own. You can nearly always tell whether a child has a room of its own and is taught to care for it, by the consideration he shows for other people's rooms everywhere. Why shouldn't this be true of smaller things?

With this in mind, I have watched children who have artificial toys, and children who have toys which are miniatures of mother's household tools, and

(Continued on following page.)

Here is Loyal C. R. Snyder, the young man who has distinguished himself as the champion school library worker of the Pacific northwest. Loyal is a pupil of White Swan school, White Swan, Wash. Just see what a wide-awake chap he is and then judge for yourself how high he stands in the opinion of the superintendent of White Swan public schools, C. A. Payne. "Loyal is 10 years old," says Mr. Payne, "is in the seventh grade and is a very bright boy. He is a hustler and makes good at anything he attempts." Here is Loyal's record as a subscription-getter: Eight subscriptions in a little over two hours—then four more in the next day or so, making 12 altogether. He stands at the very top, and though he has some pretty stiff competition for first place, we expect great things of him and believe he will be able to lead the whole field till the close of the season.

From Deer Creek school Valley, Wash., comes the following cheery little letter written by Miss Alta Cooney, teacher:

"Although we have a small school," says Miss Cooney, "and a sparsely settled district, nevertheless, we met with splendid success in obtaining subscriptions. I am enclosing a money order for $10.50, amount received for eight subscriptions."

Miss Cooney may have a small school, but her pupils are certainly the kind of boys and girls who believe that an ounce of energy is worth a ton of diffidence. Likewise, although Deer Creek school district is sparsely settled the folks who live there are to be commended for their prompt recognition of the educational value of a good school library and their equally prompt discernment of the fact that the Washington Farmer is an exceptionally worth while farm paper. We want Miss Cooney, her pupils and our subscribers in Deer Creek district to know that we admire and appreciate the fine spirit of the team work, which is easily read between the lines of Miss Cooney's letter.

When we showed the book man the letter written by Miss Georgia Mooney, teacher of Wolf Lodge school, Coeur d' Alene, Idaho, a pleased smile spread over his face. He chuckled. His eyes crinkled up at the corners and twinkled with satisfaction. Then he said in his droll way: "The Wolf Lodge hustlers must be hunting in packs."

We think that each pupil in Wolf Lodge school is a "whole pack by himself," especially as Evelyn Ahlskog brought in $8 in subscriptions all by herself.

Altogether, Miss Mooney reports $22 in subscriptions taken in a short time. "The pupils have worked faithfully" she tells us. Likewise, she says she will have more subscriptions to send in later. Let it be known by all who read this that the young ladies and young gentlemen of Wolf Creek school are a most capable lot of workers and lead all the schools of Idaho in what they have accomplished.

New schools to take up library work for the Farmer this week:

Highland school, Klickitat county, Wash., Miss Alice Chamberlain, teacher.

Sunset school, Whitman county, Wash., L. J. Babcock, teacher.

Silver Creek school, Stevens county, Wash., L. E. Decker, teacher.

Dennison school, Spokane county, Wash., Miss Nell M. Carr, teacher.

Honor Roll.

Chewelah school—Dorothy Rausch.

White Swan school—Loyal C. R. Snyder.

Deer Creek school—Eva Bond, Esther Eastman, Ellen Olsen.

Parker Bottom school—Lucinda Pagott.

Saturday, March 10, Library Day

On Saturday, March 10, the boys and girls of all these schools will strive to add more good books to their school libraries.

It will be a big day and a busy day—a day filled with earnest, ambitious effort in increase the growing wealth of good literature that the combined work of teachers, pupils, parents and other good friends of the Farmer have been adding to the school libraries of the state.

On Library day we want every one of our school workers to get at least one subscription to the Farmer—one three-year subscription if possible for that will mean one more good book for the school library.

We respectfully ask the earnest help and cooperation of teachers, parents and friends in making Library day stand out as the red letter day of the year for adding books to school libraries. Tell everybody about Library day. Tell them that on Library day hundreds of excellent books will be won by schools throughout the state and that you want your school to get its full share.

The pupils of any school in the state can take subscriptions for the Farmer on this day for the benefit of their school library at the rate of $1 for one year or $1.50 for three years and receive books in proportion to the amount of subscriptions sent in.

Let's all put our hearts into making Saturday, March 10, a great day to which every one of us can look back when it has passed and say: "I helped make Library day a big success."

Fruits

Carrying Over Till Next Year

By LISSIE C. FARMER.

This is the time of year when most housekeepers will be examining their stocks of preserves, jellies, jams and canned fruits to see what stocks they will carry over until next winter, and unless glassed fruits have the appearance of being in excellent condition—juice clear and transparent, no swell heads, bubbles, mold or mildew—it is better to open the jars and use the fruit at once or do it over than to take the risk of its spoiling during the coming warm summer weather.

Fruit that is in fairly good condition may be simply heated over in the jars by removing the tops and rubber bands, setting them on the stove in vessels of cold water adding some sugar to fruit and bringing the water to the boiling point, and when thoroughly heated through, resealing.

Or the fruit may be made over into preserves. First remove all specks or mold from the fruit, drain off the juice and add an equal amount of sugar and boil together for at least twenty minutes. Pour this juice over the fruit and stand the kettle containing it on the back of the stove and let it cook slowly for several hours. Wash the jars, tops and rubber bands and reheat them in clean water. Add spices and lemon juice to the preserves to suit the taste and when both jars and preserves are hot, refill the jars.

Spiced fruit may be made, also, in which case vinegar is added to the sugar and fruit juice in a sufficient amount to give the desired tartness, and the amount of spices used is about double what is required for the fruit preserved. A little ginger root may be added if liked and more lemon juice.

Perhaps the easiest way to do over the fruit is to make it into a jam or butter, two methods of doing fruit, the only difference between which is that butters are cooked longer than jams and are stirred and thus aerated while cooking, and so are brought to a browner, finer, smoother consistency than jam. To make over fruit into jam or butter, empty both fruit and juice into a kettle, add sugar in the proportion of about one cup of sugar to two cups fruit and juice if the fruit has been moderately sweetened; more or less sugar, according to the tartness of the fruit. Cook until the consistency desired and reseal in the cleaned and re-heated jars tops and bands.

It is usually better in doing over fruit to put it in different jars from those from which it has just been emptied so that the emptied jars may have a chance to air well before being again used. It is usually better too, to use new rubber bands.

Butters, jams and preserves will keep for some time without being sealed up, but are apt to form a scum or mold on the top so unless one expects to use them up very soon, it is generally better to seal them up again.

Jellies may be made over in several different ways if they have formed heavy layers of mold on top and so look as if they would not keep through the summer heat.

The top mold should all be skimmed off until a place is reached where there is not the least taste of mold. Then the glasses can all be emptied into a kettle and boiled down into a syrup which may be used in numberless ways through the coming season. It may be added in small quantities to jello or gelatine and molded again into jellies for desserts; it may be mixed with ice cream for serving; it may be used as a sauce for all kinds of hot or cold puddings, or a syrup for the breakfast hot cakes; it can be combined with fresh fruit juices for cooling summer drinks; it may be stirred into fruit cakes to add flavor; it may be added to the juice for making jam, preserves, and butters. If it is to be kept any length of time, it should be sealed up again in bottles or jars.

FLOWERS BRING CHEER.

As Well as to Add to Value of Home.

By MRS. B. H. JONES, Forest Grove, Ore.

One winter day my small daughter sat thinking. A radiant smile came over her little face. "Oh, muvver," she exclaimed, "I thinked a rose—such a pretty rose!"

It came to me as a sweet sermon. No matter how barren our surroundings, we may all "think roses"—yes—and hand them to others; thoughts of hope, of joy, of peace, charity, love, appreciation and "whatsoever things are lovely." Aside from its spiritual significance, we may "think" into existence real blossoms. How a flower garden cheers all who pass a farm or home, besides adding many dollars to the value of the place!

To me, flowers bring sweet memories and offer a chance to work with God in his sunshine that I could not wish to lose. As soon as possible every year, I send for my favorite catalogues (most of them cost only a postal card), and then comes the fun of choosing my seeds. Of course, John helps plan the vegetable garden, but for my flower beds I have my own sweet way. Being a busy mother, I choose those plants which have few enemies and which need least work. I must have sweet peas, but find them a care, so this year I'll have only a short row near the kitchen porch, where they can be easily watched and the blossoms picked. For a border last year I chose yellow flowers. Dwarf sunflowers made a fine background for annual chrysanthemums and California poppies. This year I shall try dwarf-double sunflowers and calliopsis back of the poppies, with African daisies in front of them. These flowers bloom profusely and are little care. Cosmos makes a fine border and hollyhocks are always lovely, however, they are apt to have enemies—black caterpillars and brown rust.

For planting near the house nothing is prettier than nasturtiums, four-o'-clocks, and on the north aquilegia or pansies. The long-spurred aquilegia is very charming. It needs two years to bloom, as does the foxglove.

This year I shall try hardy larkspur hybrids (perennials which bloom the first season) and schizanthus, or butterfly flower. This little flower should have space to develop its beautiful leaves and blossoms. It is so easily grown and so beautiful. Another favorite with me is phlox drummondi. I intend to border my paths with it, and also plant it in the bull-bed.

LIKE MOTHER'S TOOLS

Toys That Are Helpful to Child.

(Continued from preceding page.)

it seems as if almost universally the same principle holds good. A child who has dozens of mechanical toys and expects to have everything in the world cater to his amusement is careful of nothing. But a child who has toys which are exact reproductions of grown-up tools has the same interest in them and desire to keep them in good condition that he sees among his elders.

To quote my own experience, my little girl bothered me all the time by taking my broom, dust pan, dishes, spoons, etc., and, of course, they were too large for her to handle. Now she has a broom of her own, a little flatiron, a teakettle, and no longer troubles my tools. She is very careful of "my broom," "my iron," and has a place for them. Aside from the fact that she is copying all my actions about the house, she is learning the difference between her possessions and those of other people, and is learning to take care of her own things. Of course, it is not all as easy as it sounds, but she has twice as much respect for other peoples' property as she did before she had any of her own.

Household Hints.

When meat soup is ordered for a convalescent, prepare it the day before and skim the fat off.

Put a little baking soda into the pot where the spinach is cooking, and you will find that it will retain its green color.

You will find that your irons won't stick if you prepare your hot starch with soapy water. This also gives a nice shine to the linens.

To have fudge of a creamy texture, place the pan in cold water immediately on taking from the fire and stir—not beat—the mixture with a silver spoon.

A teaspoonful of lemon juice added to a quart of water in which rice is to be boiled will make the rice very white and will keep the grains separate when boiled.

Europe's many tongues and consequent misunderstandings.

The Fruits of Understanding

Throughout the vast area of this country prevails a common tongue. The whole of Europe hardly exceeds our territory, yet Europe has more than a score of nationalities and many different languages.

In the United States the telephone, as exemplified by Bell System, renders a matchless service in its mastery of distance and in encouraging the use of a universal language. This accomplishment is in spite of the great influx of population from every country in the world.

In Europe the independent countries, separated by barriers of language, and lacking efficient telephone service, suffer from inadequate facilities for inter-communication.

We now talk from the Atlantic Coast to the Pacific, and eliminate more than three thousand miles. In Europe, contending with a babel of voices and unrelated telephone systems, a bare quarter of that distance has been bridged with difficulty.

The ideal of the Bell System has been day by day to extend its service in the interest of all telephone users. Its efforts have resulted in providing the facilities to unite cities and rural districts in true American democracy.

Hustle

Good Thing to Do While You Wait

What is the quotation or what are the words which have helped you in the journey of life?

Is it a phrase from some famous author, or was it the words from some neighborly soul who helped you over a hard place and left you the invaluable legacy of a life motto?

What are your favorite motto, your favorite quotation, your favorite words?

Send them to the editor of The Farmer and let those words help another which have helped you.

To the Editor: Here is an amendment to an old quotation which has greatly helped me, and I hope that some one else may profit by it. It has kept me in mind that one must work for what he gets, and it has kept me working, always to good results, ever since I told some one, "Have patience, things will come to him who waits." He answered, "Provided he hustles while he waits."

DAVID B. COOK.

Bonanza Bar, Idaho.

Recipes

A Few Dishes You May Try

Chinese Peanut Dumplings.

Make a rich pastry as for American pie and roll out and cut into little squares. One each square of dough lay a few roasted and shelled peanuts, fold over the dough and carefully drop each dumpling into boiling water. Cover the pot and let them cook 15 or 20 minutes. Serve with sugar sauce. It would seem to need the native touch to keep these dumplings in their original shape. To be sure of success as made by an alien hand, they may be tied in little cloths as would be done in making apple dumplings.—Kansas City Star.

Sour Milk Doughnuts.

Sift into a bowl four cups of flour, a teaspoon and a half of soda and the same amount of cream of tartar, add a half teaspoonful each of cinnamon and nutmeg. Rub in lightly with the tips of the fingers a half tablespoonful of sour milk, then add a cup of sugar, a cup of sour milk and two well beaten eggs. Stir into a soft dough, turn out on a will floured board, pat and roll into a sheet about one-quarter of an inch in thickness. Cut in any shape desired, then fry in deep fat. It is necessary to remember that doughnuts require longer cooking than fish balls or croquettes, and therefore they must not be allowed to brown too quickly.

A Crochet-Covered Pouch.

This pouch is of soft gray suede, the lower part covered with bright colored striped crochet. The point is finished with a heavy colored tassel and little silver rings are set round the top, through which a silver chain is run.

Patterns

1997—Child's dress. Cut in five sizes: 6 months, 1, 2, 3 and 4 years. It requires two and one-half yards of 36-inch material for a 2-year size. Price, 10 cents.

1996—Girls' one-piece dress. Cut in five sizes: 4, 6, 8, 10 and 12 years. It requires three and one-half yards of 36-inch material for a 6-year size. Price, 10 cents.

1995—Ladies' four-piece skirt (in raised waistline). Cut in seven sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires three and three-eighths yards of 44-inch material for a 24-inch size. The skirt measures about three yards at the foot. Price, 10 cents.

2005—Ladies' shirtwaist, with or without yoke. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires three and three-eighths yards of 36-inch material for a 36-inch size. Price, 10 cents.

1822—Ladies' house or porch dress. Cut in seven sizes: 32, 34, 36, 38, 40, 42 and 44 inches bust measure. It requires five and one-half yards of 44-inch material for a 36-inch size. The skirt measures about three and one-quarter yards at the foot. Price, 10 cents.

1994-1981—Ladies' costume. Waist 1994 cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 1981 cut in six sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires eight and three-quarter yards of double-width material for a 36-inch size, for the entire dress. The skirt measures about two and seven-eighths yards at the foot. Two separate patterns, 10 cents for each pattern.

Deviled Spaghetti.

Boil carefully for 20 minutes four ounces spaghetti; drain and throw into cold water for 15 minutes; drain again and chop fine. Put one tablespoonful of butter and one of flour into a saucepan, add half a pint of milk; stir constantly until boiling; add the spaghetti, a teaspoonful of salt, a dash of pepper, a few drops of onion juice, a tablespoonful of parsley and three hardboiled eggs chopped fine. Put this into individual dishes, cover lightly with bread crumbs and brown quickly in a hot oven. Serve with a tablespoonful of catsup in the center of each.

Fruit Fritters.

Beat yolks of two eggs slightly, add gradually a half cupful of cold water and beat until light and foamy. Add one-half cupful of milk and mix well. Make a hole in the center of one cupful and a half of flour to which has been added one-half teaspoonful of salt; add liuid, slowly stirring all the time; beat until smooth, then add carefully one heaping teaspoonful of baking powder and the whites of eggs beaten stiff. Fry in hot fat until brown.

Jess Courtright, Sultan, Wash.: "We enjoy the Washington Farmer very much and find it very interesting."

TO OUR— POLICY-HOLDERS

Forty thousand policy holders now enjoy the benefits and advantages of insurance in the Northwestern Mutual Fire Association—"Your Home Company."

For several years the Northwestern Mutual has written more fire insurance than any other company doing business in Washington—in fact right now it is doubtful if any other two companies combined equal it.

This splendid development is the result of your loyalty and untiring zeal in cooperating with us to reduce the fire waste and to bring down the cost of insurance.

Every dollar you save in fire prevention is money in your own pocket and money in the pockets of your fellow policy-holders. But so large and so strong is the Northwestern Mutual that its policies are non-assessable—yet you get all the savings that mutual insurance affords. Already policy-holders in the Northwestern Mutual are richer by cash savings to the amount of $2,250,000.

Keep up the good work!

Help others to take advantage of the Northwestern service—which means fewer fires, greater protection.

Explain to neighbors the benefits of our policies. Outline the especially desirable features of the farm policies—the low rates on barns and stock; the fact that your work animals are protected wherever they may be, on the farm or in town; that even your family's clothing may be protected, at home or away from home.

And above all—

Don't forget the automobile. Our automobile insurance department can save you and your friends money.

Drop us a postal, and we will put you in touch with the agent nearest your farm.

F. J. MARTIN, President

Northwestern Mutual Fire Association

General Offices, 208 Columbia St., Seattle. Spokane Offices,

My Dear Children:

Oh, there were so many letters this time. Last time I thought there could not be more, but you have seen the list we have of letters waiting to be printed, so many dear ones, too. They will be printed in their turn.

There were letters telling us of all kinds of good things, kind things and pleasant things; there were some which told of trouble cheerfully borne, and to those and to all our dear little ones in trouble we send our sympathy and love.

Many of our dear little ones forget, and are not very careful with their letters. Many ask how to win a prize. Many ask Aunt Nellie to write them personally. This is impossible, and our nephews and nieces must be content for the present with my one letter to you all.

To compete for a prize, write on one or more of the subjects given below for March and April, or on any other subject you choose, including those given for previous months; on one side of the paper only; sign your name and address plainly; watch your penmanship and spelling and see that your letter is neat. You must write your own letters.

I see much improvement in the letters. Those who have written several letters are writing better. This encourages me and pleases me very much. Nothing worth while can be done without trying. Lovingly,

AUNT NELLIE.

PRIZE WINNERS.

Teddie Taylor, Riverside, Wash.

Gladys May Plemon, Burbank, Wash.

Flora B. Ransier, Belmont, Wash.

ROLL OF HONOR.

Elsie Austin, Dayton; Ruth Safe, Republic; Evis Erickson, Lynden; Winnifred Jones, Auburn; Mary France, St. John; Laura Hartley, Waitsburg; Phoebe Reeves, Elma; Ward Rowe, Rochester; Mary Roppert, Winlock; Clara Olsen, Bothell; Exemia Matson, Shelton.

NEW SUBJECTS.

Here are some new subjects on which you may write:

My Country.

My Favorite Book.

How I Earned My First Money.

LETS THE COWS OUT ON SATURDAY MORNING

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. My papa takes the Farmer and I read the Corner. I live on a 200-acre farm. We have about 57 chickens. We have five horses. One of them is black. I have a dog and a cat. The dog's name is Buster. The cat's name is Tabbens. It is yellow and white. I am 9 years old and in the fourth grade. I walk two miles to school. Sometimes I ride. I have two brothers and one sister. My brothers' names are Norman and Howard and my sister's name is Inga. She is 12 years old. We have a rooster. It is brown. It is so tame I can catch it when I feed the chickens. There are six in my grade, seven counting myself. I sometimes let the cows out on Saturday morning.—Thelma Satra, R. F. D. 1, box 33, East Stanwood, Wash.

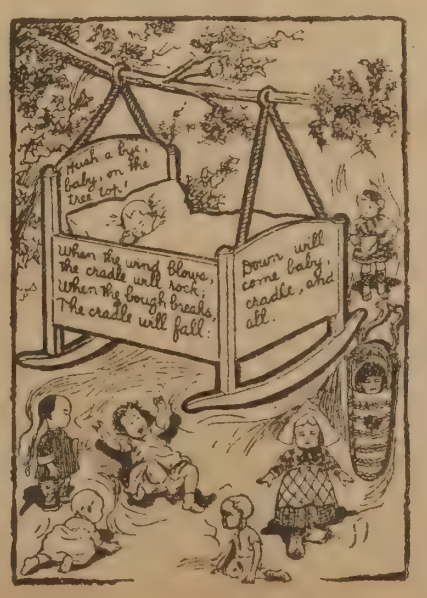
EVALENA IS THE OLDEST GIRL IN HER SCHOOL

Dear Aunt Nellie: I read the cousins' letters and like them very much. I was 14 years old January 16. I have light hair, blue eyes and weigh 102 1-2 pounds and am in the eighth grade. I have four brothers and one sister. My oldest brother is married. He is 22 years old. Cyrus is 20, George is 16 and John is 10. My sister is 8 years old. There are 10 scholars in my school. My teacher's name is John A. Neilan. I have two pets, a dog and a cat. My dog's name is Towser. I am the oldest girl in my school. I have a horse. His name is Pete. He is a dark blue color and is 4 years old. I expect to write to the Children's Corner again soon. There are five scholars in my class. We have a half hour noon.—Evalena Clement, Tampico, Wash.

JUST ONE SLEIGHRIDE AND THAT WAS A FAILURE

Dear Aunt Nellie: I am going to write on the subject "The Worst Day." I am a little girl 9 years old and go to a country school, which is right below a big hill. One day in December it was snowing hard all day and the next morning there was a foot of snow. The boys all brought their sleds and at noon a few of us girls and boys went coasting. Some of the boys stayed at the foot of the hill and were snow balling. One of the boys that was coasting gave me his sled and said I could guide it. So five of us girls got on the sled and started down the hill in full speed. It went so fast that I couldn't see to guide it any more and coasted right into the boys that were snow-balling at the foot of the hill. We coasted right against our teacher and he fell over in the snow. He was up in a minute, brushing the snow from his hair and coat and came right toward me. He took hold of my arm, led me into the schoolhouse and gave me a good shaking. He told me I could not go out of the schoolhouse again that day. All I could do was to watch the children coasting from the window. I told my teacher twice that day that I didn't mean to push him over, but he wouldn't let me go outside. So I had to stay in the schoolhouse like a prisoned bird with nothing to do but to think of only one sleighride, and that a failure, a good shaking and my teacher's fall in the snow, while all the others outside were having a good time. Really, that was the worst day for a happy girl of 9.—Mary Boppert, Winlock, Wash.

ONE DAY IT SEEMED THAT EVERYTHING WENT WRONG



Dear Aunt Nellie: This is the second time I have written to the Children's Corner. My subject is "The Worst Day." When I got up in the morning I was cross because it was raining. I said to mother that it seems like it has to rain all the time. When I was putting on my clothes I tore some of the buttons off my dress. Then I had to get a needle and thread and sew on the buttons. When I got ready to sew I had lost some of the buttons and I got my thread full of knots so I had to let it go. After I had eaten my breakfast I started to wash dishes and I broke some of them. When the clock struck 10 mamma told me to go to the mail box and mail some letters. So off I went. When I got there the mail man had gone past. When I got home I told mother that it looks like everything goes wrong today. And so it went the whole day long. I was glad when night came so I could go to bed and not do any more harm.—Exenia Matson, R. R. 1, box 15, Shelton, Wash.

HOW SHE GOT ACQUAINTED WITH HER CHUM, CALLA

Dear Aunt Nellie: As I have not written for quite a while, I will write now. My subject is, "My Best Friend." My best friends name is Calla Foster. Her birthday is October 12 and she is 11 years old. There are only 86 days between our birthdays. She has light brown hair and dark brown eyes and her face is light. We are the same height and in the sixth grade. She sits in front of me at school and she gave me a nice card for Christmas. We have lots of fun at noon and recess. I shall tell you how we became friends. The first day of school I got acquainted with a little girl who had not lived here very long and she and Calla and her sister Blanch were sitting on the fence and I went up to speak to this girl that I had not known for very long and she told me the names of the girls she was with and asked them to come into the school house to find our seats. Calla took the seat right in front of me and we have those seats still. —Inez Lockwood, Raymond, Wash.

(We hope Calla can see your letter in print so that she will know she has a real friend and perhaps she will remember that day when she was so lonely. Aunt Nellie.)

Hush-a-Bye Baby.

FLORA LEARNED THAT MAMA MEANS JUST WHAT SHE SAYS

Dear Aunt Nellie: The worst day I can remember is when I wanted to go skating with a crowd of children from our school and mama wouldn't let me. I was at school when the children said they would like to go skating on a big lake not far away and the teacher said he would dismiss them at quarter after two. I went to a family that had a phone and called mama up to see if I could go with them. Mama said I didn't have my skates, so I had better not. I said, "If I go after them, could I go?" but she didn't say anything but "Good-by" and hung up. I went back to school and asked the teacher if I could go home and get my skates. He said I could go if I got back in time for school. When I got home mama met me at the door and sent me back to school without my skates and after that I knew when mama said "No," she meant it.—Flora B. Ransier, box 7, Belmont, Wash.

MARY GOT HER LEG HURT WHEN SHE WAS COASTING

Dear Aunt Nellie: I wrote once before and saw my letter in the Corner, so I thought I would write again. I will tell you about my trouble since I wrote before. Last spring I had to stay out of school for appendicitis. I had to stay out a month. Now I have to stay out because I got my leg hurt. We were sleigh-riding at school and I stood in the track and a sled came down the hill and hit my leg. I missed 10 days of school. We had a week's vacation for Christmas. I missed three days before Christmas. Mamma said she thought my leg was cracked. We have 96 chickens and get from 40 to 50 eggs a day. We got 55 eggs one day. We milk four cows. We have nine cows and two colts and five horses. I like to live on the farm. I am in the sixth grade and am 12 years old. My birthday is August 16.—Mary France, R. F. D. 2, St. John, Wash.

LOVES HORSEBACK RIDING MORE THAN ANYTHING ELSE

Dear Aunt Nellie: I wrote to the Corner once before and I got a letter from one of the cousins whose last name is the same as mine. Another friend of mine promised to write to the Corner also. I love to read the letters because they are so interesting. I love horseback riding best of anything and often wish I had a real Shetland pony of my own. I also love to read books of any kind. We are having warmer weather than usual and the meadow larks can be heard singing once in a while, but we have signs of a hard winter. The coyotes are going in packs and are sometimes heard howling at night. Last winter there was three feet of snow. We have lovely times sleighing, but I think everybody is glad when summer comes. I shall be glad to hear from any of the cousins.—Mabel Nicholson, box 331, Bothell, Wash.

MARY LIMMER WALKS TWO MILES TO HER SCHOOL

Dear Aunt Nellie: I am 8 years old and in the third grade. I have three sisters and one brother. The sisters' names are Rosa, Margareta and Frances. My brother's name is Joseph. My father takes the Farmer and I enjoy reading the letters in the Corner. I walk two miles to school. I like to go to school. My sister is in the fifth grade and my brother is in the sixth. We have nine cows, two horses, seven calves, 36 chickens and three pigs. I like to feed the chickens and gather the eggs at night.—Mary Limmer, Winlock, Wash.

SCHOOL SHUT DOWN ON ACCOUNT OF THE MEASLES

Dear Aunt Nellie: My father takes the Farmer and I like to read the children's letters real well. I am in the fifth grade at school. I like to go to school very much. Our school was shut down for a while on account of the measles. I would like to win a prize. I like to help my mother about the house. I have a little brother 9 months old and I like to hold him and play with him. We milk 17 cows. I like to milk. The three cows' names that I milked are Lucile, Blossom and Star. They are very gentle.—Rosey Johnson, Hassan, Wash.

HAD A PIECE TO SPEAK WHEN SHE WENT BACK TO SCHOOL

Dear Aunt Nellie: This is my second letter to you. I am 8 years old and in the third grade. I was 9 years old February 16. I would like to correspond with Mary Johnson because her birthday is the 15th. My youngest brother had the scarlet fever and my other brother is coming down with it and I can not go to school. I miss my teacher and classmates an awful lot. I was working for a diploma for being neither absent nor tardy. Because my brothers are sick I will miss it this year. I got one in the first and second grades. I am learning a piece to speak to my classmates when I go to school again.—Phoebe Reeves, Box 63, Elma, Wash.

GRANDMA GAVE VERA HER VERY FIRST SURPRISE.

Dear Aunt Nellie: This is my first surprise, that I can well remember. I was a little girl about five years of age. One morning our deliveryman brought me a large package, which I could scarcely wait until I got it open. And what do you think I found? I will tell you. A lovely doll almost as large as myself. And a full wardrobe from a nightgown to a set of furs. Grandma sent it to me for Christmas and you can well imagine my surprise. Oh yes, I named her Jennie, which is also Grandma's name.—Vera V. Gensel, Aeneas, Wash.

RUTH'S SCHOOL TEACHER BOARDS AT HER HOUSE

Dear Aunt Nellie: My birthday is July 1. I am 8 years old. This is the first time I have written to the Children's Corner. My mother is dead; my papa is dead, too. Now I have another papa and mother. I have two sisters and three brothers. I have a pony, she is gray. We have 14 head of cattle and six head of horses, three pigs, seven hens, one dog and one cat. I am in the third grade. My teacher's name is Mrs. Manns. She boards at our place.—Ruth Wagner, Gilmer, Wash.

PAPA CUTS HIS GRAIN WITH COMBINED HARVESTER

Dear Aunt Nellie: I am going to tell you about our farm. We have 320 acres of land and we have three cows and 23 head of horses, 10 pigs and about 50 chickens. Papa cuts his grain with a combined harvester. I am 10 years old and am in the fourth grade. I have two miles to go to school. My teacher's name is Miss Bruce. I have two brothers. The oldest is 15 years old and is in high school at Chewelah. My other brother is 4 years old.—Harvey Heath, Mondovi, Wash.

LOTS OF FUN PADDLING THEIR CANOE IN SUMMER

Dear Aunt Nellie: I live on a 40-acre farm and we have 16 head of cattle, two little pigs and about 50 chickens, a sheep and two horses. We have lots of fun swimming in the creek. We have a canoe and paddle out and then tip it over, then we swim out from under it. Then we tip it up again and paddle to shore. In winter we go coasting and skating. We go to the top of the hill and then coast down across the ice.—Pearl Foye, Box 5, R. F. D. 1, Monroe, Wash.

LITTLE BABY BROTHER IS ESTHER'S BEST FRIEND

Dear Aunt Nellie: This is the fourth time I have written to the Children's Corner. I am 12 years of age. For my subjevt I have chosen "My Best Friend." My best friend is my baby brother. He will be one year old March 4th. He is the sweetest little thing I ever saw. His name is Roy Henry. Every time I go to school he waves good-bye to me.—Esther Carsline, Olalla, Wash.

GOLDIE THINKS IT'S FUN TO PLAY HIDE AND SEEK

Dear Aunt Nellie: I enjoy reading the Children's Corner. I am a little girl 7 years old, and I like to play hide and go seek with my sisters and brothers. My little brother has two little pups. One's name is Bruno and the other's name is Bungo. I have a pet cat and he is very tame. I have two sisters and four brothers—Goldie Miller, Box 63, Mayview, Wash.

WALKER MUST BE SURE TO WRITE SOMETIME AGAIN

Dear Aunt Nellie: We have one cow and one horse. I have a pet cat, too. I was 7 years old July 1. I am in the third grade at school. I like to read the Children's Corner. We have taken the Washington Farmer for two years now. I have one sister and no brother. My sister Charlotte was 2 years old October 1, 1916.—Walker Thompkins, Prescott, Wash.

Sidelights

Distributes Them.

"She seems to take great pains with her piano playing."

"Yes, and gives more than she takes."—Browning's Magazine.

As Our Mothers See Us.

Neighbor—"How did that naughty little boy of yours get hurt?"

Ditto—"That good little boy of yours hit him on the head with a brick."—American Boy.

Couldn't Afford a Family.

The old red rooster—"Maria, don't you really think that we ought to raise a family?"

The little speckled hen—"Raise a family! I should say not. Not while eggs are 60 cents a dozen."

The Ruling Passion.

The auctioneer was quite ill and fears were entertained that he would not recover. But he did.

Beside his bed stood the doctor and the auctioneer's wife, anxiously watching each symptom, each movement, each respiration.

"Doctor," whispered the hammer-wielder's wife, "what is his pulse now?"

The doctor raised the patient's wrist.

"His pulse," he answered, "is now going at 104."

Whereupon the auctioneer sat up excitedly in bed.

"Going at 104!" he cried feebly. "Going at 104! Who'll make it 105? Do I bear 105 for a pulse that has been running steadily for 47 years and has never once stopped! Will you bid 105? Who'll make it 105?"

Barber Shop Pleasantry.

The barber shop was well patronized, when in walked a shabby stranger.

"Good morning, sir!" called the barber, doubtfully.

"Good morning!" replied the stranger. "My good man, will you shave one side of my face for a penny?"

The barber winked at his waiting customers. "Certainly," he replied. "Take a seat, please."

Presently it was the shabby stranger's turn to occupy the seat of honor. "Now, which side shall I shave?" asked the barber, as he waved the lathering brush in the air.

"The outside," replied the shabby stranger, meekly.—Pittsburg Chronicle.

In Plain Sight.

Willie Stone had been sent on an errand to the home of the rich Mr. Lott. He returned with the astonishing news that Mr. Lott was going mad.

"What makes you think that?" his father asked.

"The way he talked," said Willie. "When I went into the room where he wanted to see me he said, 'Boy, where is your hat?' and there it was on my head all the time!"—Chicago Herald.

Assumed Proprietorship.

"Is that your dog?" "I dunno," replied Mr. Erastus Pinkley. "I didn't lay no claim to 'im tell a man thought he was my dog an' began to kick 'im aroun'. An' den I sort o' assumed proprietorship jes' foh de sake o' showin' dat I was de kind of a dog owner dat couldn' be trifled with."—Washington Star.

Potatoes---Spuds---Tubers---Are High

Why Tag Along When You Can Lead

A business course at the Northwestern will put you in the class that **Leads**, just as it has done for hundreds of others.

Our courses are so arranged that one may enter any time and make excellent progress.

"Be Sure to Visit Us."

The Northwestern

BUSINESS COLLEGE.

8317 Howard st. M. M. Higley, Pres.

WE WILL PAY SALARY

to farmer with rig or saddle horse. The publisher of The Washington Farmer wants men to secure and renew subscriptions to this paper in various farming districts throughout the state. We are paying good salaries to those who can do the work and are offering these positions only to farm owners or renters.

We want to hear only from those who will be willing to give our proposition a fair trial for at least a month and who will put in good, hard licks for good pay. For men with these qualifications the opportunity is a splendid one. This work isn't easy; but you can do it and earn a good salary. We give you full instructions and the right kind of help.

You will be able to earn a salary of from $25 to $150 per month or even more, dependent upon the amount of time and effort you can give to the work. Salary check will be sent promptly at the end of each month.

We will not consider an applicant who does not live on a farm and who does not have a rig, saddle horse or automobile. In writing us tell whether married or single, whether you own or rent your place and give the names of two merchants with whom you trade. There isn't any red tape about our proposition, but we must know something about those workers we put on our payroll to receive a monthly salary check.

Give full details in your first letter to The Washington Farmer, Reviewing, Spokane, Wash.—Adv.

He Never Troubles Trouble and It Never Troubles Him

The alligator is a very comfortable animal, if we estimate comfort as an absence of pain He has a thick skin, so that nothing in the ordinary course of nature irritates or troubles him. He has very few nerves and therefore very little pain. He hibernates during part of the year and sleeps most of the time when he is not hibernating. He never worries. He seems perfectly calm and placid and his movements are very slow and deliberate. He never troubles about politics, wars, religion, has no appreciation of music, art, science, philosophy, and when he wants something to eat he does not have to go to the store to buy or to a telephone and order it, and then pay bills at the end of the month. He just opens his mouth and lets the mosquitos, flies, frogs and other insects and small animals fly in, walk in, crawl or hop in, any way to get in, and when there are enough of them he just closes his mouth upon them and he has his dinner. But the closing is not a slow process like most of his movements. It springs shut like a trap or the twitching of the muscles or the batting of an eye, so that his food is not likely to get away from him. But the point is, it costs him no labor. He builds no houses, wears no clothes, reads no books, admires no pictures, enjoys no music, needs no fuel, has no nervous diseases and lives to be as old as man. Do you not wish you were an alligator?

Well, there are people who seem to think that the absence of nerves, of development, of the appreciation of things and therefore the absence of the losses and the absence of pain is happiness. I do not think so. I think that this is the best generation of human history, and if there are those, as I know there are, for I talk with them occasionally, who believe that the former days were better than these, if you will go back in the evolution of the race to the period when these powers were undeveloped and when we did not know the losses—in other words, if you will study the alligator as compared with the present development of human life, I think we will decide that every new brain cell, every new nerve, every new invention, anything that tends to human progress, adds to human happiness. G. L.

FIVE DOLLARS EXTRA For Some Library Worker.

NOTICE.

As a reward for good, hustling work by individual school library workers in Washington, our book man will pay $5 in gold to the boy or girl who has to his or her credit the greatest number of Washington Farmer subscriptions up to May 1, 1917.

Up to this time there are six possible winners of that $5 in gold. The score of the individual contest is now as follows:

Loyal C. R. Snyder, White Swan, Wash., 12 subscriptions.

Dorothy Rausch, Chewelah, Wash., 11 subscriptions.

Bessie Webb, Ford, Wash., 10 subscriptions.

Mildred Glasgow, Bossburg, Wash., nine subscriptions.

May Greiner, Selah, Wash., six subscriptions.

Eva Bond, Valley, Wash., three subscriptions.

We are not going to make any comment on this score other than to say that the race is not yet over and it does't follow that because Eva Bond is sixth place this week she is going to be there next week. As the contest grows hotter and hotter you can't tell who will win. And that makes a race a race, dosu't it?

D, W1311 6th ave., Spokane, Wash.

Grain and Produce Markets

Chicago Grain.

CHICAGO, March 3.—Estimates that only 29,000,000 bushels of wheat remained for export from the United States during the next four months had a decided bullish effect today on prices. Largely in consequence, the market at the close, although unsettled, was 2¼c to 4⅛c net higher, with May at $1.88¾ to $1.88⅞ and July at $1.59 to $1.59⅛. Corn gained 1⅝c to 2⅞c; oats 1⅛c to 1⅜c and provisions 2c to 85c.

Bullish sentiment developed rapidly in the wheat market after the probable smallness of the exportable surplus had been announced. Aside from the figures on the exportable surplus, however, the market had an upward tendency owing to prospects that American vessels soon would resume sailings and that shipments to Europe in consequence would be much increased.

Snowfalls in the southwest retarded more or less the advance of new crop deliveries of wheat. Besides, on account of week-end profit-taking there was a moderate reaction all around from top prices as the day approached a finish. Nevertheless, the buying power in the market seemed to show no curtailment and there were but few traders sufficiently venturesome to put out new short lines.

Corn established a new high price record. The reasons were that the hog market still was soaring and that the latest reckoning put the domestic farm reserves of corn at the lowest aggregate since 1892. Oats responded in lively fashion to the strength of other grain.

Urgent export demand for lard was a factor in hoisting the entire provision market to unprecedented levels. Other causes were the continuance of the hog shortage and of the remarkable accompanying advance of the value of corn.

Sheep—Receipts, 500; steady. Yearlings, $11.50@13; wethers, $10.50@12; lambs, $13.25@14.50.

At Chicago.

CHICAGO, March 3.—Hogs—Receipts, 14,000; steady, 20c to 25c above yesterday's average. Bulk, $13.55@13.75; light, $13@13.70; mixed, $13.35@13.85; heavy, $13.35@13.90; rough, $13.35@13.50; pigs, $10.25@12.25.

Cattle—Receipts, 800; steady. Native beef cattle, $8@12; stockers and feeders, $6.40@9.25; cows and heifers, $5.30@10.30; calves, $8@11.25.

Sheep—Receipts, 1000; steady. Wethers, $10.75@12; lambs, $11.85@14.50.

At Portland.

PORTLAND, Ore., March 3.—Hogs, steady; receipts, 444. Bulk of packing grades, $12.60@12.85; heavy packing, $12.85@13; light packing, $12.80@12.85; rough heavy, $11.75@12; pigs and skips, $11.50@11.75; stock hogs, $10.50@11.50.

Cattle, steady; receipts, 55. Steers—Prime light, $9.60@9.80; prime heavy, $9.50@9.75; good, $9@9.40; cows, choice $7.75@8; medium to good, $7@7.75; ordinary to fair, $6.50@7; heifers, $6@9; bulls, $4.50@7; calves, $6@10.

Sheep, steady; receipts, none. Lambs, east of mountains, $12.75@13; lambs, valley, $12@12.50; lambs, good, $11.25@11.75; prime wethers, $10.50@10.75; choice ewes, $9.25@9.75; heavy ewes, $8.75@9.25.

At Seattle.

SEATTLE, March 3.—Receipts, 90 hogs; 25 cattle. Market strong.

Hogs—Prime light hogs, $13.10; medium to choice, $12.25@12.30; smooth heavy, $11.75@12; rough heavy, $11.25@11.50; pigs, under 150 pounds, $9.50@11.50.

Cattle—Prime light steers, $9.75@9.85; medium to choice, $8.60@8.65; common to medium, $6.75@8.25; cows and heifers, $8.25@8.50; medium to choice, $7.60@7.85; common to medium, $3.75@4.75; calves, $6.75@9.25.

Sheep—Prime lambs, $11.50@12; good lambs, $10.75@11; wethers, $9.50@10; ewes, $7.50@9.

Spokane Union Stock Yards Saturday.

Hogs—Receipts 125, market strong. Bulk of sales $12.85. Prime heavy, $12.75@12.85; prime light, $12.65@12.75; prime mixed, $12.25@12.40; rough heavy, $11.75@11.85; stockers, $8@10.

Cattle—Receipts 146, market strong. Prime heavy steers, $9.75@10; prime light steers, $9.35@9.65; good steers, $8.50@9; prime cows, $8@8.50; good cows, $7.50@8; best heifers, $8.25@8.75; bulls, $4@6.50; calves, $7@10; stockers and feeders, $6@7.50.

Sheep—Receipts none, market strong. Prime lambs, $12@12.50; common lambs $11@11.50; choice yearlings, $10.50@11; good yearlings, $9.50@10; best mutton ewes, $10@11; common ewes, $8@9.

Seattle Market.

SEATTLE, Wash., March 3.—Apparently nothing can stand against the public boycott, as speculators in potatoes found out today. While quotations of $85@90 for Yakima gems and $80@85 for Puget sound stock were unaffected, buyers dropped completely out of the market on further telegraphic advices of the demoralization in New York and Chicago as the result of determination by consumers and committees to force down the price of foodstuffs.

It is generally admitted that the Washington spud market has been sustained by brisk upward bidding by eastern buyers, and with this support removed quotations remain in midair, with every prop abrogated. The consumption in Seattle will not reach two carloads per day, and it is evident that to market the present holdings, estimated here to be 200 carloads, would be impossible at the present prices.

Brokers, speculators and jobbers who have been actively in the market vanished rapidly today, impelled by gloomy prospects in the east, where the bulk of the Washington spuds have gone and must still go. Three days ago these operators were bidding $75 f. o. b. Yakima They have suddenly become indifferent, bids have been withdrawn, and a puzzled expression adorns the features of all who have been so confidently predicting $100 to $125 for the spring cleanup. That the present condition is only tentative, and that the flurry will pass and prices spring back to higher altitudes is the claim of a minority. Nevertheless, potatoes are not regarded as highly as they were 10 days ago.

Onions continue their uninterrupted strength, and no good grades can be bought for less than 12c.

Cheap apples are held by only a few houses, but what are left are moving rapidly. Quotations are very firm.

The local ranch egg market has not yet touched bottom, and some of the latter jobbing houses will quote 24@25c Monday. The demoralization of the week is ascribed to the speculative purchases of Petaluma eggs, moving to this market in large quantities and a desire of those who did not sit in on the experiment to force losses therein. While storage operations will be two weeks late this year, they should start next week, and the houses that put eggs in the coolers for the fall and winter trade are desirous of fixing the level at which they can buy stock.

The bulk of the spring eggs went into storage last year at 19@23c, average 22c, but this year it is conceded on all sides that the stock will cost more, probably 24@25c, so that next week will probably witness the minimum level for the season, and storage operations will begin

The butter market is something of a puzzle. California quotations have dropped to such an extent that jobbers can bring it in to compete with offering on the Seattle market. It could undersell prices here if necessary, but in view of the extreme shortage, which approached the most acute stage during the past three months, it is not probable that any price-cutting will be done. Wholesalers boast of the good quality of the California butter, two carloads of which arrived today and will go on the market at once.

There is a pronounced scarcity of cheese, and the wholesalers will elevate quotations for Monday. Sharp stock is cleaned up and the make of new stock is difficult to obtain.

BUYING PRICES.

Unless otherwise stated the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 25@26c per dozen.

Poultry—Live hens, fat, over 4 lbs., 20c per lb., do. 3 lbs. and under, 18c; old roosters, 11c per lb; springs, 20@22c per lb.; ducks, 20c per lb.; squabs, large, $3.50 per dozen; geese, fat, 12@14c per lb.; turkeys, live, 23@24c.

Butterfat—46c lb.; dairy butter, 27c per lb.

Beef—Buying price: Prime beef, steers, 7@8c per lb.; cows, fat, 7@8c per lb.

Hogs—Light, 13@14c per lb.; do., heavy, 10@12c per lb.

Veal—Fancy light, 12@14c per lb.; do. heavy, 9@13c per lb.

Hides—Salted, 20c per lb.; salt kip, 22c per lb.; salted calf, 32@35c per lb.; green hides, 16c per lb.; salted bulls, 15c per lb.; dry hides (short trim), 32@33c per lb.; dry calf (under six lbs.), 36c per lb.; bull and dry salts, 4c per lb. less; green bulls, 18c per lb.; dry butcher full wool sheep pelts, 22@26c per lb.

SELLING PRICES.

City Prices—Team Lots.

Apples—Winesaps, $1.50@2.25 box; Spitzenburgs, extra fancy, $2 box.

Feed—Scratch feed, $52 per ton; all grain chop, $44 per ton; oats, $43 per ton; rolled oats, $42 per ton; rolled barley, $45 per ton; wheat, $59 per ton; bran, $28 per ton; shorts, $32 per ton; alfalfa meal, $26 per ton; whole corn, $50 per ton; cracked corn, $51 per ton.

Hay—Eastern Washington timothy, $22 per ton; alfalfa, $15@16 per ton; double compressed, $25 per ton; straw, $12 per ton; wheat hay, $16 per ton.

Onions—Oregon, 12c per lb.; Yakima, 12c per lb.

Potatoes—Local, $85 per ton; Yakima Gems, $85@90 per ton.

Rutabagas—Yakimas, $2 sack.

Butter—Washington creamery extras, cubes, 42c lb.; do. bricks, 43c lb.; creamery firsts, cubes, 41c lb.; do. bricks, 42c lb.

Spinach—Walla Walla, $1.75 case.

Eggs—Fresh ranch, 30c.

Wool.

LNDON, March 3.—Offerings at the wool auction sales today amounted to 4100 bales. There was a strong demand and the auctions closed firm and 10 per cent higher. Medium merinos were often 15 per cent up. Fears of a shortage of future supplies caused the keen demand during the sales and virtually all the available quantity, 91,000 bales, was sold.

Licenses to export crossbreds have been stopped. It is believed a few carpet wools are going to America, but no decision has been reached regarding America's supply of Australian merinos.

Portland Market.

PORTLAND, Ore., March 3.—Wool buyers are still trying to make contracts in eastern Oregon, but only a few growers have signed up. The price generally offered was 40 cents. Valley growers are looking for a 60-cent market for the light, shrinking, valley wools. Mohair shearing will begin the latter part of this week.

The butter market is easing off because of the steady decline at San Francisco, and lower prices all around are looked for any day.

Cheese advanced 3 cents a pound at the close of the week to the highest prices of the season. Tillamook stocks are reported to be small and the demand from the east continues strong.

There are only a few shipping orders for eggs on the market and, with receipts growing, prices have declined sharply.

Poultry of all kinds is scarce and firm. Pork is strong, because of record prices at the yards, but veal drags and is weak.

Only seven cars of onions remain to be shipped and but four cars are left unsold in Oregon growers' hands. Jobbers have sufficient stocks to last until Australian onions arrive later in the month.

The potato market is still suffering from weakness east. There are practically no shipping orders and the best price offered farmers now is $3. First-hand stocks are light.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers:

Oats—No. 1, $37@37.50 per ton.

Corn—Whole, $47; cracked, $48 per ton.

Millstuffs—Bran, $27 per ton; shorts, $30.50.

Barley—No. 1 feed, $39; brewing, nominal; rolled, $42@43.

Hay—Buying prices. Timothy, eastern Oregon, $19@20; alfalfa, $14@16; grain, $12.50@14.

Eggs—Oregon ranch, case count, 23 1-2@24c per dozen; candled, 25@27c.

Poultry—Hens, 18@20c; ducks, 18@22c; turkeys, live, 20@22c; dressed, 23@28c; geese, 12@14c.

Butter—City creamery, prints, 42@43c per pound; cubes, 38c.

Cheese—Oregon triplets, 23c; Young Americas, 24c.

Dressed meats—Veal, 14c; pork, 15 1-2@16c.

Hops—1916 crop, 3@3c.

Potatoes—Oregon, jobbing price, $3.25@3.50 per cwt.

Onions—Buying price, $10 for country points.

Wool—Eastern Oregon, fine, 22@35c; coarse, 33@36c; valley, 40c.

Beans—Oregon, small white, 9 3-4c; California small white, 11 3-4c; large white, 11 1-2c per pound.

Hides—Salted hides (25 lbs. and up), 18c; salted stags (50 lbs. and up), 14c; green and salted kip (15 lbs. to 25 lbs.), 18c; green and salted calfskins (up to 15 lbs.), 27@28c; green hides (25 lbs. and up), 17c; green stags (50 lbs. and up), 13c; dry hides, 30c; dry salt hides, 25c; dry horse hides, $1 to $2; salt horse hides, $3 to $5.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer:

Potatoes—Potatoes, $3.75@4 cwt; sweet potatoes, $6.

Apples—Washington apples, cooking, 65@85c; eating, $1@1.25; Wageners, 75c@$1.10 box; Rome Beauties, $1@1.40 box; Winesaps, $1.75@2 box; Y. N. Pippins, $1.75@2 box.

Butter—Blanchard cartons, 43c lb; Medo-Maid, 43c lb; Cascade, 43c lb; Gold Coin, 36c lb; Gold Leaf, 43c lb; Better Butter, 43c lb; Hazelwood, 43c lb; Peerless, 39c lb; Jersey Belle, 42c lb; Attalia, 43c lb; Diadem, 43c lb; Jersey, 39c lb.

Cheese—Wisconsin full cream, twins, 23c; triplets, 22½c; Hazelwood full cream, triplets, 22c lb; Hazelwood Young America, 24c lb; Wisconsin limburger, 28@29c lb; brick cheese, 28c lb; domestic Swiss, 33c lb; Young Americas, 25c lb.

Eggs—Fresh local ranch eggs, $11 case; eastern storage eggs, $9.50@10.50.

Live Poultry—Springs, 17c lb; hens, 17@18c lb; old roosters, 9@10c lb; ducks, 13c lb; turkeys, 20@25c lb.

Dressed Poultry—Hens, 21c lb; springers, 20c; old roosters, 13c; ducks, 16c; geese, 14c; turkeys, 28c.

Hide Quotations.

Green cows and steers—25 lbs and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs to 25 lbs., 23c; calf skins up to 15 lbs; 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under seven lbs., 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10 to 75c each; green horse hides, $3 to $5 each; dry horse hides, $1 to $2.50 each.

"Cities and Towns."

The word "city" used to be applied in England only to places where there were cathedrals. Ely, though only a small place of about 8000 persons, is always referred to as a "city," while quite recently Birmingham and Liverpool were called "towns."

Horses Sell

Three Hundred Go at Spokane

That there is strong demand for draft horses and that there are many good horses in the county were indicated at the first sale of the season, held at the Spokane Union stockyards last week.

Over three hundred head sold at prices averaging about $150, with many selling higher than that.

Fancy prices were paid for some of the finer animals. Well-known stockmen were in the ring. Washington State college was represented by Professor William Hislop of the animal husbandry department. There was little need to stop long on a good animal, but some older ones were not disposed of without effort. Even a horse with a smooth mouth and plenty of weight, however, was snapped up if he showed evidence of being a good work animal.

A pair of 5-year-old geldings, offered by J. R. Hinshaw, were bought by a Spokane firm for $440. L. J. Reed offered a pair of 5-year-old black geldings and they were taken by Professor Hyslop for the state college at $445. Professor Hyslop also bought a pair of bay geldings.

Other top sales were: Frank Burnett, Pullman, a pair of 5-year-old mares to J. F. Reed for $440; N. Lynch, 5 and 6 year old geldings to Walter Roberts for $420; J. Cox, one 7-year-old gelding weighing 1700 pounds to C. M. Payne, $250; J. Cox, 7-year-old mare to A. J. Brincken for $237.

Among the other buyers were: Y. Scott, George Greenwald, B. C. Parmenter, A. L. Mitchell, C. S. Stephens, Guy W. Wolfle, J. A. Neal, J. A. Weidert, F. S. Day, J. C. Lewis and D. M. Carey.

Prominent consignors were: J. G. Kienbaum, Wesley Hannan, A. J. Reed, J. B. McGinn, Frank Kepl and W. R. Edgar. Mr. McGinn bought the two cars of mules and one car of horses from Kansas City which sold at from $350 to $425 a team.

Portland Wheat.

PORTLAND, Ore., March 3.—Wheat prices at the close of the week had reached within 3 cents of the highest point of the season, which prevailed in the middle of January. The demand from the east was strong and some business was worked. But for the car situation and the tightness of country holders; the trade would have been heavy.

Closing bids for March wheat at the merchants' exchange were: Bluestem, $1.69; fortyfold and club, $1.63; red Russian, $1.60.

Oats were firm with up to $37.50 bid for April delivery. Four Portland firms sent bids to San Antonio, Texas, on the government order for 6000 tons of oats for army use on the border. The bids per cental were: Allers Bros., Milling company, $1.92 1-2; Globe Grain company, $1.98 1-2; M. H. Houser, $2; Northern Grain and Warehouse company, $2.10.

Flour prices were advanced 20 cents a barrel to $8.40 for patents on Saturday. The mill feed market is very firm, as stocks are light.

Seattle Wheat.

SEATTLE, March 3.—There has been only a light movement of wheat from holders to buyers this week, due to the bullish attitude of farmers and the apathy of millers. Country bids have been $1.55 for bluestem and turkey red and 5 cents under for fife and club, the spread being explained in the tendency of Minneapolis buyers to overbid local interests.

Millers of Puget sound took only a perfunctory interest in wheat buying this week. It is claimed that they are comparatively well stocked; that they held no buying briefs from outside interests and with a dull season in the flour trade caution got in the way of any heavy operations.

Farmers will not sell. Holding probably not more than 5 or 6 per cent of the 1916 crop and carryover at this time they are in a better position to sustain a sellers' market than at any time during the winter. Bidders were repulsed with asking prices, country basis, of $1.75, as none were confirmed.

Increases in bid prices on this market followed Chicago more closely this week than for the last 60 days, thereby upsetting the tradition that Washington wheat does not work with Chicago markets. Cheaper varieties of wheat are quoted at higher levels than during the previous bull movement. Clearing of the car situation is the only obstacle in the way of farther advances, it is believed, for Eastern buyers hesitate to load up with no information in their hands as to when the grain can be moved. Exporters, moved by experiences through the winter, are cautious about taking on wheat stocks. Some heavy losses are reported in transit because of their inability to get cars to destination. Local dealers heard reports this week that English interests were in this market for Washington wheat, and would send cargo vessels to Puget sound to load.

Representative sales on exchange this week were 5000 bushels of April turkey red at $1.67, 5000 bushels of prompt club at $1.57, 5000 bushels of March club at $1.57 and 5000 bushels of March club at $1.65.

The steamship Santa Alicia loaded 69,544 bushels of wheat at Tacoma this week for Antofogasta.

Soft wheat flour advanced 20 cents per barrel today, millers contending that wheat and flour markets were out of balance. Bookings for future orders are being limited to 60 days.

Bid and asked prices on the Merchants' exchange for the week-end were as follows:

	March		April.	
	Bid.	Asked.	Bid.	Asked.
Bluestem	$1.70	$1.73	$1.70	$1.75
Turkey Red	1.71	1.75	1.71	7.71
Fortyfold	1.66	1.71	1.67	1.73
Club	1.66	1.69	1.67	1.69
Fife	1.66	1.69	1.67	1.70
Red Russian	1.63	1.67	1.64	1.68

	March.	April.
Rye	$42.00	$44.00
Barley	39.00	39.00
Oats	37.75	38.00
Timothy	19.00	18.00
Alfalfa	12.50	12.50
Straw	7.00	6.50

SAVING IN WHEAT

In Chief Importing Countries.

The demand for imported wheat this season in all the principal importing countries, in consequence of the new milling regulations, will be less than usual, says George Broomhall's Corn Trade News of Liverpool. Even in England the saving in the use of wheat will be very considerable, whereas in France, Italy, Holland, Scandinavia and Spain the economy will be even more important. British millers instead of extracting 68 to 70 per cent of flour from the wheat berry as formerly are now called upon to make a flour containing 81 per cent of wheat, or to make a 76 per cent flour and to admix 5 per cent of rice or other flour, with the option of admixing an additional 5 per cent. This order will lead to very considerable saving in the use of wheat. Under ordinary conditions British millers, this season, would have required about 29,000,000 quarters foreign and native wheat (about 4,000,000 sacks of foreign flour would also have been imported). The 34,500,000 sacks of flour which British millers would have made out of 29,000,000 quarters of wheat at 68-70 per cent extraction may now be made out of 23,400,000 quarters of wheat at the maximum extraction of 81 per cent, plus 5 per cent added substances. Under the new conditions, therefore, there should be a saving of fully 100,000 quarters per week in the demand from British millers, or at the rate of 5,600,000 quarters (or 44,800,000 bushels) of wheat per annum.

LEATHER DEMANDS

Make It a Precious Article.

Little likelihood that leather will be any cheaper for some time is seen by L. G. Adams of the Adams Leather company of Spokane. Notice of an advance of 3 cents per square foot in leather used for uppers for heavy shoes was received recently by the company.

"Sole leather has advanced in the last 20 months until we hardly know what to expect next," Mr. Adams said. "Stock that was selling 20 months ago at 48 cents a pound now is quoted to us at 95 cents. The market is strong and the demand heavy.

"Some big profits have been made by speculators in the leather business in the last two years. Men who foresaw the big demand from the warring nations of Europe bought up large supplies. Merchants who had left themselves unprotected had to buy at advanced prices to fill their orders for the regular trade."

Many Tons of Cider.

It is reported that cider has become a much more popular drink since the state of Washington went dry. It is estimated that there were 6000 tons of apples converted into byproducts during the past season, and that a very large percentage of this product was cider.

Women of England.

Over 7,000,000 women are now employed in business and profession in England.

WOOL MEN PREPARE

Shearing Season Begins Soon.

Wool growers of the Yakima valley are already contracting for the shearing of the 1917 clip. Sheepmen are expecting a good clip, exceeding the total of last year by 200,000 pounds, bringing the amount to $2,225,000.

The usual number of machine plants will be in operation at different points in the valley.

Sam Blatchley will operate a plant in Kittitas canyon, the Kiona Shearing company at Kiona and Jacob Marr at Ephrata o nthe Columbia river.

Other smaller plants will move from one band to another.

Shearing will begin about March 26 and continue through April in the lower valley and in Kittitas county for a month longer.

Suggested Canadian Embargo.

A movement is on foot in Ontario province to prohibit the importation of fruit during the local production period. The Niagara fruit growers propose to send a deputation to Ottawa to request the dominion government to put an embargo on all foreign fruits and vegetables during the four months of the Canadian fruit season.

Go Get a Homestead Free this spring

No matter where you have been farming, a fortune awaits you if you go now and get one of the recently surveyed 160 acre homesteads in the rich districts reached by the Canadian Northern Railway, the newest transcontinental railroad of America, "The Road to Opportunity." Here you can make a fortune at growing grain and **mixed farming, raising cattle, hogs and poultry.**

Western Canada's improved, **easily accessible markets** and recent extension of railways makes conditions and opportunities of settlement excellent.

"You Can Do What Others Are Doing"

George Rupp says: "I came here from Hudson, Iowa. I can stand on my windmill and count no less than a dozen grain elevators. I can stand in my yard in the Fall and count as many threshing machines. My horses and cattle have run outside all winter.

(In 1915 Alberta produced 107,741,000 bu. of oats or an average of 56.35 bu. per acre. The total value of all crops in 1915 was $114,186,000.00.)

Mr. A. Taylor of the Rhein District in Saskatchewan, says: "I had 30 acres in wheat that averaged 50 bu. an acre, 315 acres in oats, that averaged 88 bu. ian acre, 20 acres in barley that averaged 60 bu. an acre."

(In 1915 Saskatchewan produced 196,042,000 bu. of Spring Wheat or 28.54 bu. average per acre—total value of all crops for the year was $382,845,000.00.)

W. Lost says of the Kenville District in Manitoba: "I had 203 acres of wheat that averaged 43.5 bu. an acre, 17 acres of oats that averaged 65 bu., 25 acres of barley that averaged 50.5 bu. an acre.",

(In 1915 Manitoba produced 96,062,000 bu. of Spring wheat or an average of 28.83 bu. an acre. Total value of all crops for 1915 was $201,100,000.00.)

Charles Draper says: "I came from Nebraska with no capital—and have not had a poor crop for seven years. Any man willing to work can succeed here."

Mr. G. D. Schnauffer says: "I came from Illinois in 1907. Today I am worth $30,000—I cleared $120 from the litters from one sow last year."

(In 1915 British Columbia produced 3,033,000 bu. of potatoes or an average of 247.23 bu. per acre; the total value of all crops was $11,889,100.00.)

Special Low Rates

Low round trip home-seekers' fares to Western Canada are in effect the first and third Tuesday of each month. Also one-way low fares for settlers. Even if you have already selected your farm, it will pay you to travel to Western Canada via the Canadian Northern Railroad.

Grazing Land Grants

Grazing land grants may be procured at very low cost for a period of twenty-one years. Outdoor feeding of beef cattle on native grasses bring even better results than indoor feeding.

Good Roads

Bridges and culverts are built where needed, and roadways are usually graded up, although the land is just rolling enough to give good natural drainage.

Good Schools

The Public school system is well abreast of the times. One eighteenth part of the whole prairie section of Western Canada is set aside as a school grant. Land taxes are low and go mostly for schools.

Free Book

NEWS FOR BREEDERS

The 1917 session of the Idaho Cattle and Horse Raisers' association will meet at Idaho Falls next January. The State Wool Growers' convention is also expected and it is the hope of that live city to get the live stock association meeting, including the swine breeders and dairymen and the seed growers, potato growers and others that met at Pocatello this winter.

Dr. Thomas C. Wilson of Idaho Falls, Idaho, has 1200 head of hogs, all eligible to registry as Duroc Jerseys, but he is growing them for market. Dr. Wilson expects to see hogs go to 12 cents at the buying point in Idaho and has, in fact, been offered that price for two carloads ready in the early spring. He thinks by next year people will begin to fairly get back into the hog business.

The doctor expects to turn off 1000 hogs during the year, for which he counts on $25,000. He will let the gilts farrow, wean the pigs and then begin to fatten them, thus having still more hogs next year. The last of his hogs in summer will hog off peas.

Recently established union stock yards that are of much interest to Idaho live stock breeders have been erected at Ogden, Utah. This is a little the closest open market southeastern Idaho stockmen have. The first unit of these yards was completed in December. The entire completed portion has concrete floors, a perfect drainage system, covered pens for sheep, hogs and cattle and every modern device for feeding, watering and caring for the stock. The yards have been built along side of the yards of the Odgen Packing company's big plant and a new railroad bridge, nearly completed, gives them the best of railroad facilities. Ogden has direct railroad lines to Los Angeles, San Francisco, Denver and all points east. It is the plan of those interested to make this a great feeder point, especially for San Francisco and Los Angeles. But the man with a car of finished stock can ship on through whenever Ogden prices do not suit him. It looks as if the Ogden yards ought to be of benefit and that use should be made of them by Idaho Shippers.

H. A.

MORE WORLD'S RECORDS BROKEN.

The Holstein-Friesian heifer, Jewel Pontiac Segis 229261, has broken the world's records in the junior 2-year-old class of the division covering tests begun not less than 240 days after calving, is the word from Secretary F. Q. Houghton of the Holstein-Friesian association. The former world's record of 21.91 pounds of butter in seven days was held by Finderne Mutual Fayne, while the former world's record of 445.5 pounds of milk in seven days was held by Johanna De Kol of Rush Court. The record of the new champion is 473.6 pounds of milk, containing 22.07 pounds of butter, in seven days.

Jewel Pontiac Segis established her record 355 days after freshening. She holds the world's record for both milk and butter in the 60 and 90 day divisions and has now broken the records for milk and butter, and the combination record for both, in the eight-months-after-calving-division. Jewel Pontiac Segis was bred and is owned by J. M. Hackney of Arden Farms, Inc., of St. Paul, Minn. Her sire is King Segis Pontiac Count 93909 and her dam is De Kol Jewel Pontiac 142-184.

WESTERN BERKSHIRE CONGRESS.

The western Berkshire congress meeting and sale as well as the Western Berkshire show have now become established institutions. The very successful meeting and sale held at Davis, Cal., February 13, 14 and 15 have established the western Berkshire congress upon a permanent basis, is the report of F. R. Steel of Grants Pass, Ore., who was elected president of the congress.

Charles M. Talmadge of Newport, Wash., was chosen vice president and Arlington M. Smith of Visalia, Cal., secretary-treasurer.

The 45 animals sold brought an average of $145 each. The lowest price was $50 and the highest $500. A secret judging committee was appointed to see that any such if found among the consignments should not be perpetuated upon the buying public. The advance knowledge that this committee would unheasitatingly throw out any poor cows, however, kept any one from sending such to the sale.

The reception of the congress by the University of California (the event took place at the University of California farm) was carried out with a splendid spirit of helpfulness and cooperation.

ABBEKIRK DOEDE.

The above photo shows Abbekirk Doede 290732, a junior 2-year-old Holstein heifer owned by H. H. Stiyer of Buhl, Idaho, that in seven days, on official test, produced 18.23 pounds of butter which is believed to be the Idaho state record for junior 2-year-olds. Mr. Stiyer's herd bull, Buffalo Duke Doede 102228, is out of the dam of the great world record cow Duchess Skylark Ormsby, with 1508.33 pounds of butter in a year, and his sire is Sir Jewel Pontiac Doede, dam of 17 A. R. O. daughters, including Miss Netherland Artis Parthenia, 29.97 pounds of butter in seven days. The bull is a good individual and Mr. Stiyer has seven of his daughters, of which he way well be proud. One of Mr. Stiyer's cows, Albin Lottie DeKol, has a record of 324 pounds of fat, or 400 pounds of butter in five months. She has a fine bull calf by Buffalo Duke Doede.

Far-Reaching Trust

Alleged Among Big Creameries

(Continued from page three.)

cial strength and ability to eliminate competition "and to restrain interstate trade and commerce."

Charge is made that premiums and rebates have been given to an extent not justified by the business thereby obtained, to increase their own business and to decrease the business of their competitors; that they have purchased the products of competitors and thereupon made false claims of inferior quality or condition of such products in order to cause financial loss to their competitors.

Was Competition Real?

They have worked concertedly in the same sections of territory, it is charged, to prevent competitors from getting an adequate supply of raw materials and have for a time entered into apparent competition among themselves in certain territory where such procedure seemed necessary in order to eliminate competitors, and after eliminating the competition certain of the defendants have withdrawn from such territory, while another or others remained in exclusive control thereof, all by mutual agreement.

Say Others Forced In.

Charge is made that by various methods in order to force competitors to join with them in fixing prices for the purchase of raw materials, the defendants "have attempted to induce and coerce, and have induced and coerced, certain of their competitors" to adopt the methods complained of, according to their wishes and direction.

Purchase has been made of the business, plants and stations of competitors, it is charged, for the purpose of closing and doing away with the same and thus preventing competition, "all in furtherance of, and to effect the objects of, the aforesaid conspiracy unlawfully and unreasonably to restrain interestate trade and commerce."

Ruined Competitors, Is Charge.

It is charged that by virtue of the conspiracy and concerted action alleged, and because of the fact that the proportion of the business carried on by the defendants greatly exceeded that of other manufacturers, wholesale

THE GOODS YOU SEE ADVERTISED IN THESE COLUMNS ARE RELIABLE

We accept advertising only from firms or individuals whose goods we are convinced are exactly as represented. In writing advertisers please mention this paper.

When you write to advertisers be sure to say that you saw their advertisement in this paper.

dealers and others, they have been in a position to bring financial distress and ruin to others engaged in the creamery business if they so desired. And it is charged that when others engaged in the business, did not so conduct it as to please the defendants, they did so bring financial ruin to other manufacturers and dealers; and it says many persons who have been ambitious to engage in the industry "have been by said conspiracy prevented from engaging in the creamery business in competition with said defendants."

Second Count in Indictment.

There are two counts in the indictment, and the second count charges that continuously throughout the period of time named, within the state and district of Idaho, the defendants unlawfully conspired to obtain a monopoly in the creamery business which has been carried on among the several states by themselves, and which constitutes trade and commerce among the several states of the United States within the meaning of the act of congress.

It is charged in the second count the defendants did bring financial distress and ruin to other manufacturers, wholesale dealers and others engaged in the creamery business among the various states named, "as well to the great detriment and injury of the general public;" that the defendants have obtained a monopoly in the trade and commerce in the indictment described, particularly in said state and district of Idaho.

Presentation of the evidence in the case to the grand jury was made by John R. Smead, assistant United States district attorney, who said that, so far as he knew, the case would be prosecuted by James L. McClear, United States district attorney, and himself, without the aid of special counsel. Mr. Smead says the prosecution is under the Sherman anti-trust act of July 2, 1890, and that the Clayton act, passed in 1913, was not amendatory of the original act, but was supplementary thereto.

Trial in September.

Unless unforeseen circumstances arise causing a delay, the case will be tried in the United States district court at Boise at the September term of court that starts on the second Monday in September.

Referring to the indictments, John R. Smead, assistant United States district attorney, who had charge of presenting the evidence to the grand jury, says further that it was to determine whether the acts complained of indicated violations of the anti-trust law or simply tactics employed locally in the markets by the defendants. Valuable assistance on the alleged infractions of the law was rendered not only by William G. Scholtz, director of farm markets of Idaho, but also by J. K. White, pure food inspector, and H. L. Jackson, state chemist.

It is understood there was an investigation at Salt Lake last November by United States grand jury that concerns some of the defendants.

Several hundred witnesses will be called by the government from eight states when the cases are tried. All the defendants will be tried together unless there is a "severance," meaning that separate trials may be had. Allowance of a severance is entirely in the discretion of the court, according to Mr. Smead.

A CHAMPION OXFORD.

The above photo shows the champion Oxford ewe at the Panama-Pacific exposition at San Francisco in 1915. She is owned by C. P. Kizer of Harrisburg, Ore., one of the few breeders of Oxfords in the Pacific northwest. Mr. Kiser says he likes the good size of the Oxfords, that they make an excellent cross on fine wool sheep and that he has difficulty in supplying the demand.

Association Grows.

During January the National Duric-Jersey Record association recorded 5132 pedigrees received, 96 new members, and had an increase in receipts of fully 20 per cent over January of 1916. Last year the association conducted 14 futurity shows. This year the association will promote three different kinds of futurity shows, the national at Omaha, the state futurity and the district futurity. Any breeder is eligible for the national, one state futurity and one district futurity.

Thirteen state futurities, carrying classifications of $400 each, will be promoted at different state fairs, among them being the Montana State fair and the Oregon State fair.

Aluminum in Place of Wood.

Aluminum is now being substituted in place of wood in the manufacture of automobile bodies.

127-inch Wheelbase

How Mitchells Differ

Because of What John W. Bate Has Done

Hundreds of Extras

Factory efficiency has been made a fine art in this plant. John W. Bate, our efficiency engineer, has spent millions to attain it.

This entire plant, covering 45 acres, was built and equipped to secure it. Now our new body plant completes it. We urge you to learn where these tremendous savings show in extra value.

For a Lifetime Car

Part of this saving pays for 100 per cent over-strength. Our margin of safety used to be 50 per cent. It has now been doubled.

Steering parts, gears, axles, etc., are made oversize. Our rear springs are built so that, in two years, not a single spring has broken.

Over 440 parts are built of toughened steel. Parts which get a major strain are built of Chrome-Vanadium. The steel in Mitchells costs us up to 15 cents per pound. And we do not skimp on weight.

The result is safety, freedom from repairs and troubles. And a car which probably will serve men for a lifetime. Time will prove, we believe, that this double strength is worth half the price of the car.

$4,000,000 in Extras

There are 31 extra features in Mitchells, most of them exclusive. On this year's output these extras cost us about $4,000,000.

They are things like a power tire pump, an easy control, a ball-bearing steering gear, engine primer on the dashboard, a light in the tonneau, a locked compartment, etc.

Every one is a wanted feature. Yet they are impossible, at a modest price, without Mitchell factory efficiency.

Extras in Luxury

The Mitchell has long been considered by experts one of the handsomest cars on the street. The output is largely sold in metropolitan centers.

Yet this year we have added 24 per cent to the cost of finish, upholstery and trimming. We are giving you heat-fixed finish, extra-grade leather, and scores of new dainty touches.

TWO SIZES

Mitchell —a roomy, 7-passenger Six, with 127-inch wheelbase. A high-speed, economical, 48-horsepower motor. Disappearing extra seats and 31 extra features included.

Price $1460, f. o. b. Racine

Mitchell Junior —a 5-passenger Six on similar lines, with 120-inch wheelbase. A 40-horsepower motor—¼-inch smaller bore than larger Mitchell.

Price $1150, f. o. b. Racine

Also all styles of enclosed and convertible bodies. Also demountable tops.

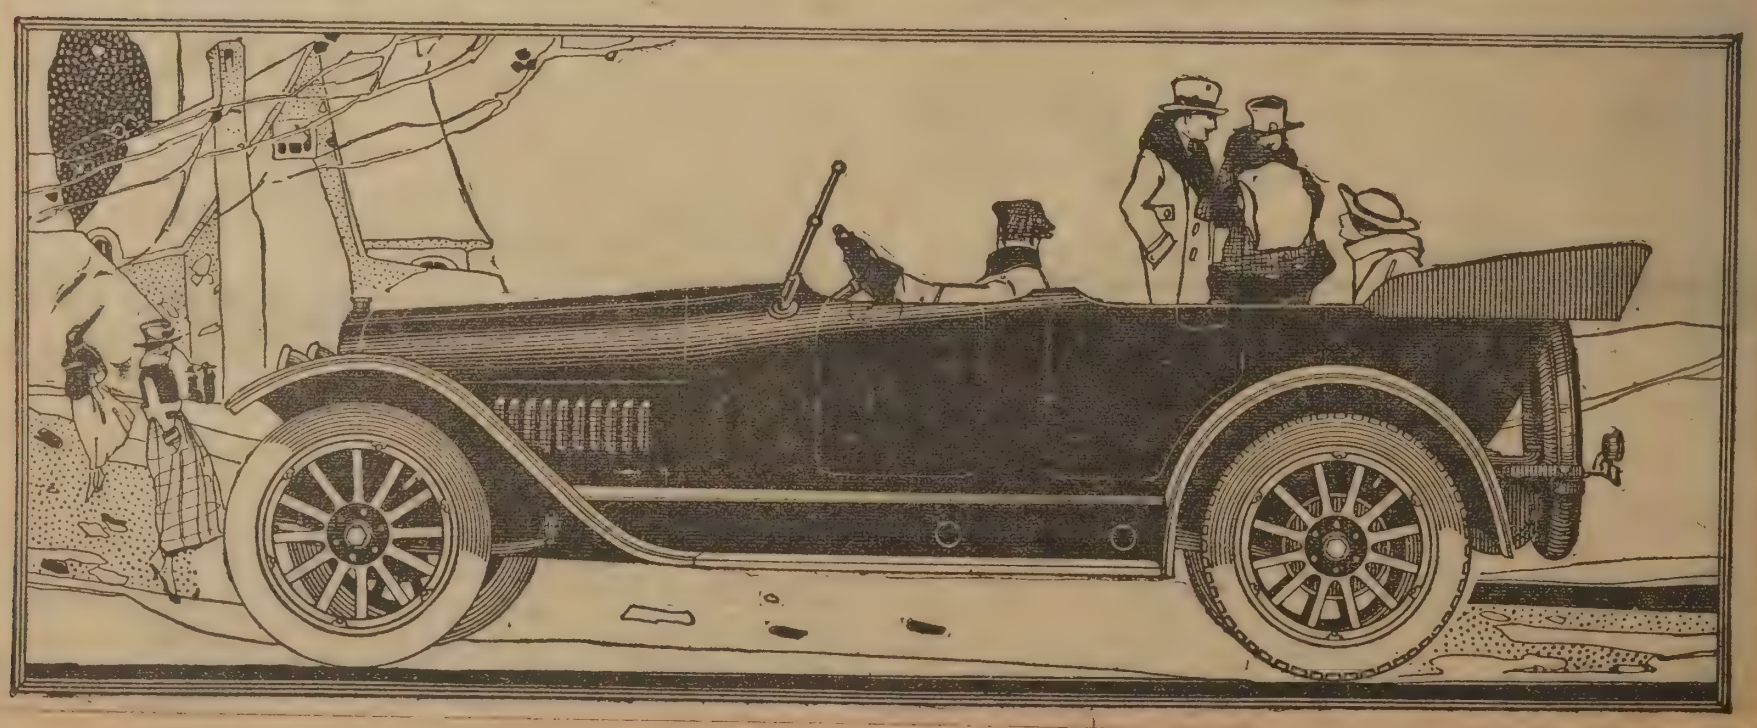
All this results from another economy. We now occupy our new body plant. All Mitchell bodies, open and closed, are built here now, under Bate efficiency methods. And this added luxury clearly shows the result.

What So Important?

What else is so important?

Extra values like these, without extra price, come only through efficiency. Under other methods, all these values are wasted in the shop.

Mitchell stands unique among fine cars in respect to efficiency. For a dozen years John W. Bate has worked here to attain it. Go to your Mitchell dealer and see the results. Compare it with cars built otherwise. If you can, take an engineer with you, and we will abide by his verdict.



$1150 Mitchell Junior

Note that this year's line includes two sizes—the Mitchell and the Mitchell Junior. But the Mitchell Junior—for five passengers—is still powerful and roomy.

This is also for efficiency. So the man who wants a 5-passenger car need not pay for more power or more room than he needs.

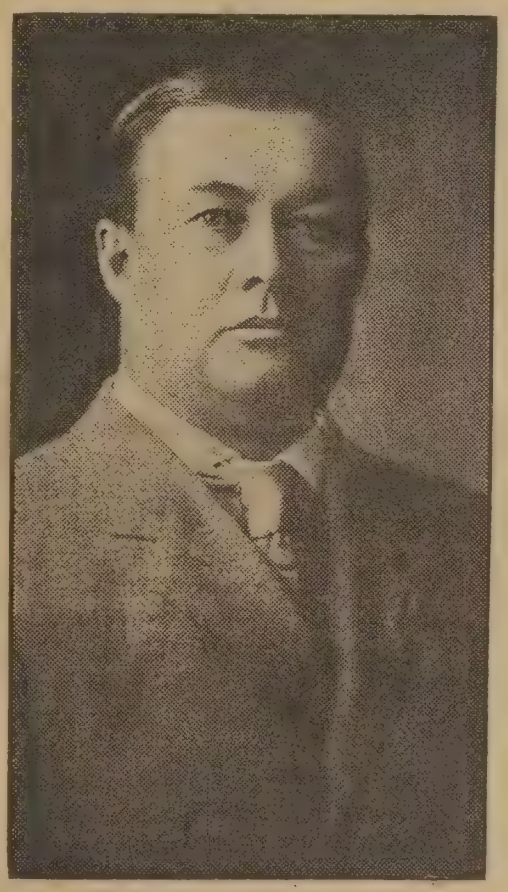
We Put Out the Sign "Cooperation"

And Then Do Everything It Is Possible for Us to Do to Avoid Cooperation

By W. H. PAULHAMUS

Most of us are not aware that we people on the farms are not the only people interested in cooperation. The truth of the matter is—that all of the large business interests of the United States are working along the same lines.

The meat packers are working cooperatively, the Standard Oil Company is working cooperatively, the bankers are working cooperatively, and in fact any line of business that is not working on a cooperative basis is not making good, and the fact that any industry fails to hang out a sign announcing that this is a cooperative movement is no indication that it is not being conducted along cooperative lines.



About all that we people in the agricultural districts do is to put out the sign "cooperation" and then do everything it is possible for us to do to avoid cooperation.

Cooperation means working in harmony, with a view of obtaining the best possible results for all in interest. This is a very simple method and can be followed to a successful conclusion by any community.

There is not a farming community in the United States that would not profit materially by holding a meeting and selecting a captain, and then permitting the captain to outline a business policy and obtain results.

Of course it is necessary to have a captain, but it is more necessary to have privates, as no captain can be successful unless he has privates, just as no leader can be successful unless he has followers.

The trouble with the cooperative movement is that we have all captains

W. H. Paulhamus

and no privates, and for this reason we should all favor military training in our schools, which I believe would teach us the elementary principles necessary in cooperation, just as it is necessary in our army and our navy, both of which are largely cooperative movements, which means that everybody connected is cooperating for one purpose.

We have the best example that the world has ever been shown of the cooperative movement in the war now being carried on—the German government are cooperators, and the allies very much resemble the average farmers' cooperative movement.

We have just had another striking example of cooperation in the recent organization conducted at Spokane, at Seattle, at Wenatchee and several other points. This movement was cooperative only to the extent that the farmer was given an opportunity to cooperate with his cash with some gentlemen, who were capable of wearing good clothes and eating good dinners, but it was not cooperative to the extent that the farmer received any results.

I believe that we can truthfully say that it requires good clothes, in addition to being a stranger to us, to gain our confidence, while the truth of the matter is we have in our own community entirely capable leaders, who understand our problems, and who will lead us to success if we will be content to be followers.

The leaders of our state grange and state union, and many other prominent citizens were misled and induced to get into bad company. This is only to be

(Continued on page ten.)

WATCH FOR THIS—

By all means read the intensely interesting account of splendid shoulder to shoulder cooperation among more than 12,000 milk producers in the Chicago district and how it resulted in a smashing victory over powerful distributing companies for better prices. This important article will appear

Wizards of Transportation

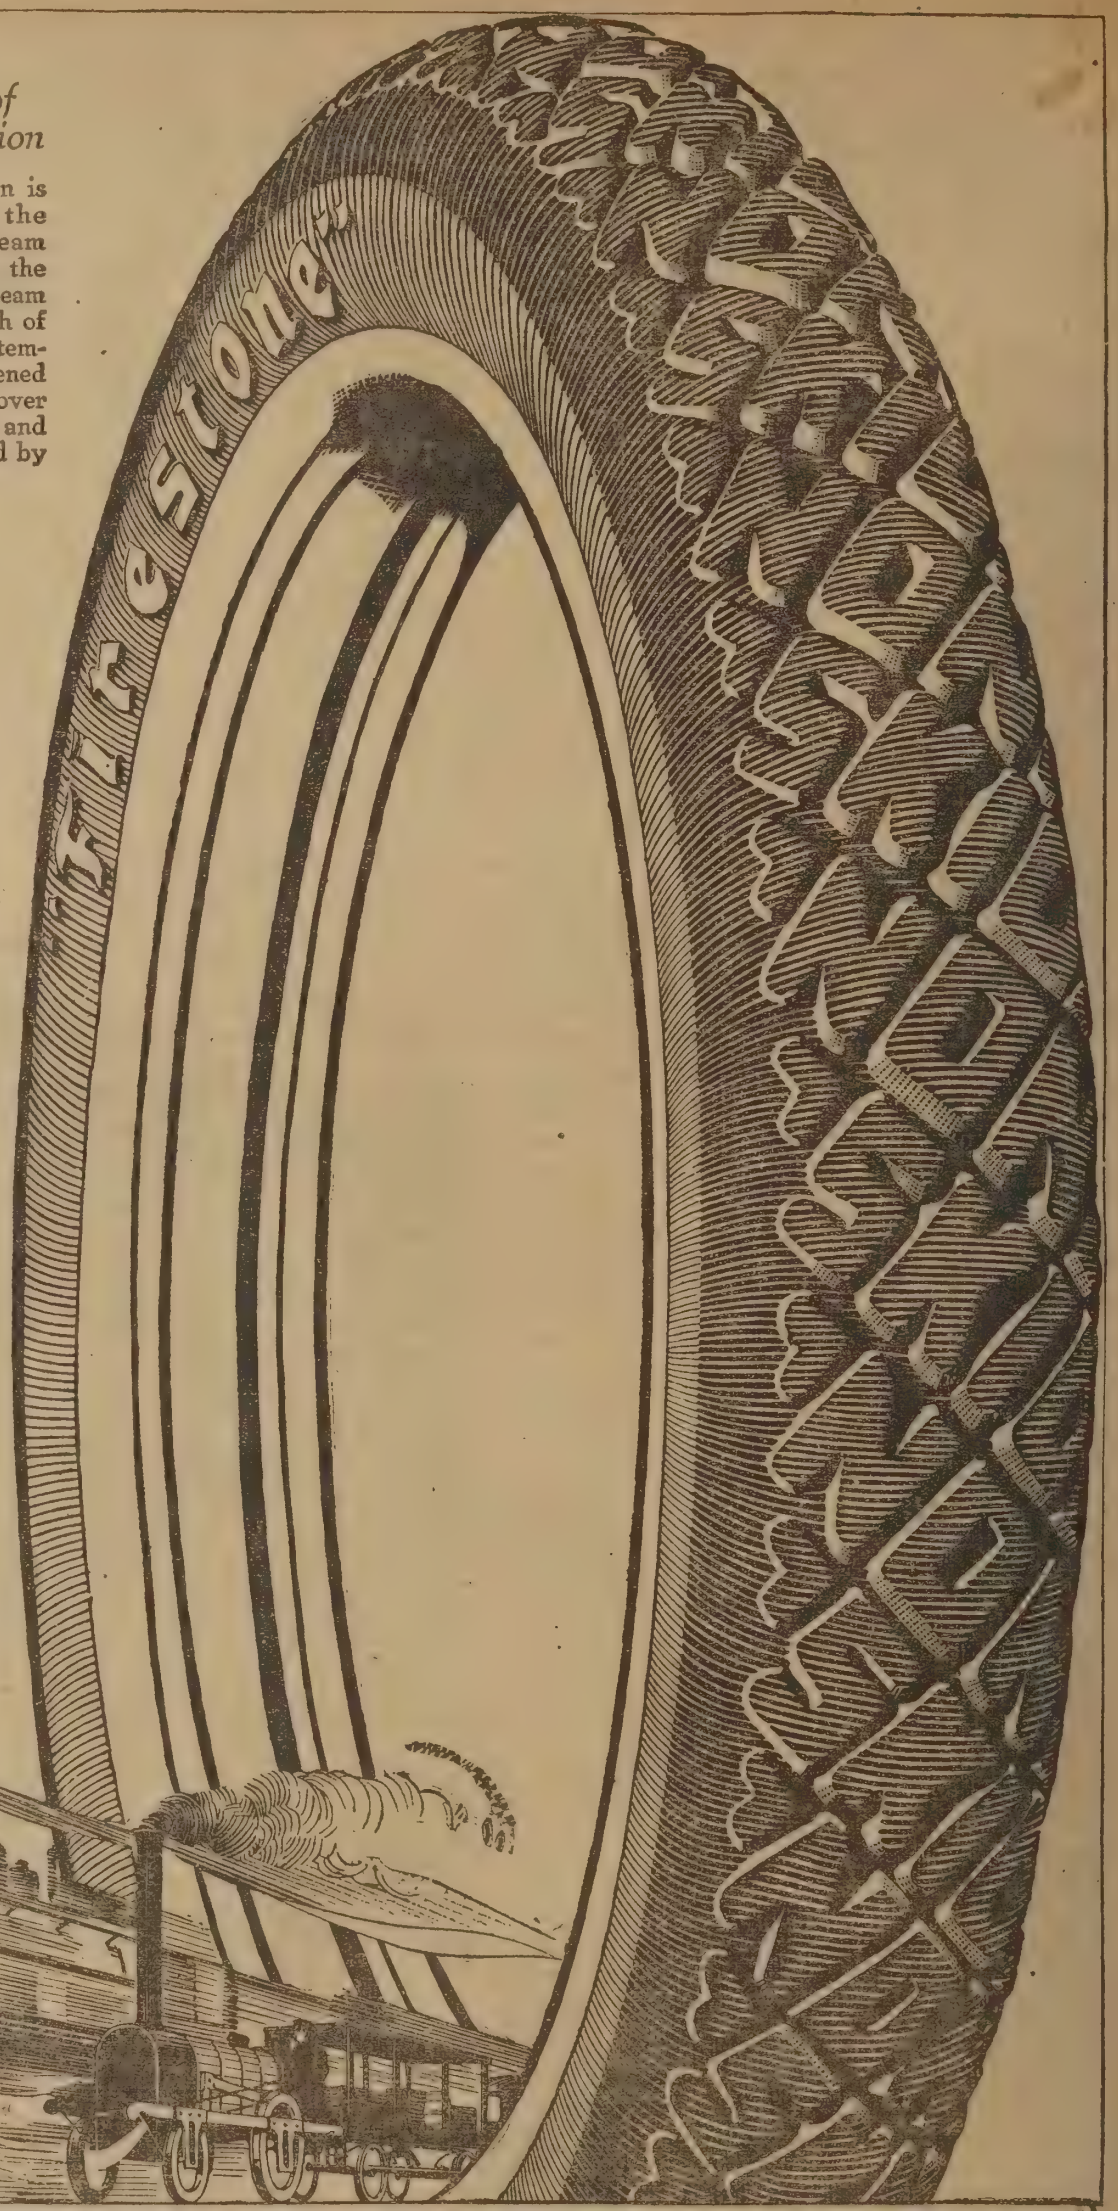
George Stephenson is rightly called the father of the steam railway. He ran the first successful steam engine on the 25th of July, 1814. In September, 1825, he opened the first railway over which passengers and goods were carried by a locomotive.

The Human Interest In Progress

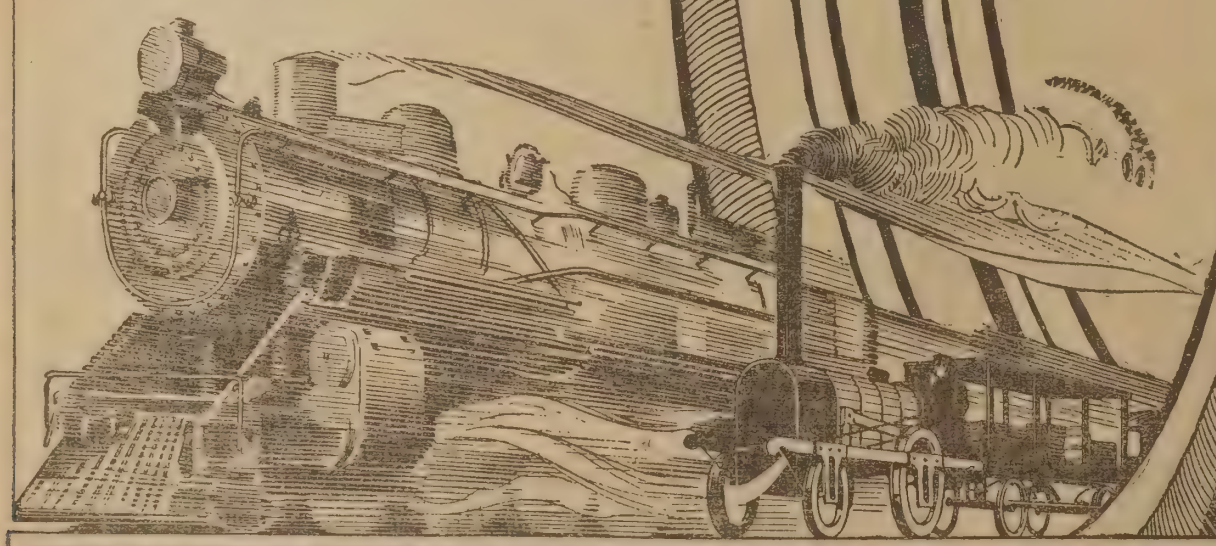
THE man who is responsible for a system by which the world enjoys safer, easier, quicker and cheaper transportation, is a determining factor in progress.

When George Stephenson started the first locomotive on its way he pushed the world forward centuries. Today we see the automobile with all its possibilities made practical and its energy made effective by the rubber tire.

The leading example of highly specialized and efficient tire service is found in Firestone Non-Skid Tires.



The miles of reliable wear on any road at all seasons, the car-protection and easy-riding, make Firestone Tires a world-wonder in transportation.



And as there is a man-power behind every big work, so this service is vitalized and given the personal element by the name on every tire of the founder and present head of the business, Mr. Firestone. That name on the tire is your assurance of quality.

Your dealer can get Firestones for you, and this quality will cost you no more than ordinary tires. Because Firestone Tires are widespread in use and the output is tremendous and efficiently handled by the Firestone Organization. Your dealer will serve you.

This Poultry Man Can Tell You

Just How Much His Chickens Pay Him for the Pleasure of His Company

By PAUL E. TRIEM

W. A. Hayward of Shelton, Mason county, Wash., knows just how much his chickens pay him for the pleasure of his company. In spite of the modern agitation for exact figures in this respect there is a delightful vagueness in the reply of most chicken cranks to the question, "Do your chickens really pay?" Mr. Hayward answered this question defintely and without hesitation.

"My present flock of Rhode Island Reds is not yet mature enough to have paid much of anything," he said, "but I can tell you what my White Leghorns did in one of their average years. I had 340 hens; I took in altogether $1335., and my net profit was $800. These chickens had the use of 1 1-4 acres of uncleared ground, and their houses were warm and comfortable, but not expensive."

Mr. Hayward feeds his chickens for egg production—in the brushy paths of their uncleared yard they find bugs and green food, but this is not their only supply. Animal food of some sort is supplied in their scratch food, and corn or cabbage is always available. The former is run through a cutter which reduces it to available size. Mr. Hayward makes little use of sprouted oats, on account of the difficulty of keeping them from molding.

In reply to a question as to why he had changed from Leghorns to Reds, when the former had proved their ability to fill the egg basket and, incidentally, the purse, Mr. Hayward said that the superior vitality and "living ability" of the larger breed had attracted him. When a Leghorn chick gets a bad start it seldom recovers sufficiently to devolep into a healthy mature chicken. The Rhode Island Reds, on the other hand, have unusual recuperative power and seldom fail to hold their own against any reasonable handicap in the way of weather or accident.

In the Hayward garden four varieties of sweet corn have been tried out. Cory and Golden Bantam have both been displaced by an unknown blue variety—one which Mr. Hayward brought from Oregon. The cob is small, the grains deep, and the quality is a revelation to one who thinks he has sounded the depths of corn palatability. Since the advent into the Hayward kitchen of this variety most others have had to retire.

Country Gentleman is the exception to this. This variety, so favorably known in the east, has not yet established its ability to cope with Pacific coast climatic conditions, but apparently it is in the way to do so. Even during the present backward season and with the handicap of late planting it has nearly matured roasting ears, and the growth of the plant itself is amazing. With proper selection and cultural conditions there seems little doubt that this variety will become of value on the Sound.

The above pictures show Mr. Hayward among his poultry and in the corn field of his home near Shelton, toward the southern end of Puget Sound. Mr. Hayward believes that his blue corn of name unknown to him is a variety of much promise.

Dollar Fifty

To Be Paid for 1917 Grain Crop

Enterprise, Ore., has set the Chicago, Minneapolis, Portland and other grain exchanges an example so hard to follow that it is not being followed. In fact, it is believed that the little Oregon town has established a new record in "futures" for the northwest, if not for the entire United States.

C. R. Elliott, a retired stockman and farmer of that place, has contracted the 1917 wheat crop of H. A. Quesenberry of Enterprise at $1.50 per bushel. The contract covers the grain to be grown on a 275-acre tract owned by Elliott and farmed by Queensberry.

W. R. Holmes, president of the Wallowa National bank of Enterprise, confirms the report of the transaction, but says that he does not "think that it establishes anything." Mr. Elliott is an enthusiastic business man, who, says President Holmes of the bank, "figures that he can make some money on the contract."

Wool Train

Will Demonstrate in Washington

The government wool car, the purpose of which is to educate the people of the country in the subject of wool production and marketing, is now in the state of Washington, where it will travel for the remainder of this month. Representatives of the state college animal husbandry department and of the federal department of agriculture will be with the car.

At each stop, of which there will be 17, lectures and talks on sheep production, methods of producing wool, shearing, marketing and even manufacturing woolen goods will be given. The car also carries a moving picture outfit showing sheep from the range to the market and wool from the fleece to the cloth.

A number of sheep from the state college farm will be carried along for demonstration purposes.

The following is the itinerary of the demonstration car:

Pullman, at the state college—March 16 and 17.

Colfax—March 19, 8 a. m. to 10:15 a. m.

La Crosse—March 19, 11:30 a. m. to 11:30 a. m. March 20.

Dayton—March 20, 2:45 p. m. to 12:45 p. m. March 21.

Waitsburg—March 21, 1:15 p. m. to 4:55 p. m.

Walla Walla—March 22, 8 a. m. to 8:15 p. m.

Pasco—March 23, 8 a. m. to 11 a. m.

Kennewick—March 23, 11:07 a. m. to 9:33 p. m.

Prosser—March 24, 8 a. m. to 10:49 p. m.

North Yakima—March 26, 8 a. m. to 10 p. m.

Ellensburg—March 27, 8 a. m. to 10:10 p. m.

Sunnyside—March 28, 9:20 a. m. to 4:10 p. m.

Grandview—March 28, 4:30 p. m. to 9:55 a. m. March 29.

Toppenish—March 29, 10:52 a. m. to 3:05 p. m.

Connell—March 29, 6:15 p. m. to 12:15 p. m. March 30.

Ritzville—March 30, 2 p. m. to 7:50 p. m.

Sprague—March 31, 8 a. m. to 2:50 p. m.

Cheney—March 31, 3:50 p. m. to 9:25 p. m.

Community Organization.

County Agriculturist O. T. McWhorter has arranged with the people of Elwha, in Clallam county, for an agricultural organization which will meet once each month.

Endorsed By Kegley and Crow

On the Advice Many Farmers Were Caught in Gigantic Swindle

(From the Mason County Journal.)

The recent conviction of five of the promoters of a "cooperative trading company" (the Northwestern General Trading company and its allied branches in United States court at Spokane), after a long and hard-fought trial, should serve as a warning to people who do not have money to lose to pass up all such get-rich-quick schemes and save-money schemes in future. We have no means of knowing how much money the little county of Mason contributed to this and other stock-selling schemes, but it is a safe guess that our people who could ill afford the loss have kissed goodbye to at least $10,000 in the last five years, in spite of the frequent warnings of this paper. The desire to buy goods cheaper is quite natural, and most people have an idea that the other fellow is exploiting them. The truth is that no business nowadays enjoys more than a moderate margin of real profit, but it is doubtless true that the expense of conducting most business is abnormal. The trend of the times, wages and the essential things required in sconducting any business, and perhaps more than anything else the growing demand of the public for "service," spells higher prices for everything and at the same time a nerrowing profit on the investment. None of these cooperative concerns, so far as we have been able to observe, has by legitimate business methods been able to eliminate unnecessary expense and sell goods cheaper to their stockholders, although some were able to keep up a pretense for a time, or as long as the new crop of suckers held out and they could sell stock. Careful reading of the testimony during the trial disclosed a cold-blooded scheme on the part of the promoters to make the farmers "come through," and the heavy fine and imprisonment seems justly merited.

The unfortunate part of the so-called cooperative trading transactions is that so many grangers were encouraged to invest their money by leading officers of their organization.

The Olympic trading concern, at Seattle, was vouched for by several of these officers, after a purported investigation, and it later developed that some of the investigators were on the payroll of the concern. It has been shown that 51 per cent of the money received from stock sales, supposed to be the capital of the company, went as commissions to those who sold the stock.

In the case of the Spokane concern it was proven that of $584,748 collected from the people in exchange for stock, $219,323 was paid out in commissions to agents and officers.

Master Kegley of the state grange, President Crow of the farmers' union and other officials formed a committee to investigate this concern, and reported it in first-class condition and doing a safe and conservative business.

John C. Lawrence, for whom it is claimed that he always "stood for the welfare of the people and against the special interests"—whatever that may be—was one of the committee, and seems to have been on the company payroll at the same time.

How these gentlemen, each claiming to have had long business and mercantile experience, could agree that a business suffering the loss of more than one-third of its capital at the outset, could be working along safe, conservative lines, certainly passeth all understanding.

The fact remains, in this case, that, after handling more than half a million dollars of the money of farmers and people of small means, the Spokane trading concern has merchandise and assets of about one-quarter of that sum. The promoters have absorbed or lost the rest, honest cooperative movements have received a severe blow, the farmers of the northwest have been cruelly despoiled, and the business interests of each little community has retrograded just that much. The lesson should be remembered when the next canvasser comes along with his little get-rich-quick or save-money scheme.

FARMERS CAUGHT

By Following Grange Advice.

The Clarke County Sun, after giving the news of the conviction of the four leading officers of the Northwest General Trading company in the United States court at Spokane, having been found guilty of using the mails to defraud, says:

This is the company that operated extensively about a year and a half ago in Clarke county. They had branch offices in Seattle and Portland. C. L. Davis was the man who sold the stock around Brush Prairie, Minnehaha, Washougal and other points in this county. Shares sold for $40 each, and each shareholder was privileged to buy groceries, supplies, etc., at wholesale prices. About $335,000 was collected in stock sales and about $112,000 of this went to salesmen for commissions. What roped the farmers and grangers into the concern was the fact that the Northwestern Trading company was indorsed by the executive committee of the Washington state grange, C. B. Kegley, J. O. Wing and J. T. Compton. And it was also indorsed by the farmers' union. The company did operate for a while, but it was a swindle, with no possible show of success.

THAT INDORSEMENT

Made by the Grange Committee.

The following signed indorsement was printed on the front cover page of the 1915 catalogue of the Northwestern General Trading company:

Patrons of Washington:

Your executive committee has made a personal investigation of the resources and liabilities, methods of business and quality of merchandise of the Northwestern General Trading company. We are satisfied that it is on a sound financial and cooperative basis, and through the proposed plan of a distributing center with each subordinate grange, and the active cooperation of the patrons, can be made to fill the need of the wholesale supply house for the grange members.

Executive committee, Washington state grange.

C. B. KEGLEY.
J. O. WING.
J. T. COMPTON.

HOLDING THE SACK

Garfield County Stockholders.

East Washingtonian: Heads of the Northwestern Trading company and of the Olympic concern were found guilty of fraudulent use of the mails in their stock manipulations. The Northwestern once did a thriving business in Garfield county, and many stockholders are now holding the sack.

Breeder of Spotless Reputation

Is the Best Sateguard the Purchaser of Well-Bred Animal Can Have

If dishonesty was the rule the whole fabric of the nation's business would fall to pieces. On the other hand, the nation's business would be considerably curtailed if it were confined only to those men whose words were as good as their bonds. Hence, while not losing faith in honesty and integrity and efficiency in building up any line of business, it is just as necessary to have laws, rules and regulations to support the weak-kneed and to punish the guilty. Constitutional government is said to be a thing of checks and balances and the purebred live stock business, while depending ultimately upon the spotless reputation of the breeder, also needs these checks and balances. If not closely watched, abuses creep in, and the good of the industry depends upon ferreting and eradicating these abuses.

The buyers as well as the breeders of purebred live stock are still looking for a satisfactory explanation of the following contradictory statements regarding the $21,500 calf sale at Portland last December:

October 2, 1916, B. Meyer, the breeder, offered the Holstein bull calf, Findern Mutual Fayne Valdessa, to E. A. Stuart for $5000.

November 17, 1916, Mr. Meyer told Mr. Stuart that the animal had been sold. He failed to give the price, but Mr. Meyer's herdsman told Mr. Stuart that a Mr. Von Herberg was the purchaser and the price was $2500.

In his transmitting letter to Mr. Gue the auctioneer at the Pacific international stock show sale, at Portland last December, Mr. Meyer said: "I consign this bull to your sale without any restriction whatsoever." But in his answer to the Farmer's telegram of inquiry of February 4, Mr. Meyer says: "Bull was sent by me to the sale under the recommendation of Von Herberg, guaranteeing me $5000 at least, and all he would bring above it. What my herdsman said was not true."

When the Farmer sent another telegram asking Mr. Meyer to be more explicit he telegraphed this reply: "The bull was sold at auction for $21,500 to Mr. Von Herberg. After deducting commission freight and expense I received the balance of my money in full. Exact amount that I got is my business."

According to the letters of the secretaries of the great purebred live stock societies of the country, the second instalment of which is herewith given in the Farmer, the purebred live stock industry needs thoughtful attention both in the way of emphasizing the priceless value of men of honesty and integrity and skill in the business, as well as in further guarding against those who would use the industry as a means of dishonest gain.

BY-BIDDING

How It May Be Largely Stopped.

The following letter is from Gurney C. Gue, secretary and treasurer of the American Hackney Horse society, incorporated in 1891:

The following letter is from Gurney C. Gue, secretary and treasurer of the American Hackney Horse society, incorporated in 1891:

Acknowledging and replying to your favor I would say that after 30 years of close association with horse auctions in New York I am unable to suggest a means by which "auctions of purebred live stock can be so conducted and guarded that they will give complete assurance of being bona fide sales." To paraphrase a famous saying of Senator John J. Ingalls, the purification of public sales is an iridescent dream, in my opinion.

It matters not how scrupulous an auctioneer may be, if a consignor puts an animal in a sale under a secret arrangement with one or more persons to bid it up to a certain amount, the manager of the sale can not ordinarily do anything to prevent such by-bidding or wash sale, as the case may be. Of course, if he has information that the bidding is fictitious, he can ignore the bids, but his liablity for damages in case he makes a mistake is usually sufficient assurance to the consignor and confederates that nothing of this kind will happen. I have seen it happen a few times, however, at horse sales, when the late Peter C. Kellogg was living.

Most auctioneers in the New York horse market have long ago given up trying to prevent by-bidding except by charging up the usual commission to the consignor when his horse is "bid in" the same as when he is actually sold. This stops most of it, though not all.

Whether he buys at public or private sale, the best safeguard a purchaser of well-bred horses or cattle can have, in my opinion, is the character of the seller; the consignor if at auction. Opportunities for fraud and sharp practice are so many and so difficult to prevent that I would never think of buying a registered animal from a breeder without a spotless reputation. After all, that is the best assurance that an animal is bred as represented, and that he is to be sold to the highest bidder, without by-bidding or reserve.

GURNEY C. GUE,
Sec. and Treas.
Hempstead (L. I.) N. Y.

PUREBRED STOCK

Put It on Firm Foundation.

J. R. Pfander, secretary of the National Duroc-Jersey Record association, gives an informative extract from the history of that great association:

To the Editor: I am in receipt of yours in which you enclosed to me clipping from the recent issue of The Washington Farmer which contained statements and affidavits relative to a recent phenomenal sale or public auction of the Holstein bull calf, which I have read over very carefully.

You asked me for a statement as to how I think auctions of purbred live stock could be conducted so that they would guarantee to the public as being bona fide sales. I can see no difference in the manner of conducting a Holstein sale than a pig sale. The latter I have had some experience with. We pig men have come through what we term "boom" times, when fictitious values were placed on animals of undeserving merit. These transactions, of which I am somewhat familiar, had for their whole object, as developments proved, the sole purpose of catching "suckers." Numerous ways have been employed to accomplish this purpose, which space and time will not permit me to enumerate, so I will try and go back to my original subject, the manner of conducting a legitimate public sale.

In my estimation we have solved this problem, at least to our satisfaction. We accomplished this by placing our public sales on a cash basis. During our "boom" times I was employed as a field man, soliciting advertising from the breeders for their sales, so this gave me quite a close observation of the outcome of these sales. It was nothing uncommon for me to present my advertising bill to the party who would have the sale with an average of $300 to $500 per head on an offering of pigs and be told that I would have to wait on payment of my bill as he had not received enough cash out of the sale to pay the expenses. This soon told all of us that there was a "screw" loose in the machinery some place. Animals were either sold and settled for before the sale, or there were old obligations which consumed the selling price of the animals in the sale.

This kind of business went so far with pig men that many of our leading breeders were on the verge of bankruptcy and when the bubble burst there were very few men who had made any money during these "boom" times, but scores of them had lost money. Many a young man who took the lead in this play of the sucker, was forced to sell his farm to pay the notes that he had been induced to give to pay the fabulous prices.

You may ask what was our condition after the bubble had burst. Busi-

(Continued on page ten.)

"PLEASE, MISTER, WON'T YOU GIVE ME YOUR DOG?"

A wistful, heart-hungry little boy, oppressed with the great lonliness of an only child out in a new country, waiting for hours by the side of a wagon trail across a vast expanse of prairie, trying desperately to get a playmate. And finally the dog came—a puppy, upon whom the boy lavished his love, but which, alas, was destined to a tragic fate, leaving the lad's heart emptier than before.

Such is but one of the interesting and touching incidents of his boyhood days in the Big Bend district related in this issue by Joe L. Ashlock. Don't fail to read this engrossing chapter from a pioneer Washington boy's life. It will prove a real treat for grownups and make most delightful reading for our young folks. You'll find it on page 22. "**The Ups and Downs of a Bunch Grass Boy.**"

Important Laws Enacted

Legislature Deals With Many Vital Issues

Deadlocked for several hours over the question of appropriating $4000 as a relief sum for Mrs. Edward Olson, widow of Commissioner Olson of the industrial insurance department, who was assassinated in his office at Olympia the first week of the legislative session, the state legislature remained in session until 5 o'clock Friday morning, when, after making the appropriation, it adjoined until January, 1919, unless called together in special session by the governor.

The legislature this year enacted into law some 10 important measures, among which were the following:

The bone dry liquor law, under which intoxicating liquor can not be shipped into the state after June 6, the date on which all the measures passed become effective.

The bill defining for all time the courses to be given at the state college and at the university.

The bill fixing the tax levy for the state college, university and the three normal schools at 1.58 mills, which will raise approximately $1,580,000 a year for the maintenance of these institutions.

The resolution submitting to the people of the state the question of whether or not to call a convention to revise the state constitution.

The bill levying one-half mill tax for the purpose of erecting a capitol building at Olympia.

The bill increasing the military levy to three-tenths of a mill, which will raise about $300,000 a year.

The bill establishing a system of first aid to the injured in employment in the industries of the state.

The irrigation code.

This latter measure is one of the important measures of the session. It was declared on the floor of the legislature that it would allow the development through irrigation of 2,000,000 acres of arid land.

The bill provides for determination of rights to the use of water on the basis of superior public use, placing domestic, irrigation and power uses on an exact par. The office of state hydraulic engineer, to be filled by appointment by the governor, is created, the engineer to make examination of each case and report to the court before which the case will be heard. Existing riparian rights are left undisturbed and water can be secured only by payment of the amount determined by the court after a hearing. The act carried an appropriation of $25,000.

A number of important measures failed of passage through direct opposition to them or through failure of their friends to force them to the front on the daily calendar. Among those which never passed are the following:

A bill reapportioning legislators to counties on population basis; a bill reestablishing capital punishment; a bill establishing a fourth normal school at Centralia with separate tax levy; remedial amondments to mothers' pension act to restore aid to abandoned mothers; a bill providing for state powder factory; a bill requiring compulsory military training in high schools and a series of measures proposing changes in election laws, including the short ballot, a blanket primary ballot, the election of county officials for four-year terms and various measures directed toward nonpartizan elections.

Two changes were made in the primary election laws, one eliminating second choice voting and the other allowing absent voting at primaries.

Of the 180 measures approximately which were passed by the legislature 121 remained on Governor Lister's desk unsigned when the legislature adjourned. The governor has until evening of March 20 in which to approve or veto such measures.

Stock Show at Sprague.

At the last meeting of the commercial club of Sprague, Lincoln county, J. H. McCroskey made a talk on the advisability of holding a stock show this summer. He pointed out that as Sprague, with the Meadow Lake stock farms and the Rothrock & Day is a center for high-grade stock, a creditable show could be held. A committee composed of J. H. McCroskey, F. M. Rothrock, A. L. Smalley, J. W. Anderson, C. E. Beckwith and C. S. Browne was appointed to handle the matter.

Fruit Growers' Agency

Successful Year and Broader Plans Proposed

Declaring the work of the Fruit Growers' agency, Inc., for the first year was successful, the board of trustees last week decided to recommend to the annual meeting of the agency to be held April 9, that its scope be broadened. The first year was experimental in a way, but with the past experience to serve as guide it is hoped to greatly enlarge the activities. The board met in Spokane. All points were discussed, and a harmonious agreement was said to have been reached. President Paul Weyerauch of Walla Walla summed up the results as follows:

Plan to Extend Usefulness.

The board discussed the outlook for the future and decided to not only go ahead, but to widen the scope.

It was decided to recommend that the qualifications be changed, and to reduce the fee for active members from $100 to $25 annually.

Would reduce the tonnage requisite for active membership from 100 cars to 50 cars.

Would admit to membership every legitimate factor of the fruit industry, including cash buyers who handle as much as 50 cars of fruit a season.

It was suggested to change the name to Northwestern Fruitmen's Chamber of Commerce, more thoroughly to represent the character of the organization.

Would establish a traffic bureau to handle all problems with which the agency may have to deal.

The agency is not a selling organization. Its functions are those largely of a marketing nature, which include the gathering of crop estimates and the dissemination of market reports. Inspection also is a feature.

President Is Optimistic.

President Weyrauch said:

"We feel that the first year has shown the value of the agency and that next year we can do still better work. Under the plan we started on some associations and some features were not available, but as we now propose to widen out we can use these things which we feel will be mutually advantageous.

"The way this is to be done is being worked out and we are not at liberty to disclose it. At first this was a growers' agency, but so much tonnage is being handled by others that we feel the full benefits can not be obtained without widening the field. We could not see that at first, but have found some advantage now.

"We see the need of securing the aid and support of the federal department of agriculture. Both the department

(Continued on page eleven.)

Allege Harvester Trust

Gregory Argues Mammoth Combines Wrong

In reargument before the supreme court of the federal dissolution suit against the International Harvester company in Washington last week, Attorney General Gregory personally presented the government's reason for seeking disintegration of the so-called trust. He declared that if the intent of congress to prohibit undue concentration of capital and restraint of competition were not carried out, government control, if not ownership, in all likelihood would follow, with its evils and dangers.

Such "colossal combinations" of capital, enjoying preponderant control of an industry—even if "good" combinations—are illegal and harmful, the attorney general argued. He pointed to evidence that the defendant controls between 77 and 85 per cent of the harvesting machinery trade, asserting that one "dummy" and six "office boys" formed the huge combination. This referred to the transfer of constituent corporations' assets to William C. Lane for subsequent transfer to the New Jersey corporation.

"Lane, the dummy," said Mr. Gregory, "offered to transfer the subsidiaries. The office boys gravely asked for time to consider. The next day these six office boys said the proposition 'looked good' to them and accepted. George W. Perkins (formerly of J. P. Morgan & Co.) was the little child who led them by the hand. J. P. Morgan & Co. waved the magic wand—and received $3,500,000 for promotion services—to make legal what was illegal."

There was conscious wrong-doing in the combination's formation, the attorney general insisted. Competition actually has been "throttled and destroyed," he said.

By controlling the industry, he contended, the combination can control prices, competitors being few and comparatively feeble.

Solicitor General Davis concluded the government's plea, contesting the defendant's suggestion that the Sherman law prohibits undue restraint of trade, but not necessarily of competition.

Harvest Labor

To Be Big Problem at Fairfield

To the Editor: This community has increased its pea acreage for next year between 400 and 500 per cent, or in other words, will have between 16,000 and 18,000 acres devoted to peas. The farmers are increasing their pea acreage and eliminating summer fallow almost entirely. In fact many farmers have not had any summer fallow for several years, their entire acreage being devoted to peas every year. The harvesting of the pea crop next harvest is causing some apprehension as it will take at least 1000 harvest hands and to get this large number of men may be a hard problem at that time.

ROY G. ADAMS.

Fairfield, Wash.

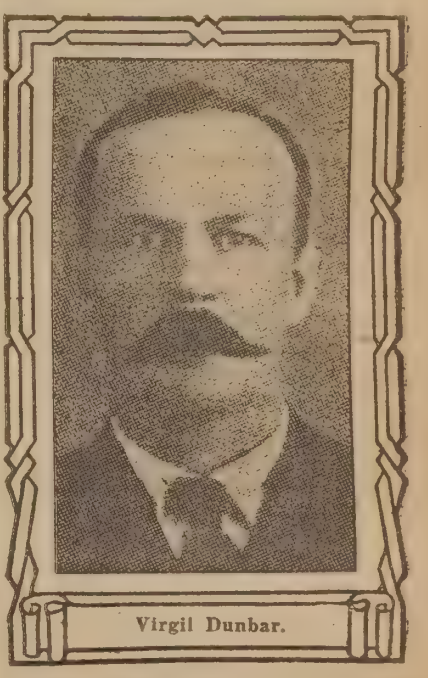
JACK SPLAWN

One of the best known and most loved of the old-time stock men of the Northwest.

A splendid specimen of a class of men of such outstanding worth and genuine merit, that their memories become an inspiration to those who have had the fortunate privilege of their acquaintance and friendship, and whose names constitute the jewels in the crown of our beloved commonwealth.

Was it the environment of the business in which they were engaged, or was it the inborn character of the men which led them to this new country that developed this type of manhood?

Whatever may have caused the making, Jack Splawn was one of that class—



His cheerful, hopeful, cordial disposition,
His freedom from hypocrisy and littleness,
His courage to say and do what he thought was right,
His willingness to serve in public or private work where duty seemed to point—

endeared him to his friends who will prize his memory as a precious experience in their own lives and will hope that his example may continue to influence the coming generations, who will carry on the development of this great state, to which he gave his own life in such unselfish devotion.

One of his numerous and sincere friends,

E. F. BENSON.

Washington Portraits No. 6.

Virgil Dunbar.

Virgil Dunbar of Pateros is a stanch advocate of diversified farming, and for six years has been trying it out on an Okanogan county dry ranch with a marked degree of success. A supply of decaying vegetation must be returned to the soil to insure lasting productiveness, and Mr. Dunbar believes that diversified farming will do this.

Mr. Dunbar says: "I consider alfalfa one of the most profitable crops that can be raised in this part of the country, even if one gets only one good cutting, as the yield per acre is greater and the cost of production less than any other crop, and stock of all kinds thrive on it. Hogs raised on alfalfa until four or six weeks of marketing time, then fed corn, make the finest and cheapest of pork. I have an acre of irrigated alfalfa, which provides ample pasture for 16 to 18 hogs during the season. This acre also contains an orchard of various fruits, which are profitable and convenient for family use, and the trees provide necessary shade for the hogs. The balance of the tillable land I rotate with wheat and corn, instead of summer fallow. The wheat is cut for hay, as cattle is my main line. Corn does well with proper care, it being necessary to cultivate often, but not too deeply, in order to keep a dust mulch and so prevent evaporation of moisture."

The next in the series of Washington portraits will be that of Willis Chambers of Port Angeles, and will be given in next week's issue of The Washington Farmer.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unusued portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Outrage of U. S. Senate Rules

The spectacular ending of the sixty-fourth congress, when a little group of 12 filibustering senators blocked the president and an overwhelming majority of both houses and prevented the passage of legislation to enable President Wilson to maintain our rights of life and commerce at sea, will arouse the American people to the absurdity and outrage of the senate rules.

Under the rules of the United States senate that body can not proceed to vote so long as any senator wants to speak upon the question. That affords an opportunity for a little group of senators, or a single senator if he has the physical endurance, to "talk to death" any measure that has their disapproval.

In this instance 76 senators signed a manifesto to the American people, declaring that they wanted this bill passed and were ready to vote for it, but were blocked by 12 filibustering senators.

The conduct of the 12 obstructionists was unpatriotic, un-American and unconstitutional. For it is clearly the intent of the constitution that the majority shall rule.

Our Rights of Sea

When the 12 United States senators blocked action by congress and the president in abandoning our rights of sea they imperiled the welfare of the great body of the American people.

In conducting their filibuster persistent effort was made to make it appear that the only thing involved in Germany's submarine atrocities were the lives of a few American citizens sailing into the danger zone. The truth is that, even if we dismissed all consideration of national right and duty—all thought of national honor and self respect—and yielded to the ruthless sea methods, we should be sacrificing the welfare of the whole American nation.

The farmer would be the chief sufferer. If his wheat and other surplus products are denied a passage across the Atlantic they will roll back on the home markets and prices will fall with a rush.

The wage-earners in American factories would also suffer, and their penalty would be immediate. Hundreds of thousands of men and women now working in factories that are supplying goods to Great Britain, France and other European countries, would be thrown out of employment, and their distress would still further restrict the farmer's market.

Any condition that brings loss to the farmers and distress to the factory workers will mean loss and distress to all other classes—the merchants, the physicians, the dentists, the lawyers and all others.

Too Many Extravagant Demands

The health department of New York city urges support of a bill now before the state legislature to permit the sale and distribution in New York city of skim milk. When intelligently used, skim milk has valuable food properties. It retains all its muscle-building casein and also its sugar of milk, and when fed to children, along with a little meat or vegetable fats to take the place of the extracted butterfat, is nourishing and wholesome.

These scientific facts are better understood in Europe than in the United States. In our country a great part of the public has been made unreasonable in its food demands by the country's long abundance and resulting waste.

Too many people in moderate circumstances have been demanding an extravagant supply of food. They have come to think that nothing but the choicest cuts of meat will do; nothing but milk high in cream content; nothing but fancy and extra fancy fruit; nothing but breakfast foods prepared from costly selected grain. And so on down the list.

If that exacting standard gave better health or imparted added vigor to the body, the Farmer would not raise one word in protest. But it is the other way around. Science knows now that these finical requirements are positively injurious to health. In requiring fine wheat flour and discarding the bran and darker parts of the wheat science knows now that we have been throwing away "vitamines" that are essential to health, and the same is true in somewhat less degree when we throw away the parings of potatoes and fruits.

Limiting Factors

A certain field of alfalfa in Chelan county, Wash., was a puzzle to its owner. After making a phenomenal first year's growth it was suddenly and unexplicably checked during its second summer, and never again grew vigorously.

Various local experts came and looked over the field and prescribed. One of them said, "Your field needs lime." Lime was administered, without benefit. Another said, "This alfalfa is root-bound. Go over the field with a disk." This also was tried, without effect. Top dressing with manure and with various amendments was experimented with. Not one of these measures either hastened or checked the feeble growth of the safron-tinted alfalfa.

Then the owner, who was not an expert, but who was an observer and a thinker, went out into his field one morning with a post hole spade and set to work. Down through the mellow loam he went, and presently the narrow blade of the spade began to bring up moist earth; 18 inches farther and the quest terminated. The four-foot hole had become a well, with six inches of water standing at the bottom.

Alfalfa does not like wet feet, apparently, and the reason for the failure of manure, lime, commercial fertilizers and disking to produce a favorable reaction was explained. These things are all good in their places, but this was not a case requiring any of them.

Agricultural science has a name for these lacks, physical or chemical, in the growing conditions required by a given plant. It calls them "limiting factors," and takes occasion frequently to remind us that accurate diagnosis is required in determining the particular lack to be overcome. Sometimes the scanty supply of available nitrogen is a limiting factor; sometimes it is lime, or potash. The point to remember is that when a lack exists, supplying something else will not meet the need. If your land lacks potash, stable manure will not meet this need except in a very limited way. If it needs tiling, no fertilizer in the world will take the place of drainage. Don't try "shotgun prescriptions" on your soil. Take time to determine what is really needed and supply that thing.

There is such a thing as giving land too much fertilization, just as there is such a thing as giving a person too much poison of one kind to counteract another poison that has been taken into the system.

If you want to try something new, ask the authorities at the state college or experiment station first. They have tried out many things already, and may be able to save you a lot of trouble and expense.

Washington Gleanings

Puyallup has asked for $150,000 for a school of secondary agriculture to be established there.

Last year about 1500 acres were planted to potatoes in the Puyallup valley, and this year the estimate is 2200.

Plans for an extensive squirrel poisoning campaign, which will cover every section of Spokane county, are being formulated by County Agriculturist J. R. Shinn.

New varieties of seed wheat will be used in some sections of Whitman county this year. Early baart and marquis seed wheat are among those that will be given a trial.

Four big seed companies of the United States have contracted for the peas from 15,000 acres in the vicinity of Fairfield and 5000 acres near Latah, Waverly and Rockford.

The South Bend Canning company has organized with G. A. Tripp as president. All the stock is paid in and a specialty will be made of canning beans and evergreen blackberries.

The chamber of commerce of Rosalia has decided to have the fair and live stock show this year on September 27, 28 and 29. The amount necessary to run the fair has nearly all been subscribed.

A new 10,000-bushel elevator will be built this summer at St. John. A number of farmers at Diamond are also working towards the formation of a company to build an elevator at that place this summer.

J. L. Willett, superintendent of the Yakima county poorfarm, has sold 11 tons of potatoes raised on the place, receiving $65 a ton. He still has a sufficient number for seed and to supply the table needs of the institution.

Announcement has been officially made that the Cowiche extension of the Northern Pacific will be completed in time for the 1917 crop movement. This brings practically all the tonnage of the Tieton project within two miles of railroad.

The fruit growers of Peach, Lincoln county, have formed a local corporation for the handling of the combined output of their orchards, which they propose to market for themselves. The organization is capitalized for $5000.

George McCroskey has added 400 acres to his extensive land holdings by purchasing the farm owned by Mrs. R. E. Largent, near Whelan. The price paid was $35,200, or $88 per acre. The farm is one of the best improved in Whitman county.

It is estimated that approximately 20,000 acres will be seeded to garden peas in the vicinity of Fairfield, Spokane county, this season. These peas are contracted to eastern seed companies at from 2 to 4 cents a pound, and will at those figures produce not less than three quarters of a million dollars.

Project Manager R. K. Tiffany of the U. S. reclamation service announces that a corps of engineers will soon be put into the field surveying for a proposed canal to water 120,000 acres in the Wenas, Selah and Moxee valleys, west and north of North Yakima and also a considerable acreage above the present Sunnyside canal below Union Gap.

What Others Say

Farm and Home: Plant, first of all, to feed your family and live stock.

Denver Field and Farm: Our freedom is alarmingly restricted by fool laws.

American Agriculturist: Produce crops generously at conservative outlay of money and muscle, with full confidence in ultimate market outlet at reasonably profitable prices.

Hoard's Dairyman: Men who understand something of machinery and a great deal about cows are in most cases obtaining excellent returns through the use of the milking machine.

Farmers' Mail and Breeze: Assured high meat values of the future, the need of greater economy in the use of farm labor, and the importance of full utilization of pastures place sheep-raising in an entirely new light.

Trees in BLASTED soil bear better

Fruit growers have proved—by planting some trees in blasted beds and others in ordinary ground—that trees planted after the use of explosives root deeper, grow faster and better—that they are thriftier in every way, bear earlier, and yield larger crops.

They have proved also that when the soil of established orchards is properly blasted the trees immediately take on new vigor and bear better fruit thereafter. Orchardists know that this condition is due to the increased moisture-storage capacity induced by blasting and to the consequent release of plant food from the subsoil.

Fruit growers in every Pacific Coast State have used tons of

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

for planting trees and deep-tilling their orchards. These powders are made in two brands, Eureka Stumping Powder and Giant Stumping Powder, and are prepared especially for farm work. prepared especially for farm and orchard work. They are more effective and do their

Eureka Stumping Powder pulverizes the soil instead of caking and packing or throwing it high in the air. This is the action that is wanted in stump and soil work, and the action that the so-called "high strength" dynamites will not give. When you use Eureka Stumping Powder the finished job costs you less money.

Giant Stumping Powder, which is also used for subsoil blasting, is the most efficient explosive for many other kinds of farm work, including blasting dead trees or stumps in wet soil.

WASHINGTON Fruit Growers Say:

"Generally speaking, the growth of plants depends upon the condition of the soil into which the roots penetrate. If the depth of loose soil is too limited or the surface water is permitted to stand too long, the growth is impaired. Explosives properly used in such instances have invariably relieved the condition and resulted in excellent growth. The yield is often three times as great on blasted soil as from those untreated in the same vicinity."
ROSECROFT FRUIT FARM, Sumner.

"We consider the use of explosives an important factor in planting orchards. It is important to secure good drainage and the roots should be able to penetrate deeply into the subsoil. Young fruit trees newly planted should make at least one foot of new growth the first year, and this is hardly possible unless the land is put into good mechanical condition, with plenty of room for the roots to spread in the loosened subsoil."
A. LINGHAM, Puyallup.

Experiment Stations Say:

"I have seen orchards in Hood River greatly benefited by the use of dynamite, where the dynamite opened up the soil to give better drainage." C. I. LEWIS, Oregon Experiment Station.

"The use of explosives is not simply a benefit in the case of hardpan, but is beneficial to all soils and is necessary in any heavy, impervious soil. Its effect is to loosen, drain, and aerate, and give additional feeding ground for the roots."
UNIVERSITY OF SOUTHERN CALIFORNIA.

"Without the use of dynamite in tree-planting the roots soon meet with the smooth and compacted sides of the hole, through which they have great difficulty in penetrating. The tree is in about the same situation as if it had been planted in a large tub. When dynamite is used cracks are formed in the soil to distances of five or sometimes six feet on all sides. This makes the very best conditions for the continued growth of the tree. For tree planting dynamite is recommended confidently as the best method of preparing the soil."
U. S. BULLETIN No. 38.

Make this test of Giant Powders

By *using* the Giant Farm Powders you can demonstrate their superiority for tree planting and orchard tillage. Fill out the trial order blank in the coupon to the right. We will have our nearest distributor supply you—at lowest market price—with a 25- or 50-pound case of either of the Giant Farm Powders. Test this in comparison with any dynamite. The results will show you why fruit growers in every section insist upon having the Giant Farm Powders for orchard tillage work.

Giant Farm Powders and other Giant blasting supplies are sold by distributors everywhere. Your own dealer has them or can get them for you. If he offers you a substitute, write us and we will see that you are supplied with the genuine. Giant Powder is the trade name of explosives manufactured by The Giant Powder Co., Con. Because Giant Powders are best known everywhere, many have assumed that all high explosives are Giant Powders. Insist upon having the genuine.

Advantage of Long Loan

Enough to Recommend Federal Bank System

By N. W. DURHAM

Chairman of Spokane Committee on Farm Loan Bank

Norman Lombard, secretary of a California farm mortgage corporation, writes from San Francisco:

"I have been reading from time to time articles in the Fermer concerning the organization of the federal farm loan system and have been very sorry to note that all of your articles, until that appearing in the current number, have shown a decided bias in favor of the new system such as to entirely blind you to the disadvantages that are inherent in the system.

"I feel that the farmers of the country are being badly misled by the politicians who are currying favor in an endeavor to secure the farmer vote, and by the rural press, which, of course, tells the farmer what he wants to hear. I do not believe the disadvantages of the system have been anything like as well advertised as the alleged advantages and as, in my opinion, the success of the system will be better assured by a complete understanding, I have very much regretted this tendency."

Mr. Norman has written a booklet that dwells on "the inconvenience of the system," the "strict and rigid rules," and his belief that farmers will not respond to the cooperative requirements, because, as he puts it, "It is well known that the detached and segregated conditions of country life promote the growth of petty feelings of jealousy, envy and distrust."

Some of these difficulties are real, and some are greatly exaggerated. The Farmer has a deep conviction that the benefits of the system heavily outweigh its disadvantages.

The single advantage of long-time loans—from five to 40 years at the option of the borrower, with the privilege of paying off the mortgage in full at any time after five years—is sufficient in itself to commend the system to millions of borrowing farmers. An owner of improved Spokane real estate was discussing this feature the other day.

"I wish that we city owners had such a system," he said. "I should be mighty glad if I had an opportunity to finance my debt in that way. While I have no complaints against the treatment I have had from private mortgage companies, the fact remains that uncertainty always hangs over us—the fear that when our mortgage matures we may have difficulty in securing a renewal; that the interest rate may advance on us; or that larger commissions will be charged for a renewal. Under the farm loan system all these uncertainties are swept away. The borrower can adjust his financial affairs to a long-time, definite plan, paying off his principal in small amortization instalments, or increasing the payments after five years if he wants to."

Another advantage of the new system is the opportunity it offers to landless men of small means to acquire a farm and work off the debt in easy payments. Frank R. Wilson of the federal farm loan bureau points out the manner of doing that in a recent informative article:

"Suppose John Smith, a renter, wants to buy 100 acres of land valued at $50 an acre. The total purchase price would be $5000, but John Smith has not the money to buy it.

"Under the federal farm loan act Mr. Smith would be entitled to borrow $2500 if the appraised value should be the same as the purchase price. This would leave $2500 to be handled by a second mortgage. The amount borrowed under the farm loan act could be paid to the original owner of the land and a second mortgage executed for the difference.

"The original owner would thus get a satisfactory payment down, and if he had confidence in the purchaser he would probably be willing to accept a second mortgage for the balance, divided into 10 annual payments.

This reasoning by Mr. Wilson has been attacked and ridiculed by a member of the publicity committee of the Farm Mortgage Bankers' association of America; but that criticism is refuted by no less an authority than the Wall Street Journal.

"This newspaper (says the Wall street authority) is not enamored with the federal farm loan act, chiefly because, as class legislation, it is not constructed upon sound business principles. At the same time we beg leave to challenge the above argument, coming, as it does, from a quarter which should be expected to have a clear knowledge of the subject. Far from undermining the loan bureau's illustration in this particular, it would seem that the point made by the publicity committee of the Farm Mortgage Bankers' association rather plays into its hands.

"Assuming that the original owner is desirous of selling his property and that he is well satisfied with the character of the would-be purchaser, $2500 in cash and a second mortgage under the above conditions should prove an advantageous arrangement. As the federal farm loan bank holds the first mortgage, the equity in the second mortgage would be enhanced from year to year because of the amortization feature of the federal loan.

"The whole point rests upon whether the original owner intends to sell the property or wants merely to borrow on it. If he wants to sell, and this is his position according to Mr. Wilson's example, he would then be securing $2500 in cash, permanently, upon which there would be no interest charge, etc., and for the second mortgage he would be obtaining interest at a good rate with payment in full after 10 years. At the same time he would be free of all land taxes, etc. Of course, if he is merely a borrower then recourse to the federal farm loan bank or the hundred other channels would be open to him as to anybody else."

In another editorial the Wall Street Journal says: "There can be no question as to the benefits of rural credits properly administered. Such systems under government auspices have proved of inestimable value on the continent of Europe, and doubtless the same good can be accomplished here."

Our San Francisco critic's judgment is evidently warped by personal interest.

Good News for Renters and Farm Owners' Sons

You can get a rich 160-acre farm free this spring, excellent for growing grain and mixed farming. Write for copy of "The Home Seekers' and Settlers' Guide." It gives full facts and tells what others are doing. Address Canadian Northern Railway, A. A. Brostedt, D. F. & P. A., 605 Hastings St., Vancouver, B. C., Canada.

MOXEE VALLEY
National Farm Loan Association.

All of the Moxee valley, in central Washington, is included in the Moxee National Farm Loan association organization, which has just been completed. The articles have been signed by more than a dozen farmers, with loans aggregating $34,400. The association elected nine trustees: H. Wayenberg, Charles Schmidt, W. D. Duffield, D. Walters, N. J. Dickson, Chris Thompson, B. F. Kumler, P. Zutenhorst and E. Altwardt. Officers are: W. R. Duffield, president; B. F. Kumler, vice president; J. E. McGrath, secretary-treasurer; N. J. Dickson, H. Wayenberg, Chris Thomson, loan committee.

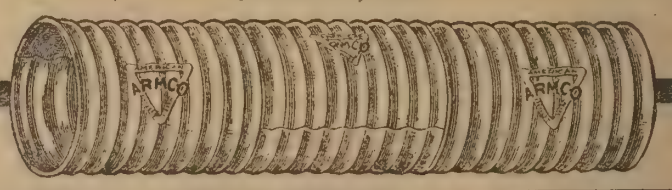
Buys Farm for $48,000.

J. S. Klemgard, pioneer Whitman county farmer, increased his land holdings to 1840 acres when he purchased from W. H. Eaton the 631-acre "Cloverdale" farm, 11 miles west of Pullman, for $48,000, or $76 per acre.

Community Club.

GRANITE FALLS, Snohomish county, is enthusiastic over success in organizing a "Community club" which now has over 50 members, and as it has been opened to the ladies the membership will soon be materially increased.

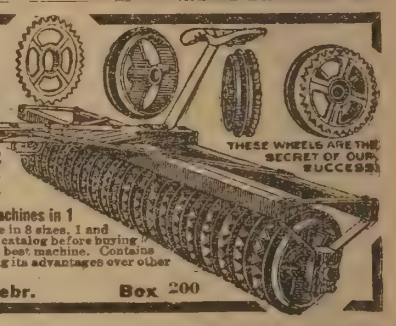
How Old was The Old Oaken Bucket?



THE "iron-bound" bucket that hung in the well was covered with moss but the hoops were always tight and the bale was always secure. Time left its impress on the wood and on the metal but *rust* did not eat through the iron although the bucket was subjected to the severest of exposures. The iron was *pure* iron and pure iron resists rust.

"ARMCO" IRON CORRUGATED CULVERTS

By chemical analysis these are purer iron than were the hoops of the old oaken bucket. Under similar conditions "Armco" Iron should outlast even the old-fashioned ron. Under highways and railroads all over the country, "Armco" Iron Culverts give service like that of the old oaken bucket. They are the only metal culverts that can be counted on to outlast the generation that installs them.



For full information on "Armco" Iron Culverts, Flumes, Sheets, Roofing, and Formed Products, write the manufacturer in your vicinity, or

ARMCO IRON CULVERT AND FLUME MFRS. ASSOCIATION
CINCINNATI, OHIO

WHEAT, ALFALFA

and other grains yield more where a perfect seed bed is prepared. The **Western** pulverizes, packs and mulches—makes a perfect seed bed at one operation. Saves seed, time and horse power. Is especially adapted for breaking crust on winter wheat or other grain or in orchards after irrigation or packing rains. It forms the hardest crust into a granular mulch without hurting the grain, and prevents evaporation.

Western Pulverizer, Packer and Mulcher 3 Machines in 1 made in 8 sizes, 1 and 3 sections, prices $20 and up. We want every farmer to have our free catalog before buying a roller or packer. It proves we can save you money and have far the best machine. Contains full description, price direct to you, letters from many farmers proving its advantages over other makes, and much other valuable information. Send for it today.

$275--Only Two Days Left--$275

Saturday, March 17, Your Opportunity to Grasp
This Big Prize Will Fade Away

Only Two Days to Win

Besides the Possibility of Your Winning One of the Thirty-Two Cash Prizes You Get This Paper at the Very Low Special Rate of 3 Years for $1.50

This Figure Problem Will Not Appear Again

Read the Conditions

Simply add up the figures in the puzzle chart as if they were in one long column. Your success depends on the accuracy of your total thus obtained.

Figures run from two to nine, and there are no double figures or characters which are not figures. The tail of the "6" has a decided curve, while the tail of the "9" is straight. All other figures have the usual characteristics, allowing no question as to the identity of any figure.

In event that no one submits the correct total, prizes will be awarded for the next nearest solutions.

This contest is restricted to persons residing in Washington, Idaho, Oregon and Montana.

A payment of $1 to $1.50 on subscription to The Farmer entitles the subscriber to enter the contest.

If your subscription is already paid in advance, your expiration date will be set ahead beyond this date to which you are now paid the full period for which you pay at this time. The advantage of paying $1.50 instead of $1 is that the winner of any of the first four prizes receives additional prize dividends apportioned on the amount paid in on subscription, besides the fact that $1.50 during this contest pays for a three-year subscription to the paper, while $1 pays for only one year.

More than one solution may be submitted by any contestant, by an additional subscription payment of not less than $1 nor more than $1.50. It is not necessary to pay the same amount with each solution if more than one is submitted.

You can send in a subscription for some one other than yourself and have the solution registered in your own name. Remember that by paying $1.50 instead of $1 on subscription, the larger will be your dividends if you win one of the four leading prizes; but not more than $1.50 will be received with one solution.

$750-Prizes-$750

FIRST PRIZE, $200,
to which will be added 50 times the amount paid by the subscriber with the winning solution. For example, if you pay $1.50 on subscription, this prize will be worth $275.

SECOND PRIZE, $100,
to which will be added 30 times the amount paid by the subscriber with the winning solution. This prize may be worth $145.

THIRD PRIZE, $60,
to which will be added 20 times the amount paid by the subscriber with the winning solution. This prize may be worth $90.

FOURTH PRIZE, $50,
to which will be added 10 times the amount paid by the subscriber with the winning solution. This prize may be worth $65.

FIFTH PRIZE, $40.

SIXTH AND SEVENTH PRIZES, Each $20.

EIGHTH TO SIXTEENTH PRIZES, Each $7.

SEVENTEENTH TO THIRTY-SECOND PRIZES, Each $2.

CASH MUST ACCOMPANY.

Don't send in your charts and working papers unless called for by the Contest Editor. Simply write your solution in blank space provided in "Registration Blank."

Something to Know

If your subscription is paid in advance, further payment will be credited on an extension of your subscription from the time to which it is now paid.

Any solution unaccompanied by payment on subscription will not be entered.

Put Out "Cooperation" Sign

And Then Fail to Cooperate Practice Usually Followed

(Continued from page one.)

expected, as none of us are entirely free from mistakes, and can look back and see where we have had narrow escapes from the same conditions. I do not believe that our friends of the grange and union are helping matters any by trying to blame all of the trouble on political enemies. Of course, political enemies desire to see their enemies annihilated, but if we get caught in bad company and give our political enemies an opportunity to smile, it is much better to take our medicine and try to recover ourselves.

The word cooperation should not only be a hyphenated word, but it should contain more hyphens and more letters, and really should be under the title, "Co-operative-Mis-management."

Almost every business man that you meet starts to run away when you speak to him of cooperative societies. He immediately draws his coat around him and puts his hands in both pockets for fear he will lose something.

We must admit that cooperative societies, as a whole, have not been extremely successful, for the reason that cooperative societies generally do not use sufficient care in selecting the management.

It is a good deal like politics—a man who will not make all kinds of promises is hard to elect to any office; therefore we very frequently have inefficiency in our public places, and the man in the community having fixed ideas and ordinary horse-sense is not very popular in the community, and can not be elected to the management of the business of the community for the reason that he disagrees so many times with many of the temporarily popular subjects.

In addition to this, most cooperators refuse to give the loyal support to their society on account of having so much time on their hands that they desire to listen to criticism of every person who desires to criticize, and this very frequently means 99 per cent of the community.

Men of large business interests have no difficulty in cooperating, for the reason that they are willing to delegate the management to some one individual, and then look for results. If results are not obtained, they select some other individual, and if results are obtained, they proceed immediately to divide up a reasonable share of the earnings with the manager who does make good.

The cooperative movement should not suffer because mistakes have been made. Those who try to profit at the expense of cooperation will always receive just punishment, but the cooperative movement must go ahead, as it is the salvation of the agricultural interests of our country.

THE READERS OF THE FARMER ARE TO BE CONGRATULATED OVER THE ASSURANCE OF A SERIES OF ARTICLES ON COOPERATION BY W. H. PAULHAMUS. MR. PAULHAMUS HAS BEEN IDENTIFIED WITH THE GREATEST COOPERATIVE BUSINESS CONCERN OF THE PACIFIC NORTHWEST—THE PUYALLUP AND SUMNER FRUITGROWERS' ASSOCIATION OF WESTERN WASHINGTON. NO ONE HAS BATTLED MORE PERSISTENTLY OR MORE SUCCESSFULLY WITH THE INSIDIOUS FORCES ARRAYED AGAINST TRUE COOPERATIVE UNDERTAKINGS THAN MR. PAULHAMUS, AND NO MAN IS IN GREATER DEMAND TO HELP OUT THE BEGINNINGS OF COOPERATIVE ENTERPRISES ALL OVER THESE NORTHWESTERN STATES.

"I BELIEVE MY NEXT ARTICLE WILL BE ENTITLED 'THE MIDDLEMAN,' OF WHOM WE HEAR SO MUCH UNNECESSARY CUSSING," WRITES MR. PAULHAMUS.

Breeder

Of Spotless Reputation Is Need

(Continued from page four.)

ness was mighty slow and it was nothing uncommon for a sow that had previously sold for $2000 to $3000 to be offered in an auction and sold for her real value of $200 to $300. This practically ruined the business for a while, but after our breeders saw the folly of their ways, the cash basis was adopted and now business has been 10 years getting back to the firm foundation upon which it rested before the "boom times."

It is nothing uncommon now to talk to the clerk after one of our best sales, where the average on bred sows is from $100 to $250, and have the banker tell us that 75 to 80 per cent of the offering has already been settled for within an hour's time of the close of the sale. This gives me assurance that our sales are being conducted in a bona fide manner. I don't know whether the breeders of the blacks and white are conducting cash sales or not. If they are, it would be an easy matter to verify any of the prices at which animals sold, so if you want to know whether your public sales are being conducted on a bona fide basis, I would make investigation relative to the amount of money that goes through the clerk's hands, and I think you will soon have the information you desire and know whether your sales are bona fide or not.

J. R. PFANDER,
Secretary.

Peoria, Ill.

PEDIGREE STOCK

Bloated Prices Check Industry.

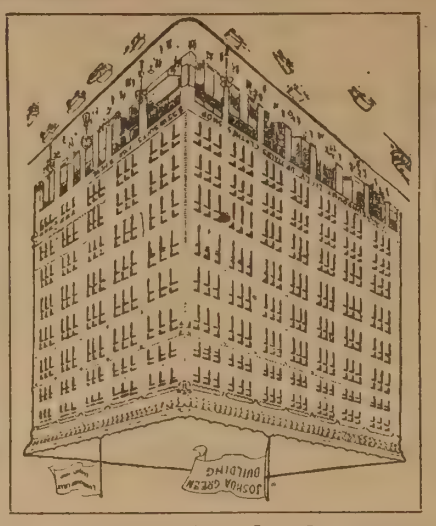
R. W. Brown, the secretary of the American Galloway Breeders' association, writes:

I have at hand your favor enclosing statement and affidavits regarding sale of the Holstein bull calf at the recent Portland show for $21,500.

From the sale reports of the last few years it would seem that the different breed organizations are attempting to outdo each other in boosting sale prices. While it is rather difficult to get at the actual facts in these auction sales, there has been sufficient rumor and other evidence to indicate that many of these sales are not conducted on a substantial basis. Even though such sales may be authentic, the high prices reported are unreasonable. So long as such practices prevail we can not expect, as farmers and breeders, to have the confidence of bankers and other interests who are endeavoring to support the pure-bred live stock industry, neither can we expect to secure any satisfactory relationship with state and federal governments in our live stock work, especially in the matter of compensation for animals that might have to be slaughtered to prevent the spread of contagious diseases.

Another serious condition that arises in connection with these "wash sales" is that the smaller breeders who are not in close touch with the interests that support such sales hear of the reported prices and hold their cattle for a higher valuation than they themselves are able to obtain. The result is that they find themselves with a lot of sale cattle on hand that they are unable to dispose of.

The fact that our pedigree live stock industry is not more generally appreciated among farmers is due to the frequent attempts that have been made to boost prices for registered stock above values that are not intrinsically sate. The whole business could be placed upon a more substantial basis than it is, but it will require cooperation and persistence on the part of breeders and the live stock press who are desirous of seeing the future of the business conducted along safe and sane lines.



I do not know what corrective measures might be employed, but I am sure that publicity is one of them, and you are to be congratulated in your efforts to bring these matters to light. I assure you that our association will be pleased to cooperate with you in any movement that might tend to make the pedigree live stock industry of greater usefulness than it is at present.

R. W. BROWN,
Secretary.

Carrollton, Mo.

For Rabbit Control.

The Deschutes county court in Oregon recently set aside $500 to be used in rodent control and distributed by the county agriculturist. This poison will be given only to clubs having a poison mixer, who will follow the directions of the biological survey and submit a report, similar to the plan used last year. Two hundred thirty dollars' worth of strychnin has been purchased and 95 ounces distributed in 12 clubs. Four clubs report 8500 rabbits poisoned already in both counties.

Railroads Are Ready

Will Serve Country if War Comes

Both the heads of the great railroad companies of this country and the heads of the labor organizations of which the operatives are members have notified President Wilson that if this country is drawn into war the railroads will stand ready and willing to render whatever service is possible in the transportation of troops or supplies or munitions.

The train operatives have announced that they will not permit a strike to be called during the war, if one comes, regardless of whether the supreme court holds the Adamson law constitutional or not.

The court is expected very soon to announce its decision on the Adamson law, which is the measure passed by congress last fall at the request of President Wilson to prevent the threatened strike of railroad workmen.

Arm Merchant Ships.

Following the filibuster in congress which defeated the "armed neutrality" measure designed to give the president authority to arm American merchant ships to protect themselves against submarines, President Wilson sought advice from his cabinet and decided that it was within his power to so arm the ships without consent of congress. As a result, he has issued orders to the navy department that merchant vessels be armed, and it is understood that they are instructed to attack any submarine discovered within gunshot of their course through the war zone, whether the submarine shows any direct evidence of hostile intentions or not.

Suppress Ship News.

Secretary Daniels of the navy department, following the decision of President Wilson to arm American merchant ships, issued an appeal to the newspapers and telegraph and cable companies as to the movement of such ships in an attempt to aid them in escaping the submarine peril.

War Seems Near.

This situation is believed by officials and diplomats at Washington, D. C., to bring the United States and Germany nearer to war than ever before in the history of the two countries. At the time of this writing no shots have been fired by an American merchant ship, nor has any such ship been attacked by a submarine. So tense is the situation, however, that it appears more than probable that such attack or such shot would bring about actual hostilities.

Gerard Reaches Home.

Ambassador Gerard, who was recalled to this country from Germany when the president severed diplomatic relations with Germany, has reached American soil. He landed in Havana Sunday, March 11, sailing the following day for Key West, Fla., from whence to proceed to Washington.

The name of Gerard has been mentioned as a possible successor to Secretary of War Baker, who some time ago announced his intention of resigning.

Eliminate Much Talk.

As a result of the filibuster in congress, by means of which 12 senators talked the ship arming measure to death, the United States senate, at the request of President Wilson, remained in session after the regular adjournment of congress March 4 and revised its rules. Henceforth, under the rules, two-thirds of the senate can at any time limit the length of debates, so that it will no longer be possible for a few senators who are opposed to a measure to take up all the time of a session and prevent its passage.

President Wilson has decided upon April 16 as the date for the convening of congress in the special session which he considers necessary for the passage of certain important measures not connected directly with the war situation.

Bank Officers Chosen.

Announcement is made at Washington that Daniel G. O'Shea of Red Lodge, Mont., has been appointed president of the federal farm loan bank soon to be established in Spokane to handle the northwest farm loan work under the recent federal act. The other officers of the bank are: Vice president, C. E. B. Roberts, Rupert, Idaho; secretary, George C. Jewett, Palouse; treasurer, George M. Dreher, Spokane; fifth director, A. W. Canthorn, Portland; registrar and attorney, Turner Oliver, La Grande, Ore.

Fruit Growers

Broader Plans for Selling Agency

(Continued from page five.)

and ourselves have learned many things the last year. It is necessary for the department to have a medium through which to work, and we furnish this. The department plans even greater things for us. It plans to develop the fruit industry of the Pacific northwest to the fullest extent.

Shipped 17,020 Cars.

"A factor I consider of great importance has been our crop estimates. For the first time we have had an accurate estimate. In the beginning of the season we estimated 19,930 cars for Washington. To date 17,020 cars have been shipped. We had better estimates in this state by reason of having the aid of the state department of agriculture.

"The office of markets has kept three men here who have investigated the systems of 37 growers' organizations. They have established systems of accounting in seven organizations and have prepared a uniform account sales, which has been adopted by 80 per cent of the membership. This enables growers to compare their returns with a grower in any other organization of the agency.

"The market news service has been of great value. On August 1 the service was begun from the office of the agency at Walla Walla and was transferred to Spokane in September. A feature of the service was a bi-weekly report on Canadian markets.

"An inspection service has been started. The government kept a man at Fort Worth and another at Dallas, Texas, who looked after the condition of our fruit to inspect cars in transit. This operates to protect the shipper from unjust rejections.

"A traffic managers' meeting was held at Seattle recently, at which all problems of transportation were discussed and a report made to members.

"Our recommendations today to lower the fee and to reduce the tonnage is for the purpose of increasing the membership."

The report of the financial officer showed that the expense of the agency had been $7067, with $306 on hand. The expense to the growers has been 85 cents a car. President Weyrauch cites this to show that the work has not been of great expense to the grower.

The expense report follows:

Issues Financial Statement.

Expenditures—	
Annual license and filing of articles of incorporation	$ 40.00
Market subscription contract	1000.00
List of growers furnished by marketer	15.00
Office expenses, including rental, use of furniture, typewriters, dictaphones, etc., also stenographic service March 26, 1916, to March 5, 1917	2250.00
Office salaries, April 1 to March 5	2291.64
Postage	287.93
Stationery	215.27
Traveling expenses of president	265.45
Traveling expenses of trustees	320.50
Printing bylaws, uniform contracts	42.00
Telegraphic and long distance telephone service	192.12
Legal services	5.00
Publicity expense	44.90
Special stenographic service, Spokane meetings	43.45
Special stenographic service, traffic managers' meeting, Seattle	6.00
Transportation and storage committee stenographic service	22.94
Typing growers' lists for members	25.00
Total	$7067.20
Balance on hand	$ 306.40

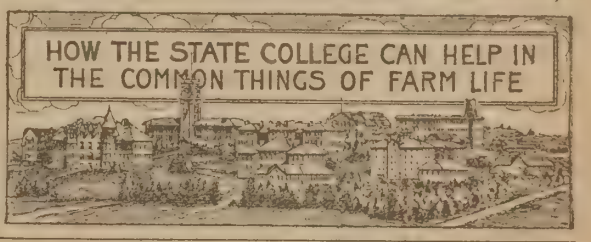
rauch; J. B. Adams, Wenatchee; C. H. Swigart, North Yakima; H. G. Fletcher, representing W. F. Gwin of Seattle; William Sackett, Hamilton, Mont.; B. W. Johnson, Corvallis, Ore.; C. J. Webb, Spokane, representing P. R. Parks of the Spokane Fruit Growers' agency.

U. S. GRAIN BUREAU

To Be Located in City of Spokane.

Announcement has been made by the department of agriculture that the new grain standards bureau for the northwest will be located in Spokane, Wash. It will open on April 1, and be ready for business when the new grain standards under the federal act become effective, which will be probably about July 1.



To the Washington Farmer: I like the Washington Farmer and the pep it has to stand by the rancher.

Warding Off Fake or Unsuitable Crop

All the World Loves the Faker, Loves to be Humbugged. Write to State College.

V.

In the last number I began to talk about both soils and crops, but came to the end of the chapter before I got through with soils. I said, and repeat, that not only general help to all farmers and special help to inquiring ones, but also by special investigations as new problems or new applications of general laws arise, may help be afforded.

In the matter of crops, great help may come by warding off the fake crop or the crop unsuited to conditions, or less profitable than the old standbys or more hazardous than the staple ones. All the world loves the fakir, loves to be humbugged. I suppose it is because we want to "get rich quick" or to get "something for nothing" that we are constantly wasting our good wealth and strength on the impossible and the absurd. A fakir comes across a big, coarse-grained, ill-yielding grain resembling wheat in part and hullless barley in part. It is as old as the pyramids and as worthless as it is old. He calls it "goose wheat" and invents a story about its being found in the craw of a Canada wild goose. He also calls it "corn wheat" and invents a story about its enormous yield and its being a substitute for corn. Forthwith the story flies far and wide through the newspapers, for the newspaper man loves the agricultural fakir above all men. The gullible public send in their orders at so much per ounce or so much per pound, just as fast as the women ordered the 10-cent silk skirts. When you are tempted to try some of these new unusual, untried things, before you do it write to the college for advice, and state your conditions, for in some places the proposed new crop might be useful and in others wasteful.

One fearful drawback in crop production is the presence of noxious weeds. You want to guard against their introduction upon your place as you guard against the smallpox. Therefore, when you propose to sow clover, or alfalfa or grass seed of any kind or any other seeds, send a sample, from the very lot from which it is proposed to buy, and ask that it be tested for purity, also for germination. It will not cost you anything. It doesn't matter quite so much about the high percentage of germination for that only means the use of more seed and possibly weaker vitality in the plants. But watch for the weeds. The report looks high—99 per cent pure it may be. But what are the weeds? Bull thistle? That doesn't matter much—a little more perhaps. Green foxtail? Only one seed out of every hundred. Only six, maybe, in a cubic centimeter! Only six hundred in a quart of seed! Think of the possible danger! And the college can keep you from it if you will ask its help. Or if a plant which you suspect to be a noxious plant occurs on your farm, send a specimen to the college. Send, if possible, root and stem and leaves and flowers or fruit. It may be harmful or harmless, but the college can help you to determine.

You want to know how you should prepare the ground for some special crop. Ask the college. Or you wish to know how much seed of clover or alfalfa or peas or what not to sow. Ask for information, stating conditions. Perhaps you are new in the country or have pursued the single crop system and you need help in a system of crop rotation. The proper college man will be glad to help you. If one of the college traveling force chances to be in your vicinity, and you know him to be a specialist in the line on which you want advice, get him to go out to your place with you and talk it over. But don't expect the plant pathologist to give you advice on the feeding of dairy cows. What I say of crops is but suggestive of a hundred chances for help from the college.

E. A. Bryan

"WE ARE ON THE VERGE OF A PERIOD OF ANIMAL HUSBANDRY IN THE STATE OF WASHINGTON," ARE THE WORDS WHICH DR. BRYAN WILL BEGIN HIS NEXT ARTICLE, WHICH WILL TREAT OF LIVE STOCK AND HOW THE COLLEGE CAN HELP IN PROMOTING A HEALTHY GROWTH OF THIS GREAT INDUSTRY.

May Reseed Much Fall Grain

Bad Fall and Winter Leads to Fear That Much Whitman County Wheat Will Have to Be Sown This Spring Again.

Whitman County, Wash.—Owing to unfavorable seeding and growing weather much of the fall grain may have to be reseeded in the western part of the county. Peas promise to become an important crop, but is about the only new one being tried out. The fruit industry is waning.

May Reseed Wheat.

LACROSSE, Whitman County, Wash., March 4.—Spring work usually starts here about March 1, and all plowing and spring seeding is finished by the first of April. Very little spring plowing is done for spring crops as a rule. Most plowing for summer fallow is done as early in the spring as possible and the fall seeding as early as September weather permits. Haying generally starts the last of June, and the cutting of fall wheat starts usually near the middle of July. Spring wheat generally ripens from August 1 to the 15th. Spring work this year will be late, and at this writing from five to six inches of snow still covers the ground, which is very unusual here. Prospects of fall crops are not very promising, as the germination during winter was very poor, with very little growth; so there will be lots of reseeding done, undoubtedly. Precipitation since last fall is only about 75 per cent of the normal, and nearly all that fell since December ran off, making stubble soil much drier for this time of the year. There is more snow on the ground now than at any time this winter, which will benefit fall wheat.

M. E. SCHRECK.

Peas Are Promising.

OAKESDALE, Whitman County, Wash., March 1.—The leading products of Whitman county are wheat, oats, hay, live stock, barley, potatoes, dairy products, fruit, poultry and garden products. Wheat is the leading crop, and, owing to high prices, it is rapidly increasing in importance. So far no crop has been entirely abandoned, but the fruit industry is in danger of becoming so. The high cost of production and poor market conditions are responsible for the decline in the production of fruit. The only new product that is being talked of now is the production of seed peas. Several farmers are planning to sow from five to 50 acres of the Alaska garden peas this spring. This new venture will be watched with interest by a large number of farmers, and if it proves successful there is no doubt but that the production of seed peas will become an important industry in this part of the country. There is some uneasiness among the farmers regarding the safety of the winter wheat. The winter has been very severe, and although there has been plenty of snow, it is badly drifted. The high winds have swept the south slopes bare, leaving the wheat there unprotected, while on the north slopes the snow is drifted so badly that the wheat is in danger of being smothered out. This morning the thermometer registered 12 degrees below zero. This is the coldest first March day I ever saw. Judging from the present high prices of all kinds of farm products I should think the coming season would be a very promising one.

MASON BROWN.

Soil Needs Lime.

SOUTH BEND, Pacific County, Wash., March 2.—The fall crops are doing nicely. Some rye which had grown six inches was pastured in the middle of February. A late snowfall, lasting nearly two weeks, has delayed spring work. Some oats will be sown in March and April. A lime quarry has been opened at Bear River. Ground limestone is selling for $5 a ton. Nearly all of the soil in this section needs lime. County Agriculturist H. C. Wilcox has resigned and will move to Wyoming. His successor has not been named. Mr. Wilcox was a great help in developing up-to-date methods, and his departure is regretted. He gave a number of lectures, some to the boys and girls, urging them to organize into clubs. The price of milk has dropped in South Bend and Raymond. Cranberries are cheaper, too. A farm loan association was completed at Menlo February 24. The amount asked for is $40,000. This will be used in building up the valley farms and improving them. The committee are Mr. Habersetzer and Mr. Lichenthaler of Frances, Ernest Lilly and Emil Scholtz of Menlo and Jack Moore of Willapa.

MRS. WINNIFRED BUCKINGHAM.

Leading Products.

KENNEWICK, Benton county, Wash., —The leading products in Benton county are about as follows: Tree fruits, cream, wheat, hay, strawberries, corn, potatoes, grapes, poultry, and pork. Corn, strawberries and potatoes are increasing in importance, the two first named very decidedly. Pork production has decreased very materially the past year because of low prices. The grape production is far less than it was four years ago, because of lack of a marketing system. Several farmers are planning to cooperate with the agricultural office in making field tests of commercial fertilizers. One farmer is going to try a plan of thickening up a thin stand of alfalfa by keeping the old stand clipped off so it will not shade the new plants until they are

What's on the Fertilizer Bag?

Does your manufacturer print on the fertilizer bag; how much immediately available nitrogen (viz., Nitrates) it contains? Many do not. Home mixing is the safe, economical method. Mix your own fertilizers and know what you get.

started. The coming season looks very promising in most all lines, it looks especially promising for the few pork producers that are left and also for the strawberry and asparagus growers as they now have a definite system of marketing their produce worked out and are practically all cooperating in it. LEE M. LAMPSON.

Contract Potatoes at $20.

MARIETTA, Whatcom County, Wash., March 5.—Much ground will be broken about the middle of this month and peas and oats and spring wheat will be seeded. Summer fallow will continue until late in September to have the seed in about the first of October for fall grain. Spring is coming in about normal and much talk is occasioned by prospects for a good crop of potatoes. Some crops of potatoes have already been contracted at $20 per ton. What little fall crops are raised here are coming out in good shape, the season being exceptionally good. Weather has been clear, with little frosts at night.

S. B. MAYHEW.

Too Many Predatory Animals.

VADER, Lewis County, Wash., March 3.—Some of the leading products of the farms around Vader are milk and dairy products, dairy cattle, oats, hogs, beef, potatoes, eggs, chickens and draft horses. The production of milk products and dairy cows, both Holsteins and Jerseys, is on the increase. The coming season looks very promising to the farmer. The high prices at the present time and the past season have encouraged the farmers to such a pitch that they seem determined to make their land produce an increased crop. The production of hops is decreasing very rapidly, there being not more than one-third as many raised as there was a few years ago. There is no grange or farmers' union in this vicinity. We can not raise sheep successfully here on account of so many predatory animals. L. S. WILSON.

Sows Sweet Clover.

CENTERVILLE, Klickitat County, Wash., Feb. 26.—The chief industries of this county are wheat, sheep, hogs, cattle, lumber, oats, barley, the fruit industry in the Columbia river district, chickens, wheat, hay and alfalfa hay. There will be very little variation in the average crop rotation with the exception of a few small crops. One neighbor is planning to sow sweet clover as a soiling crop and pasture. Some talk of planting beans, and most likely the potato will get an extra send-off on account of the high prices now. The dairy interests are divided between Portland and Seattle, the latter having paid us a good price so far. C. F. McEwen has purchased and shipped to his home in Montana several cars of cattle, affording a market here for our extra stock cattle. The sheep business has been on the boom, several parties having sold out their sheep and are looking for more. The hog business is at a premium here and will be a very short crop the coming season. The wheat situation at the present time is favorable on most of the farms, but there are a few that don't have a good stand, but the prospects are much better than last year. The bulk elevator is on the increase here, with good results the last season. There are about four inches of snow on the wheat fields, which are doing fine.

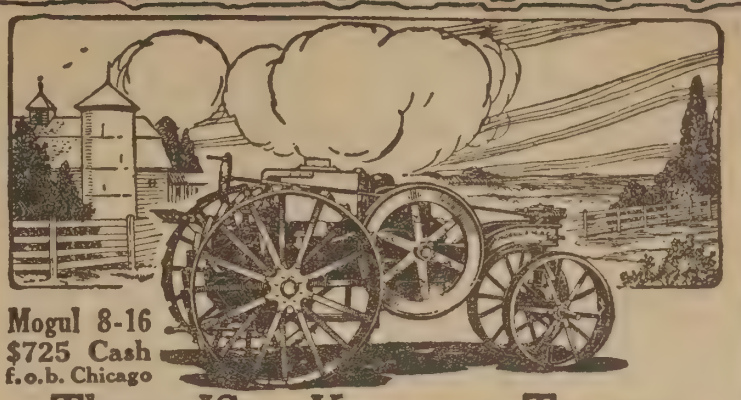
C. A. LESTER.

Seed and Plant in June.

CHEHALIS, Lewis County, Wash., March 1.—This county has been through a very comfortable winter, with little snow, ice or frosty weather. There have been no bad floods as yet. Farmers have not been keeping sheep and but very few pigs and far fewer hens than usual, on account of the egg boycott and the high cost of feed. The cattle prices have been far below cost of production for the last two years and have driven over 5000 good cattle out of the county, which will make a shortage and paying prices again. Most of the upland and well drained bottoms and some of the wet land have been plowed and considerable grain sown. The balance of the ground will be plowed and sown up to June 15. June-sown oats and potatoes often make the heaviest, best crops. No summer fallowing is done, but quite a lot of fall plowing has been done, and some fall wheat, oats and rye sown, which look in, at 15 cents a pound, and veal is scarce at 15 cents. Potatoes are $60 and up a ton. Many will be planted early this year. Hay and straw are 20 per cent cheaper than last fall. Straw is now $6 and hay $14. Grass is about gone here, which will cause a stiff advance on beef, cows, young cattle and heavy horses, which are getting scarce. Eggs have had a steady, fair market, but are reported down now.

L. K. COGSWELL.

Are Planting Potatoes.



CHIMACUM, Jefferson County, Wash., March 2.—We have had a late winter this year, and the spring work, like hauling manure and plowing, is in progress now, especially on the high ground. A few early potatoes have been planted, and I think there will be a large acreage of them put in this year. A good many of the farmers were lucky this year, as they held their potatoes and have received a good price that is ranging from $55 to $60 per ton on the farm. Almost everybody has plenty of hay this year, as they had experience enough last year with the high prices of hay and the hard winter.

JOHN VAN TROJEN JR.

Two Weeks Late.

PORT ANGELES, Clallam County, Wash., March 2.—The spring plowing for the Olympic peninsula generally starts about the middle part of March and the normal season for fall plowing is the latter part of September. Summer fallowing practically does not amount to anything in Clallam county. The present season is what you would term "backward." We have had 34 1-2 inches of snow, which is the third heaviest snowfall in 25 years. There is considerable snow on the ground, and it freezes during the nights. Judging by present signs our spring will be two weeks late.

J. P. CHRISTENSEN.

There IS a Kerosene Tractor
It is Mogul 8-16

IN order to remove the last shadow of doubt about the ability of **Mogul 8-16** to operate successfully on kerosene, we now put into our warranty a guarantee that **Mogul 8-16 will do good, serviceable work at all loads, operating on common coal oil.**

That is our answer to critics and doubters—a **signed guarantee** to purchasers of Mogul 8-16. You can now buy a tractor **built** to operate on kerosene, that **does operate successfully** on kerosene, and that is **guaranteed** to do good, serviceable work on your farm, using kerosene for fuel.

Now it is up to you. Buy a guaranteed Mogul kerosene tractor and you get a machine that will do your work for about half the fuel cost of a gasoline tractor of the same power, and that will work faithfully for you through the rush seasons when you need reserve power.

Will you please send us your name and address, so that we can tell you in full detail **why** we can guarantee the kerosene burning feature of Mogul tractors. **Mogul 10-20** and **Mogul 12-25**—the larger Moguls—are also kerosene tractors.

Montesano Cow Testing Association

One of the most interesting reports that has come to the Farmer is the yearly summary of the Montesano Cow Testing association in western Washington of which R. W. McKenna is tester. C. F. Monroe, county agricultural agent, has taken great interest in this association. The association has had 24 members, 21 of whom completed the year's work. There were 510 cows tested. Fifty-one cows were found to be so unprofitable that they were sold to the butcher. One hundred and forty-six cows did not complete a full year's work, but the yearly records of 313 cows were obtained.

The average cow produced 6021 pounds of milk during the year at a feed cost of 90 cents per hundredweight of milk; produced 263.4 pounds of butter fat at a feed cost of 20 cents per pound of butter fat.

The highest producing cow gave 11,672 pounds of milk, producing 680.3 pounds of butter fat.

The lowest producing cow gave 2107 pounds of milk and produced 98.3 pounds of butter fat.

The highest average herd produced 8959 pounds of milk with 521.1 pounds of butter fat. The lowest average herd is credited with 2912 pounds of milk, producing 135.5 pounds of butter fat.

Twelve cows gave over 10,000 pounds of milk during the year, the butter fat ranging from 337.6 pounds of butter fat to 680.3. The proportion of the grain to the roughage fed to these 12 cows was 58 per cent.

HIGHEST BUTTERFAT RECORDS FOR THE YEAR.

Name	Age	Breed	Owner	Lbs. Milk	Lbs. Butterfat
Emanon's Anne West	4	PB Jer.	E. L. Brewer	11,672	680.34
Pansy	8	GR Jer.	Murphy Bros.	12,324	595.4
The Owl's Golden Queen	5	PB Jer.	E. L. Brewer	9,186	589.81
Golden Massy Polo 3d	6	PB Jer.	J. H. Taylor	9,174	563.2
Gertie's Lily	12	PB Jer.	J. H. Taylor	9,667	548.0
Gertie's Son's Lass	5	PB Jer.	J. H. Taylor	9,340	536.2
Queen's Golden Pogis	7	PB Jer.	E. L. Brewer	9,071	518.7
Golden 26	5	Gr. Jer.	Murphy Bros.	10,148	506.3

In this group, the proportion of the grain to the roughage fed was 123 per cent. Also, the cow producing the highest amount of butter fat for the year made the largest net profit, namely, $151.46. There are among us a considerable number of people who can see only bankruptcy ahead for the man who buys and feeds concentrated or mill feeds. These items may be of interest to these people.

War to Aid Dairy Industry.

Lane county dairymen and business men have been inspired by the possibilities of the dairy industry in Oregon after the close of the war, as predicted by Herbert A. Emerson, deputy commissioner of foods and markets of the state of New York, who was a recent visitor at the home of Mr. and Mrs. W. A. Sims in Eugene. Mr. Emerson declares that the foundation of the dairy industry in Europe has been shattered by the war and that Europe for the next 30 years must look to America for dairy products.

"The countries at war are depending on America to furnish them with dairy supplies," said Mr. Emerson. "Each soldier in the British army is given four ounces of cheese daily. As there are 5,000,000 soldiers in the army this makes a total of 1,250,000 pounds, or 65 carloads, consumed every day.

"If Oregon can furnish the right kind of goods it can hold the market in Europe for many years to come. There will be an immense demand for the dairy products of this state, as well as those of every other state where dairying is an industry."

A PRIZE WINNER.

Cloveridge Sir Beets Netherland is the name borne by the Holstein bull calf shown above. He was bred on Cloveridge farm, owned by W. K. Newell, Seghers, Ore., and was shown last December at the Pacific International Stock show at Portland, Ore., where he won first in his class and junior championship.

NO DOSE TO MEASURE.
NO LIQUID TO SPILL.
NO STRING TO ROT.

BLACKLEGOIDS are small pills. Each pill is an accurate dose of blackleg vaccine.

BLACKLEGOIDS are easily administered—simply inject them under the skin with a vaccine injector.

TAKE NO CHANCES.

Don't wait until your calves become infected. This means certain loss—there is no *cure* for blackleg. Vaccinate now—before the deadly disease shows itself.

THE COST IS SMALL.

BLACKLEGOIDS are economical. The expense is trifling compared with the loss you are liable to sustain if you do not use them.

ORDER THROUGH YOUR VETERINARIAN OR DRUGGIST.

INTER-STATE SILO

Too often in the past farmers have considered "a silo just a silo."

But a silo is the most important, the most profitable, the most far-reaching investment ever made on a farm and as much care, as much knowledge, as much thought should be applied in its selection as any equipment bought for the farm.

The Inter-State Silo and the Hinge-Red Door are superior to all other makes.

Raise Own Feed

Is Advice Given to All Dairymen

Two bits of advice are given to dairymen by C. C. Aspinwall, one of the successful producers of Thurston county, Wash.: (1) Every dairyman should raise his own feed, at least all the common varieties; (2) every dairyman should have a silo.

Mr. Aspinwall, who was for a number of years superintendent of the Washington State Training school at Chehalis and who is now representative in the state legislature, milks about 30 cows, all grades but one. He is not a believer in grades as preferable to purebreds, however, considering that a grade must be unusual to be as valuable as a purebred.

He farms 120 acres at the southern tip of Puget sound, near Olympia. The first year he bought all his feed, but since then he has put more of his farm into cultivation, built a silo, and now grows and stores all his own feed.

SUNNYSIDE COWS

Report of the Official Tester.

The report of N. R. Weldin, official tester of the Sunnyside Cow Testing association, for the month of February shows 571 cows to have been tested and 58 dry cows.

The following table gives the owners and records of the cows in the association which have produced more than 50 pounds of butter fat during the period of 30 days ended March 1:

Owner of cow.	Breed of cow.	Lbs. milk.	Lbs. B. fat.
H. C. Davis .....H.		1602	80.1
Moorhead & Hobson H.		1632	63.7
Moorhead & Hobson H.		1485	59.4
Charles Hammer ..G. J.		1098	58.2
Charles Hammer ..G. J.		906	54.3
L. H. Lee .....G. S.		1320	54.1
Moorhead & Hobson H.		1659	53
N. B. Schafer .....G. H.		1125	50.6
H. C. Davis .....H.		1857	50.1

There were, in addition to the 50-pound list, 25 cows known to have produced between 40 and 50 pounds of fat for the month.

H. C. Davis led in herd averages, with a 41.5-pound average. Others with herd averages of over 30 pounds were Moorhead & Hobson, G. W. Huston, R. E. Deets, S. G. Sorenson, John St. Hilaire, Charles Hammer, W. O. Cox, Axel Anderson and L. H. Lee.

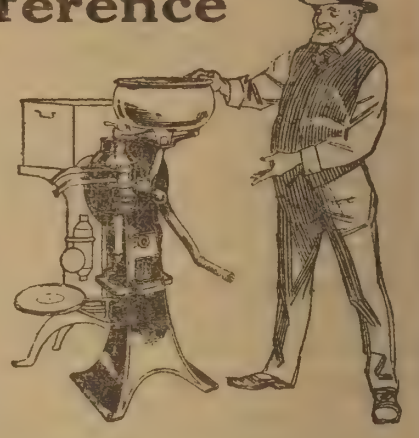
See the Difference

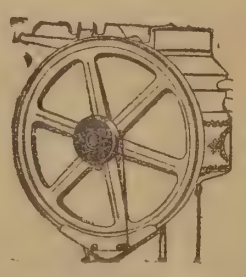


BETWEEN

THE NEW

DE LAVAL

AND OTHER



CREAM SEPARATORS

YOU can *see the difference* between a NEW DE LAVAL and any other cream separator right away.

And five minutes spent in comparing the bowl construction, the size, material and finish of all the working parts, the manner of oiling, the tinware and the frames, will surely convince you of the superiority of De Laval construction and workmanship.

Then if you go a step farther and turn the cranks of the two machines side by side for fifteen minutes, running milk or water through the bowl, you will see still more difference.

Every New De Laval is now equipped with a Bell Speed-Indicator, the "Warning Signal" which insures proper speed and uniform cream.

Speed Indicators can be furnished for use on old style De Laval machines at a cost of $3.00 each.

And if you will run the two machines side by side in practical use, as any De Laval agent will be glad to have you do—the De Laval one day and the other machine the next—for a couple of weeks, you will see still greater difference in the work of the two machines.

There is a De Laval agent near you who will be glad to explain all the improvements and advantages of the NEW De Laval, and who will set and start a machine for you on your farm and let you *prove the difference* for yourself.

Why not see the nearest De Laval agent at once? If you do not know him, write to the nearest office for any desired information.

Honor Roll at Waikiki Farm.

The Farmer has received from Ira P. Whitney, manager of the Waikiki farm, Spokane county, Wash., a list of 27 cows out of 80 cows being milked at the farm, which produced 40 or more pounds of butter during the month of December. Mr. Whitney writes:

"While we are not members of any association, all of our testing is done by the official tester of the Whitman county association, Noel Buchanan, who spends six days at Waikiki each month. He does our register of merit testing and also takes a four-milking composite sample of all cows in the herd not on official test."

Here is the list of cows producing over 50 pounds during December:

Name of Cow.	Breed.	Age Years.	Days Fresh.	Lbs. Fat. Dec.	Total Fat to Date.
Princess Coleman	Registered Jersey	6	81	75.3	175.0

Pioneer Jerseys

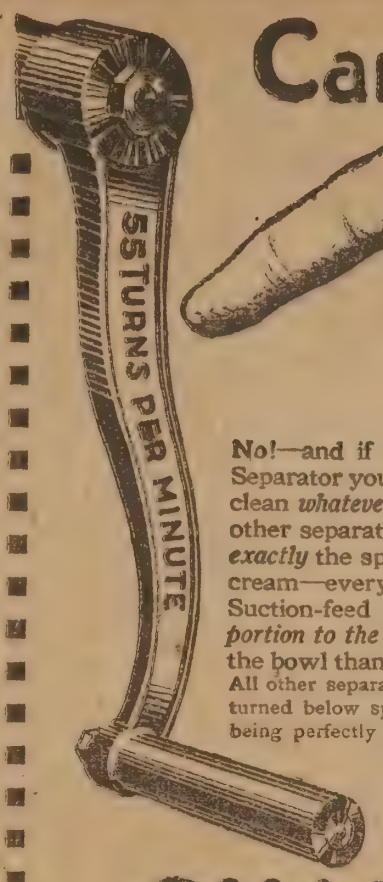
Brought Into White River Valley

In the possession of Mrs. T. Liston of White River Valley, Wash., is a deed, wrinkled and yellow with age now, which was made out in 1878. The signers were A. A. Denny, Mary A. Denny, George F. Frye and Louisa C. Frye, and title was conveyed to Edmond Bow. During the Seattle fire this deed rested in the safe of J. B. Metcalf, and part of its present color probably is due to the heat of the big conflagration.

Mrs. Liston, who now lives on part of the pioneer farm, remembers the first Jerseys brought into White River Valley. They were bought by her father, and ever since that time Jerseys have held an important place on the Bow farm.

The old Bow place adjoins the Pacific highway, and it is no uncommon sight now to see half a dozen high-powered motor cars whizzing past at the same time. This carries Mrs. Liston back to pioneer days, when the narrow-gage railroad was built up to the Newcastle mines.

"We used to go down to a place where the cars were supposed to stop," says Mrs. Liston, "and perhaps they did stop and perhaps they didn't. There was no station, and the right of way occupied by the track was so narrow that if you stuck your arm out of the window you were apt to have it knocked off by a tree trunk. Of course, we didn't have to go to Seattle in this way—there was a steamer on the river which we could take if we wanted variety. The only trouble was that when the steamer reached the mouth of the river, unless tide conditions were favorable, it sometimes had to wait till far into the night before it was able to get across the sand spit. But in spite of it all," adds the daughter of the pioneers, "I don't know but what we had better times then than we do now. We didn't travel so rapidly—but we did take time to live."



HIRED HELP

Higher Cost and Smaller Farms.

T. Liston of King county, Wash., believes that when land goes over $200 an acre it is too high for farming purposes. For a good many years Mr. Liston was in the dairy business, but six years ago he decided that the cost of production was overtopping selling price, and that a good time had come for selling off his cows.

"There was more money in selling milk 15 years ago at 8 cents a gallon than there is in selling now for twice that," Mr. Liston says. "Look at the matter of help, for one thing. We used to get a good man for $20 a month; now we must pay $50 or $60. Shorts were $16 a ton, while now—well, you know what they are. The dairy farmer of today handles more money than the oldtimers did, but he doesn't succeed in keeping any more of it for his own use."

Mr. Liston believes the big farms will have to be cut into smaller holdings, so that the matter of hired labor will be largely eliminated. When a man and his family are able to do all of the work, they are in an independent position. Living costs little, and the money taken in goes farther.

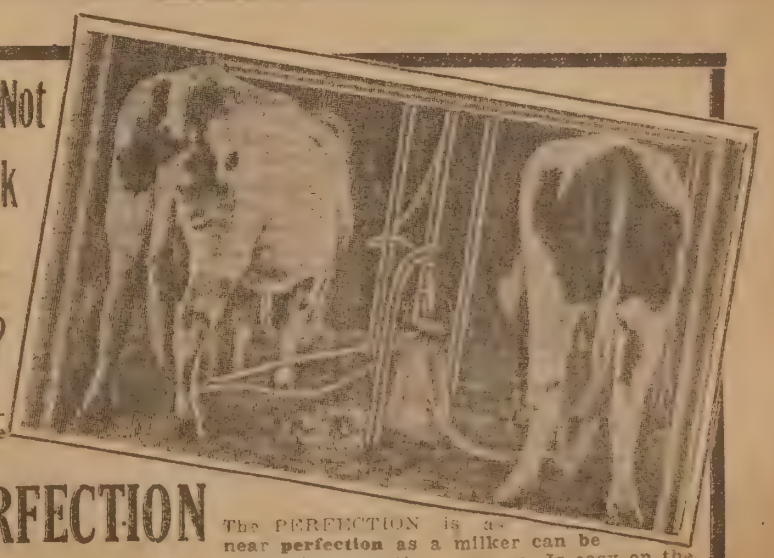
Can you do it? Every day?

No!—and if you have a Sharples Suction-feed Separator you don't have to, for it skims equally clean *whatever* speed you turn. But with every other separator you must turn the crank at just *exactly* the speed stamped on it, or you will lose cream—every time! The wonderful Sharples Suction-feed varies the milk feed *in direct proportion to the separating force—never* more milk in the bowl than it can *perfectly* separate.

All other separators have a fixed milk feed. Thus when turned below speed much of the milk runs out without being perfectly separated, and some gets into the cream, making it thin and uneven. Thousands of actual tests have proven that 19 out of 20 persons *do* turn too slow most of the time, and that *everybody* turns too slow some of the time. Get a

SHARPLES SUCTION-FEED CREAM SEPARATOR

—the *only* separator that skims clean at widely varying speeds
—the *only* separator that delivers cream of unchanging thickness—all speeds
—the *only* separator you can turn faster and finish skimming quicker
—the *only* separator with just *one* piece in the bowl—no discs, easiest to clean
—the *only* separator with knee-low supply tank and a once-a-month oiling system



Sharples is positive insurance against carelessness and its consequent cream waste. We realized that it was far from sufficient that a separator *could* skim clean when properly handled. It was vitally necessary that it *would* skim clean—even when improperly handled. If any of the old-style fixed-feed separators would adopt a device for the purpose of notifying the operator when he is turning too slow, it would be an acknowledgement of the ***vast superiority*** of Sharples, which automatically ***prevents*** losses from irregular turning instead of simply announcing them. Write today for catalog to Dept. 49.

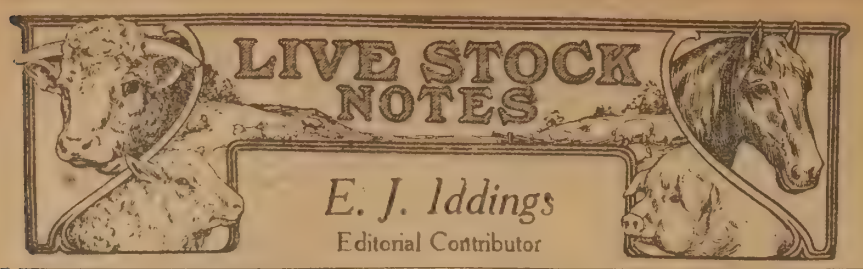
Why Not Milk This Way?

Investigate the



PERFECTION Milking Machine

The PERFECTION is as near **perfection** as a milker can be made. It saves time—money. Is easy on the cows—they like it. The PERFECTION gives a downward squeeze and suck—a perfect imitation of the calf itself.

The PERFECTION pump is very simple—runs smooth and easy—floats in oil. Will last a lifetime. The pulsator is unique and perfect in action **—it is the only machine capable of adjustment to the individual cow.** Write today.

J. C. ROBINSON COMPANY 47 FIRST STREET, PORTLAND, ORE.

BULL ASSOCIATION

Farmers Endeavor to Improve Herds

The farmers in the vicinity of Powell Butte in Crook county, Ore., formed the Central Oregon Bull association. County Agriculturist Blanchard, acting under the direction of the County Agricultural Council, assisted in forming the organization. E. S. Barnard, secretary-treasurer and chairman of the committee on economic problems of the County Agricultural council, was particularly active in assisting in the formation of the association. After adopting the articles and by-laws, the following officers were elected: George F. Beckman, president; Levi Ernst, secretary-treasurer and E. S. Barnard, chairman of the board of directors. The association will use a bull of the Jersey breed.

The bull association is merely the get-together of several men who are using the same breed of cows, who purchase a high grade bull cooperatively, thus getting the advantage at a lower cost. As the association grows, blocks or sections are formed and a bull supplied to every 70 cows. At the end of two years, when the danger of in-breeding occurs, the bulls of the blocks in the association are exchanged.

Manage O. A. C. Live Stock Farm.

The appointment of D. E. Richards, manager of the Oregon Agricultural college live stock farm and live stock, as instructor on the animal husbandry faculty and as secretary of the Oregon state stallion registration board, has been announced by Professor E. L. Potter. His time and salary will be equally divided between the college and the state board. All his college work will be specialized on horses.

Veterinary

Dr. S. B. Nelson

I have a cow that has small hard lumps along her back. They seem to be under the hide, but break similar to a boil, leaving a bloody scab. She will be fresh in about a month and seems to be losing flesh, though I am feeding her well. I give her bran, shorts, oil meal, carrots and good hay.
J. W. P.

Oak Harbor, Wash.

The description that you give of the hard lumps along the cow's back fits pretty closely the condition known as "warbles" in the cow's back. This condition is caused by the "bot fly," or "ox warble fly," which lays its eggs on the hair of the animals during the hot summer months. At the present time the thing to do is to squeeze the grubs out of the boils and destroy them, then in the summer when the cattle are turned into the field the treatment is to apply to the hair some oil, sticky substance, such as whale oil, or similar substance. Otherwise, there is no treatment for the trouble.

I have two mules that get sore shoulders when they are worked in the field. The shoulders chafe, but do not seem to swell much. Is there anything I can get to toughen their shoulders before it is time to work them?
J. C. O.

Wilson Creek, Wash.

Try applying to the shoulders every night when the team comes in a small quantity of "elyerite of tannin." If you can apply this for a week or 10 days before you begin to work the mules hard, so much the better.

I had a cow that lost her appetite three days after calving. I doctored her for impaction of the stomach. She seemed to be in no pain, but died about 10 days afterward. I opened her and found her heart enclosed in a substance resembling tripe. Her udder was a mass of clotted blood. About three months after a former calf two teats on one side became obstructed and did not open again, although the udder was full. Could this have caused her death, as she was a heavy milker.
M. B.

Curlew, Wash.

Your cow died from inflamation of the lining covering the heart, known as "peridarticis." I do not believe that the obstructed teats had anything to do with the inflamation of the heart, although it may be that it did. The inflamation of the heart could have come from either her catching cold, or if bacteria were present in the blood of the udder, they might be absorbed and show themselves in the inflamation caused both inside and outside of the heart.

If a cow aborts her calf at four months should she be brought to a flow of milk and would the milk be fit to use?
C. C. H.

Humptulips, Wash.

Yes, the cow should be given treatment for the conditions which generally follow when the calf has been aborted and the cow should be brought to her full flow of milk and when the cow has recovered from calving and the results of the abortion she should go into full milk and the milk is fit to use.

I have a cow that got some oat beards in her eyes. I tried to get them out, but could not do so. I have been washing the eye out with weak carbolic acid water. It has now formed an ulcer or abscess and there is quite a lot of puss and blood. It discharges very freely and has a strong odor. The eye is sunken away into the head and seems loose. She is totally blind in it. Should the eye be taken out?
O. H. H.

Kealey Springs, Sask., Canada.

You are mentioning here and asking advise for a very serious trouble. If you do not have the advantage of expert veterinary service try the following treatment provided that the eye ball has not yet bursted. It the eye ball has bursted, then it should be removed. However, if not, inject at the corner of the eye a few drops of a 4 per cent cocaine solution. Wait a few minutes and then drop in a few drops more. After about six or seven minutes open the eye and flush it out carefully with a warm 2 per cent solution of boracic acid in water. Flush it with a running stream until it is clean, and then examine carefully it the oat beards have been gotten out. It not, remove them with a small pair of pinchers. After the eye is clean drop into it four or five times daily a few drops of a 2 per cent solution of argyrol. Continue this treatment until the animal is better.

Women Carpenters.

Nineteen young women carpenters have been sent from London to France to build huts for the British army.

ABSORBINE STOPS LAMENESS

from a Bone Spavin, Ring Bone, Splint, Curb, Side Bone, or similar trouble and gets horse going sound. It acts mildly but quickly and good results are lasting. **Does not blister or remove the hair** and horse can be worked. Page 17 in pamphlet with each bottle tells how. $2.00 a bottle delivered. **Horse Book 9 M free.**

ABSORBINE, JR., the antiseptic liniment for mankind, reduces Painful Swellings, Enlarged Glands, Wens, Bruises, Varicose Veins; heals Sores. Allays Pain. Will tell you more if you write. $1 and $2 a bottle at dealers or delivered. Liberal trial bottle for 10c stamps.
W. F. YOUNG, P.D.F., 371 Temple St., Springfield, Mass.

Identify Your Stock

The reason lost stock is seldom returned is because it lacks Perfect Identification. Each animal should carry an ear tag, with name and address of owner stamped thereon.

The "Perfect" Tag should be used because it is the lightest tag manufactured; made of aluminum; noncorrosive and non-poisonous. This ear tag is indorsed by stockmen all over the United States.

Send for FREE sample tag and prices.

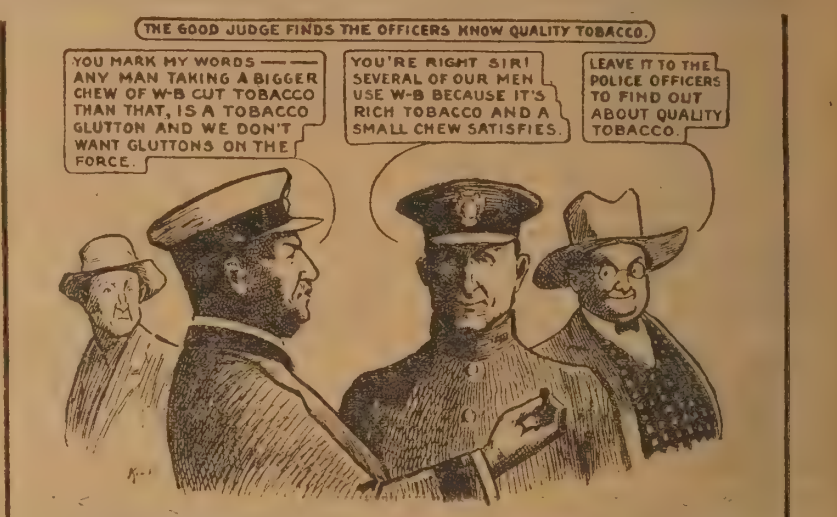
The Aultman & Taylor Pea and Bean Puller

Save Your Whole Crop

After you have gone to the expense of raising a crop of peas or beans, you should not be satisfied with anything but the best in hulling machinery. Do not trust your crop to an improvised huller, such as a grain separator with pea and bean hulling attachment, as it only invites loss through cracked seed, poor cleaning and inferior separation.



The AULTMAN-TAYLOR pea and bean machine is designed and built solely for the successful handling of peas and beans. It is a machine you can trust your crop to and feel satisfied that none of it will be wasted.

Our 1917 catalog fully describes this huller, as well as the New Century Separator. A special Tractor Catalog tells you about the Aultmann-Taylor Four-Cylinder Gas Tractors, and why they lead all others.

Write or call at our nearest branch house.

Cyphers Incubators

The practicability of artificial incubation has been so firmly established that it is not any more questioned.

The important thing is to select an incubator that is thoroughly reliable and that can be depended on regardless of the rise or fall in temperature, and one so scientifically constructed that it will produce strong, healthy chicks. Such an incubator, is **The Cyphers**, now known as the "world's standard" hatcher. All sizes in stock. Write for catalog.

The Inland Seed Co.
909 First Avenue
Spokane, Wn.

Poultrymen are learning that fresh air is their most valuable ally in fighting or preventing diseases. It is also one of the best aids in filling the egg basket. In spite of all that has been said about the open-front house and fresh air, a great many persist in closing up the house in cold weather. Many build an open-ffont house, but when a cold spell comes they lose courage and tack up gunny sacks over the opening. In 99 times out of 100 there is no need of closing up the house at all. The chickens will be healthier and lay better if the opening is left open all the time. There is no use in doctoring sick fowls that roost in a closed house. Doctor the house. J. D.

Values Double in Nine Years.

In nine years the value of poultry and poultry products in Oregon state has increased from about $4,000,000 to approximately double that amount The poultry department of the O. A. C. at Corvallis has done much to increase the interest in the Poultry business.

Egg Production

Question of Breeds and Breeding

To the Editor: I find it difficult to keep the Single Comb Leghorn's combs from freezing, but I have proved their ability to lay eggs. How does the Rose Comb Leghorns compare with the Single Comb in egg production?

M. L.
Withrow, Wash.

If the rose comb White Leghorns have been bred along the same line as the single comb Leghorns there should be no difference in their egg yield. It is more a question of their breeding than of the breed when it comes to egg production. It would be easier to secure a good laying strain of single comb White Leghorns than of the rose comb, because there are more of them and a number of breeders have been breeding them up specially for egg production.

In most any part of the northwestern states there should not be much trouble from the combs freezing. There are, of course, a few cold districts where it would be almost impossible to keep them from freezing, but in most sections if the chickens are housed properly, there should be little freezing of combs. They should he kept in open front houses all the time and in that way they become hardened and are not so apt to freeze their combs. If they are kept in a warm house for a few days and then turned out into the cold there combs are very tender and will be sure to freeze. J. D.

Sick Hens

Careful Examination Is Needed

To the Editor: Can you please tell me what is the matter with my chickens? They have had the same disease for three years. They get the same disease about the same time each year, sometime in February, and it lasts till summer. The hen gets very sick suddenly, maybe she will stay on the nest all night and die before morning. Her comb will stay just as red as can be, but she will have a greenish-yellow discharge from her bowels and she will usually died from one to three days. I have given them injections of carbolic and boric acid in water and saved some, caught in time. Our chickens look healthy and lay pretty well, but get the same thing every spring F. B.
Okanogan, Wash.

From the description given one could only guess at the nature of the sickness. Would suggest that he dissect two or three of the sick hens and examine closely the digestive organs, especially the liver and intestines. The symptoms, so far as they are given, might indicate tuberculosis, though nothing positive could be said until an examination was made. If tuberculous the liver will usually show yellowish spots and the intestines often more or less spotted with tubercles. It any other abnormal conditions are found, write us giving full particulars. J. D.

"Business Hen" Works.

H. Villeneuve, an experienced poultry raiser of purebred birds, near Nampa, Idaho, says his experience is that Barred Rocks need less grain than other breeds that are more active, like the Rhode Island Reds, for example. He says that his Reds will eat and use to advantage a half more grain than the Rocks. The latter if fed too much will take on fat, to the detriment of their egg production. He says too many people fail to understand this, and hence are disappointed with the Barred Rocks as egg producers. The hen, he says, that is too fat, or too lazy to hustle, won't amount to much in filling the egg basket. The "business hen" is the one that works for her rations.

Panama Canal Service.

Since the Panama canal was put into use in August, 1914, nearly 3000 ships have passed through it, carrying nearly 12,000,000 tons of freight. The receipts in toll is abount $4,000,000, with the cost of operation nearly $7,500,000, showing a heavy loss.

LILLY'S

Holly **Chick Food**

High Protein **Chick Mash**

They are true body builders for the chick. The foundation of your strain's future is laid in the health and strength building-up of the young chick. RIGHT NOW IS THE TIME TO SEE TO IT!

Model Coal Burning Hover

is a simple, portable, Brooder House Stove more economical than oil. Cost of operation 2 cents to 5 cents per day. Can be used for fifty chicks or for fifteen hundred. The stove is cast iron. The canopy has no curtains to collect vermin. Practical Poultrymen WRITE US FOR FULLER DETAILS, or ORDER NOW—$15.00 COMPLETE.

International Sanitary Hover

The all-metal circular brooder of wide reputation. The only hover with the lamp in the interior; a complete hover movable from place to place without carpentry or other construction work. SEND for DESCRIPTIVE PAMPHLET, or ORDER NOW—$8.50.

Dealers sell Lilly's Poultry Foods and Supplies.

Transplanting

Care Should Be Taken With Trees

Naturally one of the vital steps in the development of an orchard, whether an acre on the farm or 100 acres as a commercial venture, is the first step—setting out the young trees.

Professor W. S. Thornber, director of the extension department of the state college at Pullman, Wash., in a short circular on the subject, has given the main points to be observed. The circular follows:

The transplanting of trees is always accompanied by some danger of loss or backset because of loss of feeding roots, drying of the bark of the roots, thus making activity impossible; or failure on the part of the planter to make the soil firm around the roots and thereby prevent wind injury to newly formed rootlets.

Immediately upon receipt of trees, if they are moist and in good condition, heel-in in moist soil. If the roots are dry and the top shriveled, bury top, roots and all in moist soil for a few days before planting. This will frequently save trees when ordinary treatment would not.

When ready to plant dig the holes large enough to accommodate the roots without cramping and deep enough so that when the tree is transplanted it will stand from one to two inches deeper than in the nursery. Prune off all injured or bruised parts of the roots so that the cut ends will rest on the bottom of the hole or will face downward. Place the tree in the hole so that it rests firmly on the bottom; fill in with moist, rich soil until the hole is from one-third to one-half full, or until the roots are thoroughly covered, shake the tree slightly to work the soil among the roots, and then get into the hole and tramp the soil until it is firm. If it is impossible to firm it with the feet use a piece of two by four four six to eight feet long, the end of which should be padded. Fill the hole and leave the surface loose and smooth, but never cloddy or covered with chunks of sod.

If water is to be used it is best to dig the holes one or two days before planting and put from two gallons or more of water in each hole, permitting it to soak away before planting. Never apply water to the surface of the ground around trees after they are transplanted as it will do more harm than good.

The roots of deciduous trees may become very dry and yet not suffer serious injury, but evergreens must never be permitted to dry as they have a resinous sap which hardens when it dries out or comes in contact with the air. This kills the trees.

Evergreen trees can be transplanted almost any month of the year, but best results are obtained by transplanting just as the buds begin to expand, usually from the 10th of April to the first of May, or right after the spring growth has hardened, from the middle to the last of July. Deciduous trees must be transplanted during the fall or very early in the spring.

Dynamite

Used in Planting Orchard Trees

By J. M. FIELD.

During the spring of 1911 I set out a young orchard, which covered 25 acres. In laying out the tract one row came exactly in an old road that was hard, barren soil. I could hardly dig holes here at all because of the extreme hardness of the ground. I did not wish to move the row to one side as that would spoil the symmetry of the tract. I decided to try dynamite for loosening up the ground.

I took a dirt auger and bored a small hole to a depth of 30 inches and exploded one-half stick of 40 per cent dynamite in the bottom of it. It did not tear up the surface as I had expected it to do, but when I dug down to see what the effect was underneath I was surprised to find the hard subsoil thoroughly pulverized to a distance of one and one-half to two feet on each side. This seemed to be in excellent condition for my young trees, and I gave the other holes in the old road the same treatment. Then I was so well satisfied with the results that I decided to use dynamite to loosen up all the holes so much better than could be done with any implement I had.

BOYS AND GIRLS' Club Work in Cowlitz County.

Cowlitz county's first attempt at the Boys and Girls' club work shows that 19 children are entitled to receive the national gold achievement pin. The pupil who leads the list is Bertha Frey of district 41, near Ostrander, who made a net profit of $25.70 in the canning club. Second place is taken by Willie Clark of Yale, whose net profit was $24.70 in potatoes.

Less work and bigger crops with Planet Jr. implements
"No gardener would do without a No. 4 Planet Jr if he would but try it. I would not take ten times its price and do without it," writes Isaac Kennedy, Owensboro, Ky.
Planet Jr implements are so well made that they not only do good work, but they last a lifetime. Fully guaranteed.
No. 4 Planet Jr Combined Hill and Drill Seeder, Wheel-Hoe, Cultivator and Plow does garden work so quickly, easily and thoroughly, that it pays for itself in a single season. Sows all garden seeds (in drills or hills) plows, opens furrows and covers them, hoes and cultivates all through the season. 32 other styles of seed drills and wheel-hoes—various prices.
Planet Jr
No. 8 Planet Jr Horse-Hoe and Cultivator does a greater variety of work and does it more thoroughly than any other cultivator ever made. It has stronger, better construction. Its depth regulator and extra-long frame make it steady-running. Adaptable to deep or shallow cultivation and to different widths. 15 other styles of one-horse cultivators—various prices.

Farm Hands Wanted
Western Canada Farmers Require 50,000 American Farm Laborers AT ONCE!
Urgent demand sent out for farm help by the Government of Canada. Good wages. Steady employment. Low railway fares. Pleasant surroundings. Comfortable homes. No Compulsory Military Service. Farm hands from the United States are absolutely guaranteed against Conscription. This advertisement is to secure farm help to replace Canadian farmers who have enlisted for the war.
A splendid opportunity for the young man to investigate Western Canada's agricultural offerings, and to do so at no expense. Only those accustomed to farming need apply.
For particulars as to railway rates and districts where labor is required, or other information regarding Western Canada, apply to
J. N. GRIEVE, Cor. First and Post Sts., Spokane, Wash.

SCATTER YOUR STRAW AND SAVE YOUR CHAFF
THE BEST USE that can be made of straw is to put it back in the soil. More humus in the land means bigger crops. Straw properly spread back of the harvester conserves the moisture and helps prevent the blowing of the soil. We can equip 1917 Holt Combined Harvesters with our patent Straw Scattering Device shown in the illustration. This consists of a light frame fastened to the rear of the harvester and back of the straw carrier.
On the frame are placed two rapidly moving beaters which are driven from the straw carrier shaft. The beaters scatter the straw evenly over a space 20 feet wide back of the machine. This plan of handling straw makes it unnecessary to burn straw that is usually run in winrows after the Harvester. Ground on which straw is scattered as described is very easily plowed. The Straw Scatterer may be used in connection with the chaff dump. You save your chaff and scatter the straw at the same time.

The Farm Garden

Article 3

Seed Testing

Good Seeds Are As Essential to Good Gardens as Fertile Eggs Are to Successful Poultry Raising.

One had as well set hens on pebbles or go hunting with powderless shells as to attempt to grow beans from seeds in which the germ of life is dead or very weak. The time was when people set their hens on just eggs, without a great deal of thought whether they were good eggs or bad, or from good stock or poor. But that system, or lack of system, has changed. Likewise, gardeners have accepted anything branded turnip seeds and planted them in "rich, moist loam" made out of clay or gravel or sand, as the case might be, and expected a good crop of turnips. And that system also is changing. Soils are now studied; planting methods are improved; cultivation is made a science. And now the necessity and practicability of testing seeds to learn whether they will grow are being recognized. Colleges and universities throughout the country are establishing modern seed-testing departments, and federal and state departments of agriculture are doing likewise. And even individual farmers and farm gardeners are learning how to test for themselves.

The Equipment Needed.

The equipment necessary is easily obtained. For small amounts of seed, such as the common farm garden would require, a few blotters, a few plates or saucers, a few pieces of flannel, and a little water will serve. Seed-testing laboratories in come instances have elaborate equipment, but it is necessary for the work they must do. They are testing the "germinable viability" of the seeds. The farmer doesn't care much about that. What he wants to know is whether the seed will grow, and therefore plates, blotters, flannel and water are all he requires.

Method to Be Used.

Proper conditions of warmth, moisture and air are essential to germination of seeds. In general these conditions are the same for all seeds, but differ in a number of special cases.

tend to act as wicks to "draw" water from the vessel into which an end is placed, but care must be taken that they do not take too much or too little water.

Plate Germination.

For testing large seeds (beans, for example) take a piece of canton flannel, moisten it, place the seeds between two folds, lay on a plate with an end hanging over to rest in a vessel of water as nearly as possible on a level with the plate, and place in a darkened room where the temperature may be kept between 68 and 75 degres, as indicated by the ordinary Fahrenheit thermometer. The water vessel is not essential, but in cases where it is not used more constant watching must be practiced to protect the seeds against damage from loss of moisture. Much of this watching is necessary, however, under any circumstances, and much testing is done without the wick system.

Smaller seeds may be germinated in the same manner between sheets of blotting paper, while very small seeds will germinate successfully on top of a single sheet of moist blotter.

Adaptation of Methods.

Among the seeds that do better between the folds of the canton flannel than between or on top of the blotters are the following, and seeds of similar size and nature: Beans, peas, corn, watermelon, pumpkin and squash.

Among those for which the two sheets of blotting paper are best adapted are these and others like them: Beets, cucumbers, buckwheat, onions, muskmelons and parsnips.

Among those that will germinate readily on top of a single sheet of blotter are such as cabbage, kale, Brussels sprouts, lettuce, turnip and all very small seeds.

Two other methods of testing are practiced, but in general appear less practicable than the methods just described. The first is the actual planting of the seed in rows in a box filled with moist earth. This method is better than the former methods in one respect—that more even conditions of temperature, moisture and light may be had—but it is manifestly more difficult to keep watch on the germination developments.

The other method is fundamentally similar to the blotter and flannel methods. A shallow box is filled with moist earth or sawdust, and earthen plates with openings in the bottom are embedded in this earth or sawdust. The seeds are germinated in these plates in much the same manner as in the first method described.

Use of Testing.

It is advisable to take as large a number of seeds of each kind as seems practical, 100 being the ideal number. After the germination period is passed, a count of those which have sprouted vigorously will show the percentage of good seed, and planting can be done accordingly, or the entire supply of seed discarded if the percentage is low. Seeds for testing should be taken promiscuously from the packet or package, so that the result will be truly representative.

The time necessary to germinate seeds depends upon the seed nature and the moisture and temperature. Ordinarily, almost any garden seed should sprout well within 10 days. In many of them sprouting may be seen in from two to four days.

Prime Essentials.

Even moisture and temperature are first essentials to good testing. Seed must not be too wet, nor must they ever be allowed to become dry after once swelling. The temperature should be kept about 70 degrees, varying to never below 65 nor above 75 if the best results are desired.

In using the blotters and the flannel (canton), care must be taken that they do not become too wet. Seeds require moisture, but must not be kept too wet. The blotters and the flannel

No child who has ever loved a garden will despise the farmer, for he has learned by experience to respect manual labor, and that brains and hands must go together to bring good crops.—M. Louise Greene.

"Works Day and Night on 2¾¢ Stove Tops"

—An OILPULL owner in Triangle, Cal.

EVERY OILPULL owner can do what the OILPULL owner quoted above does, because the OILPULL is *built* to burn stove oil, distillate and other cheap fuels—there is no makeshift proposition about it.

The increasing demand for the OILPULL tractor on the Coast is the natural result of its light efficiency and low cost of operation and upkeep.

You get strength and long life in your OILPULL, not continual delays and expenses. All parts are well protected, the air intake is located high up out of the dust, the engine is oil-cooled.

Besides its unlimited usefulness on the drawbar, its close regulation has given the OILPULL an added reputation for reliability on the belt.

The OILPULL is governor controlled, the speed of the engine *automatically* and instantaneously changes to every variation in the load. This means smooth, steady, economical power and your machinery always running at its highest efficiency. Then, of course, there is no danger from sparks.

The OILPULL is made in two sizes, 15-30 and 30-60 h. p., in the same shops as the well known Rumely Ideal Separators, hullers, engine gang plows and the new model small tractors, "8-16" and "12-24".

READ HOW TO WIN IT IN OUR BIG

FARM INFORMATION CONTEST

Don't Let It Escape. Get Our Contestant's Helpful Outfit and Start at Once. On April Fifth This First Prize Drops to $175.

Read the Rules—Answer These Questions

31. The abbreviation of what state means "to launder?"
32. What breed of swine has a name made up of the names of an Asiatic nation and a European nation?
33. What kind of bird with the name of a domestic animal, uses the nests of other birds in which to lay its eggs?
34. How many women have been legal rulers of France?
35. How much must you pay to get a U. S. postal money order for $99.99?

$800—IN CASH to Be Paid—$800

We will positively give EIGHT HUNDRED DOLLARS in cash awards (and more in event of ties) to the winners. As explained in the rules which follow, there will be five questions run in every issue of the Farmer for 12 weeks. The last five questions will appear in the issue of April 19.

Open to Four States

Contestants must be residents of Washington, Oregon, Idaho and Montana.

Five Questions Each Issue

The contest will be composed of 60 questions. Five will be run in each issue of the Farmer for 12 issues.

Answers to each question except No. 45 can be given correctly in from one to 10 words and will be given a score of 100 if correct. Answers to question No. 45 will be limited to 100 words each, and will be graded as to the common sense and general knowledge of farm conditions shown by the contestant without regard to spelling, grammar or penmanship. As with the other 59 questions, a perfect answer to No. 45 will be scored 100.

Perfect Score Is 6,000

The contestant who comes nearest to a score of 6000 and complies with all the conditions of the contest will receive the first prize; the next nearest, second prize, and so on. In case of a tie each tying contestant will receive the full amount of the prize.

There are 35 prizes as follows:

$150 is amount of First Prize. **$50** is amount of Third Prize. **$10** is amount of Fifth Prize.

$100 is amount of Second Prize. **$20** is amount of Fourth Prize. **$5** each, Sixth to Tenth Prizes.

$2 each Eleventh to Fifteenth Prizes. **$1** each, Sixteenth to Thirty-fifth Prizes.

OTHER RULES

The answers will be passed upon and graded by a fair-minded, thoroughly competent judge.

Two weeks will be allowed for sending in answers after April 19, 1917, date of the issue containing the last five questions.

Remember, your failure to answer all the questions will not necessarily exclude you from the contest. There are 60 questions to be answered and it is not reasonable to suppose that all our prize winners will attain a perfect score. Your answers must all be sent in at the same time. Do not send any answers until you have completed the full list or as many as you can answer.

Those who use our CONTESTANT'S HELPFUL OUTFIT will be able to send in their complete set of answers without delay, there being no need of their waiting for the questions as they appear in The Farmer from week to week down to the final issue of April 19. In order to get as prompt returns as possible from those contestants who use our CONTESTANT'S HELPFUL OUTFIT, extra inducement is made in the prize awards. SEE ENLARGED PRIZE LIST.

Announcement of prize winners will be made and prize checks mailed as soon after close of contest as possible.

If any point is not clear, do not hesitate to write the Farm Information Editor.

All answers must be mailed on or before midnight, May 3, 1917, as shown by post-office dating stamp on your envelope.

ORDER COUPON—If your subscription is paid ahead, the time paid for herewith will begin at the date to which you are now paid.

FARM INFORMATION EDITOR,
Review Building, Spokane, Wash.
Enclosed find $1 for one year, or $1.50 for three years' subscription to

THE WASHINGTON FARMER,

and enter me as a contestant in the Farm Information Contest. I am also to receive at once the complete CONTESTANT'S HELPFUL OUTFIT, consisting of guide against wrong answers, reply blanks, rules and all information to aid me to win a reward.

Name .....

R. F. D. .....Town .....

State .....

Notice—Amount of remittance to be either $1 for one year's subscription to the Farmer or $1.50 for three years' subscription.

Answer this question: Are you now a subscriber?.....
If you wish paper sent elsewhere, fill in name and address.

A Valuable Aid to Contestants

One complete CONTESTANT'S HELPFUL OUTFIT, including all of the 60 questions and instructions and helpful warnings as to answers which would be wrong, and the correct answers to some of the most difficult questions, is truly a big help to the contestant.

To each contestant who sends in a new renewal or an extension of his subscription at the time of registering for the contest, this complete CONTESTANT'S HELPFUL OUTFIT will be sent in combination.

We feel that those beginning on the contest will find these suggestions as to what to avoid distinctly useful. This equipment supplies in convenient form everything needed to enable you to apply your ability to the best advantage, and will contain information enabling you to answer the most difficult questions correctly.

Puts Questions in Reach of Children

This CONTESTANT'S HELPFUL OUTFIT puts the solution of the questions in the reach even of the children, it being the purpose to make it possible for everybody in Washington, Oregon, Idaho and Montana to compete. This outfit includes, besides general information about the plan of the contest, the following:

Guide against wrong answers, which includes either correct answers of more difficult questions or easy references as to where to find the correct answers; and blank forms on which to write your answers in such a way that there can be no confusion when your answers are taken up by the judge for scoring.

It will be worth considerable to you to be assured that your answers are reaching the Farm Information Editor in such form that he will know in every instance exactly what question you intended to answer. This CONTESTANT'S HELPFUL OUTFIT will make it possible for you to

Begin Work at Once

On account of the large number certain to send for our CONTESTANT'S HELPFUL OUTFIT, thus making it possible for them to answer the entire 60 questions without delay, it is deemed advisable to offer some special inducements to secure prompt returns from this particular class of contestants. By securing the early replies of those who are thus supplied with the entire 60 questions, we will be able to have their papers carefully scored before the final rush of answers toward the end of the contest.

Understand, it is not absolutely required that those who use our CONTESTANT'S HELPFUL OUTFIT send in their replies at once, but, in order to induce them to get in early, the following plan for enlarging the awards to those prize winners whose answers come in early is offered:

ENLARGED PRIZE LIST—$800 IN PRIZES—ENLARGED PRIZE LIST

For those who use our CONTESTANT'S HELPFUL OUTFIT.

Essence of the Big Questions for Busy Men and Women

OUR WEEKLY MAGAZINE DEPARTMENT

Stories, Pictures and Home Helps for All the Folks

La Grippe, the Trade Mark of Aristocracy

Man From Sunny Yakima Breaks Into High Society While in Texas; Did Mind or Matter Bring Relief?

By GRANVILLE LOWTHER.

I thought when I left the northwest on the sixth day of January that I was leaving cold winds, winter snows, la grippe, influenza and many other ills flesh is heir to. I imagined I was going to a country of balmy breezes, invigorating salt air from the gulf and salubrious sprays softened by southern sunshine. But I was mistaken. I had scarcely got myself settled and unpacked my trunk until the cold winds came sweeping from the north at a rate of speed faster than a train running from Oklahoma City to Houston.

"I suppose this is the kind of weather you folks have up north?" said one of my friends.

"No," I replied. "this is the kind of weather you have down here."

"You came from the north, would you deny that you are a sample of the folks up there? Why, then, do you deny the weather you brought with you?"

Like a judge on the bench deciding an important case, I asked for time to weigh the evidence before rendering a decision.

Dr. Lowther.

Aristocracy Has La Grippe.

What I started out to tell was that it seemed to me nearly everybody had la grippe. At any rate the "superior classes" had it. I am coming to the conclusion that certain diseases are mostly diseases of the aristocracy. Appendicitis, for instance, is not often found in persons unable to pay for an operation, and I never knew a wage worker or a farmer with the gout.

For several days I was trying to decide whether the disease was contagious or infectious; whether it attacked all classes alike, or belonged mostly to the aristocracy; whether if I did not have it I would lose caste and be classed with the "niggers" and "poor whites." While I was deciding I began to sneeze.

It was not the old fashioned nose-in-the-air type in which the head is thrown backward then forward as if making a polite bow to your best lady, but the suppressed delicatessen style behind handkerchiefs requiring three or four changes a day.

My imagination took wings and I wondered if I would be able to make my weekly contributions to The Farmer, and how much or how little the readers would lose if I failed them. Of one thing I was assured, and that was that I had a fashionable disease in a fashionable society. But now that I had it, and my social status was assured, I wanted a light form. What could I do?

The Psychology of It.

I confess I do not know what the mind will do for persons whose minds are different from mine; but I had my own thoughts to manage and I did the best I could with them. I knew that the mind had great influence over the body, for once when I disobeyed my father, and I saw him cutting a switch, I felt the cold chills running up and down my back as plainly as I ever did with the ague.

At another time when I wanted to lick one of my school mates the other boys told the teacher that my face was as red as blood, and I know my head was hot all the afternoon. Then, I will never forget the night when I asked my best girl to marry me. She affirmed that she could hear my heart beating the whole distance that separated us. So I knew there was truth in the claim that mind and matter act and react upon one another. Then, too, I remembered that in Baldwin's Psychology it was taught that, "There is a correspondence between every act of thing, feeling and willing, and some molecular change in the body."

Later, Professor James taught that "Thought changes the atoms; the atoms change the molecules, and the molecules change the blood." I concluded to adopt Professor James' statement as my slogan of war against the millions of invading germs coming into my body unbidden and unwelcome. I repeated it over and over until I could say it consciously, unconsciously, subconsciously and superconsciously, then marshaled the atoms of my anatomy like men of war. It was an interesting fight with fluctuations, actions, reactions and changes similar to those of the battle fields of Europe.

The doctor visited our place every day, and my friends had him call on me. In the meantime I had been reading up on the subject of germs; how they invaded the mucus membranes and multiplied at the rate of a million a minute, more or less. I had read that Professor Pfeiffer had called them baccillus influenza, but the name had not killed them.

When the doctor came in I was still reading. Looking at me with a kind of quizical air he said: "What are you reading?"

"Bacteriology," I replied. "What species of bacteria are you most interested in?" said the doctor.

"Baccillus influenza,"

"Are you a physician?" said the doctor.

"No, I am a democrat."

"Good enough for you, you ought to have la grippe. But the disease is awfully hard on democrats, so you will have to take some medicine or it may kill you."

"All right, shovel it out."

"Oh," he said, "we do not carry medicines with us, we write prescriptions."

"Certainly, I beg your pardon; I forgot."

The Doctor's Directions.

(1) Drink all the cold water you can conveniently hold.

(2) Take most of your food in soup form.

(3) If necessary, take laxatives to move the bowels once or twice each day.

(4) Take four doses of quinine each day until your head begins to buzz, then gradually diminish the doses.

(5) Take a good, warm bath every morning and evening.

(6) Stay in out of the cold.

(7) Keep the air in the room pure.

(8) Do not overexert yourself. (I never do that anyway.)

I did all he told me and am still alive; in fact am getting better.

The Difficulty.

The difficulty is that when I get well I will not know whether it was the mind cure, the medicine cure, or both that cured me. It would be of little consequence for a lobster to use the mind cure, he has so little mind. It would be futile for a disembodied spirit or an angel to use the medicine cure, they have so little matter. The question is, what should we do who have some of the qualities and characteristics of both?

WORLD RECORD SILO
Was Made by Washington Mill.

What is believed to be the largest silo in the world is located near Dallas, Texas, on the large farm of the Tennessee Dairy company. It is 40 feet in diameter and 80 feet high, and is calculated to hold over 2000 tons of silage. The gigantic proportions of the silo are seen when it is figured that it would contain enough silage to feed one cow 35 pounds a day for 340 years.

It was manufactured by the Union Lumber company of Union Mills, Wash., and required about 66,000 feet of lumber and three cars for shipment. R. C. Pierson of the mill company says that the Tennessee Dairy company had previously purchased two smaller silos of the same make, being "only" 20 feet in diameter and 65 feet high. The largest silo that he had any previous knowledge of was one measuring 24 feet in diameter and 93 feet in height.

The Union Lumber company has a factory in New Orleans, from which the large silo could have been shipped to Texas several hundred dollars cheaper, but the dairy company wished it manufactured from Douglas fir, for which the northwest is famous.

Better to Buy Early.

Manufacturers of all kinds of equipment have found it necessary to increase prices. Automobiles and farm machines of all kinds must go up. Many firms already have advanced their prices, and there will undoubtedly be still further advances.

Silos and farm buildings must be included in this class. Every piece of wire, every bolt, nail, rod or stick has advanced in price. The manufacturer must pay more for his raw material, and likewise he will demand more of the jobber and distributor. This will be noticed more when the greatest demand is made. Therefore, to buy wisely will mean to buy ahead of time.

Its Far-Reaching Effect.

Former Governor Ammons of Colorado, in an address before a gathering of farmers recently, told the following story:

A man in Colorado died and passed to the other world.

St. Peter: "Where do you come from?"

Colorado Man: "From the state of Colorado."

St. Peter: "You do not belong here; you belong down below."

The man started away in the direction indicated. Coming to the brow of a hill, he looked over into one of the most beautiful valleys he had ever seen. Trees, green, fields, streams of water were everywhere to be seen. As he reached the lower level, he met a happy-looking man, of whom he asked. "What place is this?"

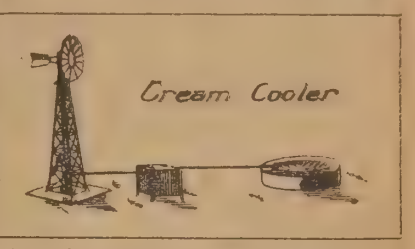
"Hell," was the unhesitating reply.

"But I thought hell was a dry, hot, parched place," said the Colorado man.

"So it was formerly," said the other, "but it has been converted into a great irrigation project by the United States reclamation service, and everything is changed."

Out His Soup.

"Sorry, old man, to hear that you spilled some soup on Miss Andrews' gown at the dinner last night."



"So was I dreadfully put out about it. You know it isn't polite to ask for soup twice."—Judge.

Inventions

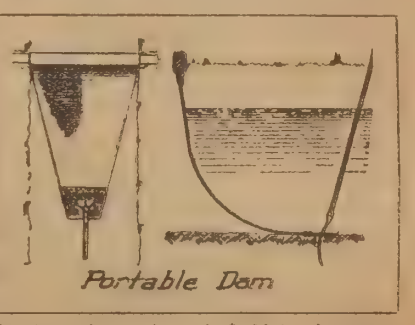
By C. J. LYNDE, Macdonald College, Quebec.

Cream Storing Cabinet.

This cabinet is a water-tight box which holds a small can for the new cream and a large can for the stored cream. It is placed on the pipe from a

windmill pump, or on the pipe from any other supply of cold running water.

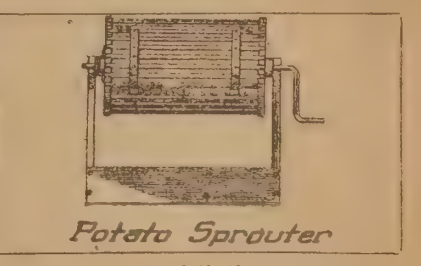
Hog Oiler.



This oiler has a canvas covered drum of sheet metal or wood, which

revolves on an axle and dips into oil in the tank beneath. The canvas carries the oil to the hog's back.

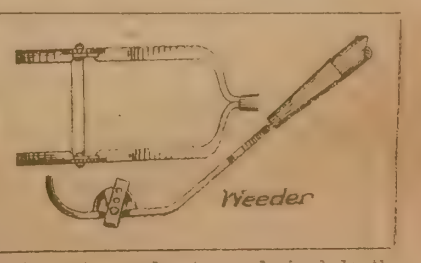
Portable Dam.



The ordinary canvas dam for irrigation ditches is held at the top by a cross-bar and at the bottom by shovelfuls of earth placed on the canvas;

the dam shown here is held in the same way at the top, but is held at the bottom by a pitchfork, or other pointed implement, struck through a burlap edge.

Potato Sprouter.



When sprouted potatoes are shoveled into this slatted drum and revolved the

separate sprouts fall through and the potatoes come out clean.

Weeder and Cultivator.

The double-edged blade of this weeder has a rocking motion which gives the cutting edges the proper angle in both the forward and back strokes. The

device cuts weeds at any desired depth below the surface and leaves a good dust mulch.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER II.

WE drove from the Walla Walla valley to the Grand coulee in the Big Bend country in about 10 days. We camped in the coulee, and father rode out over the surrounding hills looking for a suitable claim, which finally he found. He went to Waterville and filed; then returned, having learned that lumber to build a house could be obtained at Badger mountain, 60 miles away. Leaving mother and me camped in the wagon bed, which had been set on the ground, he made two trips to Badger mountain for lumber. John R. Lewis lived nearby, and there were several of the Lewis children, with whom I played. They spoke nothing but Welsh, yet we managed to play together somehow.

As I now look back I puzzle to know what mother and I lived on that summer while father was away on long trips. We had bought from Walla Walla valley a lot of dried prunes, dried peaches, bacon, flour, potatoes and other hardy provender, but it does not seem possible that the supply could have lasted all summer. I suppose Mrs. Lewis must have supplied us with milk and occasional garden truck. I remember that one or the other of the Lewis children were either eating or yelling for bread and milk most of the time. They called it something in Welsh which sounded like "bary clath."

There were many rattlesnakes, and for these I learned to watch! The slightest rustle in the grass, or the slightest rattle, had me instantly on the alert. An Indian squaw and her papoose, or baby, had been bitten a little while before we came to the coulee. Both died. It was unsafe to leave blankets on the ground, for at night when it was chilly the snakes would crawl under them. Dan Paul and Philip McIntee, stockmen, who lived near the Lewises, told many harrowing tales about finding "rattle bugs" in their beds when they awoke in the morning, and in other grewsome ways added to my discomfort. But there were no bees or thistles as there had been in the Walla Walla country, for which relief I was thankful.

That summer the surveyors were laying out the route of the Washington Central branch of the Northern Pacific, which now runs from Spokane to Coulee City. They were camped near the Lewis place and had a Chinese cook, for whom I took a great liking. He fed me so many cookies and doughnuts that my mother bade me stay away from his cook tent. Also he swore like a pirate. He had a sallow-faced, consumptive looking Chinaman to help him whom he cursed in a way that suggested brimstone and fire everlasting. He explained to me one day that his helper smoked opium and was no good. In spite of mothers' orders I managed to spend a good deal of time in John's cook tent, and he told me how bad it was to smoke opium and drink whisky. He must have been a pretty good Chinaman. One afternoon when it rained and the sun afterwards shone brightly there was a brilliant, arching rainbow. The sight of it seemed to make John homesick for China. He told me what the rainbows were like in China and said they were called "suva kahn," or something like that. He said he would never go back to China, though, and swore violently at somebody there who had served him a mean trick. I suppose, I liked him so well that when the surveyors left I cried.

He was not a Christian Chinaman, though, and the boys used to tease him about his religion—or lack of it. I remember one evening at the supper table one of the boys said:

"John, who makes your whiskers grow?"

It was supposed that John would have to say that Buddha or Shinto or Confucius or some other heathen god made them grow. John was not so easily trapped.

"Who makee you whiskees glow?" he countered.

"God makes mine grow," replied the surveyor, who was young and had a fuzzy mustache.

"Same man makee mine glow," barked John. The laugh was on the would-be joker.

In the Walla Walla country I had had occasional playmates, and we usually got to church or a public gathering once or twice a month. The summer we camped in the Grand coulee I had the Lewis children to play with—and John, the Chinaman. But when at last we moved out to our claim, five miles south of the present town of Hartline, playmates I had none. During the months and years that followed the great, burning hunger of my soul was for playmates.

There were great numbers of squirrels on the bunch grass prairie, and they used to play about our doorstep and under our small, wood-frame house. For hours at a time I have lain on the shady side of our house watching them play, not moving a muscle lest they should be frightened. There were many small lizards, horned toads we called them. I caught these and vainly tried to make pets of them. I captured various bugs and tried to tame them, but vainly. Wild sage hens frequently came into our dooryard, but they fled at the slightest motion. Coyotes barked and howled morning and evening, and I wanted to catch one and tame it for a pet. But it was a vain hope.

I wanted a pet of some kind very badly. All plans failed; and, finally, in desperation, I took a rope and stationed myself by the main traveled road, which ran a few hundred yards south of our house. Hour after hour, day after day, I stood there; and every time a team came along with a dog following I asked the man if I could have his dog.

I was refused a good many times, occasionally with rudeness. At last a man said I could have his dog—a wonderful, brown-eyed pup. He got out of the wagon, coaxed the pup to him, tied my rope around its neck, and said it was my dog. I was fairly paralyzed with joy, but believe I thanked the man for his dog. He and John the Chinaman to this day live in my memory as two great benefactors of my childhood.

We had a small wheat crop that year. The squirrels came to it in droves. My father fought them with poisoned wheat and slew them by hundreds. My great fear was that Rover, my pup, would get a poisoned squirrel. I kept him tied, but one day he chewed the rope in two. Terror stricken, I raced away to find him. I did—but too late. He had been out digging for live squirrels, and in so doing had found a lately poisoned one, which he ate.

I had seen scores of squirrels die of strychnine poisoning and knew the symptoms. The hair stands erect along the spine, and the eyes turn a peculiar, glassy green. There is stiffness in the hindlegs, which presently become paralyzed and are dragged. Then in a few moments the animal foams at the mouth and goes into convulsions and dies.

When I found Rover his hair was up and he was stiffening in the hind legs. His eyes turned on me with a vacant, greenish stare and he did not wag his tail when I spoke and petted him. I knew what should be done: Warm, melted lard should be poured down his throat. But we were far from the house. I screamed to mother, but she could not hear. I coaxed the stricken dog to follow me to the house, and he tried to do so, but he walked stiffly and finally refused to budge. I seized his collar and dragged him as far as I could. All the while his body was stiffening. At last, in desperation, I gathered him up bodily and tried to run. As I ran he went into convulsions, and in trying to hold him in my arms and make progress at the same time I fell down.

Even when the dog was in the last throes of strychnine poisoning I struggled on with him, partly carrying and partly dragging the dying dog. All the while I kept calling to mother to "melt some lard." Finally she heard the outcry and ran out of the house. The dog was dead when she reached us, and I was clinging to him and crying. I remember yet the terror that was in her face as she snatched me away from my poisoned pet. In the struggle foam from his mouth had gotten all over my clothes and hands. She fairly flew into the house with me and, before saying a word to assuage my grief, scoured over every inch of me with soap and water, and asked me time and again if any of the foam had gotten on my lips. I doubt if I should have been poisoned if it had, but mother was taking no chances.

I again took up my stand by the main road and asked passers-by for their dogs. But I had a run of bad luck. Some laughed at me. Some did not answer at all. Finally one man with an unpleasant face looked at me in disgust and said, "Not by a damn sight." That cured me of asking for dogs.

Father brought me a baby rabbit one day. He had caught it in the bunch grass. He helped me make a little house for it, and we experimented to determine what it wanted to eat. Young carriots plainly were preferred. I fairly covered the small thing with carrots in my desire to love it and make it happy. This civilized diet was too much for a bunch grass rabbit, I suppose; for presently it got dysentery, ceased to eat and became thin and weak. I wanted to sit up with it at night, but my folks made me go to bed.

One night I put it snugly to bed, calling it many endearing names and tryingg in a dozen ways to insure its comfort. In the morning it was there exactaly as I had left it, but dead and cold.

For a day I remained immured in grief, declining food, water, sleep or consolation. Then I made a small box, lined it with some scraps of red flannel, put in some bunch grass, and laid my dead rabbit to rest. I had been told that in burying their dead the Indians often set food on the grave, which was supposed to provision spirits on their way to the happy hunting ground. With this thought in mind I filled the small coffin as full of tender young carrots as the presence of the rabbit and the grass would permit, and buried it behind the house. At the head of the grave I erected a shingle on which was written in scarwling lead pencil:

QUIRRIE.
A Rabbit.

IN THE NEXT CHAPTER THE BUNCH GRASS BOY TELLS OF "ROWDY," THE FIRST REAL CAYUSE HE HAD, BOUGHT FROM A PIONEER STOCKMAN WHO HAD GOTTEN THE HORSE OUT OF CHIEF MOSES' BAND. "ROWDY WAS MY FIRST, AND GREATEST TEACHER, I THINK. HE TAUGHT ME COURAGE, PERSISTENCE, COOLNESS, QUICK THINKING AND ACTUAL CUNNING OF A KIND TO MATCH HIS. TIME AND AGAIN HE PITCHED ME OVER HIS HEAD, OR SLIPPED FROM UNDER ME."

Humor-ous.

"Now," said a teacher to her class in English, "can anyone give me a word ending in ous, meaning full of, as dangerous, full of danger; hazardous, full of hazard?"

There was silence for several minutes, then a small boy raised his hand.

"Well," encouraged the teacher, "what is your word?"

"Pious, full of pie," was the answer.

Figure Contest Nears End

Contestant Contributes a Swan Song

By the CONTEST EDITOR.

GOODBY, OLD PUZZLE, GOODBY.

(Familiar Tune.)

The man who made that puzzle chart,
(Goodby, old puzzle, goodby)
He must have been most awful smart!
(Goodby, old puzzle, goodby)
'Tis intricate, confusing quite
(Goodby, old puzzle, goodby)
He keeps me thinking noon and night
(Goodby, old puzzle, goodby)

Chorus—
It haunts when awake, O!
I wash, scrub or bake, O!
My dreams it doth choke, O!
Goodby, 'old puzzle, goodby.

So often I the figures trace,
(Goodby, old puzzle, goodby)
'Tis like a dear, familiar face.
(Goodby, old puzzle, goodby)
Eleven hundred—two to nine,
(Goodby, old puzzle, goodby)
If I succeed won't I feel fine?
(Goodby, old puzzle, goodby)

Corus—
It tires my eyes, O!
To add I despise, O!
But I'll get that prize, O!
(If I can.)
Goodby, old puzzle, goodby.

A CONTESTANT.

Forest Grove, Ore.

When this issue of the Farmer reaches its readers there will be small time left to get into the figure contest. Solutions to be entered in the contest must show by the postmark on the envelope that they were mailed not later than 12 o'clock next Saturday night. If you have not sent in your solution do not delay another day. Fire it in at once. There are 32 prizes to be awarded in this contest, the largest of which is $275.

Somebody wishes to know more about freak editions of the Bible, several of which were mentioned last week in dilating on the interest aroused by the question in our Farm Information contest: "In what year was the edition of the Bible known as the 'Vinegar Bible' published?"

There is but little more to tell. There were, however, a few other editions of the Bible which attracted attention in their day. Some of the most notable were:

"Discharge Bible" (1806), reading in First Timothy v. 21, "I discharge (charge) thee before God."

"Placemakers' Bible" (about 1562), reading in Matthew v. 9, "Blessed are the placemakers (peacemakers)."

"Standing Fishes Bible" (1806), reading in Ezekiel xlvii., "The Fishes (Fishers) shall stand upon it."

"How many upper front teeth has a cow?" So goes question No. 2 in the Farm Information contest, and someone writes that he can not tell the number, but that he thinks the cow has at least 16 teeth in its upper jaw. Our correspondent says it is so long since he lived on a farm that he has quite forgotten much he once knew about the dental construction of cows and pigs. Cows, however, he feels sure, are well equipped with teeth because he has heard many persons speak of "milk teeth."

"If you would ask me about dogs," he writes, "I could answer you much more intelligently. Just ask me how many teeth a dog has, and I'll refer you to a certain section on the posterior side of my thigh, at a point considerably more up than down, where there exists to this day an almost perfect cast of about as completely an equipped set of canine teeth as you could ever contemplate. Why, I could not only tell you how many teeth a dog has, but likewise the length of teeth carried by one particular dog that I have met."

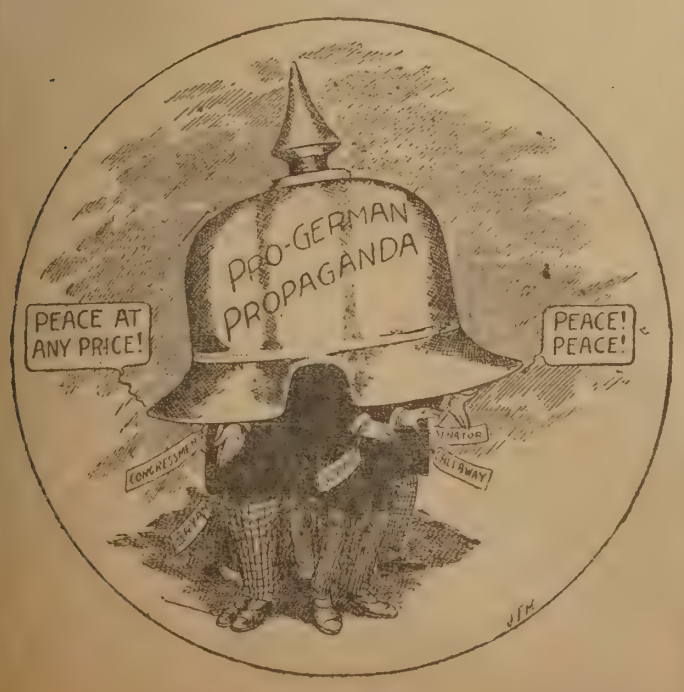
"I say 'met,' but that is not exactly the correct way to state it, you will understand by the location of the scars just mentioned. I say I 'met' him, but I didn't. I was going in the other direction."

"If you don't care to ask me, just ask my wife. She knows, because she does all the mending at our house."

Many persons who have signified their intention of entering the Farm Information contest seem to have overlooked the fact that as the weeks pass the amount of the prizes possible for those to win who use our Contestant's Helpful Outfit reduces gradually. There is much to be gained by getting into this contest early. Send in a new, renewal or extension subscription to the Farmer and secure this outfit in order that you may compete for first prize while the amount stands at $200. Only a few days and this prize drops to $175. See announcement on page 9.

All the World's a Stage, and All the Men and Women Merely Players

Ambassador Fletcher in Mexico



The above photograph shows United States Ambassador Fletcher upon his arrival at Nuevo Laredo, Mexico, conferring with the Mexican official sent to meet him. The tall officer who bears such a marked resemblance to the "first chief" is commander of the bodyguard furnished by General Carranza to escort the ambassador through the hostile country to the capital.

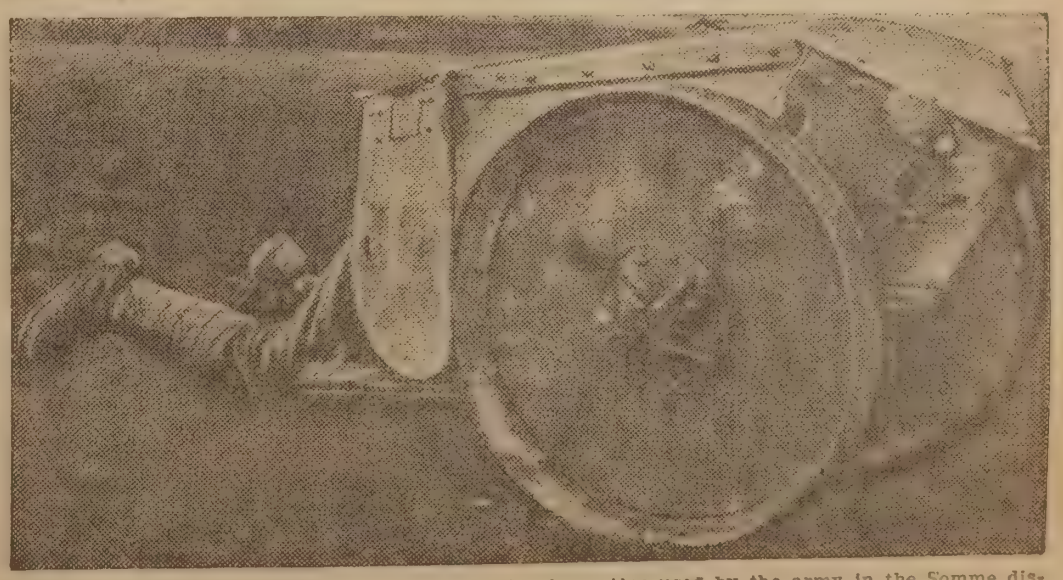
Women Accused of Conspiracy

Above are shown the two women who are charged with having conspired together with Alfred George Mason, shown in the insert, to take the life of David Lloyd George, premier of Great Britain, and Arthur Henderson, a member of the cabinet and the war council of the empire. On the right is the woman warden.

The Cap Fits

—Springfield Union.

Cavalry Drill by New York Women



One of the first organizations to prepare for action in the event of war with Germany is the women's military reserve, composed of 30 prominent society women of New York. Costumed in smart olive-drab riding clothes they hold cavalrm reatl ogot rBactionntiV, cmfwyp shrdlu h later go to the roof of a neighboring hotel for dismounted drill.

Picked Men Guard New York Streets

Ten machine guns have been received by the New York police department and 120 picked men, all of whom have had previous service in the army drill in the Central park riding academy and a part of the elaborate plan for preparedness in the event of war with Germany. The guns can be used against rioters or against an invading force with just as deadly results.

New Invention Bothers Teutons

The above photograph shows the new French wire cutter used by the army in the Somme district. The soldier enters the machine and pushes it ahead of him until he reaches the barbed wire entanglements. Inside the car are two huge clippers which can be seen at the front. These clippers cut through the wire and allow a passageway for the attacking French infantry to get through.

WHEN KNIGHTHOOD WAS IN FLOWER

or, the Love Story of Charles Brandon and Mary Tudor, the King's Sister, and Happening in the Reign of His August Majesty, King Henry the Eighth.

By EDWIN CASKODEN (Charles Major).

Copyright, 1898, The Bobbs-Merril Co.

CHAPTER XI.

As soon as I could leave Brandon, I had intended to go down to Windsor and give vent to my indignation toward the girls, but the more I thought about it the surer I felt there had, somehow, been a mistake. I could not bring myself to believe that Mary had deliberately permitted matters to go to such an extreme when it was in her power to prevent it. She might have neglected her duty for a day or two, but, sooner or later, her good impulses always came to her rescue, and, with Jane by her side to urge her on, I was almost sure she would have liberated Brandon long ago—barring a blunder of some sort.

So I did not go to Windsor until a week after Brandon's release, when the king asked me to go down with him, Wolsey and de Longueville, the French ambassador-special, for the purpose of officially offering to Mary the hand of Louis XII., and the honor of becoming queen of France.

The princess had known of the projected arrangement for many weeks, but had no thought of the present forward conditions of affairs or she would have brought her energies to bear upon Henry long before. She could not bring herself to believe that her brother would really force her into such wretchedness, and possibly he would never have done so, as much as he desired it from the standpoint of personal ambition, had it not been for the petty excuse of that fatal trip to Grouche's.

All the circumstances of the case were such as to make Mary's marriage a veritable virgin sacrifice. Louis was an old man, and an old Frenchman at that; full of French notions of mortality and immorality; and besides, there were objections that can not be written, but of which Henry and Mary had been fully informed. She might as well marry a leper. Do you wonder she was full of dread and fear, and resisted with the desperation of death?

So Mary, the person most interested, was about the last to learn that the treaty had been signed.

Windsor was nearly eight leagues from London, and at that time was occupied only by the girls and a few old ladies and servants, so that news did not travel fast in that direction from the city. It is also probable that, even if report of the treaty and Brandon's release had reached Windsor, the persons hearing it would have hesitated to repeat it to Mary. However that may be, she had no knowledge of either until she was informed of the fact that the king and the French ambassador would be at Windsor on a certain day to make the formal request for her hand and offer the gifts of King Louis.

I had no doubt Mary was in trouble, and felt sure she had been making affairs lively about her. I knew her suffering was keen, but was glad of it in view of her treatment of Brandon.

A day of two after Brandon's liberation I had begun to speak to him of the girls, but he interrupted me with a frightful oath: "Caskoden, you are my friend, but if you ever mention their names again in my hearing you are my friend no longer. I will curse you."

I was frightened, so much stronger did his nature show than mine, and took good care to remain silent on that subject until—but I am going too fast again; I will tell you of that hereafter.

Upon the morning appointed, the king, Wolsey, de Longueville and myself, with a small retinue, rode over to Windsor, where we found that Mary, anticipating us, had barricaded herself in her bedroom and refused to receive the announcement. The king went upstairs to coax at the fair young besieged through two inches of oak door, and to induce her, if possible, to come down. We below could plainly hear the king pleading in the voice of a bashful bull, and it afforded us some amusement behind our hands. Then his majesty grew angry and threatened to break down the door, but the fair besieged maintained a most persistent and provoking silence throughout it all, and allowed him to carry out his threat without so much as a whimper. He was thoroughly angry, and called to us to come up to see him "compel obedience from the self-willed hussy,"—a task the magnitude of which he underrated.

The door was soon broken down, and the king walked in first, with de Longueville and Wolsey next, and the rest of us following in close procession. But we marched over broken walls to the most laughable defeat ever suffered by besieging army. Our foe, though small, was altogether too fertile in expedients for us. There seemed no way to conquer this girl; her resources were so inexhaustible that in the moment of you expected victory success was turned into defeat; nay, more, ridiculous disaster.

We found Jane crouching on the floor in a corner half dead with fright from the noise and tumult—and where do you think we found her mistress? Frightened? Not at all; she was lying in bed with her face to the wall as cool as a January morning; her clothing in a little heap in the middle of the room.

Without turning her head, she exclaimed: "Come in, brother; you are quite welcome. Bring in your friends; I am ready to receive them, though not in court attire, as you see." And she thrust her bare arm straight up from the bed to prove her words. You should have seen the Frenchman's little black eyes gloat on its beauty.

Mary went on, still looking toward the wall: "I will arise and receive you all informally, if you will but wait."

And she thrust her bare arm straight up from the bed to prove her words.

This disconcerted the imperturbable Henry, who was about at his wit's end.

"Cover that arm, you hussy," he cried in a flaming rage.

"Be not impatient, brother mine! I will jump out in just a moment."

A little scream from Jane startled everybody, and she quickly ran up to the king, saying: "I beg your majesty to go. She will do as she says so sure as you remain; you don't know her; she is very angry. Please go; I will bring her rown stairs somehow."

"Ah, indeed! Jane Bonigbroke," came from the bed. "I will receive my guests myself when they are kind enough to come to my room." The coverlid began to move, and, whether or not she was really going to carry out her threat, I can not say, but Henry, knowing her too well to risk it, hurried us all out of the room and marched downstairs at the head of his defeated cohorts. He was swearing in a way to make a priest's flesh creep, and protesting by everything holy that Mary should be the wife of Louis or die. He went back to Mary's room at intervals, but there was enough persistence in that one girl to stop the wheels of time, if she but set herself to do it, and the king came away from each visit the victim of another rout.

Finally his anger cooled and he became amused. From the last visit he came down laughing:

"I shall give up the fight or else put my armor on with visor down," said he; "it is not safe to go near her without it; she is a very vixen, and but now tried to scratch my eyes out."

Wolsey, who had a wonderful knack for finding the easiest means to a difficult end, took Henry off to a window where they held a whispered conversation.

It was pathetic to see a mighty king and his great minister of state consulting and planning against one poor girl; and, as angry as I felt toward Mary, I could not help pitying her, and admired, beyond the power of pen to write, the valiant and so far impregnable defense she had put up against an array of strength that would have made a king tremble on his throne.

Presently Henry gave one of his loud laughs, and slapped his thigh as if highly satisfied with some proposition of Wolsey's.

"Make ready at once," he said. "We will go back to London."

In a short time we were all at the main stairway ready to mount for the return trip.

The Lady Mary's window was just above, and I saw Jane watching us as we rode away.

After we were well out of Mary's sight the king called me to him, and he, together with de Longueville, Wolsey and myself, turned our horses' heads, rode rapidly by a circuitous path back to another door of the castle and reentered without the knowledge of any of the inmates.

We four remained in silence, enjoined by the king, and in the course of an hour, the princess, supposing every one had gone, came downstairs and walked into the room where we were waiting.

It was a scurvy trick, and I felt a contempt for the men who had planned it. I could see that Mary's first impulse was to beat a hasty retreat back into her citadel, the bed, but in truth she had in her makeup very little disposition to retreat. She was clear grit. What a man she would have made! But what a crime it would have been in nature to have spoiled so perfect a woman. How beautiful she was! She threw one quick, surprised glance at her brother and his companions, and lifting up her exquisite head carelessly hummed a little tune under her breath as she marched to the other end of the room with a gait that Juno herself could not have improved upon.

Henry and the ambassador spoke a word in whispers, when the latter took a box from a huge side pocket and started across the room toward Mary with the king at his heels.

Her side was toward them when they came up, but she kept her attiture as if she had been of bronze. She had taken up a book that was lying on the table and was examining it as they approached.

De Longueville held the box in his hand, and bowing and scraping said in broken English: "Per mit to me, most gracious princess, that I may have the honor to offer on behalf of my august master, this little testament of his high admiration and love." With this he bowed again, smiled like a crack in a piece of old parchment, and held his box toward Mary. It was open, probably in the hope of enticing her with the sight of its contents—a beautiful diamond necklace.

She turned her face ever so little and took it all in with one contemptuous, sneering glance out of the corners of her eyes. Then quickly reaching out her hand she grasped the necklace and deliberately dashed it in poor old de Longueville's face.

"There is my answer, sir! Go home and tell your imbecile old master I scorn his suit and hate him—hate him—hate him!" Then with the tears falling unheeded down her cheeks, "Master Wolsey, thou butcher's cur! This trick was of your conception; the others had not brains enough to think of it. Are you not proud to have outwitted one poor heart-broken girl? But beware, sir; I tell you now I will be quits with you yet, or my name is not Mary."

There is a limit to the best of feminine nerve, and at that limit should always be found a flood of healthful tears. Mary had reached it when she threw the necklace and shot her bolt at Wolsey, so she broke down and hastily left the room.

The king, of course, was beside himself with rage.

"By God's soul," he swore, "she shall mary Louis of France, or I will have her whipped to death on the Smithfield pillory." And in his wicked heart—so impervious to a single lasting good impulse—he really meant it.

Immediately after this, the king, de Longueville and Wolsey set out for London.

I remained behind hoping to see the girls, and after a short time a page plucked me by the sleeve, saying the princess wished to see me.

The page conducted me to the same room in which had been fought the battle with Mary in bed. The door had been placed on its hinges again, but the bed was tumbled as Mary had left it, an dthe room was in great disorder.

"Oh, Sir Edwin," began Mary, who was weeping, "was ever woman in such frightful trouble? My brother is killing me. Can he not see that I could not live through a week of this marriage? And I have been deserted by all my friends, too, excepting Jane. She, poor thing, can not leave."

"You know I would not go," said Jane, parenthetically. Mary continued: "You, too, have been home an entire week and have not been near me."

I began to soften at the sight of her grief, and concluded, with Brandon, that, after all, her beauty could well cover a multitude of sins; perhaps even this, her great transgression against him.

The princess was trying to check her weeping, and in a moment took up the thread of her unfinished sentence: "And Master Brandon, too, left without so much as sending me one little word—not a line nor syllable. He did not come near me, but went off as if I did not care—or he did not. Of course he did not care, or he would not have behaved so, knowing I was in so much trouble. I did not see him at all after—one afternoon in the king's—about a week before that awful night in London, except that night, when I was so frightened I could not speak one word of all the things I wished to say."

This sounded strange enough, and I began more than ever to suspect something wrong. I, however, kept as firm a grasp as possible upon the stock of indignation I had brought with me.

"How did you expect to see or hear from him," asked I, "when he was lying in a lothsome dungeon without one ray of light, condemned to be hanged, drawn and quartered, because of your selfish neglect to save him who, at the cost of half his blood, and almost his life, had saved so much for you?"

Her eyes grew big, and the tears were checked by genuine surprise.

I continued: "Lady Mary, no one could have made me believe that you would stand back and let the man, to whom you owed so great a debt, lie so long in such misery, and be condemned to such a death for the act that saved you. I could never have believed it!"

"Imp of hell!" screamed Mary; "what tale is this you bring to torture me? Have I not enough already? Tell me it is a lie, or I will have your miserable little tongue torn out by the roots."

"It is no lie, princess, but an awful truth, and a frightful shame to you."

I was determined to tell her all and let her see herself as she was.

She gave a hysterical laugh, and, throwing up her hands, with her accustomed little gesture, fell upon the bed in utter abandonment, shaking as with a spasm. She did not weep; she could not; she was past that now. Jane went over to the bed and tried to soothe her.

In a moment Mary sprang to her feet, exclaiming: "Master Brandon condemned to death and you and I here talking and moaning and weeping? Come, come, we will go to the king at once. We will start to walk, Edwin—I must be doing something—and Jane can follow with the horses and overtake us. No; I will not dress; just as I am; this will do. Bring me a hat, Jane; any one, any one." While putting on hat and gloves she continued: "I will see the

When Knighthood Was in Flower

BY EDWIN CASKODEN

king at once and tell him all! all! I will do anything; I will marry that old king of France, or forty kings, or forty devil's; it's all one to me; anything! anything! to save him. Oh! to think that he has been in that dungeon all this time." And the tears came unheeded in a deluge.

She was under such headway, and spoke and moved so rapidly, that I could not stop her until she was nearly ready to go. Then I held her by the arm while I said:

"It is not necessary now; you are too late."

A look of horror came into her face, and I continued slowly: "I procured Brandon's release nearly a week ago; I did what you should have done, and he is now at our rooms in Greenwich."

Mary looked at me a moment, and, turning pale, pressed her hands to her heart and leaned against the door frame.

After a short silence she said: "Edwin Caskoden—fool! Why could you not have told me that at first? I thought my brain would burn and my heart burst."

"I should have told you had you given me time. As to the pain it gave you—" this was the last charge of my large magazine of indignation—"I care very little about that. You deserve it. I do not know what explanation you have to offer, but nothing can excuse you. An explanation, however good, would have been little comfort to you had Brandon failed you in Billingsgate that night."

She had fallen into a chair by this time, and sat in reverie, staring at nothing. Then the tears came again, but more softly.

"You are right; nothing can excuse me. I am the most selfish, ungrateful, guilty creature ever born. A whole month in that dungeon!" And she covered her drooping face with her hands.

"Go away for a while Edwin, and then return; we shall want to see you again," said Jane.

Upon my return Mary was more composed. Jane had dressed her hair, and she was sitting on the bed in her riding habit, hat in hand. Her fingers were nervously toying at the ribbons and her eyes cast down.

"You are surely right, Sir Edwin. I have no excuse. I can have none; but I will tell you how it was. You remember the day you left me in the waiting-room of the king's council?—when they were discussing my marriage without one thought of me, as if I were but a slave or a dumb brute that could not feel." She began to weep a little, but soon recovered herself. "While waiting for you to return, the Duke of Buckingham came in. I knew Henry was trying to sell me to the French king, and my heart was full of trouble—from more causes than you can know. All the council, especially that butcher's son, were urging him on, and Henry himself was anxious that the marriage should be brought about. He thought it would strengthen him for the imperial crown. He wants everything, and is ambitious to be emperor. Emperor! He would cut a pretty figure! I hoped, though, I should be able to induce him not to sacrifice me to his selfish interests, as I have done before, but I knew only too well it would tax my powers to the utmost this time. I knew that if I did anything to anger or antagonize him, it would be all at an end wtih me. You know he is so exacting with other people's conduct, for one who is so careless of his own—so virtuous by proxy. You remember how cruelly he disgraced and crushed poor Lady Chesterfield, who was in such trouble about her husband, and who went to Grouche's only to learn if he were true to her. Henry seems to be particularly sensitive in that direction. One would think it was in the commondments: Thou shalt not go to Grouche's. It may be that some have gone there for other purposes than to have their fortunes told—to meet, to—but I need not say that I—" and she stopped short, blushing to her hair.

"Well, I knew I could do nothing with Henry if he once learned of that visit, especially as it resulted so fatally. Oh! why did I go? Why did I go? That was why I hesitated to tell Henry at once. I was hoping some other way would open whereby I might save Charles—Master Brandon. While I was waiting, along came the duke of Buckingham, and as I knew he was popular in London, and had almost as much influence there as the king, a thought came to me that he might help us.

"I knew that he and Master Brandon had passed a few angry words at one time in my ballroom—you remember—but I also knew that the duke was in—in love with me, you know, or pretended to be—he always said he was—and I felt sure I could, by a little flattery, induce him to do anything. He was always protesting that he would give half his blood to serve me. As if anybody wanted a drop of his wretched blood. Poor Master Brandon! his blood * * * " and the tears came, choking her words for the moment. "So I told the duke I had promised you and Jane to procure Master Brandon's liberty, and asked him to do it for me. He gladly consented, and gave me his knightly word that it should be attended to without an hour's delay. He said it might have to be done secretly in the way of an escape—not officially—as the Londoners were very jealous of their rights and much aroused on account of the killing. Especially, he said that at that time great caution must be used, as the king was anxious to conciliate the city in order to procure a loan for some purpose—my dower, I suppose.

"The duke said it should be as I wished; that Master Brandon should escape, and remain away from London for a few weeks until the king procured his loan, and then be freed by royal proclamation.

"I saw Buckingham the next day, for I was very anxious, you may be sure, and he said the keeper of Newgate had told him it had been arranged the night before as desired. I had come to Windsor because it was more quiet, and my heart was full. It was quite a distance from London, and I thought it might afford a better opportunity to—to see—I thought, perhaps, Master Brandon might come—might want to—to--see Jane and me; in fact I wrote him before I left Greenwich that I would be here. Then I heard he had gone to New Spain. Now you see how all my troubles have come upon me at once; and this the greatest of them, because it is my fault. I can ask no forgiveness from any one, for I can not forgive myself."

She then inquired about Brandon's health and spirit, and I left out no distressing detail, you may be sure.

During my recital she sat with downcast eyes and tear-stained face, playing with the ribbons of her hat.

When I was ready to go she said: "Please say to Master Brandon I should like to—tosee—him, if he cares to come, if only that I may tell him how it happened."

"I greatly fear, in fact, I know he will not come," said I. "The crulest blow of all, worse even than the dungeon, or the sentence of death, was your failure to save him. He trusted you so implicitly. At the time of his arrest he refused to allow me to tell the king, saying he knew you would see to it—that you were pure gold."

"Ah, did he say that?" she asked, as a sad little smile lighted her face.

"His faith was so entirely without doubt, that his recoil from you is correspondingly great. He goes to New Spain as soon as his health is recovered sufficiently for him to travel."

This sent the last fleck of color from her face, and with the words almost choking her throat: "Then tell him what I have said to you and perhaps he will not feel so——"

"I can not do that, either, Lady Mary. When I mentioned your name the other day he said he would curse me if I ever spoke it again in his hearing."

"Is it so bad as that?" Then, meditatively: "And at his trial he did not tell the reason for the killing? Would not compromise me, who had served him so ill, even to save his own life? Noble, noble!" And her lips went together as she rose to her feet. No tears now; nothing but glowing, determined womanhood.

"Then I will go to him wherever he may be. He shall forgive me, no matter what my fault."

Soon after this we were on our way to London at a brisk gallop.

We were all very silent, but at one time Mary spoke up from the midst of a reverie: "During the moment when I thought Master Brandon had been executed—when you said it was too late—it seemed that I was born again and all made over; that I was changed in the very texture of my nature by the shock, as they say the grain of the iron cannon is sometimes changed by too violent an explosion." And this proved to be true in some respects.

We rode on rapidly and did not stop in London except to give the horses drink.

After crossing the bridge, Mary said, half to Jane and half to herself: "I will never marry the French king—never." Mary was but a girl pitted against a body of brutal men, two of them rulers of the two greatest nations on earth—rather heavy odds, for one woman.

The king and queen and most of the courtiers were in London—at Bridewell and Baynard castle—where Henry was vigorously pushing the loan of 500,000 crowns for Mary's dower, the only business of state in which, at that time, he took any active interest. Subsequently, as you know, he became interested in the divorce laws, and the various methods whereby a man, especially a king, might rid himself of a distasteful wife; and after he saw the truth in Anne Boleyn's eyes, he adopted a combined policy of church and state craft that has brought us a deal of senseless trouble ever since—and is likely to keep it up.

As to Mary's dower, Henry was to pay Louis only 400,000 crowns, but he made the marriage an excuse for an extra 100,000, to be devoted to his own private use.

When we arrived at the palace, the girls went to their apartments and I to mine, where I found Brandon reading. There was only one window to our common room—a dormer window, set into the roof, and reached by a little passage as broad as the window itself, and perhaps a yard and a half long. In the alcove thus formed was a bench along the wall, cushioned by Brandon's great campaign cloak. In this window we often sat and read, and here was Brandon with his book. I had intended to tell him the girls were coming, for when Mary asked me if I thought he would come to her at the palace, and when I had again said no, she reiterated her intention of going to him at once; but my courage failed me and I did not speak of it.

I knew that Mary ought not to come to our room, and that if news of it should reach the king's ears there would be more and worse trouble than ever, and, as usual, Brandon would pay the penalty for all. Then again, if it were discovered it might seriously compromise both Mary and Jane, as the world is full of people who would rather say and believe an evil thing of another man than to say their prayers or believe the holy creed.

I had said as much to the Lady Mary when she expressed her determination to go to Brandon. She had been in the wrong so much of late that she was humbled, and I was brave enough to say whatever I felt; but she said she had thought it all over, and as every one was away from Greenwich it would not be found out if done secretly.

She told Jane she need not go; that she, Mary, did not want to take any risk of compromising her.

You see, trouble was doing a good work in the princess, and had made it possible for a generous thought for another to find spontaneous lodgment in her heart. What a great thing it is, this human suffering, which so sensitizes our sympathy, and makes us tender to another's pain. Nothing else so fits us for earth or prepares us for heaven.

Jane would have gone, though, had she known that all her fair name would go with her. She was right, you see, when she told me, while riding over to the Windsor, that should Mary's love blossom into a full-blown passion she could wreck everything and everybody, including herself perhaps, to attain the object of so great a desire.

It looked now as if she were on the high road to that end. Nothing short of chains and fetters could have kept her from going to Brandon that evening. There was an inherent force about her that was irresistible and swept everything before it.

In our garret she was to meet another will, stronger and infinitely better controlled than her own, and I did not know how it would all turn out.

(To Be Continued in Next Issue.)

Satisfactory to Her.

Pa—I greatly disapprove of that young Smithson and one particular reason is his lack of industry in his calling.

Daughter—His calling? Why, papa, he calls seven evenings in the week!—Tit-Bits.

In Your Shoes All Day

Tramping out in the open from morning to night—that's the kind of wear that makes most socks you buy go to pieces quickly. Wear

Durable DURHAM Hosiery

FOR MEN, WOMEN AND CHILDREN

Made Strongest Where the Wear is Hardest

and at night you'll find your socks holeless. Durable-DURHAM Hosiery sells for 15, 19, 25 and 35 cents. Heels, soles and toes are heavily reinforced. The deep, stretchy, garter-pull-proof tops with the anti-run stitch are knit on *to stay*. The quality is uniform throughout, the sizes are correctly marked. Toes are smooth and even. Famous Durham dyes insure fast colors. You can't buy better hosiery at any price. Made by the largest hosiery mills in the world. Fastened to every pair is our unlimited guarantee ticket that insures absolute satisfaction. Sold everywhere.

Ask your dealer to show you our 35-cent Silk-Mercerized Hosiery with the patented anti-run stitch.

Live in Deeds

What Quotation Has Helped You?

What is the quotation or what are the words which have helped you in the journey of life?

Is it a phrase from some famous author, or was it the words from some neighborly soul who helped you over a hard place and left you the invaluable legacy of a life motto?

What are your favorite motto, your favorite quotation, your favorite words?

Send them to the editor of The Farmer and let those words help another which have helped you.

To the Editor: I am sending you a quotation which may help some one:

"We live in deeds, not years; in thoughts, not breaths;
In feelings, not in figures on a dial.
We should count time by heart throbs.
He most lives who thinks most, feels the noblest, acts the best."
—Bailey.

MISS WILLIE BELL DYSART.

St. Patrick's Day

Instructive Fun for March 17

By LOUISE VAN AUKEN.

The 17th of March is a time when all of us think of Ireland and St. Patrick, and reptiles, and shamrocks, and shillelahs. It's a sportive date, and we all wear the green. This color everywhere is the most dominant of the entire spectrum.

Either at a party or at home around the library table a lot of innocent fun and instructive entertainment can be created by the asking of queries centering on the names of "green." Here are a few that may be put:

A synonym for always plus green? Evergreen.

Green and a part of the human anatomy? Greenback.

Green and the opposite of ocean? Greenland.

Green and a building? Greenhouse.

A city of France plus green? Paris green.

Green and a musical instrument? Greenhorn.

Green stone and water-surrounded by land? Emerald isle.

Questions to which the answers are Irish places may be asked. A map will show many more possible towns than these:

A winter garment? Ulster.

To be cunning and to depart? Sligo.

A popular girl and to be rapid? Belfast.

A stopper? Cork.

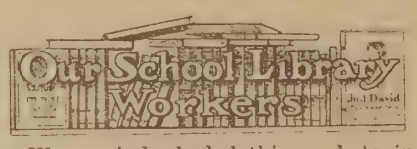
A path for a tall person? Giant's causeway.

To slay and to challenge? Kildare.

A sovereign plus a city? Queenstown.

Recipes

Some That May Be New to You



To make oatmeal soup slice an onion and parboil it in a little water till rather soft; add a bit of bayleaf, celery salt, three-fourths cup of cooked oatmeal, two cupfuls water and let simmer for nearly an hour. Add two cupfuls milk, salt and pepper to taste and a tablespoonful butter. Strain and serve with small squares of toasted bread.

Cinnamon Rolls.

These are made with baking powder and may take the place of a desert at a simple family dinner. Sift a pint of flour with one and a half teaspoonfuls baking powder, and half a teaspoonful salt; rub in two tablespoonfuls shortening and make into a soft dough with sweet milk. Roll out thin, sprinkle with a cupful of light brown sugar well mixed with a teaspoonful ground cinnamon. Roll up tightly like a jelly roll, cut across in slices an inch thick, lay in a greased pan and bake quickly.

Sausage Turnover.

Roll out thin, rich pie dough and cut into four or five-inch squares. Place in the center of each a little heap of cooked sausage meat. Fold each square into turnover shape, brush with milk and bake in a quick oven till crisp and golden in color. Many use raw sausage, but it insures wholesomeness to have it partially cooked before it is baked.

We are indeed glad this week to introduce Miss Dorothy Rauch, now leader and champion over all School Library workers in the Pacific northwest. Miss Dorothy is, to our way of thinking, one of the brightest and winsomest lassies in Washington. And, besides having that rare charm of personality which her portrait plainly indicates, Miss Dorothy has a winning firmness of purpose that insures success in whatever she undertakes. She has a greater number of subscriptions to her credit than any other worker, and she is pushing steadily ahead day by day. Will Dorothy be the winner of that $5 in gold, May 1? Well, we can't safely make any predictions now, but the chances in Dorothy's favor are very, very good. And she is hard at work making them better right along.

Individual Standing This Week.

Dorothy Rauch, Chewelah, Wash., 14 subscriptions.

Loyal C. R. Snyder, White Swan, Wash., 12 subscriptions.

Bessie Webb, Ford, Wash., 10 subscriptions.

Mildred Glasgow, Bossburg, Wash., nine subscriptions.

Dorothy Larue, Mayview, Wash., six subscriptions.

Lester Ruark, Mayview, Wash., six subscriptions.

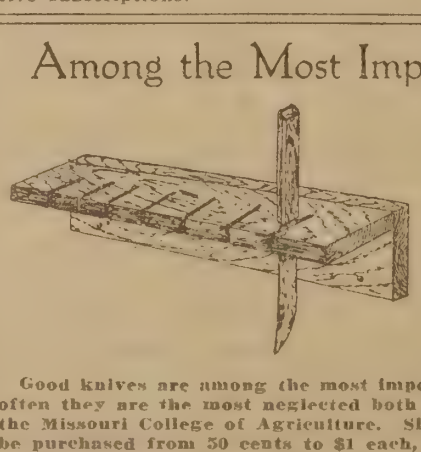
Violet Leachman, Mayview, Wash., five subscriptions.

Eva Bond, Valley, Wash., three subscriptions.

Here is a most inspiring record of achievement by a little school. On February 1 the New Century school at Mayview, Wash., started work for a school library. There were 13 pupils and their teacher, Miss Lillian Brown, and after a little conference the campaign for subscriptions was begun. The weather wasn't favorable—roads were bad—traveling mighty difficult, and certainly not pleasant. But Miss Brown and each of those 13 boys and girls had a vision of more good books in their school, and they one and all had the kind of faith in themselves that always brings success. They kept steadily at work on Saturdays and after school hours, and on March 1 New Century school had earned a library of 30 fine books. "The girls and boys were much enthused over the contest," Miss Brown tells us—and we are glad to set down here the admiration we feel for the purposeful way this enthusiasm was directed toward acquiring the good books these young folks wanted to place in their school.

Miss Alta Cooney, to whose school we sent a nice lot of books last week, writes us a dandy good little letter, as follows: "I received your splendid books, and am pleased to find them such excellent copies. We shall do our best to obtain more of them in the near future." We infer from the last sentence in Miss Cooney's letter that her boys and girls are still busily at work for additional books.

Honor Roll.



CHEWELAH SCHOOL, Chewelah, Wash., Dorothy Rauch; WHITE SWAN SCHOOL, White Swan, Wash., Loyal C. R. Snyder; DEER CREEK SCHOOL, Valley, Wash., Esther Eastman, Eva Bond, Ellen Olson; PARKER BOTTOM SCHOOL, Wapato, Wash., Lucinda Pigott; NEW CENTURY SCHOOL, Mayview, Wash., Lester Ruark, Violet Leachman, Dorothy Larue, Myrtle Anderson, Merle Schneckloth, Kenneth Fitzsimmons, Grace Smellar, Sylvan Ruark; SUNSET SCHOOL, Sunset, Wash., Harry Cota, Lula Henning, Hattie Miller, Charlotte Pickett, Harold Herron, Victor Hubbard, Joe Mills, La Valda Morgan, Ross Pickett; SOUTH BASIN SCHOOL, Orin, Wash., Annie Noah, Sammie Reitz, Clara Reitz; WAITS SCHOOL, Valley, Wash., Bennie Sundvik, E. Boucher, H. Woodbury; BAY VIEW SCHOOL, Bay View, Wash., Estner Crumrine, Mary Nelles; THORNTON SCHOOL, Thornton, Wash., Thelma Kerns, Dwight Barton, Marvin Ward.

"We have received the books you sent us, for which please accept our thanks. We are well satisfied with them and have found them everything you said they were." This is quoted from a letter from C. B. Merritt, teacher of Prairie school, at Sumas, Wash.

New Schools Starting Campaigns.

WHITE SALMON SCHOOL, Klickitat county, O. F. Glass, superintendent; STEVENSON GRADE SCHOOL, Skamania county, Miss Lucy Lindsay, teacher; BICKLETON SCHOOL, Klickitat county, J. E. Johnson, principal; NAPOLEON SCHOOL, Stevens county, Miss Edith Dornty, teacher; LYLE SCHOOL, Klickitat county, Philip Pere, principal.

Among the Most Important of Kitchen Tools

Good knives are among the most important tools in the kitchen workshop, yet often they are the most neglected both as to selection and care, says a bulletin of the Missouri College of Agriculture. Sharp knives of excellent quality steel may be purchased from 50 cents to $1 each, depending upon the size. The broad, flat spatula, useful for many kinds of work as scraping and mixing can be bought for from 15 to 40 cents. Knives should not be jumbled into drawers with forks, spoons and can openers so that their edges are dulled. A wire coil similar to a pen rack can be placed where convenient and into this the knife handles can be slipped. Or the blades can be inserted into grooves cut into pieces of soft pine wood.

From off the starry mountain-peak of song,
Thy spirit shows me, in the coming time,
An earth unwithered by the foot of wrong,
A race revering its own soul sublime.—Lowell.

Home Canning

Home-Cooked Canned Dinner

C. R. Campbell and Mrs. Campbell of Bellevue, Wash., recently served a "canned dinner" as an illustration of the possibilities of home canning in not only decreasing living costs, but in adding to the variety and palatability of the bill of fare.

Among the dishes served at this canned dinner were tomato soup, peas, beans, corn, squash, chicken, seedless blackberries and fruit cake made from canned fruit. Corn was served both on the ear and in the usual way.

Mr. Campbell is a great believer in government bulletins.

"People ask me how we do our canning," he comments, "and I tell them it's the easiest thing in the world to learn—all you've got to do is to use the information the government puts freely at your disposal. Write to the United States department of agriculture, division of publications, Washington, D. C., and ask for bulletins on home canning. You will receive a bunch of literature which will teach you more than years of experiment, and all you've got to do is to carry out the directions implicitly. That's the way we can our fruit."

Referring to the popular theory that peas, beans and corn are particularly prone to ferment, Mr. Campbell negatives the whole thing.

"They don't spoil if you can them right," he says. "Again, I will have to refer you to the government bulletins—you can learn there exactly how to do it, and if you follow directions you can't fail.

"We didn't stop with canning fruits and vegetables last fall," Mr. Campbell continued. "A time came when chicken feed went so high and egg production fell so low that we decided there was no profit in keeping our hens through the winter. We could have sold them, of course, but so many other people were doing the same thing that the price had fallen to just about nothing. So, instead of selling, we canned the whole bunch. Did they keep? Why, of course they kept! We followed government directions. And now, if some one comes in unexpectedly to dinner, we're ready for him. If two, or six, or a dozen should come just as unexpectedly, it wouldn't make any difference. We've got the finest kind of chicken, with fruit and vegetables, ready at a moment's notice. Not a can of chicken spoiled, and if you can tell by the flavor that you are eating canned chicken, you're the first one who has ever been able to do so."

In regard to the cost of living when home canning is utilized, Mr. Campbell points out that a great big dinner for 18 people can be served for $3.74, which allows the home canner the top-notch market price for his garden produce at the time of canning and 25 cents an hour for labor required to can them.

"There's just one final point," the canning enthusiast concludes. "It is important to have the very best vegetables and fruit for canning."

Home and the Children.

Ordinarily children are much what their parents make them, says the New York Evening Sun. If home is bright, cheerful and full of glow, full of the spirit of mutual love and kindness, the children will grow up bolted and screwed to that fireside.

Kerosene

Keeps Starch From Being Sticky

What is the most helpful thing you have learned during the last year in your experience with housekeeping? Let us pass it along to other housekeepers.

To the Editor: A helpful hint for a busy day is to add one or more tablespoonfuls of kerosene to the starch in which clothes are starched and the irons will not stick.

One Egg Cake.

The following is my own recipe for a one-egg cake:

One and one-half cups of sugar, rubbed to a cream with one rounding tablespoonful of butter, or other shortening. Beat in one egg, add 1 1-4 cups of buttermilk or sour milk, into which a scant 1-2 teaspoonful of soda has been dissolved. And 1-4 teaspoonful of salt; any flavoring desired, and sift in three cupfuls of flour, to which has been added a heaping teaspoonful of baking powder. A trifle more or less flour may be used according to your own judment as to the consistency you like your cake batter. Bake in three layers, and use any filling desired.

Butterscotch Pie.

One large cup of brown sugar, 2 tablespoonfuls of flour, yokes of 2 eggs beaten light, 1 1-2 cups of cold water, pinch of salt, 3 tablespoons melted butter. Mix sugar and flour to a cream on top of stove, stirring constantly to keep from burning. Let cool slightly and pour into a baked pie crust. Beat the whites of the two eggs to a stiff froth, add 2 tablespoons sugar and vanilla to flavor. A teaspoon of vanilla should also go into the cream for filling the crust. After putting on the frosting set in the oven a minute.

Cabinet, Idaho.

New Spring Suit.

For the tailor-made girl there will be smart simple suits made on novel lines. This example is of blue gabardine and has a "weskit" of white satin. Black satin hat with a scarlet quill seems to go well with the suit.

Magnet Will Hunt Needles.

Much time is saved in hunting for lost needles if you keep a horseshoe magnet suspended from a string in your work basket, ready to drop to the floor and hunt your lost needles for you.

YOUNG MERCHANTS

Marketing Done by Boys and Girls.

In connection with the work of boys' and girls' canning and gardening clubs at Bellevue, Wash., during the coming season, something out of the usual line of such work is being planned. Canning and gardening work of this kind naturally results in the accumulation of a surplus of fresh and canned garden products. The marketing of these in a community where the average family has its own garden is not easy. For this reason, arrangements are being considered to put this season's product on the Seattle market, and at the same time to make the marketing a means of further practical education of the junior gardeners and canners.

It is proposed to rent or secure a stall at the public market, in which the fruits, vegetables and canned goods produced by the youngsters will be displayed for sale. In charge of the stall each day will be two of the young people themselves. In this way not only will the production end be taught, as at present, but that even more important element of salesmanship will be brought out. Possibly some sort of prize will be offered for the boy or girl averaging the highest sales.

Curried Chicken.

Carefully clean and joint one medium sized chicken. Cover with cold water, add a teaspoonful of salt and simmer until very tender. Have a large covered dish well heated, place the chicken in it and return to the saucepan containing the chicken stock to the stove after removing as much of the fat as possible. When the stock is nearly at the boiling point add to it two tablespoonfuls of finely chopped parsley, one teaspoonful of onion seasoning, a dash of pepper, and, last of all, a teaspoonful of curry powder well mixed with a little of the stock. Thicken the gravy with cornstarch, cook two minutes and pour while very hot over the chicken. Cover the dish at once and serve immediately with waffles, hot biscuits or steamed rice.

Buckwheat Cakes.

One cake of compressed yeast, 2 cups lukewarm water, 1 cup of milk scalded and cooled, 2 tablespoonfuls of light brown sugar, 2 cups of buckwheat flour, 1 cup sifted white flour, 1 1-2 teaspoonfuls of salt. Dissolve the yeast and sugar in lukewarm milk and water, gradually add the buckwheat, white flour and salt, which have been mixed. Beat until smooth. Cover and set aside in a warm place free from draft to rise for about an hour. When light stir well and bake on a hot greased, or aluminum griddle. If it is possible to let rise over night, one-quarter cake of yeast will suffice, but an extra half teaspoonful of salt must be added.

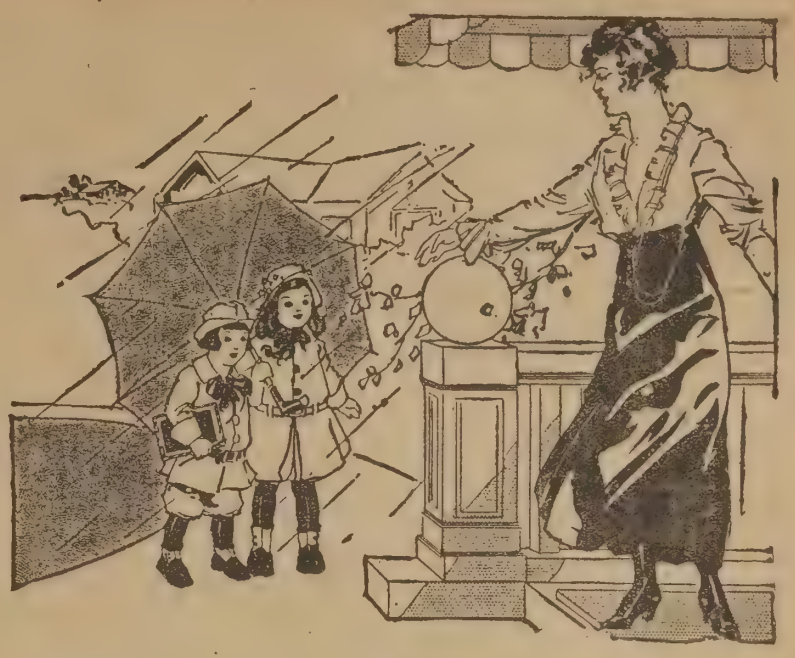
Peach Delight.

With such a satisfying dinner the dessert might well be omitted. But it is not expensive, if one happens to have the ingredients left from previous meals. Fill halves of canned peaches with slightly sweetened boiled rice, cold, of course. Add, if you have them, a few crumbs of stale macaroons and top with a tablespoonful of whipped cream.

To Remove the Mote.

When traveling one should always bear in mind that cinders are apt to find their way into the eyes. An eye cup, a lotion for bathing and a few flaxseed should be included in your package. A boric acid included in your be found soothing for eyes that are inflamed from dust, wind or foreign matter.

In Mending Gloves.



I have found that a marble is a good substitute for a glove darner when a small hole in a glove needs mending.

Girdles Still Hold.

Girdles of beads or of braid ending with huge upholstery tassels are an attractive addition to many one-piece frocks.

Just Drop the Cake Pan.

Before placing your cake in the oven, drop the pan once or twice to jar the large gas bubbles, thus producing finer grain in the baking.

"Hurry, children—I've got a real treat for you."

Ghirardelli's Ground Chocolate

is a fortifying food beverage for all—from childhood to old age.

It comes PROTECTED—as all chocolate should—in ½-lb., 1-lb., and 3-lb. hermetically sealed cans.

Since 1852 D. GHIRARDELLI CO. San Francisco

SWEET-PEAS

OUR 1917 SEED ANNUAL

contains many new varieties.

Early Morning Star, Early Melody, Early Spring Maid, Early Snow Flake.

They bloom in about 110 days from planting.

Perennials and Shrubs.

Phlox, Poenies, Roses, Iris. Full descriptions and prices.

Household Food Waste

More Vital Than Agricultural Shortcomings

In an informative and sensible statement relative to the food problem, Secretary of Agriculture Houston emphasizes a fact which the Farmer has frequently dwelt upon—that household wastefulness is more responsible than any shortcomings of agriculture.

"As a nation," says Secretary Houstop, "we seem to disdain economizing. The estimate of $700,000,000 waste in the country, as prepared by our experts, even if cut in half, would still leave an enormous waste."

If this estimate of $700,000,000 waste is substantially correct and there is no reason to doubt its accuracy, it would just about balance the total value of our wheat crop in normal times and with normal prices.

Secretary Houston directs attention to another fract frequently mentioned by the Farmer—that while the 1916 wheat crop of the United States was short, the 1915 yield was a record breaker, and the two crops together gave us more than an average production. In this connection the secretary says:

"It is evident that the public has failed to look at all the facts involved, especially in the case of wheat. The wheat crop for the current year was reported to be 640,000,000 bushels, against a five-year average of 728,000,000, and the record crop of 1915 of 1,026,000,000. Apparently the public has compared the crop of 1916 solely with the record crop of 1915 and failed to take into account the unusually large carryover from that year into the present year of 164,000,000 bushels or more."

Taking the two years of 1915-16 we had a combined wheat yield of 1,666,000,000 bushels, an average for the two years of 833,000,000 bushels, or more than 100,000,000 bushels greater than the five-year average.

The Farmer is glad to quote the sensible conclusions of the secretary of Agriculture, for they confirm the soundness of the position it took early against the embargo folly, which for a while seemed likely to sweep congress into grave blunders.

Profits

From Poultry When Feed Is High

By MARIELLA LADD.

Two years ago, when chicken wheat cost 1 1-2 cents a pound and corn a little more, I calculated that we fed to each of our hens during a week in winter 3 cents' worth of grain besides the ueual trimmings. This year, if we had relied wholly on wheat and corn for proteid and carbohydrates and fats, each hen would have cost us 6 cents per week for grain alone, and, as eggs have not doubled in price and hens have not learned how to double their yield to order, profits would have shrunk to a very small margin indeed. As a matter of fact, by substitution and extra care, we have maintained profits to a fair level.

The Canadian field pea has been an excellent substitute for wheat. It has a proteid value of 21 per cent to wheat's 11 per cent. Less of it, therefore, is required to maintain the proteid contents of a ration. Its mineral content is 2.60, against wheat's 1.9, which makes it still more valuable as an egg producer. At the same time, hens tire of it more rapidly than they tire of wheat. We found it better to alternate the two, watching carefully for signs of loss of appetite. The peas are better crushed or boiled in a mash mixed with bran for the sake of variety.

Naturally it would not pay to buy peas to feed hens. That would make eggs cost still more than high wheat. But it is easy to find a patch of ground that will grow peas when it would not grow anything else without a lot of trouble. Besides, peas build up the ground they are grown in and make it more productive. Taking labor, seed, etc., into account, our peas cost us less than a cent a pound. They were not big enough to fetch a top price at market, so that we felt justified in turning them into eggs.

Fat is a very necessary element of a hen's food in winter. It is not only needed to keep up the hen's body heat; it is a valuable constituent of the yolk, which, unless the hen has plenty of fat in her food, is liable to be pale and sickly in appearance. Corn with 5.4 per cent of fat, when mixed with wheat, is most satisfactory. When corn is soaring with other grains, sunflower seeds are a splendid substitute. These seeds are so rich in fat that English manufacturers are planning to make artificial butter from them. They can not, therefore, be used so freely as corn. The growing of sunflowers is not only easy, but pleasant and ornamental. The sunflower needs good, rich ground, but it can be grown around the house and buildings instead of flowers. They must not be planted too early in the northwest, and must be kept well watered and cultivated. The seed must be planted two or three inches deep and at least three feet apart. The ground should have an eastern or southeastern aspect, if possible, and the earlier the seed heads mature the better. When the heads have been gathered, the stalks may be used for fodder.

For feeding purposes, rape is probably the cheapest fattening food. It can be planted in patches by itself or with some grain like corn or rye. The value of rape as a chicken food is that it stimulates the appetite and digestion of other foods. When rape is fed during the few weeks of fattening the birds will do better, and usually fetch a much higher price on the market.

Sweepings from manger and hay loft are excellent winter food for hens. Not only do they contain many seeds, but these seeds have to be scratched out of their natural husks. In getting them, biddy is almost as happy as she is in summer when she scours the fields for her relishes.

Now is the time to prepare for next winter, so that whatever the price of wheat may be then our biddies will not have to suffer or be sacrificed.

Conveniences

Little Helps for Farm Housewife

By ADA CARROLL WORTMAN.

There was such a pathetic plea in one of our farm papers recently for the older farm women to tell some of the things which had been helpful to them. It was from a very young homemaker on the farm, who had just discovered some wonderful labor-saving device, and, upon her going joyfully to tell her neighbors, she found that many of them had known of it and used it for years. She was much aggrieved at the thoughtless selfishness of farm women who would keep such helpful advice to themselves.

It is possible nowadays to make the farm home almost strictly modern, without the expenditure of a great sum of money, such as would be needed to install a system of gas lighting and cooking and a complete water system. There are so many small helps that can be purchased for a few dollars, and that go so far toward making the farm home a more convenient place for the burdened farm woman.

The question of water is of paramount importance, but not every farmer can put in a pressure or gravity tank and pipes through his house. Instead, why not have a pump in the kitchen and a cheap sink? When we moved to our present farm, last spring, we came from a modern home in the outskirts of a small city, and felt that we must have some of the conveniences that we had been used to enjoying.

The first thing we did was to hunt up a second-hand bathtub, which cost us just $6, and install it in a small empty room adjacent to the kitchen. The range was set just outside the door of the bathroom, so that it was a small matter to set a boiler of water thereon and heat it for the bath. A drain was laid to carry the water away down the hill after using it. This drain was simple—just an ordinary inch-and-a-half pipe led from the bathtub to the outside wall of the kitchen, where it and the drain from the sink entered a six-inch tile, which led under the surface of the ground to a point well away from the house—a place on a side hill where the water quickly disappeared.

Out in the kitchen we set a cheap sink, costing $3.75. It was large enough to hold a large dishpan, such as we needed to wash the separator in, and all the waste water from kitchen and bathroom was disposed of without any carrying.

The well was directly under the kitchen, so the pump was already in place, but if it had not been, we should have put the pump at the sink and run the pipes from it into the well, so that we could pump water right in the house. It is not a hard matter to do this unless the well is very deep or a long way from the house, in which case there would need to be a supply tank, so that all the water pumped by the windmill for the stock might first go through the kitchen tank, and there would be a constant supply.

Either of these methods would insure a supply of water for the house and a means of disposing of it after using, and would amply repay the expense of installation. It would be better to go without something else and have the water so convenient, and there are few farmers who could not do as I have indicated.

Patterns

1987—Lady's house gown or negligee. Cut in 4 sizes: 34, 38, 42 and 46 inches bust measure. It requires 7 yards of 44-inch material for a 38-inch size. Price, 10 cents.

1988-1976—Lady's costume. Waist 1988 cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 1976 cut in 7 sizes: 22, 24, 26, 28, 30, 32

and 34 inches waist measure. It requires 2 1-2 yards of 44-inch material for the waist, and 5 1-2 yards for the skirt for a medium size. The skirt measures about 3 1-8 yards at the foot, with plaits drawn out. Two separate patterns, 10 cents for each pattern.

1978—Child's dress. Cut in 4 sizes: 2, 4, 6 and 8 years. It requires 2 1-2 yards of 36-inch material for a 4-year size. Price, 10 cents.

2002—Boy's Russian suit, with or without revers collar and shield. Cut in 4 sizes: 2, 3, 4 and 5 years. It requires 3 3-4 yards of 36-inch material for a 4-year size. Price, 10 cents.

1985—Lady's combination corset cover and drawers. Cut in 4 sizes: 34, 38, 42 and 46 inches bust measure. It requires 3 1-4 yards of 36-inch material for a 38-inch size. Price, 10 cents.

1998—Dress for misses and small women. Cut in 3 sizes: 16, 18 and 20 years. It requires 6 1-2 yards of 36-inch material for an 18-year size. The skirt measures about 2 3-4 yards at the foot. Price, 10 cents.

Cream Cheese Salad.

Cut a small cream cheese into cubes. Arrange on sections of head lettuce, and serve with a simple French dressing the recipe for which calls for one fourth teaspoonful salt, half as much paprika, four tablespoonfuls olive oil and two tablespoonfuls vinegar, mixed in the order given.

Double Deck Bee Hive.

John Cushman of Eatonville, Pierce county, Wash., has just received a shipment of double deck bee hives with which he expects to experiment. He says that the double deck hive will bring better results than the ordinary hive.

Women Form Poultry Club.

The women of the Camas valley, Ore. grange organized a poultry association recently, with Mrs. Cynthia Lange as president, Mrs. Bessie Martindale, vice president, and Alice Scranton, secretary-treasurer.

WE WILL PAY SALARY

to farmer with rig or saddle horse. The publisher of The Washington Farmer wants men to secure and renew subscriptions to this paper in various farming districts throughout the state. We are paying good salaries to those who can do the work and are offering these positions only to farm owners or renters.

We want to hear only from those who will be willing to give our proposition a fair trial for at least a month and who will put in good, hard licks for good pay. For men with these qualifications the opportunity is a splendid one. This work isn't easy; but you can do it and earn a good salary. We give you full instructions and the right kind of help.

You will be able to earn a salary of from $25 to $150 per month or even more, dependent upon the amount of time and effort you can give to the work. Salary check will be sent promptly at the end of each month.

We will not consider an applicant who does not live on a farm and who does not have a rig, saddle horse or automobile. In writing us tell whether married or single, whether you own or rent your place and give the names of two merchants with whom you trade. There isn't any red tape about our proposition, but we must know something about those workers we put on our payroll to receive a monthly salary check.

Give full details in your first letter to The Washington Farmer, Review building, Spokane, Wash.—Adv.

STARTS WITH THE WORST AND ENDS WITH THE BEST

Dear Aunt Nellie: Here I am for the second time. This time I feel so I must thank you ever and ever so much for the nice prize you sent me. It was indeed very nice of you, auntie. This time I will write about "My Best Friend," "My Worst Day" and "My First Surprise." My worst day was the 22d of May, 1914. It was the last day of school and we were having a picnic. It was about noon when word came for us children to hurry home because there was a fire all around our home. The cause was that a neighbor woman set fire to some slashing she wanted to burn. A strong wind sent the fire over to our place, and when we came home about 30 men were helping papa and mamma protect our home from the flames. They all worked till it was dark that night. Then the wind went down and the flames ceased. My first surprise was in the winter of 1916, when one of the Bellingham book stores offered a dollar to any boy or girl not under 9 nor over 11 years of age that in 50 words or less could tell what books they liked best. I was 9 then, so I wrote about what books I liked best and in a few days I was very much surprised by receiving a dollar as a prize and a very nice letter saying my letter was one of the best. The dollar I put in the bank, which is my first start in a savings account. Here comes my best friend on earth. That is mamma. I have a better friend, and that is Jesus, but it was mamma that taught me to love Him.—Evis Erickson, box 108, R. F. D. 2, Lynden, Wash.

TELLS ABOUT HER LOVELY DRIVE TO PENTICTON

Dear Aunt Nellie: I want to tell you about my trip to Penticton, Canada. Grandpa, papa, mamma and my brothers and sisters went with me. When we got to Oroville we had to get permission to go across the line. Then when we crossed the line we had to get a pass from the Canadian officer. Then we drove 30 miles along the finest roads you ever saw. We got out and saw the Okanogan falls. There was an old Indian squaw fishing. We drove on to Penticton along the most beautiful lake shore road. Penticton is a very pretty town, located in a beautiful pine forest. We went from there to Keremos along a lovely shady road. The tops of the trees touched over the road. We got home that evening about 7 o'clock all very tired, but we enjoyed the trip very much.—Kathryn Bowen, Oroville, Wash.

PET SHEEP WILL COME TO THE DOOR AND KNOCK

Dear Aunt Nellie: I am 10 years old and am in the sixth grade. I can crochet and tat, though I like to crochet best. I have a sister whose name is Derla and a brother named Dea. They are in the seventh grade. We live in the country and go to a school about a quarter of a mile from our house. On our place there are two lakes which are the same as Soap lake. One is on each end of the place. Above one of them there is a bluff and in that there is a face of a man. We have a little bunch of sheep and I have some of my own. One of them, a sheepherder gave me, and now she will come to the door and knock. She will stand up for a piece of bread and will drink milk. I also have a red hen, which we call Reddie, and one white cat, besides some horses.—Frances McManamon, Othello, Wash.

HOPES ALL ACCIDENTS MAY PROVE AS LUCKY AS THEIRS

Dear Aunt Nellie: I think the subject that I can write more about is "The Worst Day," which I remember well, a very frightful day, to the parties most concerned. It happened last winter when the snow lay crisp and white on the ground. There was a sleighing party of three and in some way or other parts of the sleigh broke, letting a portion of the load in the snow, thus freeing the horses and letting them run one-fourth of a mile before I got out of the wrecked sleigh. Now, I don't know whether this was the worst day or the best day, as no one was injured, neither persons or horses. I feel thankful all escaped injury that day and hope all accidents may prove as lucky.—Laura E. Hatley, Waitsburg, Wash.

MABEL HAS A GOOD MANY RELATIVES IN WAR ZONE

Dear Aunt Nellie: I live on a farm of 100 acres. I go to the Twin Groves school. There are 25 scholars in our room. Our teacher is Mr. Young. We have three rooms in our schoolhouse. I have two sisters and one brother. My sisters are married. We have lots of fun on the farm. In the summer we go in swimming and do housework. In the winter we go sleighriding and snowshoeing. I have many relations in England. They are very scared of the war.—Mabel Woodfield, St. Anthony, Idaho.

YES, IT DOES HELP IF MOTHER IS INTERESTED

Dear Aunt Nellie: I am 13 years old and in the seventh grade at school. The subject that I chose to write about is "My Best Friend." My best friend is my mother. She always takes my part. If I am happy she is happy with me and if I am sad she is sad with me. When my brother and sister and I go to school she sees that we are clean and whole. She also cooks good meals for us. She asks us every day if we are getting along well at school, because she loves us and wants us to get ahead in our class. Arithmetic is my hardest study and sometimes I can't get the problems and if my class gets ahead of me I get sad. My mother tries to soothe my sorrows by telling of brighter days. She always is planning so we can get our lessons easier. You know it helps a girl lots to have a mother who takes interest in her school work.—Ruth Safe, Republic, Wash.

YELLOW CANARY WILL PICK YOU IF YOU TEASE HIM

Dear Aunt Nellie: I have been reading the Children's Corner every time we get the paper. I am glad I have so many little cousins. The other children write so well, I thought I would write, too. I know some of the children who have written to you. I am in the eighth grade at school. I have two sisters going to this school. We walk two miles and three-quarters to school. We live on a farm. There are 11 children in our school, four boys and seven girls. I will describe a pet I have. It is a little canary bird. He is yellow, with a black cap on his head. He sings and he will pick you if you tease him. I take real good care of him. He is 7 years old and he seems to be a young bird.—Ivah Jump, R. F. D. No. 2, box 61, Creston, Wash.

EDNA WOULD NOT CHANGE PLACES WITH A CITY GIRL

Dear Aunt Nellie: I am 12 years old. My birthday is September 12. I have a friend who comes to the country almost every summer. She stays with her uncle and aunt. They are our closest neighbors. We have a very nice time. I go to school and am in the fifth grade. I have three sisters and one brother. Their names are Elsie, Mata, Helen and Adolph. Elsie does not go to school, but the rest of us do. Mata is 14 years old. She is in the eighth grade. Helen is 10 and she is in the fifth grade. Adolph is 7 years of age. He is in the first grade. I live on a farm. We have about 80 chickens and three geese. We have one sheep. We have two dogs. Their names are Bob and Shep. I like to live on a farm and would not change with a city girl.—Edna Reinbold, Hubby, Wash.

INZA'S WORST DAYS WERE WHEN SHE HAD MEASLES

Dear Aunt Nellie: I thought I would write a letter to the Children's Corner, as I like to read the others very much. My subject is "The Worst Day." My worst days were when I had the measles. I had to stay in bed three days and a half. The second day I was in bed I had a bad fever and wanted to get out of bed all the time. I have four brothers and two sisters at home. My big sister has had the measles, but the rest of them have not. They never caught them, although they were in the room quite often. I am over with them now and will start to school again. I like to go to school. I am in the sixth grade and am 11 years old. My birthday is July 28.—Inza Staiff, Freeland, Wash.

LIVE ON 320-ACRE FARM IN THE GRAND COULEE

Dear Aunt Nellie: I will write to the Children's Corner. I have never written before. I love to read the letters. We live on a 320-acre farm in the Grand coulee, 20 miles from town. We get our mail by a stage line called the Nespelem route. I have two sisters and two brothers, all younger than I. We have seven horses, one cow, some pigs, chickens and turkeys. I am 11 years old and in the fifth grade. Our school has been closed for two weeks on account of the measles. My teacher's name is Miss Bridge.—Naomi Canaday, Almira, Wash., Nespelem route.

Pussy-Cat, Pussy Cat.

MARGERY HAS ADVANTAGES OF TOWN AND COUNTRY

Dear Aunt Nellie: I have never written to the Corner before. As yet, I have see but two Bellingham letters in the Corner. I was 14 years old January 3. I started to high school January 26. I have three sisters and four brothers. I have a father and mother. My oldest brother is junior in the normal school here. He is taking a special course so he can enter college a little advanced. He is 20. My next brother, who is 18, and my oldest sister, who is 17, are seniors at the Whatcom high school here. My next sister down the line is 15 and a junior second in high school. My brother younger than myself is 9 years old and in the third grade. My little sister is in the first A grade. The baby, 2 years old, is large for his age and very cute. Our names are, from the oldest down: Irving, Myron, Catherine, Josephine, Margery, Donald, Betty and Junior. Our home is a five-acre chicken ranch. We have 1800 chickens. Last year we had an incubator containing 6000 eggs. This year we are doubling the capacity and it will contain 13,000 eggs. Our incubator is to run by electricity this year. I live neither in the city or in the country, but have the advantage of both.—Margery Hawley, 820 Moore street, Bellingham, Wash.

HAVE AN AUTO AND A BOAT NAMED "AGNES W."

Dear Aunt Nellie: I have read the letters often in the Children's Corner and I will write, too. I live on a farm. We have a cow and three calves and about 29 chickens. We have 20 acres of land. We have a dog named Teddy and two cats. I am writing this letter in school. I am in the third grade and am 9 years old. We have an automobile and a boat named "Agnes W." I have two brothers and one sister. Our school is named Lincoln school. I have a mile to go to school. There are seven in my class. There are 37 children in our room. We live in a big white house. We have a mile to go to town. We have a white horse. His name is Jim.—Myrtle Weberg, Poulsbo, Wash.

MARY HASN'T SEEN ANY LETTERS FROM CONCRETE

Dear Aunt Nellie: I have read the Children's Corner a number of times. I have seen letters from quite a few places, but none from Concrete yet. I have never written before. There are nine and a half inches of snow here. We have 15 cows and a number of calves. We have two horses, two pigs, three dogs and three cats. The horses' names are Nell and Prince. The dogs' names are Brownie, Bob and Topy. The cats' names are Blacknose, Blacky and Tom. I walk about half a mile to school. My teacher's name is Mr. Carl. I like him very much. I am 10 years old and am in the fifth grade.—Mary Von Pressentin, Concrete, Wash.

ETHEL FEELS BAD BECAUSE DOGGIE MUST WEAR MUZZLE

Dear Aunt Nellie: I am going to tell you about my dog. His name is Colonel and he has black hair. He has but two white spots. Those are on his chin and neck. When I go to school in the morning he always goes part way with me and is at a certain place to meet me every evening. When our county commissioners ordered that all dogs be muzzled we got one for Colonel, but he does not like to wear it because it makes his nose sore. It makes me feel bad to see my doggie wear a muzzle.—Ethel Sprong, Sunnyside, Wash.

BIG SISTER IS TEACHING HILDRETH AT HOME

Dear Aunt Nellie: I thought I would write to the Children's Corner. I am in the fourth grade and am 11 years old. I have light hair and blue eyes. I have five sisters and two brothers. My big sister is teaching me at home. I am four feet nine inches tall. We have 68 head of cattle, 14 pigs and 21 head of horses. We had lots of corn this year. We have two dogs and three cats. My birthday is October 3.—Hildreth G. Hicks, Coulee City, Wash.

TONY, THE CANARY BIRD, SINGS A GREAT DEAL

Dear Aunt Nellie: My papa has a homestead of 200 acres. I am 12 years old and am in the fourth grade. I have light hair and blue eyes. I am five feet and two inches tall. I weigh 106 pounds. We have a canary bird named Tony and he sings a great deal.—Violet Hicks, box 162, Coulee City, Wash.

PEND OREILLE RIVER RUNS BY THEIR FARM

Dear Aunt Nellie: This is the first time I have written to the Children's Corner, but have read every letter and like them very much. I am a girl 10 years old, born May 31, 1906. I have a little pony of my own, also three cats. We have a team, 14 pigs, 30 chickens, a cow and calf. I live on a farm of about 300 acres. There is a river running by our place called the Pend Oreille. It is frozen. I have two little brothers, one of them is named Ransom and the other Lawrence. Lawrence is 5 years old and Ransom is 1 year old. I ride to school on my pony. Her name is Sadie. My papa carries the mail.—Lorena Schultz, Lost Creek, Wash.

LEARNED TO PLAY ON THE PIANO WHEN SHE WAS FIVE

Dear Aunt Nellie: I am 9 years old and my birthday is January 23. My sister is 14 and her birthday is August 16. I go to school every day. I am in the fourth grade and my sister is in the seventh grade. I have a big doll and her name is Josephine. My teacher's name is Mrs. Kane. There are 42 pupils going to our school. My sister's name is Ethel. Sometimes I help my mother with the dishes and carry in wood for her. I have to walk one mile to school. When there is ice our teacher lets us go skating. I learned to play the piano when I was 5 years old. We have an auto and it is a dodge. I like to ride in an automobile—Doris Streeter, R. I., Bow, Wash.

WE WANT YOU TO WRITE ANOTHER LETTER, EVALENE

Dear Aunt Nellie: I was 10 years old September 1. I live on a farm of 320 acres. We have 10 horses and their names are Madge, Bill, Dan, Barney, Tom, George, Kit, Mike, Maggie and Doll. We have one cow. Her name is Trilby. We have five pigs and a dog and his name is Nick. I have one brother and his name is Charles. I have two little sisters and their names are Agnes, age five, and Bernice, age three and a half years. My doll's name is Nellie. I am in the second grade at school.—Evalene K. Maurer, Mohler, Wash.

RIDE TO SCHOOL ON HORSE-BACK WHEN THERE IS SNOW

Dear Aunt Nellie: I have been reading the Children's Corner and like it very much. My father takes the Farmer. There are three pupils in our school. We ride to school on horseback during the snow. I like to live on a farm because you can have pets. I have a pet cat named Tommy and a pet dog named Slivers. I have a horse that I like very much. It's name is Babe. We live on a farm 10 miles from Corfu, Wash.—Glynes Simenson, Box 88, Corfu, Wash.

EDITH HAS A PLAYHOUSE WITH A ROCK FIREPLACE

Dear Aunt Nellie: I am 8 years old. My birthday is May 18. We live on a five-acre farm. We have about 90 chickens. We are going to hatch some more. I have a playhouse. It has a fireplace. I made it of rocks. In summer I go barefooted and pick wild flowers and berries. We have some nice blackberries. We have lots of fun in summer. I have no brother or sisters.—Edith Kobe, Kirkland, Wash.

CHILDREN GET CREDITS AT SCHOOL FOR HOME WORK

Dear Aunt Nellie: I am 9 years old and in the fifth grade. My teacher's name is Miss Pederson. I like her very much. I have one sister and no brothers. My sister's name is Gunvor. She is 4 years old. I help my mother before I go to school in the morning and when I come home. At school we get credits for home work. If we get 600 credits a month we get a half holiday.—Liv Elekastad, Southworth, Wash.

READS EVERY LETTER THAT SHE SEES IN THE CORNER

Dear Aunt Nellie: I have read every letter that I have seen in the Farmer. My subject is about the schoolhouse. The schoolhouse is very large and there are six rooms in the building. In my room there are 42 pupils, 32 in the third grade and 10 in the fourth grade. I am 11 years old. My teacher's name is Miss Hinckley. I will close for this time.—Yerda Johnson, Rochester, Wash.

The Washington Farmer is glad to announce the receipt of letters for the "Children's Corner" from the following during the last week: Helen Guenther, Maud Shineke, Irene May Hott, Irene Glissler, Ruth Crabb, Marie Wolf, Anna Staube, Josephine Wagner, Irene Slaughter, George Vaneberg, Olive Long, Beulah May Wilson, Maude Daniel, Irma B. Polson, Ethel Gladson, Grace Clark, Mamie Jennings, Florence Cox, Margaret Cox, Mildred Widmer, Eleanor Dobers, Ora McDonald, Margaret Helen Jelly, Lucile Gwen, Clayton Beeson.

O Lord, I've never lived where churches grow;
I love creation better as it stood
That day you finished it so long ago
And looked upon your work and called it good.
I know that others find you in the light
That's sifted down through tinted window panes,
And yet, I seem to feel you near tonight
In this dim, quiet starlight on the plains.

I thank you, Lord, that I am placed so well;
That you have made my freedom so complete;
That I'm no slave of whistle, clock and bell,
Or weak-eyed prisoner of wall and street.
Just let me live my life as I've begun,
And give me work that's open to the sky;
Make me a pardner of the wind and sun
And I won't ask a life that soft or high.

Let me be easy on the man that's down
And make me square and generous with all;
I'm careless sometimes, Lord, when I'm in town,
But never let them say I'm mean or small.
Make me as big and open as the plains;
As honest as the horse between my knees;
Clean as the wind that blows behind the rains;
Free as the hawk that circles down the breeze.

Forgive me, Lord, when sometimes I forget;
You understand the reasons that are hid.
You know about the things that gall and fret;
You know me better than my mother did.
Just keep an eye on all that's done and said;
Just right me sometimes when I turn aside,
And guide me on the long, dim trail ahead,
That reaches upward toward the Great Divide.

The above poem was written by Charles B. Clark Jr. and has been regarded as one of the best bits of sentiment ever expressed in poetic form concerning the picturesque life of the cowboy of the range. Probably no other cowboy poem has found its way into so many scrap books.

WORLD'S CROPS
Summary of Present Position.

According to reports received by Broomhall's Corn Trade News the middle of last month:

Russia—Crops remain under snow.

Argentina—Confirmed wheat crop of good quality; indications of outturn fully maintained. Maize crop outlook improved.

Australia—Some further heavy rains in Queensland and New South Wales not wanted, but think they will have no bad effect on wheat crop.

India—Beneficial timely rains have fallen in most parts; crops growing well on big acreage.

France—Severe frost; but much snow. Position of wheat crop improved, but feared weak plants may suffer. Government has ordered an admixture of 15 per cent of maize, rye or barley with wheaten flour.

Germany—Constinued reports of severe frost and shortage of food. Bavaria admits cereal crops are overestimated.

Italy—Officially stated that the wheat crop was seeded under normal conditions and germination was regular. Continued complaints that wet winter is having a bad effect on young crops. Government is offering a substantial bonus for grain growing.

North Africa—Further favorable reports of wheather and crop prospects received.

Lies and Lies.

The first and most wonderful baby in the world was in the Hopkins household. He had reached the age when he could coo, an accomplishment which he indulged in most of the time.

"He is the most welcome visitor I ever had," announced the proud mother. "He just lies and talks to me by the hour."

"Isn't that lovely?" agreed the caller. "So unlike most visitors—they just talk and lie to you by the hour."—Country Gentleman.

Watching for a Morsel.

The man getting his hair cut noticed that the barber's dog which was lying on the floor beside the chair had his eyes fixed on his master at work.

"Nice dog, that," said the customer.

"He is, sir."

"He seems very fond of watching you cut hair."

"It isn't that, sir," explained the barber. "You see sometimes I make a mistake and snip off a little bit of a customer's ear."—Boston Transcript.

Who's Who, and What Do They Know
Told at Stockmen's Banquet in Spokane

Professor E. J. Iddings, dean of the agricultural department of the University of Idaho, was speaking at the big banquet given by the Spokane Chamber of Commerce to the live stock men attending the convention recently held in Spokane.

"There's a man down in Oregon who has always taken a great interest in promoting pig clubs," he said, "and for this reason he has become a favorite with farmer boys throughout the state.

"One day in a country schoolroom, the teacher asked the children to write down for her the names of the three men in the United States who they felt were entitled to greatest honor. One little fellow struggled long and manfully with the problem. He was a patriot, a sportsman and a member of a pig club, and when he finished the three names on his paper were Woodrow Wilson, Jess Willard and C. M. McAlister of the Portland Union stockyards."

McAlister "Comes Back."

Without pause, Mr. McAllister of the stockyards was on his feet amid the laughter, and, with his napkin held aloft to still the tempest, began to speak:

"Mr. Toastmaster: I must leave to catch my train for Portland, but I want to tell you a story before I go. I promised Dean Iddings that I would not tell it, but, with your permission, I will anyway.

"The dean and I were traveling in a rural community in Idaho and were spending the night at a farmhouse. After supper, the 8-year-old son of the house came in from the kitchen, held out a handful of little pellets and asked him what they were.

"'Those are beans,' Mr. Iddings replied; and the youngster turned and shouted back to the kitchen: 'He does know 'em, Maw.' And then he turned to the dean and said: 'Maw said you wuz here tryin' to tell Paw how to farm, but that you didn't know beans.'"

Sidelights

Looking Backward.

"There's no danger," said the doctor. "It's only a carbuncle coming on the back of your neck. But you must keep your eye on it!"—Christian Register.

Extra Weight.

"Hey, Redney, look here! I weigh three pounds more'n you!"

"Aw, g'wan, y're cheatin', Skinny! Youse got y'r hands in y'r pockets!"

Who's Your Mother?

First little chicken to second little chicken: "Say, kid, who's your maw, the hen that hatched you or the hen that laid the egg that you came out of?"

There's Always an Excuse to Buy.

The Hawker—Buy some flowers for your wife?

"But I'm not married."

"Well, then, guv'nor, buy the lot to celebrate your luck!"—Tit-Bits.

Seems So, Sometimes.

"I don't think women have always been vain. Yon know women were made before mirrors," said Mrs. Vainly.

"And they've been before them ever since," snapped her husband.

The Eye of the Law.

First Officer—Did you get that fellow's number?

Second Officer—No; he was going too fast.

First Officer—Say, that was a fine-looking dame in the car.

Second Officer—Wasn't she?—Puck.

Need Comfort.

For three successive nights Newpop had walked the floor with the baby. On the fourth night he became desperate and bought a bottle of soothing syrup.

"Why, James," exclaimed his wife when she saw the bottle, "what did you buy that for? Don't you know it is very dangerous to give a child anything like that?"

"Don't worry," was her husband's reply, "I'm going to take it myself."—Wisconsin State Journal.

Don't Soil the Furniture.

They were a saving old couple, and as a result had a beautifully furnished house. One day the old woman missed her husband. "Joseph, where are you?" she called.

"I'm restin' in the parlor."

"Not on the sofy?" she gasped in horror.

"No, on the floor."

"Not on that grand carpet?" came back in tones of anguish.

"No, I rolled it up."—Sharples News.

No Play Acting.

A Philadelphian who had been away from his home for several years decided to visit his native city. After his arrival there, while on his way to his brother's home the taxi in which he was riding was held up by a funeral procession.

"Whose funeral is that?" he asked a newsboy standing on the curb.

"Bill Smith's," replied the newsie.

"I knew him well," said the man; "can it be possible Bill is dead?"

"Course he's dead," replied the boy. "What d'ye think they're doin', rehearsin' wid him?"

Send for map and details. No trade deal considered. Refer to No. 5.

W. N. WOODSON, OWNER, CORNING, CAL.

Grain and Produce Markets

Chicago Grain.

CHICAGO, March 10.—Notwithstanding that the wheat market averaged higher today, peace rumors gave quotations a downward sweep in the last hour. Closing quotations were unsettled, ranging from 1¼c net lower to ⅝c advance, with May at $1.86½@1.86⅝ and July at $1.56⅝@1.56¾, corn lost ¼c to ½c and oats ⅝c to ½c. Provisions wound up with gains of 12c to 20c.

Moderate advances, interrupted by numerous transient setbacks, were brought about in wheat prices as a result of President Wilson's orders for the arming of American merchant ships. Reports that the British government was negotiating for the purchase of the entire Canadian crop of 1917 tended also for a while to give considerable advantage to the bulls and so likewise did severe duststorms in Kansas.

Assertions that the price which Great Britain was offering for the Canadian wheat yield of 1917 was only $1.30 a bushel exerted an additional bearish influence during the late dealings. On the other hand, announcement that one railroad to the seaboard from Chicago had lifted the embargo on export shipments of grain helped somewhat to check selling as the day came to an end.

Corn swayed with wheat, advancing early and sagging later. On the upturn the market touched a new high record price, $1.10⅜ for May delivery. Oats were guided entirely by the action of other grain.

Relatively high prices which the British government fixed for lard at Liverpool did a good deal to tighten the provision market here. Besides, record top quotations on hogs continued to rule at the Chicago yards.

Cash Quotations.

CHICAGO, March 10.—Wheat No. 2 and No. 3 red and No. 2 and No. 3 hard, nominal.

Corn—No. 2 yellow nominal; No. 3 yellow, $1.09 3-4@1.10 1-2; No. 4 yellow, $1.08@1.09 1-4

Sheep—Receipts, 4000; steady. Wethers, $11@12.40; lambs, $12.40@15.05.

At Portland.

PORTLAND, Ore., March 10.—Hogs—Receipts, 442. Steady. Bulk of packing grades, $13.35@13.50; heavy packing, $13.40@13.60; light packing, $13.25@13.50; rough heavies, $12.25@13; pigs and skips, $11.75@12.25; stock hogs, $11@12.

Cattle—Receipts, 87. Steady. Steers, prime light, $9.50@9.75; prime heavy, $9.65@9.85; good, $9@9.40; cows, choice, $7.75@8.15; medium to good, $7@7.75; ordinary to fair, $6.50@7; heifers, $6@9; bulls, $6.25@7.25; calves, $6@10.

Sheep—Receipts, none. Steady. Lambs, east of mountains, $12.90@13.10; lambs, valley, $12.50@13; lambs, shorn, $10.75@12.25; prime wethers, $11.75@12; choice ewes, $9.75@10; heavy ewes, $8.75@9.25.

At Seattle.

SEATTLE, March 10.—No receipts. Indications for higher market on hogs and cattle. Sheep steady.

Hogs—Prime light, $13.10; medium to choice, $12.25@12.50; smooth heavy, $11.75@12; rough heavy, $11.25@11.50; pigs under 150 pounds, $9.50@11.50.

Cattle—Prime light steers, $8.75@9.85; medium to choice, $8.60@8.65; common to medium, $6.75@8.25; medium to choice, $7.60@7.85; common to medium, $3.75@4.75; calves, $6.75@9.25.

Sheep—Prime lambs, $11.50@12; good lambs, $10.75@11; wethers, $9.50@10; ewes, $7.50@9.

Spokane Stock Yards Saturday.

Hogs—Receipts, none; market strong. Prime heavy, $13.35@13.50; prime light, $13.25@13.35; prime mixed, $12.90@13; rough heavy, $12.35@12.50; stockers, $9@10.

Cattle—Receipts, 105; market steady. Prime heavy steers, $9.60@9.85; prime light steers, $9.35@9.50; good steers, $8.50@9; prime cows, $8@8.50; good cows, $7.50@8; best heifers, $8.25@8.75; bulls, $4@6.50; calves, $7@10; stockers and feeders, $6@7.50.

Sheep—Receipts, none; market steady. Prime lambs, $12@12.50; common lambs, $11@11.50; choice yearlings, $10.50@11; good yearlings, $9.50@10; best mutton ewes, $10@11.

Meat Situation Shifts.

Wide differences between the amount of food meats in storage on March 1, 1917, and March 1, 1916, ranging from an increase of 34.5 per cent in cured beef to a decrease of 36.9 per cent in frozen pork, are indicated in figures gathered by the agricultural department. Frozen beef increased 17.1 per cent, and dry salt pork 5.3 per cent. Sweet pickled pork decreased 4.8 per cent; lard, 31.7 per cent, and frozen lamb and mutton 31.1 per cent.

Boosts Milk Price.

The Dairymen's league, which virtually controls the sources of supply for this city and vicinity, announces a schedule for the six months beginning April 1, which average 1¼ cents a quart more for milk than the corresponding months of last year.

Seattle Market.

SEATTLE, Wash., March 10.—Potato dealers believe they have at last approximated the visible supply of the state, and today they place the figure at or near 450 cars, 150 of which are west of the Cascades. This is twice the estimate given when the market was high, but it seems that declining prices have smoked out holders within the last week to a surprising degree. The outlook is for a series of declines, predictions being made today that Yakima Gems would be selling at $50 per ton before the 1916 crop is cleaned up, and this in the face of the fact that Seattle alone will use 100 carloads.

Brokers here have quotations of $65 @70 f. o. b. Yakima, and holders are willing to let go at that. The figure is regarded as too high. Operations are stagnant. Nobody is buying, as conditions are regarded as too hazardous.

The onion market is following spuds. Prices are weak, despite shortage of the visible supply. The best grade of dry Oregon onions can be bought at 8c per pound.

Small apples are very popular, with quotations at 60@75c per box. The extreme limit of prices for extra fancy fruit is now believed to be in vogue.

Practically every jobber on Western avenue will begin storing eggs for the spring crop on Monday, convinced that the market has fallen to the lowest level at 25c. Some of the houses paid 26c today, but this fact was kept well under cover in the fear that producers would expect an advance of 1c next week. The opening of the storage season would make any higher prices inadvisable.

Poultry prices will remain stationary next week. Jobbers say that higher quotations will not relieve the scarcity, as the country is shipping all it can spare at the present time.

Butter is steady to weak. Condensaries are shipping daily to this market, and it is reported will engage more heavily than ever in the butter make this spring and summer.

BUYING PRICES.

Unless otherwise stated the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 25c per dozen.

Poultry—Live hens, fat, over 4 lbs., 20c per lb., do 3 lbs. and under, 18c.; old roosters, 11c per lb.; springs, 20@22c per lb.; ducks, 20c per lb.; squabs, large, $3.50 per dozen; geese, fat, 12@14c per lb.; turkeys, live, 23@24c.

Butterfat—43c per lb.; dairy butter, 24c per lb.

Beef—Buying price: Prime beef, steers, 7@8c per lb.; cows, fat, 7@8c per lb.

Hogs—Light, 13@14c per lb.; do., heavy, 10@12c per lb.

Veal—Fancy light, 12@14c per lb.; do., heavy, 9@13c per lb.

Hides—Salted, 20c per lb.; salt kip, 22c per lb.; salted calf, 32@35c per lb.; green hides, 16c per lb.; salted bulls, 15c per lb.; dry hides (short trim), 32@33c per lb.; dry calf (under six lbs.), 36c per lb.; bull and dry salts, 4c per lb. less; green bulls, 18c per lb.; dry butcher full wool sheep pelts, 22@26c per lb.

SELLING PRICES.

City Prices—Team Lots.

Apples—Winesaps, $1.50@2.25 box; Spitzenburgs, extra fancy, $2 box.

Feed—Scratch feed, $53@54 per ton; all grain chop, $45 per ton; oats, $43 per ton; rolled oats, $42 per ton; rolled barley, $45 per ton; wheat, $59@60 per ton; bran, $28 per ton; shorts, $32 per ton; alfalfa meal, $26 per ton; whole corn, $51 per ton; cracked corn, $52 per ton.

Hay—Eastern Washington timothy, $22@23 per ton; alfalfa, $15@16 per ton; double compressed, $25 per ton; straw, $12 per ton; wheat hay, $16 per ton.

Onions—Oregon, 8c per lb.; Yakima, 8c per lb.

Potatoes — Local, $70 per ton; Yakima Gems, $80 per ton.

Rutabagas—Yakimas, $2 sack.

Butter—Washington creamery extras, cubes, 39c lb.; do., bricks, 40c lb.; creamery firsts, cubes, 38c lb.; do. bricks, 39c lb.

Spinach—Walla Walla, $1.75 case.

Eggs—Fresh ranch, 27@28c.

Protest Rates on Wool.

A complaint has been filed with the interstate commerce commission by S. W. McClure of Salt Lake City, secretary of the National Wool Growers' association, against the Union Pacific and 32 other railroads, including the Canadian Pacific, charging that the companies have been applying tariff rates to shipments of wool from western to eastern points that are unjust, unreasonable and discriminatory.

Pull Big Stumps by hand

Showing easy lever operation

Clear your stump land cheaply—no digging, no expense for teams and powder. One man with a K can rip out any stump that can be pulled with the best inch steel cable. Works by leverage—same principle as a jack. 100 pounds pull on the lever gives a 48-ton pull on the stump. Made of Krupp steel—guaranteed against breakage. Endorsed by U. S. Government experts.

What Is the A. B. C.?

Audit Bureau of Circulations.

This is an association, nationwide in its scope, not conducted for profit. Every publisher having membership in this organization pledges himself to sell circulation as a commodity, both as to quality and quantity. Advertisers using our columns are safeguarded. They know that we give all the circulation we offer.

CREAMERY CONCERNS

Plead Not Guilty to Conspiracy.

Pleas of not guilty to a charge of conspiracy in violation of the Sherman anti-trust act, in the creamery business, have been entered in the United States court at Boise by A. P. Henningsen, Portland; W. F. Henningsen, Butte; Carl Schallinger, Portland; R. A. Goodhue, Spokane; Henningsen Produce company, Butte; Schallinger Produce company, Portland; Hazelwood company, Portland; Commercial Creamery company, Spokane, and the Hazelwood company, limited, Spokane.

All of the 11 corporations and eight individuals indicted have now pleaded except B. B. Corless of Seattle, who has been granted further time on account of delay in his notice, and the Klock Produce company, Seattle.

Portland Market.

PORTLAND, Ore., March 12.—According to reports received by wool dealers, contracting in all parts of the west has slowed down. The failure of congress to pass the army bill with appropriations for military clothes has checked speculation in the east, and the effect is felt in the western field. There is no doubt, however, that the government will finally enter the market, and as its clothes requirements are expected to equal at least 100,000,000 pounds of raw wool the trade believes that prices higher than ever will yet be recorded.

To date only a few odd clips, mostly fine wool, have been contracted for in Oregon at prices ranging from 30 to 35 cents. Only one contract for coarse wool at 40 cents is known to have been made, being for a lot of early shorn thoroughbred Shropshire.

Egg storing is under way on a 25-cent market. This is the highest price at which eggs have ever been stored here.

Butter is weak for cubes and steady for prints. City creameries have supplied themselves with California butter and the outside demand is left to take care of the surplus of outside creameries. The cooperative creamery association has begun selling its butter direct to the trade through its new selling agency here.

Small receipts of poultry keep the local market high on chickens. Dressed pork is strong at the record price of 17 cents, but veal drags at 14 cents.

Potato shippers say the eastern markets have improved, but there is not much buying demand at this end. A few offers are being made to farmers at $2.50@3. Jobbing trade in potatoes is very dull. New potatoes from Florida are on sale at 10 cents a pound. Onions are slow, with jobbers quoting No. 1 stock at $9 and No. 2 at $6. Farmers' stocks of onions are exhausted.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers:

Oats—No. 1, $36.75@37.25.

Corn—Whole, $49; cracked, $50 per ton.

Millstuffs—Bran, $28 per ton; shorts, $31.

Barley—No. 1 feed, $38.50; brewing, nominal; rolled, $42@43.

Hay—Buying prices. Timothy, eastern Oregon, $19@20; alfalfa, $14@16; grain, $12.50@14.

Eggs—Oregon ranch, case count, 25c per dozen; candled, 27c.

Poultry—Hens, 18@20c; ducks, 18@22c; turkeys, live, 20@22c; dressed, 23@28c; geese, 12@14c.

Butter—City creamery, prints, 39@40c per pound; cubes, 35@35 1-2c.

Cheese—Oregon triplets, 23c; Young Americas, 24c.

Dressed meats—Veal, 14c; pork, 17c.

Hops—1916 crop, 3@8c per pound.

Potatoes—Oregon, jobbing price, $3.25@3.50.

Onions—Jobbing prices: No. 1, $9; No. 2, $6 per sack.

Wool—Eastern Oregon, fine, $30@35c; coarse, 40c; valley, 40c.

Beans—Oregon, small white, 9 3-4c; California small white, 11 3-4c; large white, 11 1-2c per pound.

Hides—Salted hides (25 lbs. and up), 18c; salted stags (50 lbs. and up), 14c; green and salted kip (15 lbs. to 25 lbs.), 18c; green and salted calfskins (up to 15 lbs.), 27@28c; green hides (25 lbs. and up), 17c; green stags (50 lbs. and up), 13c; dry hides, 30c; dry salt hides, 25c; dry horse hides, $1 to $2; salt horse hides, $3 to $5.

Cattle Top Market.

Twenty-four head of cattle purchased from W. A. Patton, rancher in the Wingville district of Baker county, Oregon, topped the market at Portland stock yards, selling at $9.85.

Washigton Crop Report.

A summary of the March crop report for Washington as compiled by the bureau of crop estimates and transmitted through the weather bureau, United States department of argiculture, is as follows:

Wheat on Farms—Estimated stocks on farms March 1 this year, 4,520,000 bushels, compared with 7,713,000 a year ago and 5,021,000 two years ago. Price on March 1 to producers, $1.44 per bushel, compared with 94 cents a year ago and $1.28 two years ago.

Corn on Farms—Estimated stocks on farms March 1 this year, 183,000 bushels, compared with 158,000 a year ago and 165,000 two years ago. Price March 1 to producers, $1.02 per bushel, compared with 90 cents a year ago and 98 cents two years ago.

Corn of Merchantable Quality—The perceatage of the 1916 crop, which was of merchantable quality is estimated at 75 per cent, compared with 82 per cent of the 1915 crop and 80 per cent of the 1914 crop.

Oats on Farms—Estimated stocks on farms March 1 this year, 3,430,000 bushels, compared with 3,850,000 a year ago and 2,792,000 two years ago. Price March 1 to producers, 53 cents per bushel, compared with 42 cents a year ago and 53 cents two years ago.

Barley on Farms—Estimated stocks on farms March 1 this year, 1,020,000 bushels, compared with 1,453,000 a year ago and 1,349,000 two years ago. Price March 1 to producers, 87 cents per bushel, compared with 64 cents a year ago and 76 cents two years ago.

Seattle Wheat.

SEATTLE, March 10.—There has been considerable activity this week in bluestem, stimulated by the strong bids from Minneapolis presumably for St. Louis account, as the southern market uses little other Washington wheat.

Millers here who have been in the market in a perfunctory way cut but little figure in the transactions of the week, as they were below bids offered from the outside. There were a number of actual sales of bluestem to Minneapolis at $1.62, although Puget Sound millers were bidding but $1.57 for either bluestem or turkey red and $1.53 for fife and club. Due to the car shortage, Seattle millers, who prefer bluestem for grinding, did not care to dabble in export grades. Operations by Minneapolis for the beginning of the week were at $1.55 bid, but they were unable to get any wheat into circulation and began toning up 2c per bushel.

Scarcity of cars has reached such a stage as to make delivery in the east almost impossible. The best that shippers can expect is an occasional car or two.

Representative sales on 'change this week included 5000 bushels of April red Russian at $1.64, 5000 bushels of March club at $1.67 and 5000 bushels of April bluestem at $1.68.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippwers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer:

Potatoes—Potatoes, $3.50 cwt; sweet potatoes, $6.

Apples—Washington apples, cooking, 65@85c; eating, $1@1.25; Wageners, 75c@$1.20 box; Rome Beauties, $1@1.40 box; Winesaps, $1.75@2 box; Y. N. Pippins, $1.75@2 box.

Butter—Blanchard cartons, 43c lb; Medo-Maid, 43c lb; Cascade, 43c lb; Gold Coin, 36c lb; Gold Leaf, 43c lb; Better Butter, 43c lb; Hazelwood, 43c lb; Peerless, 39c lb; Jersey Belle, 42c lb; Attalia, 43c lb; Diadem, 43c lb; Jersey, 39c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 22½c; Hazelwood full cream, triplets, 23c lb; Hazelwood Young America, 24c lb; Wisconsin limburger, 28@29c lb; brick cheese, 28c lb; domestic Swiss, 33c lb; Young Americas, 25c lb.

Eggs—Fresh local ranch eggs, $8.50 case.

Live Poultry—Springs, 17c lb; hens, 17@18c lb; old roosters, 9@10c lb; ducks, 13c lb; turkeys, 20@25c lb.

Dressed Poultry—Hens, 21c lb; springers, 20c; old roosters, 13c; ducks, 16c; geese, 14c; turkeys, 28c.

Hide Quotations.

Green cows and steers—25 lbs. and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs. to 25 lbs., 23c; calf skins up to 15 lbs; 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under seven lbs., 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10 to 75c each; green horse hides, $3 to $5 each; dry horse hides, $1 to $2.50 each.

Beef Brings Record Price.

Fifty cornfed steers averaging 1245 pounds each were sold Friday by T. O. Crozier, Culdesac farmer, to the Inland Meat company for 10 cents a pound, which is the record price for beef in this region.

Peat Deposits of Ireland.

Peat covers about one-seventh of the area in Ireland and the deposits are estimated to contain 40,000,000,000 tons of fuel.

NEWS FOR BREEDERS

E. M. Kennedy of Blackfoot, Idaho, took a carload of 16 Hereford bulls to the Denver stock show in January, where he sold them at a good price. Some of them went to Wood Bros. of Omaha some to Wyoming and some to the western slope in Colorado. Mr. Kennedy considers the selling of Idaho bulls to go back to Nebraska, something of which the state has a right to be proud. He went to Omaha after the show to purchase 60 head of registered Hereford cows on which he had an option, but the time ran out and he was just too late, as they were already sold. He says there was considerable comment by breeders further east on the bone size, good top lines and general quality of the western Herefords. Mr. Kennedy has a herd of 80 registered breeding cows, headed by Donald 37th, a bull he brought in from Iowa last year. They are all of the same line of breeding and are a very uniform herd.

Leaf and Jones of Rupert, Idaho, who were the principal buyers at the A. A. Davis Holstein sale at Filer, Idaho, last fall also purchased a few from H. H. Stiyer and others and now have about 28 head of registered females and a few grades. They purchased Mr. Davis' herd bull, Model Fobes, of Idaho, a very fine individual, whose four nearest dams average 28.5 pounds of butter in seven days, and his sire has 17 A. R. O. daughters. They thus have a foundation herd of rich breeding along producing lines. They have just completed a very fine barn, with Louden equipment and modern in every respect.

A PROMISING HEIFER.

The sweet Holstein heifer shown above was bred and is still owned by William Bishop of Chimacum, Wash. She was shown at the Pacific International Stock show at North Portland, Ore., last December, winning first in her class and junior championship. She promises to develop into a fine show cow and has ancestral inheritance that should make her a big producer.

POULTRY

RHODE ISLAND REDS

and Rose Island Whites, both combs; eggs, $1 per 15; Bronze turkey and Toulouse goose eggs; pedigreed Belgian hares.
J. NONNENMACHER, R. F. D. 3, No. Yakima, Wash.

HEADS JERSEY HERD.
On Kaylor Farm at Twin Falls.

By HORACE ADDIS.

Rosy's Jolly Golden Fern.

The accompanying photo shows Rosy's Jolly Golden Fern, the Jersey bull at the head of S. H. Kaylor's herd at Twin Falls, Idaho. This handsome young bull is by Golden Fern's Noble, dam Rosy's Jolly Golden Fern by Jolly Fox Hunter. He traces six times to Golden Fern's Lad and four times to Golden Jolly, making him a bull of rich breeding along both show and producing lines. Mr. Kaylor's herd is mostly of Island or close-up Island breeding. He has one half-sister of the world record 3-year-old, Goldie's Nehalem Beauty, in the Clifford Reid herd at Portland, Ore., purchased from Mr. Reid, and a full sister to her dam.

This latter cow has a bull calf by Clifford Reid's great show bull, Onota's Catillon Boy, that at this time looks almost invincible in the show ring. He has the head, length of body and hips that go to make a great show animal. Mr. Kaylor expects to keep him for his own use. Gem's Nehalem Lassie is producing over two pounds of butter a day, on official test. Majesty's Golden Maid is a granddaughter of Oxford's Majesty. Dippon's Viola is a daughter of Viola's Golden Jolly. Catillon Majesty, by Mr. Reid's bull, Onata's Catillon Boy, dam Majesty's Golden Maid, is one of his greatly prize cows. Mr. Kaylor also has a few cows of American breeding, among them one from the William Ladd herd that produced 74 pounds of butter the second month of her official test.

At Head of the Class.

In the report published by the American Jersey Cattle club of yearly tests accepted in January the herd of Ed Cary at Carleton, Ore., makes an unusually strong showing. In the class of cows 5 years and older St. Mawes Poppy stands first, with 1120.32 pounds of butter. The report of this test was published in the Farmer a few days after its completion as 1090 pounds, but the official figures increase that by 30 pounds. She stands at the head of the class.

In the 4 1-2 and 5 year class Blossom's Rosaire has 806.01 pounds of butter and Rosaire's Blossom (twins), 682.25 pounds, standing first and second. In the junior 4-year-old class St. Mawes Rose has 721.35 pounds of butter, standing third. And in the class under 2 years old St. Mawes' Susie Olga stands first, with 642.08 pounds of butter.

St. Mawes, the bull that started Mr. Cary's herd on the road to fame, now has 20 daughters in the Register of Merit, three of them with over 900 pounds of butter. Rosarie Olga Lad, his present old herd bull, has 19 daughters in the Register of Merit, or that have qualified all of them as 2-year-olds or younger. St. Mawes' Beauty has 690.3 pounds of butter to her credit and two others have over 600 pounds. Poppy's St. Mawes, the present junior herd sire, has three daughters in the Register of Merit—all that have been tested and one of them has a record over 600 pounds.

Besides the Cary cattle in the January report, Oregon is further represented with Clifford F. Reid's Golden Nehalem Beauty, that as a junior 3-year-old produced 880 pounds of butter, a world's record. H. A.

Purchase Top Notchers.

A. L. Wilson and W. M. Rhodes of Greenleaf, Idaho, reached home March 3 with a carload of fine stock for their breeding farms. The shipment also included a young Shorthorn bull for W. F. Howard of Roswell.

Wilson's purchase consisted of 12 head of Poland China swine, of different ages, that represented an expenditure of $1200; Mr. Rhodes secured a magnificent span of Percheron mares, 2 years old, that cost around $1100, and Mr. Howard's 6-months calf cost a long price. The animals are all registered stuff.

FIFTH SEMI-ANNUAL SALE
of the
WESTERN WASHINGTON HOLSTEIN BREEDERS' ASSOCIATION
APRIL 11th. 1917.
ON THE SNOHOMISH COUNTY FAIR GROUNDS.

CONSIGNORS

A. E. Smith, Seattle.
Hugh Nisbet, Chimacum.

Chas. Eldridge, Chimacum.
J. H. Hulbert, Mt. Vernon.
Tualco Valley Farm, Monroe

Seventy-five registered Holsteins, "The Best in the West," including cows with 30-pound butter records, and cows that have given over 100 pounds of milk per day, officially. Sons and daughters of 30-pound sires, and dams with large 7-day and semi-official yearly records.

If you want the best, attend this sale.

If you do not receive a copy of the Catalog by March 10th, write the secretary for one.

A. B. WINTERS, 15151 HEWITT AVE., EVERETT, WASH.

Shorthorn Show and Sale
by the
NORTHWESTERN SHORTHORN ASSOCIATION

86 head—52 bulls and 34 cows and heifers—of choice Shorthorns from the best herds in the Pacific Northwest, will be shown and sold

Tuesday April 3rd, 1917
AT THE PORTLAND UNION STOCK YARDS, PORTLAND, OREGON.

Consignments from the following herds:

F. M. Rothrock, Spokane, Wash.
A. D. Dunn, Wapato, Wash.
A. Chalmers, Forest Grove, Ore.
W. O. Minor, Heppner, Ore.
Frank Brown, Carlton, Ore.
J. B. Cornett, Shedd, Ore.
T. B. Gibson Estate, Woodlawn, Cal.
Oregon Agricultural College, Corvallis, Ore.
Schmidt Bros., Oregon City, Ore.
Mrs. M. J. Hughes, Cobble Hill, B. C.
E. F. Anderson & Son, Albany, Ore.
C. C. Beers, Lyons, Ore.
C. H. Lindeman, Crabtree, Ore.
Gust Jaeger, Sherwood, Ore.
A. T. Cutting, Molalla, Ore.
G. E. Wyatt, Corvallis, Ore.
Elvin Witham, Corvallis, Ore.

Opportunity for the bull buyer, and the man who wants to buy foundation females, that will prove a profitable investment.

See the show the day prior to sale. It affords opportunities for comparison of bulls and females that will be appreciated by buyers, and valuable lessons may be learned therefrom.

A sale under the same auspices will also be held at Spokane Union Stock Yards, Spokane, Wash., consisting of 55 head of Shorthorns, on April 5, 1917. Plan to attend one or both sales.

For catalogues and particulars, address

Filibuster Fails to Stop the President

Twelve United States senators prevented congress giving President Wilson authority to arm American merchant vessels. Upon advice from Secretary of State Lansing and Attorney General Gregory the president instructed the navy department to proceed forthwith to arm vessels flying the United States flag, and authorized such vessels to fire on any submarine sighted in the war zone. Secretary Lansing and Attorney General Gregory are shown with the president above, the former at the left and the latter at the right.

In This Issue: Sheep Scarcity Arouses Government to Action

This Is It!!--$200--This Is It!!

READ HOW TO WIN IT IN OUR BIG

FARM INFORMATION CONTEST

Don't Let It Escape. Get Our Contestant's Helpful Outfit and Start at Once. On April Fifth This First Prize Drops to $175.

Read the Rules—Answer These Questions

36. The name of what fungus disease extremely destructive to wheat will be changed to the nose of a farm animal if for one letter is substituted the two letters directly following it in the alphabet?

37. What does the government estimate as the amount of sugar-beet seed produced in the United States in the year 1916?

38. What root vegetable is most used in making sugar?

39. What brand of oil widely advertised in this paper is formed by combining a word meaning a very low temperature with a word meaning thin.

40. In six to ten words tell three reasons why it is beneficial to cultivate the soil around growing plants?

$800—IN CASH to Be Paid—$800

We will positively give EIGHT HUNDRED DOLLARS in cash awards (and more in event of ties) to the winners. As explained in the rules which follow, there will be five questions run in every issue of the Farmer for 12 weeks. The last five questions will appear in the issue of April 19.

Open to Four States

Contestants must be residents of Washington, Oregon, Idaho and Montana.

Five Questions Each Issue

The contest will be composed of 60 questions. Five will be run in each issue of the Farmer for 12 issues.

Answers to each question except No. 45 can be given correctly in from one to 10 words and will be given a score of 100 if correct. Answers to question No. 45 will be limited to 100 words each, and will be graded as to the common sense and general knowledge of farm conditions shown by the contestant without regard to spelling, grammar or penmanship. As with the other 59 questions, a perfect answer to No. 45 will be scored 100.

Perfect Score Is 6,000

The contestant who comes nearest to a score of 6000 and complies with all the conditions of the contest will receive the first prize; the next nearest, second prize, and so on. In case of a tie each tying contestant will receive the full amount of the prize.

There are 35 prizes as follows:

$150 is amount of First Prize. **$50** is amount of Third Prize. **$10** is amount of Fifth Prize.

$100 is amount of Second Prize. **$20** is amount of Fourth Prize. **$5** each, Sixth to Tenth Prizes.

$2 each Eleventh to Fifteenth Prizes. **$1** each, Sixteenth to Thirty-fifth Prizes.

OTHER RULES

The answers will be passed upon and graded by a fair-minded, thoroughly competent judge.

Two weeks will be allowed for sending in answers after April 19, 1917, date of the issue containing the last five questions.

Remember, your failure to answer all the questions will not necessarily exclude you from the contest. There are 60 questions to be answered and it is not reasonable to suppose that all our prize winners will attain a perfect score. Your answers must all be sent in at the same time. Do not send any answers until you have completed the full list or as many as you can answer.

Those who use our CONTESTANT'S HELPFUL OUTFIT will be able to send in their complete set of answers without delay, there being no need of their waiting for the questions as they appear in The Farmer from week to week down to the final issue of April 19. In order to get as prompt returns as possible from those contestants who use our CONTESTANT'S HELPFUL OUTFIT, extra inducement is made in the prize awards. SEE ENLARGED PRIZE LIST.

Announcement of prize winners will be made and prize checks mailed as soon after close of contest as possible.

If any point is not clear, do not hesitate to write the Farm Information Editor.

All answers must be mailed on or before midnight, May 3, 1917, as shown by post-office dating stamp on your envelope.

ORDER COUPON—If your subscription is paid ahead, the time paid for herewith will begin at the date to which you are now paid.

FARM INFORMATION EDITOR,
Review Building, Spokane, Wash.
Enclosed find $1 for one year, or $1.50 for three years' subscription to

THE WASHINGTON FARMER.

and enter me as a contestant in the Farm Information Contest. I am also to receive at once the complete CONTESTANT'S HELPFUL OUTFIT, consisting of guide against wrong answers, reply blanks, rules and all information to aid me to win a reward.

Name .....

R. F. D. .....Town .....

State .....

Notice—Amount of remittance to be either $1 for one year's subscription to the Farmer or $1.50 for three years' subscription.

Answer this question: Are you now a subscriber?.....
If you wish paper sent elsewhere, fill in name and address.

A Valuable Aid to Contestants

One complete CONTESTANT'S HELPFUL OUTFIT, including all of the 60 questions and instructions and helpful warnings as to answers which would be wrong, and the correct answers to some of the most difficult questions, is truly a big help to the contestant.

To each contestant who sends in a new renewal or an extension of his subscription at the time of registering for the contest, this complete CONTESTANT'S HELPFUL OUTFIT will be sent in combination.

We feel that those beginning on the contest will find these suggestions as to what to avoid distinctly useful. This equipment supplies in convenient form everything needed to enable you to apply your ability to the best advantage, and will contain information enabling you to answer the most difficult questions correctly.

Puts Questions in Reach of Children

This CONTESTANT'S HELPFUL OUTFIT puts the solution of the questions in the reach even of the children, it being the purpose to make it possible for everybody in Washington, Oregon, Idaho and Montana to compete. This outfit includes, besides general information about the plan of the contest, the following:

Guide against wrong answers, which includes either correct answers of more difficult questions or easy references as to where to find the correct answers; and blank forms on which to write your answers in such a way that there can be no confusion when your answers are taken up by the judge for scoring.

It will be worth considerable to you to be assured that your answers are reaching the Farm Information Editor in such form that he will know in every instance exactly what question you intended to answer. This CONTESTANT'S HELPFUL OUTFIT will make it possible for you to

Begin Work at Once

On account of the large number certain to send for our CONTESTANT'S HELPFUL OUTFIT, thus making it possible for them to answer the entire 60 questions without delay, it is deemed advisable to offer some special inducements to secure prompt returns from this particular class of contestants. By securing the early replies of those who are thus supplied with the entire 60 questions, we will be able to have their papers carefully scored before the final rush of answers toward the end of the contest.

Understand, it is not absolutely required that those who use our CONTESTANT'S HELPFUL OUTFIT send in their replies at once, but, in order to induce them to get in early, the following plan for enlarging the awards to those prize winners whose answers come in early is offered:

ENLARGED PRIZE LIST—$800 IN PRIZES—ENLARGED PRIZE LIST

For those who use our CONTESTANT'S HELPFUL OUTFIT.

Thirty-Five Prizes	Amt. of prize if winner sends in answers during 1st period, Feb. 1- Feb. 21	Amt. of prize if winner sends in answers during 2d period, Feb. 21 Mch. 14	Amt. of prize if winner sends in answers during 3d period, Mch. 14 April 5	Amt. of prize if winner sends in answers during 4th period, April 5 April 19	Amt. of Prize for winner who does not send in answers before April 19
First Prize	$300.00	$225.00	$200.00	$175.00	$150.00

Milk Producers Win Brilliant Victories

Wise and Courageous Cooperation Lifts 12,000 Dairymen Out of the Slough of Distress

This is a true narrative of cooperative achievement, of the lifting of more than 12,000 milk producers out of the slough of distress and impending ruin to the heights of prosperity. The Farmer tells this story in some detail, for it considers the brilliant victory won by the milk producers' association of the Chicago district one of the most remarkable, if not the most remarkable, demonstration in American history of the benefits of cooperative organization under wise, courageous and loyal leadership.

In the light of the association's achievements all wonder ceases that at the recent annual convention in Chicago the great hosts of enthusiastic delegates cheered the speakers to the echo, "pledging their undivided support to the men whom they had elected, and doubly pledging their allegiance to the milk producers' association, declaring that they will see to it that every farmer, every farm owner and every dairyman in this great dairy district must become a member of this association."

The winter and spring of 1916 brought dark days to the milk producers of Illinois, Indiana and Wisconsin. Their product was being delivered to the distributors at prices below the actual cost of production. Thousands were discouraged and looking about for different occupations.

Then the great strike was organized, a milk board of capable and trusted leaders was appointed, with full powers of negotiation, and the association pledged its members to stand firm for an association price of $1.55 per hundred pounds average for milk delivered to the condensing or bottling plants, or $1.30 per eight-gallon can delivered in Chicago. Now, let the milk board tell its own story, as it reported its work to the recent Chicago convention:

"This soon brought about that now famous conference held at the Hotel La Salle, which was called by the health commissioner, John Dill Robertson of the city of Chicago. At this conference the Bowman Dairy company agreed to pay the price, and their milk was released at once. The Borden company took the matter under further advisement. Later that day the Bordens offered to pay the price at their bottling plants and arbitrate for their condensing plants. This was refused. The next day, Saturday, they then proposed to pay our price for April, and went so far as to send out this offer to all of their plants where we had members. This offer also was refused. Sunday forenoon word commenced to come from the Borden plants that Bordens had offered to pay the price and asking permission to sell. They were then told that if they wished to have the association recognized, it would be necessary to hold another conference with the Borden manager. This was readily consented to, and on the following day this conference was held.

"The Borden company promised to dismiss the injunction suits brought in the court of Judge Landis and also to show no discrimination to any member who had been active during the strike, and to pay the association price to all members of the association. Upon this agreement, their milk was released.

"Immediately after the Bowman Dairy company's milk had been turned over to them it was learned that they had commenced over 100 suits against our members in Kane, Cook and McHenry counties, claiming of each $10,000 damages. Some attempt was made to have them dismiss these suits, but without satisfaction.

"A meeting was called of the milk boards of the Bowman plant. This meeting was held on the following Friday in the Hotel Morrison. Almost every Bowman plant was represented. Mr. Bowman was invited, and came with his lawyer. After some preliminary talk, the roll was called and Mr. Bowman and his lawyer had the opportunity to hear direct from the representatives of their patrons just what would happen unless the suits were dismissed. The roll call was only partially completed when Mr. Bowman's lawyer arose, holding up both hands, and cried, 'Boys, don't shoot any more; we know when we are licked. If you will have a resolution passed here asking the Bowman Dairy company to dismiss these suits, they will be dismissed.' This was done, with their promise that no more suits would be started, and here ended the most successful milk strike in all history."

That settled the summer contract.

"When the time for the fall or winter contract period arrived a delegate meeting on August 22 for the purpose of considering prices was held in the First Methodist church, Chicago.

"This meeting was very largely attended, and many outsiders were permitted to come in and take part. For this reason, it was advised that the vote on the price which was taken at that meeting be not made public until canvassed by the milk board and campaign committee, and not to be made public then unless these committees thought it for the best interests of the association to do so.

"When this vote was canvassed it was found that the price voted by those who sell to the bottling and condensing plants and those who ship to Chicago in cans varied at quite a wide range. The price voted for the plants was $2.02 1-2 per 100 pounds, and the price voted for the can shippers was found to be $1.65 per can. Which, figured on the 100-pound basis less the established differential, was $2.12 1-2 per 100 pounds, as it has been the established custom to fix the price for can milk based on the price sold to the bottling and condensing plants.

"It was decided not to make these prices public, but to call another delegate meeting and exclude all except reg-

Washington Portraits No. 7.

Willis Chambers.

Willis Chambers, one of the representative farmers of Clallam county, has been farming near Port Angeles for 13 years. He has been raising a few sheep and hogs, ducks, chickens and turkeys and also doing some dairying. Mr. Chambers believes that diversified farming is best suited for that part of the state.

The next in the series of Washington portraits will be that of J. R. Ayers of Kennewick, and will be given in next week's issue of The Washington Farmer.

Ensilage Corn

Success in White River Valley

Nelson brothers, dairy and potato farmers of White River valley, report a fine yield of ensilage corn last year. This is the third season ensilage has been grown successfully on the Nelson farm, and the only complaint the brothers make is that they did not put in double the acreage they did plant. Red cob ensilage is the variety grown, and last season 15 loads of barley were added to the corn to fill the silos, two of which, each with a capacity of 97 tons, are now in use on the farm. The barley was planted in August, but was fairly mature at the time of filling the silos.

Potatoes are raised every year, and in this way, averaging the big years with the lean ones, a fair profit is secured. Both of the young men in charge of the farm are enthusiastic in regard to the testing association now being organized by County Agriculturist Rader.

"It's the biggest thing that has ever happened for this part of the country," one of them declared. "We ought to have had it years ago."

Speaking of the difference of opinion which exists among milk producers as to the relative value of roots and silage in the dairy ration, Nelson brothers state that, figuring land rent at $20 per acre and with other production costs about average, it will cost less than $3 a ton to put corn silage into the silo, and that from then on there would seem to be an advantage in ease of handling in favor of silage over roots.

Potatoes

Tendency to Plant Small Pieces

To the Editor of The Farmer: I have heard that it is possible to save the eyes for the planting of potatoes used on the table. Can you inform me how this is done and whether I can grow a thrifty plant from the same? L. B. Lopez, Wash.

The above question is answered by Leonard Hegnauer, extension specialist in soils and crops, at the State College of Washington.

In seasons when seed stock is very high, there is always a tendency to cut potatoes into smaller pieces when used for seed. Some even take out the eyes with a small amount of the fleshy part of the potato, the thickness of which is very little more than that of an ordinary potato peeling.

However, to insure strong, healthy plants, a larger seed piece is necessary in order to have plenty of food material for the little plant until it is able to get its support from the soil. The yield depends to a considerable extent upon the size of the seed pieces. If one should continue the use of very small seed pieces, or simply the eyes, he would soon lose in yield.

Snow-Kist Oranges.

D. De Jong of Lynden recently harvested a crop of home-grown oranges when the temperature was around freezing to show that Lnyden can compete favorably with southern California in this respect. Mr. De Jong raised the Lynden Snow-kist brand at his home, and the fruit is as beautiful and delicious as any that ever came up from the south.

Did It Himself

Way of Getting Back to the Land

When Leonard Gilkey, who captured the first prize for the best single farm exhibit at the land show in Seattle, began farming, six years ago, he began in the usual way—by asking the advice of his neighbors as to what he could hope to raise and how he should raise it.

"And the result was that I made a flat failure of everything," he comments. "I gained just one thing by that first year's work, and that was the certainty that I must work it out myself, and that I must do a lot of experimenting and observing before I would be able to farm at a profit. I was on the farm to stick, however—had worked as a postal employe in various cities long enough to break down physically and financially, so that at the time when we went onto our 40-acre farm in Oregon we had no capital except a little borrowed on the security of the land itself. We had to make good."

That they have done so, this city family transplanted to the country, no one who saw the Gilkey exhibit needs to be told. Everything was pioneer work, from clearing the land to selecting the best varieties of potatoes for table and market. Here is the Gilkey way of accomplishing this last task:

"I didn't like any of the varieties raised in our neighborhood," Mr. Gilkey explains, "so I sent away and secured 36 different varieties. Seventeen of these are here in my exhibit, but out of the three dozen I shall probably not keep, in the end, more than six. But those will be the six best adapted to my farm and my methods and my market."

Among roots for cow feed Mr. Gilkey has found the Long Red and the Golden Tankard mangels the best, while his "Golden Glow Dent corn" has also proved a winner. He milks from five to eight cows, which pay him about $60 a month. He considers the best feature of his move to the country to be the influence of country living on his two boys, both of whom take as much interest in the farm work as does their father.

"It was a hard pull, getting started," he admits. "But it was worth it. None of us would go back to the city to live for any consideration I can conceive."

Loan $188,000 Worth of Pea Seed.

County Agriculturist Jr. R. Shinn, assisted by the Spokane Chamber of Commerce, has secured the loan of 1,259,272 pounds of pea seed valued at $188,890 from seed companies in return for contracts for 10,000 additional acres of peas in Spokane county. The Fairfield district alone in Spokane county has 15,000 acres which will be planted in peas this year.

More Income Taxes.

A larger proportion of the population of Walla Walla county will pay income taxes this year than in any other county in the state, according to internal revenue collectors. The number subject to the tax is about 64 in 1000, the largest number of whom are farmers.

Wool Shortage Arouses Government

Effort Is Being Made by United States Bureau of Animal Husbandry to Stimulate Industry

The United States is producing not to exceed half of the wool it requires.

The European war has greatly curtailed wool production in other countries than the United States.

England and her colonies control approximately 65 per cent of the wool of the entire world, and have placed an embargo against its shipment to this or any other country.

Even the close of the war will not immediately liberate this 65 per cent for general use in this country or other manufacturing countries, for the war has so disturbed England's manufacturies that most of her available supply will be required to rehabilitate her own industries.

These facts help to explain why wool sells today in this country at prices heretofore almost unheard of; why buyers have been paying as high as 35 to 40 cents; why offers are now being made to contract this season's clip at prices around 40 cents; why the market is so keen that wool on the backs of lambs yet unborn may almost be contracted.

Government Alert.

They also explain in some degree the rapidly spreading interest in the wool growing industry as indicated by the government's attempt to stimulate sheep production and the improvement of the wool grown by a "demonstration" car, conducted through the sheep growing states by experts of the federal department of animal industry and of the agricultural colleges throughout the country.

The government's demonstration car is now in the state of Washington in charge of Virgil O. McWhorter of the federal department, and C. E. Howell of the state college of Washington. Demonstrating at Pullman last week, Colfax, March 19; La Crosse, March 20; Dayton and Waitsburg, March 21, and Walla Walla, March 22, these men will conduct the car and its educational equipment through the state during the remainder of this month as follows:

Pasco—March 23, 8 a. m. to 11 a. m.

Kennewick—March 23, 11:07 a. m. to 9:33 p. m.

Prsser—March 24, 8 a. m. to 10:49 p. m.

North Yakima—March 26, 8 a. m. to 10 p. m.

Ellensburg — March 27, 8 a. m. to 10:10 p. m.

Sunnyside—March 28, 9:20 a. m. to 4:10 p. m.

Grandview—March 28, 4:30 p. m. to 9:55 a. m., March 29.

Toppenish—March 29, 10:52 a. m. to 3:05 p. m.

Connell—March 29, 6:15 p. m. to 12:15 p. m. March 30.

Ritzville—March 30, 2 p. m. to 7:50 p. m.

Sprague—March 31, 8 a. m. to 2:50 p. m.

Cheney—March 31, 3:50 p. m. to 9:25 p. m.

Wool Science.

The object of the wool car is not only to stimulate interest in wool production with a view to increasing the quantity, but to educate growers so that they may prepare their product for market in a manner that will entitle it to top prices and insure a better grade of manufactured goods from it.

"Persons familiar with the buying and manufacturing of home-grown and foreign wools assert that on account of poor preparation American wools net the growers from one to three cents a pound less than their actual value," declares a writer of the federal department. "This is due to failure to classify the wool before selling and to defects from the use of improper twine, branding paints and other minor causes."

The demonstration car carries six head of sheep, with samples of wool corresponding to each; samples of several grades of wool under microscopes so that those interested may learn more readily the differences between the grades; graded and nongraded packs, to show the advisability of proper packing before shipment to market; charts and tables showing essential facts and points to be kept in mind in the production and handling of wool; samples of woven goods, to illustrate the effect on the finished product of certain methods of handling the wool or of certain grades of wool; and a model of a properly built and equipped shearing shed for use in localities where there are as high as a few thousand sheep to be shorn.

Moving Pictures.

The car also carries five reels of motion picture films for use in "free movies" at each place visited. These films show the production of sheep and the handling of wool, all operations from the lambing quarters to the department store where the woolen goods are on sale.

Determining Factors.

Wool is graded upon three main factors—length, strength and fineness. It is not always true, however, that the fine wools are most profitable, for the coarse varieties shrink much less in the scouring process. They therefore sell in the "grease" state frequently as high as the finer wools, but after being scoured usually bring a price several cents lower than the price of the scoured fine wools.

Weak Wool Undesirable.

Wool is greatly influenced in quality by the condition of the sheep just prior to shearing time, say the government experts. Sheep in poor flesh produce neither as heavy fleeces nor as high quality. Illness or suffering from sudden feed shortage or bad weather tend to make the wool "tender," or of insufficient strength and elasticity.

Grade in Shearing Sheds.

It is more common than otherwise, Mr. McWhorter told visitors to the car at Colfax, for growers in western territory to sack their wool up without regard to the character of the different fleeces, putting, therefore, sometimes two or three or more different grades into one sack. Buyers either must examine each sack or buy for a price that will protect them against the chance of discovering inferior quality when the sacks are opened later.

For this reason, grading should be done at the time of shearing.

Each fleece should be examined and graded separately. This is more difficult on the small farms than in localities where there are a few thousand sheep, as in the latter case it is possible to secure an expert to follow the shearers as they proceed from flock to flock. But it is possible for even the small sheepman, though inexperienced, to improve greatly the value of his clip by care in regard to shearing, assorting and sacking. The following are rules which the federal department recommends to all sheepmen, whether producers of large numbers or small, as an aid to improving the quality and value of their wools:

1. Adhere to a settled policy of breeding the type of sheep suitable to the locality.

2. Sack lambs', ewes', wethers', and all buck or very oily fleeces separately. If the bucks or part of the ewes or wethers have wool of widely different kind from the remainder of the flock, shear such separately and put the wool in separate sacks so marked.

3. Shear all black sheep at one time, preferably last, and put the wool in separate sacks.

4. Remove and sack separately all tags, and then allow no tag discount upon the clip as a whole.

5. Have slatted floors in the holding pens.

6. Use a smooth, light, and hard glazed (preferably paper) twine.

7. Securely knot the string on each fleece.

8. Turn sacks wrong side out and shake well before filling.

9. Keep wool dry at all times.

10. Make the brands on the sheep as small as possible and avoid tar brands.

11. Know the grade and value of your wool and price it accordingly.

12. Do not sweat sheep excessively before shearing.

13. Keep the floor sweepings out of the wool.

14. Do not sell the wool before it is grown.

15. When all these rules are followed place your personal brand or your name upon the bags or bales.

Sliding Scale

Of Wages for Help on the Farm

Not long ago the Farmer published an article from Dr. E. A. Bryan, former president of the Washington State college, proposing a sliding scale of wages for the all-year-round hired man on the farm. Starting with the four months from the middle of June to the middle of October, the period of greatest demand and highest priced labor, Dr. Bryan suggested $60 per month; $50 per month from the middle of March to the middle of July, and $40 per month from November 15 to March 15.

This is on the basis of $600 a year, or an average wage of $50 per month, the employe to board himself. In addition, he is to have the use of a cottage and small garden, some fruit from the orchard and possibly a pig or two.

The same wage scale would work out for $480 per year as follows: Four months at $48, four months at $40 and four months at $32.

With regard to this article of Dr. Bryan's the following letters have been received:

Used Plan for Ten Years.

To the Editor: Replying to your letter of February 21, requesting my opinion on the year-round farm labor, will say we have found the plan as suggested a good one; in fact, we have practiced it for 10 years and have no labor troubles. Each employer must figure the rate for each season to fit his proposition. We grow grain, hay, alfalfa, hogs, cattle, sheep and horses. We keep several men all the year round. Pay all according to ability and season; often refuse to permit men to work for their board during the winter months. If an employe is married we furnish him supplies at cost to us, allow a reasonable amount of fruit and vegetables, try to treat them like men, feed them well and wish we could do more for them, as their road is not a smooth one.

D. S. WALLACE.

Lewiston, Idaho.

Writer Likes Dr. Bryan's Plan.

To the Editor: Received copy of your paper with Dr. E. A. Bryan's proposition of a yearly price for farm hands. I think his plan very reasonable, indeed if one could get good farm hands at the price he states ($50 a month and board themselves at present food prices) we would be in clover. We pay, in this locality, $40 per month for the average man, and $50 and as high as $60 for an all-round man who can take full charge of the work and stock.

I am quite sure he is right as to giving the hired help a comfortable place to live, a garden, cow to milk, and, in fact, make him feel as near one of the firm as you can possibly do so, and still keep him in his place.

I have worked by the month myself and claim to know how to appreciate a good boss, and I think the average farm hand will respond to proper treatment from his employer.

I have lived in Idaho for 16 years, came from Chenoa, Ill.; have been raising purebred Shorthorn cattle, Percheron horses and purebred Poland China hogs, grain, hay and clover seed, and find my work very profitable.

W. F. HOWARD.

Parma, Idaho.

Chance to Buy Shares.

To the Editor: I think the general wages for farm labor are about high enough. Here they are $45 per month. We do not need hard labor very much in winter months, but I think the best way would be to give the regular labor harvest wages during harvest season. Then there could not be any chance for a kick.

As for a man with a family working for wages, the best way would be to give him a chance to buy a share in the stock and implements—say one-half interest. Take a mortgage if the tenant does not have the money to pay; then let the man put his labor up against the land. In that way he will have an interest in the work and will take care of the stock and implements, also the land upkeep. This is my view of the situation. It may not be of any help to you, but, anyway, this is my view.

W. J. BLANCHETT.

Quincy, Wash.

Tell Us What Has Been the Most Interesting Experience in Your Life

The glimpse from the life of a little 10-year-old girl in the Family Circle department of The Farmer this week is an example of the experiences of one kind or another that all of us have—won't all of you join our Experience Circle and tell us some of the things that have happened to you in your own life?

We will be glad to publish what you send for the entertainment and enjoyment of other readers.

This means boys and girls—young men and young women—and parents—every reader who has had some interesting experience, no matter whether it happened last week, last year or in the golden days of the long ago.

Wheat Is Lost

Through Activities of Submarines

Wheat belonging to M. H. Houser of Portland, well-known grain man of the northwest, has been lost on sinking vessels to an amount of about 150,000 bushels during the winter, according to reports compiled.

It is stated unofficially that during the period in which this grain was lost Mr. Houser had exported nearly 13,000,000 bushels. This is taken by some to indicate to some degree the insignificance of the submarine campaign, as the percentage of loss sustained by this one exporter is slight. The greater part of the exportations, however, were prior to the renewal of the submarine campaign February 1.

Sweet Clover and Alfalfa.

Arrangements have been completed by County Agriculturist O. T. McWhorter for a test crop of sweet clover and alfalfa in the district west of Port Townsend, Jefferson county.

Our Duty to Smoke Out Swindlers

Shameful Effort Is Made to Shield C. B. Kegley at Expense of the Grange and Its Members

The Grange News, which is the organ of C. B. Kegley, is trying to make it appear that the government's good work of running down and convicting the swindling officers of the plundering Northwestern General Trading company, and exposing Mr. Kegley's connection with the swindlers, the United States government was in some sort of a "conspiracy" to attack and discredit the Grange.

In other words, that the United States officials who gathered the evidence, the United States grand jury that indicted the swindlers, the jury who convicted them after a fair trial in the federal court, and even the federal judge who presided at the trial, had a dark, deep design to strike at the whole Grange organization and the Farmers' Union. What consummate nonsense!

This coupling by Mr. Kegley's organ of the rank and file of the grange membership with the disreputable coterie that filched hundreds of thousands of dollars out of the pockets of the farmers of the Pacific northwest is an outrage. The grange membership is made up of honest, straightforward, hard-working men and women who had nothing in sympathy with the tricky operators of the Northwestern General Trading company.

Mr. Kegley and some of his appointees are also circulating a ridiculous assertion that the Farmer is unfriendly to the Grange because it printed the news about his connection with and endorsement of the swindling Northwestern General Trading company.

That assertion is utterly false. The Farmer has the highest regard for the Grange and the Farmers' Union and will ever be found working for their best interests.

The disreputable Northwestern General Trading company and its convicted officials and their stock-selling boosters are not the Grange or the Farmers' Union, and it is outrageous that this shameful effort is made to shield Mr. Kegley at the expense of the Grange and its members.

It is to be expected that the appointees and adherents of C. B. Kegley in the grange will be pushing resolutions prepared by themselves through the grange, declaring the utmost confidence in Kegley's integrity and in his ability to guide the order and denouncing those who have aught to say in exposing the flat-footed indorsement of the swindling Northwestern General Trading company by declaring that the indorsement was made at a time when the company was supposed to be solvent and on a firm basis.

The cold fact of the flat-footed indorsement remain:

> Patrons of Washington:
> Your executive committee has made a personal investigation of the resources and liabilities, methods of business and quality of merchandise of the Northwestern General Trading company. We are satisfied that it is on a sound financial and cooperative basis, and through the proposed plan of a distributing center with each subordinate grange, and the active cooperation of the patrons, can be made to fill the need of the wholesale supply house for the grange members.
> Executive committee, Washington state grange.
> C. B. KEGLEY.
> J. O. WING.
> J. T. COMPTON.

As to the nature of the examination into the affairs of the Northwestern General Trading company, Mr. Kegley himself testified under oath in the United States court in Spokane:

"Did you examine the books when you were at the Trading company's store for two or three days?" inquired Attorney Garrecht on cross-examination. "It was impossible. We simply took the reports of the accountant, Wilson, Mr. Lawrence and Mr. Delivuk," said Kegley.

"You made some investigation into the Northwestern?" "Yes, I was a member of a committee from the state grange, along with J. O. Wing and J. D. Compton, who investigated it in 1914. We came to Spokane for that purpose, and stayed here three days, and were shown over the store by Mr. Lawrence, who exhibited the Wilson

(Continued on page seventeen.)

State Gets Market Bureau

Governor Signs Bill Passed by Legislature

Governor Ernest Lister has signed the Metcalf bill passed by the recent legislature creating the office of state director of farm markets.

While the practical value of the present measure remains to be proved it constitutes a step of far-reaching possibilities on the part of the state in improving marketing conditions.

The bill was prepared by Senator Ralph Metcalf of Tacoma, who was a member of the commission which went from this country to Europe three years ago to make a study of rural credits and marketing systems.

Has a Preamble.

The measure is unique in legislation in that it begins with a preamble, which reads as follows:

"The production and marketing of farm products is hereby declared to be a matter of public interest and a proper subject for investigation, encouragement, development, regulation and control of the state."

The bill then provides for the appointment of a director of farm marketing by the director of the agricultural experiment station of the state college, with the consent of the governor. He shall be appointed to serve at the pleasure of the director of the experiment station. He shall receive a salary of $3000 a year and his expenses in the conduct of his office shall be borne by the state.

Fifteen thousand dollars is appropriated by the bill for the work of the new department during the present two years.

Duties and Powers.

"It shall be the duty of the director to investigate and promote, in the interest of the state, economical and efficient distribution of all farm products, for this purpose cooperating to the fullest extent practicable with the United States department of agriculture and with other agencies of the federal government of this state and of other states engaged in similar activities. He shall have power:

"(a.) To maintain a market news service by publication of bulletins and through newspapers, giving information as to prices, available supplies of different farm products, demand in local and foreign markets, freight rates and any and all other such matters of interest to producers and consumers.

"(b.) To aid and assist producers and consumers in establishing economical and efficient systems and methods of distribution, in promoting more direct business relations through the organization of cooperative societies of sellers and buyers, and in every practicable way to reduce the waste, expense and cost of marketing, that the producer may secure more adequate returns and the consumer a lower cost of food products.

"(c.) To investigate the methods of commission merchants and of all others who buy, sell, handle on commission or otherwise, or deal in farm products, to the end that distribution of such commodities in this manner may be efficiently and economically and honestly accomplished. In such investigation he may hear complaints and suggestions, and shall have power to visit the place of business of any individual, firm, corporation or association, and examine under oath such individuals and the officers and employes of such firms, corporations and associations for the purpose of obtaining accurate information. If the director shall find legislation necessary for the regulation of such distribution of farm products he shall recommend such to the governor not later than the 15th of November of each even numbered year.

"(d.) To investigate the feasibility of direct dealing between producers and consumers through the agency of the parcel post and the employment of mail order methods.

"(e.) To receive applications for farm help and for employment in farm work, assisting in bringing the job and the man together without expense to either employer or laborer, and to this end to cooperate with the authorities of the United States, the state or municipalities that may be engaged in similar work.

"(f.) To investigate transportation of farm products, methods, delays and charges, and advise and assist producers in relation thereto."

Babcock Tester in School.

A Babcock tester has been secured for the Arden school, Stevens county, and it is planned to do class work in testing, with instruction in care of milk, cream and butterfat, together with the rudiments of farm accounting and bookkeeping. Foods and feeding will be given attention, with an effort to have the pupils do some direct experimental work at their own homes.

Drainage Project.

County Agent C. F. Monroe has been aiding those interested in a drainage project comprising several hundred acres north of Satsop, Grays Harbor county.

Pea Crop Over $1,500,000

Oats and Peas Make 20 Tons Silage Per Acre

County Agriculturist J. R. Shinn astounded the members of the Inland Empire Development league, which met in Spokane Monday, with his recital of the pea industry of Spokane county. He declared the crop this year would be around 40,000 acres and worth between $1,500,000 and $2,000,000. He found oats and peas sometimes made 20 tons of silage and that wheat made about the same in some cases. Sweet clover is another crop Mr. Shinn is boosting, and he also is inclined to the belief that the growing of clover might do away with smut in grain.

Gets $12,000 from Land Once Idle.

A pea crop is worth from $40 to $50 an acre, Mr. Shinn, said. He advocated growing the crop instead of summer fallowing. He cited one example of a man who got a $12,000 crop from land that previously had lain idle. He placed great stress on inoculation of the seed. Without this he would not expect success.

W. W. Skuse, in charge of the boys and girls' pig and canning clubs gave an illustrated talk on his work. Lamb and legume clubs will be added this year.

S. E. Hege, who had been elected president of the league, presided. Harold Hooker was elected secretary.

Gets 1056 Land Inquiries.

The report of the secretary showed 1056 inquiries for land had been received since January 1. They covered nearly every state, but California led with 100, North Dakota came next with 94, and then in succession came Montana, Iowa, Minnesota and Illinois. Generally speaking they came in largest numbers from the northern tier of states. Saskatchewan sent 68, and Alberta 31.

The report showed these inquiries had been obtained largely as the result of advertisements placed in publications at a cost of $331, or an average of 3 1-3 cents each.

Interest centered in the talk by T. L. Greer, manager of the land department of the Humbird Lumber company of Sandpoint, Idaho. He told how they had sold 12,000 acres of cut-over land last year.

Lauds Chamber Farm Pamphlet.

The talk by Mr. Greer was listened to with keen interest, and the note of "satisfied settler" which he sounded met with hearty applause. He declared the pamphlet, "A Farm Home for You," put out by the chamber of commerce, was the best publication of the kind he had seen. The fact that real estate men in his section willingly took space in the booklet this year was the best evidence of its value.

"Land speculation is as bad as any other kind of speculation. We are not in the speculation business; we are merchandizing. Mr. Humbird makes me feel that my problem is to get a satisfied settler, and my success depends on that. The satisfied settler will sell the land for us. If I learn that a man is not satisfied I get him out quickly, and I get him out by getting another man to buy him out. We usually find a man concludes he is satisfied as soon as he finds he can sell.

"The community interest is the big thing. We want to get the community interested largely in the same thing.

Women Must Be Contented.

"We have the problem of satisfying the women. If they are satisfied the men usually are, but you can't do anything with a dissatisfied woman. We have the problem that people don't want to go into a community unless there are roads and schools, and we can't get these things until we have the settlers to justify them, we are told. So we must gradually work along. A vacant shanty is a drawback to getting settlers, so we try to avoid that. It means the man is a misfit.

"Some of our land costs $100 an acre to clear, but I have known crops worth $100 an acre to be raised the first year. Of course there is a big demand with us, and prices are high."

A. M. Harris of Newport, Wash., told of the interest being taken in dairying. They had received benefits from the league. He said the creamery they had established could not supply the demand. Stock was taken at $25 a share to finance it, and there had been no loss.

F. W. Fitze of Coeur d'Alene told of their success in establishing a creamery. He said they had no sooner started than a certain element in Spokane began to knock it. He hoped the Spokane Chamber of Commerce could do something to prevent a repetition of such things. He told how the commercial club of his city sponsored the plan and helped the farmers buy the cows.

Professor N. C. Jamison of Washington State college told of the work of cow testing associations. There are 400 such organizations in the United States and 17 in this state. The work was merely that of keeping books to find which cows were profitable. The feed is weighed, the milk tested and weighed, and the profits ascertained. The owner can eliminate those that do not pay. The association hires a man who makes this test once a month. In one association out of 600 cows it was found 100 were losers. He estimated that out of 25,000,000 cows in the United States 8,000,000 were losing money to their owners.
